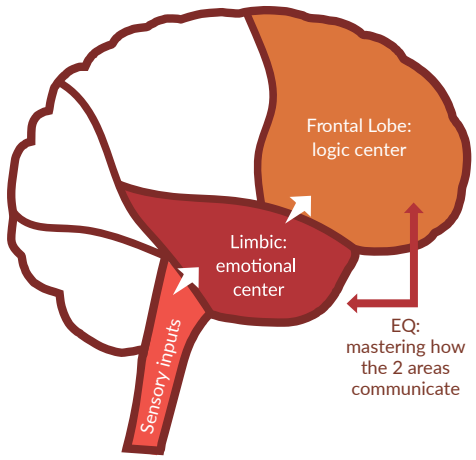
"Emotional Intelligence 2.0 has one purpose—increasing your EQ."

"We enter the workforce knowing how to read, write, and report on bodies of knowledge, but too often, we lack the skills to manage our emotions in the heat of the challenging problems we face."

Humans are emotional creatures because of how we're wired biologically. Everything we perceive via our 5 senses travels through the body in the form of *electric signals*. These signals enter the brain at the base near the spinal cord and pass through your limbic system (where emotions are produced) before they reach the area where rational thinking takes place.



- That's why you experience things emotionally before logic kicks in, and may be *overwhelmed* by intense feelings like panic, sorrow, exuberance or outrage.

- However, there's a 2-way communication between the emotional and rational centers in your brain, and you can control the thoughts that follow the emotions. Practicing EQ skills help you to form and strengthen new *neural connections* in your brain which eventually form new habits.

KEY QUOTES

"Emotions can help you and they can hurt you, but you have no say in the matter until you understand them."

Understanding, Measuring & Improving EQ

An Emotional Intelligence Framework

In order to improve your EQ, you must know the skills involved and what they look like behaviorally. The authors present **4 key emotional intelligence skills.**

	AWARENESS	MANAGEMENT
PERSONAL COMPETENCE	**Self Awareness** Ability to identify & understand your feelings/tendencies	**Self Management** Ability to adjust & direct your thoughts and actions
SOCIAL COMPETENCE	**Social Awareness** Ability to accurately pick up others' emotions & perspectives	**Relationship Management** Ability to effectively manage interactions & relations

Personal competence is your ability to be aware of your emotions and manage your reactions.

Social competence is your ability to be aware of (and understand) others' moods, behavior and motives, and to manage your relationships well.

Developing a Specific Improvement Plan

Each book comes with a code for an **Emotional Intelligence Appraisal® test**. Use it to find your score (from 1-99) for each of the 4 EQ components, and identify specific areas for improvement.

Focus on only 1 EQ component at a time, to avoid diluting your focus and efforts. The test results will include a recommend of the skill to start with, though you can also pick your own area of focus.

Choose 3 strategies to begin with. Again, the test report will come with specific suggestions, but you are free to choose from the list of 66 strategies in the next section.

Find an **EQ mentor** (who is already strong in your chosen EQ skill), keep practicing and give yourself time to improve.

Measure/track your progress; when you feel you've made enough progress, retake the test and start the next cycle of improvement.

In the following sections, we'll elaborate on the 4 EQ dimensions and 66 proven strategies that you can use to improve your EQ.

Improving Self Awareness

Self awareness is simply knowing what makes you tick. It involves the ability to identify and understand your current emotions as well as your tendencies *across* situations.

KEY QUOTES

"As you transform yourself and bring new skills into your life, you'll reap all of the benefits that this incredible human ability has to offer."

"Self-awareness is not about discovering deep, dark secrets or unconscious motivations, but, rather, it comes from developing a straightforward and honest understanding of what makes you tick."

With self awareness, you **see how you react** to events, challenges and people and understand why these emotions exist.

- When you can *make sense of your feelings*, you'll understand where you can excel, what motivates and fulfils you, and what type of people/situations may trigger certain feelings.
- This in turn allows you to pursue the right opportunities, apply your strengths optimally, and prevent emotions from holding you back from *better performance*.
- Self awareness *lays the foundation* for all the other EQ skills.

Developing self awareness takes time. As you get in touch with your feelings, you'll uncover both positive and negative traits. Embrace all of them, and remember that being aware is already a step toward improvement.

Self Awareness Strategies

Don't judge your feelings as good or bad—it only adds more emotions to the mix and prevents you from seeing the cause of the original feeling. Instead, pay attention when you feel an emotion surfacing, and seek to understand it without judgement.

Observe the ripple effects of your emotional outbursts. Often, they continue to affect others even after the emotion has passed. Take note of how your emotions affect people, ask them for feedback, and consciously *choose* the types of ripples to create.

Lean into your discomfort. Avoiding unpleasant emotions doesn't remove them and they'll keep resurfacing. Instead, face them and gradually work through them.

Learn how an emotion physically affects you. Close your eyes, recall an intensely-emotional incident and notice the physical symptoms e.g. increased heart rate, stomach tightening, shallow breathing. With practice, you'd be able to identify your emotions via these symptoms faster than your brain can diagnose them logically.

KEY QUOTES

"Getting to know yourself inside and out is a continuous journey of peeling back the layers of the onion and becoming more and more comfortable with what is in the middle—the true essence of you."

"It's really the whole picture that serves us. The more we understand the beauty and the blemishes, the better we are able to achieve our full potential."

"Your outpouring of emotions are like stones that send ripples through the people in your life."

"Rather than avoiding a feeling, your goal should be to move toward the emotion, into it, and eventually through it."

"You'll find that you're often physically aware of an emotion long before you're mentally aware of it."

Know what triggers you. Make a list of the exact people, situations, and environments that trigger certain emotions in you. When you know who/what triggers you and how exactly it irks you, you can learn to manage your responses.

Watch yourself like a hawk in the sky, observing how your own emotions, thoughts and behaviors unfold in a situation. When you can see the big picture (including the other person's perspectives or how your emotional reactions may backfire), it's easier to calm down and formulate a more effective response.

Record your emotions in a journal, noting the events/people that trigger strong feelings, the physical sensations you feel, and how you respond. Such entries help you to identify patterns in your emotions and how you tend to react. It also helps you to remember your fleeting responses and progress.

Don't be misled by bad moods. A bad mood can cloud your judgment and make everything seem bad. Be aware when you're in a bad mood, reflect briefly on what may have caused it, and avoid making important decisions during this period.

Don't be deceived by good moods either. Good moods can flood you with excitement and feelings that lead to impulsive actions. Enjoy your good moods but stay mindful of the consequences of your decisions.

Pause and question why you react the way you do. When did you first react like this? Were you triggered by similar people or situations? The more you can identify the source of your emotions, the easier you can manage them.

Connect with your values. We tend to get so caught up with our daily activities that we lose sight of our core values and beliefs. Revisit your values regularly (minimally once a month). Write down your values in 1 column, list down what you've done recently that you're not proud of in a 2 nd column, then identify what triggered those actions.

Check your physical appearance, which often reflects how you feel. Regularly check your clothes, facial expressions, body language, etc., and notice how your mood affects your demeanor.

KEY QUOTES

"Knowing why your buttons are what they are opens doors to managing your reactions to your triggers."

"Once a negative mood takes over, you lose sight of what's good in your life."

"A good mood can deceive your thinking just as much as a bad one."

"The better you understand why do you the things you do, the better equipped you'll be to keep your emotions from running the show."

Use art as a reflection of yourself. Consider the books, movies, and music which you resonate with—what grabs your attention and why? Artists can often express complex feelings which we can't; you can deepen self-awareness by finding your emotions in their work.

Seek others' feedback to identify the gaps between how you see yourself and how others see you. Get feedback for specific situations and put the various viewpoints together to see a bigger picture.

Know when you're stressed. People react differently to stress (e.g. loss of sleep, headache, back spasms). Identify your physical/emotional responses to stress so you can recharge before the stress escalates.

Improving Self Management

Self management is your ability to use your emotional awareness to deliberately choose what you say and do. It enables you to adjust and direct your responses to people and circumstances in a positive way.

It allows you to rein your emotions in, **decide whether to take action and the type of action to take**, such as overcoming your paralysis from fear, or stopping yourself from lashing out in anger.

It also involves your ability to set aside your immediate needs to **focus on longer-term goals**. People who're strong in self-management handle stressful situations and confrontations more effectively, communicate better, and are proactive yet patient.

Self Management Strategies

Breathe right. Oxygen goes first to your body's vital functions, then to the complex functions that keep you calm and focused. Shallow breathing leads to lower energy levels and concentration, reducing your ability to self-manage. When you're stressed, take slow deep breaths via your nose then exhale gently and fully from your mouth.

KEY QUOTES

"By mustering the courage to peer at what others see, you can reach a level of self-awareness that few people attain."

"Success comes to those who can put their needs on hold and continually manage their tendencies.

Use an **Emotions-vs-Logic list** when your head and heart are in conflict. Write down the list of emotional vs logical arguments in 2 columns, side by side. Then ask 2 questions: (a) where could emotions be clouding your judgment? and (b) where could logic be blocking emotional cues? Write these down so you can see the situation more clearly.

Share your goals publicly to motivate yourself to take action. You can even ask someone to specifically hold you accountable and dish out rewards or punishments.

Count to 10. When you sense yourself becoming frustrated or angry, count to 10, taking a deep breath with each count. This will help you to calm down and re-engage your rational brain.

Let things settle. If you're stuck, sleep on the problem, so the dust can settle and emotions can run their course, before making a decision. Time brings clarity and perspective.

Consult a role model. Ask someone skilled in self-management for advice. Ensure you follow-up on the tips.

Smile and laugh. The nerves and muscles in your face send signals to your brain that set your emotional state. To break a negative mood, read/watch something funny, force yourself to smile, or hold a pencil between your teeth to activate the muscles used in smiling.

Set aside 15mins a day for problem-solving. Put away your phone and computer; dedicate this time to thinking without distractions.

Manage your self-talk. An average person has about 50,000 thoughts per day, and such thoughts trigger chemical reactions in the body that affect your emotions and behaviors. Catch yourself with negative thoughts (e.g. "I'm an idiot", "it's all their fault") and replace them with healthier thoughts (e.g. "I fumbled this once", "we can learn from this").

Visualize success. Your brain reacts the same way when you're visualizing something and when you actually experience it. Each night, before going to bed, visualize yourself effectively managing your emotions and acting the desired way. These mental practices help to prepare you for challenging situations.

KEY QUOTES

"Much of self-management comes down to motivation, and you can use the expectations that other people have of you as a powerful force to get you up off the proverbial couch."

"Force yourself to wait for the dust to settle before you make a move.

"There is a strong relationship between what you think and how you feel, both physically and emotionally."

Improve your sleep hygiene. To feel fresh, alert and balanced, you need enough quality sleep, which in turn requires good sleep hygiene. Reset your biological clock with 20min of natural morning sunlight daily, avoid caffeine after noon, avoid working or watching TV in bed, and avoid screens 2 hours before bedtime (as blue light hinders production of hormones needed for sleep).

Focus on freedoms, not limitations. In any situation, you can *always* choose your perspectives. Take accountability for areas within your control (e.g. your attitudes and reactions), instead of fretting about things beyond your control.

Stay synchronized, i.e. check that your body language and emotions are in sync. When your emotions threaten to get the best of you, focus on the task at hand instead of the feelings.

Find an objective sounding board to get fresh perspectives on a problem. Speak with someone you trust who's not emotionally invested in the problem, and who won't blindly agree with you.

Learn from everyone you meet. When you're upset or defensive, you feel stressed and tend to miss out on learning opportunities. By seeking to learn from every interaction (be it about yourself or others), you'll feel more relaxed and open-minded.

Recharge mentally. Schedule time for physical activity; this gives your brain some rest, releases chemicals to improve your mood, keeps you alert, and increases your productivity and effectiveness.

Anticipate change. You can't predict the future. The best way to be prepared is to expect change. Set aside some time weekly/ fortnightly to consider potential changes and actions, so you won't be caught by surprise when they happen.

KEY QUOTES

"Even when you can't do or say anything to change a difficult situation, you always have a say in your perspective of what's happening."

"Approaching everyone you encounter as though they have something valuable to teach you…is the best way to remain flexible, open-minded and much less stressed."

"The key to navigating change successfully is your perspective before changes even surface."

Improving Social Awareness

Social awareness is your ability to accurately tune in to others' emotions and understand what's really going on with them. This requires the willingness and ability to understand others' perspectives even if they differ from yours.

We tend to get so caught up in our own thoughts or emotions that we don't truly consider **the other person's point of view**.

To build social awareness, we must be **fully present**, listen and observe. This means we must silence our self-talk, stop anticipating what the other person may say, and give him/her our full attention.

Social Awareness Strategies

Use and remember people's names. When you're introduced to someone, greet him by his name, picture the name spelt out (or ask how it's spelt), and use it at least twice in your first conversation, so you'd remember the name.

Observe body language, and learn to recognize subtle emotional cues which convey lots of information. Notice if the person maintains eye contact, appears relaxed or fidgety etc.

Pick the right timing. Focus on the other person's emotional state, so you can match your question/message with the right timing and frame of mind. For example, avoid asking for favors when someone is clearly upset.

Have a back-pocket question that you can use if a conversation dies out, the other person is closing up, or you run out of things to say. A question like "What do you think about [add a topic]" can help to revive the conversation.

Focus on people at meetings, not note-taking. We tend to be so focused on taking notes at meetings that we miss out vital nonverbal communications. If possible, focus on listening or watching others at meetings rather than taking notes. Or, at

KEY QUOTES

"To be socially aware, you have to spot and understand people's emotions while you're right there in the middle of it—a contributing, yet astutely aware, member of the interaction."

"Listening and observing are the most important elements of social awareness."

"The body communicates nonstop and is an abundant source of information."

"When dealing with people and their emotions, timing really is everything."

least pause your note-taking regularly to observe people's body language (e.g. facial expressions, who's making eye contact with whom).

Plan ahead for social events, e.g. list down who'll be attending, the talking points you want to use, or things you must bring or accomplish. This frees up your mind at the event to focus fully on the people there.

Remove mental clutter. When someone is speaking, don't interrupt. Stop the internal chatter in your head and avoid formulating your responses as they speak. Instead of trying to impress the other person, focus on learning something from the conversation.

Be fully present in the moment; don't constantly live in past regrets or worries about the future.

Do a 15min walkabout every workday to observe people. Look at people's workspaces, how they interact with one another, and try to pick up their moods and other social clues.

Learn EQ from movies. Movies often reflect real life. Watch 2 movies this month just to observe the characters' emotional cues, body language, relationships, interactions, etc. Notice how conflict builds up and how the characters handle conflict.

Practice listening. Most people think they're great listeners when they're not. Listen not just for the words, but also the tone of voice, hidden meanings and what's left unsaid. This requires focus.

Go people-watching in a public place, e.g. a coffee shop or grocery store. Watch how people reveal their moods/feelings and interact with one another.

Identify cultural rules. We live in a melting pot of various cultures, each with its own set of rules and norms. To succeed in a new environment (e.g. a new workplace), you need to learn its culture. This requires listening, observing and interacting with people over a period of time. Ask specific questions to learn what's acceptable and unacceptable to them.

KEY QUOTES

"To be socially aware, you must be socially present and remove distractions—especially the ones inside your head."

"Watching movies from the land of make-believe is one of the most useful and entertaining ways to practice your social awareness skills for the real world."

"Listening isn't just about hearing words; it's also about listening to the tone, speed, and volume of the voice."

"The secret to winning this cultural game is to treat others how they want to be treated, not how you would want to be treated."

Check for accuracy. If you're unsure about a cue, you can confirm your interpretation by asking a reflective question. State what you see then ask a direct question, e.g. "You seem sad…Did something happen?"

Put yourself in their shoes. The best way to understand someone is to try to see things from their perspective. Ask yourself, "If I were this person, how would I feel, act, or respond?". Think about how the person has reacted in similar situations and if possible, check with them to verify your guesses.

Assemble the whole picture. There's usually a gap between how we see ourselves and how others see us, e.g. your attempt to be proactive may be perceived to be bossiness. Get feedback or do a 360-degree survey to understand what people perceive.

Read the room. Once you're familiar with reading cues and emotions of individuals, you can try reading the mood of an entire room. Try sensing the energy level and mood, observing how people arrange themselves or behave. Or, get someone with high social awareness to share his observations with you.

KEY QUOTES

"Walking in the shoes of another is social awareness at its best."

"Believe it or not, what others say about you is usually more accurate than what you think about yourself."

Improving Relationship Management

Relationship management is your ability to apply the emotional awareness of yourself and others to manage your relations. This includes effective communication, conflict management and forging bonds. Such skills are the most useful during times of stress or conflict, when people either (a) give in to their anger/frustration, or (b) avoid the conflict and let it fester because they don't know how to handle it.

"Working on a relationship takes time, effort and knowhow. The know-how is emotional intelligence."

Relationship Management Strategies

Be open and interested. Be open to share about yourself so others can understand you. Be genuinely interested about others and ask questions to learn about their perspectives.

Augment your natural style. Write down a description of your natural communication style, then list down the positives vs negatives of this style in 2 columns. Choose 3 upsides to use more and 3 downsides to eliminate/improve. Ask your friends, family or colleagues to help you with the list.

Stop giving mixed signals. Be aware when your body language conveys a different message from your words. If you know you're giving mixed signals, explain why e.g. you're still upset over an earlier incident and not over the current conversation.

Remember: small things matter. Small courtesies like saying "please", "thank you" and "I'm sorry" can make a big difference in your relationships.

Receive feedback well. We may respond poorly to feedback if we feel offended or are taken by surprise. Listen carefully, ask for examples of what you said/did to create the impression, and always thank the person for the feedback. Then, use the other strategies to evaluate the feedback and decide what to do with it.

Build trust by opening up first, being consistent in your words, actions and behaviors over time, and fulfilling your promises. Strong relations require mutual trust, which can only be built with time and deliberate effort.

Be as accessible as you can, while realizing that you cannot be available for everyone at all times.

Master your anger. Anger exists for a reason; the challenge is to use it purposefully rather than let it control you. Express your anger appropriately to show the seriousness of a situation or to improve a relationship.

Face the inevitable. When you face an unpleasant situation, don't withdraw or try to avoid it. Instead, find ways to handle or improve the situation. For example, if you must work with someone you dislike, apply your EQ skills to establish mutual understanding, and/or put boundaries in place to make your interaction more constructive for both sides.

KEY QUOTES

"People trust what they see over what they hear."

"Trust is something that takes time to build, can be lost in seconds, and may be our most important and difficult objective in managing our relationships."

"Anyone can become angry—that is easy. But to be angry with the right person, to the right degree, at the right time, for the right purpose, and in the right way, this is not easy."
- Aristotle

Respect and recognize others' feelings, regardless of whether you agree with them. Don't dismiss or try to change these feelings. Listen carefully and summarize what you've heard to show your understanding and concern.

Complement people's emotions or situations. Mirroring someone's emotions may backfire if the person is upset. Instead, identify the person's emotional state and respond in a complementary way. For instance, if someone is asking for help, you may respond in a friendly/relaxed way if he seems calm, but take a serious/urgent tone if he seems agitated.

Show you care. Don't hesitate to show others you notice and appreciate their good work, with a thank you note, small gift, etc.

Explain your decisions. To support a decision, people must understand it. Seek inputs if possible, help people to understand your decision process, the alternatives considered and why the final choice was made. Address how the decision will affect everyone.

Give direct and constructive feedback. Always consider the person who's receiving the feedback and adapt your approach so it'll be clear, constructive, and respectful to him/her. Share your observations, offer solutions, ask the person to share his/her views and thank the person for considering your suggestions.

Align intent with words and actions. Think of the times when you unintentionally caused hard feelings or strained a relationship. Write down your intentions, actions, and others' reactions. Then, analyze what you've learned on hindsight (e.g. cues you missed, varying perspectives) and identify what you can do differently in future.

Fix a broken conversation. When you realize a conversation is deteriorating, focus on restoring communication by saying something neutral like, "This is hard," or "How are you feeling?". This allows both sides to pause and get the interaction back on-track.

KEY QUOTES

"Everyone has a right to experience feelings, even if you might not feel the same way."

"There are people who do great work around you every day. When you care, show it."

"Remember, feedback is meant to address the problem, not the person…Constructive feedback has two parts: sharing your opinion and offering solutions for change."

"Let go of blame and focus on the repair. Do you want to be right, or do you want a resolution?"

Tackle tough conversations, which will come up no matter how high your EQ is. Use this 6-part approach to manage them:

- Start by stating the *common ground* that you share.
- Ask the other person to share *his/her point of view*.
- *Listen first*. Resist the urge to defend your point of view.
- Help the other person to understand *your point of view* (your logic, feelings, dilemmas etc.).
- *Move the conversation forward*, e.g. "I'm glad we've had the opportunity to talk. I understand your views, and you seem to understand mine. I'm still committed to make this project a success. What are your thoughts?".
- After the meeting, *keep in touch* with the person to see how he/she is doing.

ENTRELEADERSHIP

20 Years Of Practical Business Wisdom
From The Trenches

Dave Ramsey

The Big "So What"

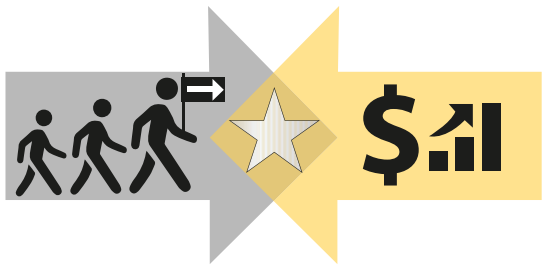
Mistakes are inevitable in business, but you can shorten your learning curve by studying the successes and failures of others before you. This playbook presents philosophies/methods to help you understand business fundamentals and avoid common pitfalls in starting and growing a business.

Introduction

After 20 years in business, Ramsey has experienced what it's like to hit rock bottom, and also what it takes to grow a business from scratch to achieve massive financial success and fulfillment. Fundamentally, your company's performance doesn't depend on the economy, industry or even its people; it all boils down to 1 thing—***you* as the leader**. As you grow and improve yourself, the effects will be felt throughout the organization.

Specifically, a successful business is built on **EntreLeadership**, i.e. a blend of great leadership and entrepreneurship.

- A leader guides and inspires others while an entrepreneur takes on and manages the risks for a venture. In short, an *EntreLeader* leads people in a way that brings growth and prosperity to an enterprise.



- As a boss, you have the positional power to sign a check, hire and fire people etc. However, that doesn't make you a leader. To grow a strong team, you need "*persuasional leadership*" to get people to embrace why you do what you do.

KEY QUOTES

"The point is, you can win in business and have a blast doing it."

"Most of us can list what we want our leaders to look like, but we don't apply it to ourselves."

"If you want employees, then boss them around; if you want team members, explain why you do what you do…don't lead with threats and fear."

- Great leaders are often *servant leaders*—they see leadership roles not as an entitlement but a form of service. They take charge, lead from strength, and send clear signals that everyone is in it together.

- *Passion* is an essential ingredient for success in any organization. When you and your team truly care about what you're doing, it drives action, results, service, and even forgiveness.

Becoming an EntreLeader

Cultivate these vital components in yourself and your team.

Develop your Dream → Vision → Mission Statement → Goals

Without **dreams**, nothing new or exciting would ever be created. Yet, dreams tend to be vague and only start to take shape when you flesh them out with concrete action.

You can create something only if you can see it in your mind. Crystallize your **vision** and share it with your team regularly, so you're all working toward the same vision.

Your **mission statement** captures your dream and vision to guide your goals. According to Dan Miller, a good statement should cover your (i) calling, (ii) skills and abilities, (iii) personality, and (iv) values, dreams and passions. These jointly tell you *who* you are (and aren't), *what* you do (including what you can/want to do), *how* you'll do it and *why*. It'll take time and numerous redrafts to craft a good mission statement.

Goals translate your dream and vision into an actionable form. Develop goals in all key areas of your life including career, finance, spiritual, physical, intellectual, family, and social.

- *Effective goals* should (i) be specific and measurable, (ii) have a timeframe, (iii) be *your* objectives (not someone else's), and (iv) be put in writing.

- *Shared goals* facilitate communication and help people to focus on a wider objective beyond their personal interests.

KEY QUOTES

"You cannot lead without passion. Passion causes things to move, and passion creates a force multiplier."

"Visions are dreams with more clarity. Dreams become reality only when you pull them gently from the clouds and convert them to visions."

"Developing your mission statement forces you to decide in advance what you are and then by definition what you aren't."

"Goals force practical steps into your life to make your dreams come true…Goals convert vision into energy."

Make the Most of your Time

Time is one of your most critical resources. When you **purposefully direct your time** and see progress from your efforts, you'll feel energized. However, when you're fighting fires and going round in circles, you'll feel drained.

Dr Stephen Covey introduced the **4 quadrants of time-use**. Most people focus on Quadrant I (e.g. bills and contract deadlines), get distracted by Quadrant III (e.g. emails and calls), and waste time on Quadrant IV (e.g. TV and social media). We tend to neglect *Quadrant II*—things that're important but not urgent—such as exercise, strategic planning, and personal growth. Yet, this is the quadrant that makes the biggest long-term difference; if left unaddressed, the items here will end up in Quadrant I, leaving you with no time for anything else.

	urgent	not urgent
important	Quadrant I	Quadrant II
non important	Quadrant III	Quadrant IV

Manage your time with a **prioritized to-do list**. Each morning, list down everything you must do. Label them with "A" for things that must be done today, "B" for things to be done soon, and "C" for things that can be delegated or put aside. Then, go through items in the "A" list and rank them (A1, A2...) using this question: "If I can do only 1 thing today, what will be the *most* crucial item?" Do the same for your "B" and "C" lists. *Put A1 at the top of your to-do list* and focus on that above all else.

Meetings are essential in any organization, but they can also be a huge time-waster if not properly managed. Set a clear agenda in advance, have everyone come prepared to address those objectives, and ensure there's proper follow-up after each meeting. [Refer to Patrick Lencioni's "Death by Meeting" for more tips on structuring your meetings to be focused, effective and enjoyable.]

Your desk reflects how organized or disorganized you are. **Clean up** a messy desk—remove, finish or delegate loose items sitting around. Use technology to make your work more productive (but don't waste all your time playing with tech gadgets).

KEY QUOTES

"When scheduling a meeting, take time to prepare for the meeting."

Dare to Make Hard Decisions

A leader must make hard decisions and take action in spite of criticism. To overcome indecision, you must **conquer your fears**, which can otherwise paralyze you. State your fear out loud, so you're aware of what's holding you back and can address it. Step back to examine your worst-case scenario—which is likely to be unpleasant but not fatal—to see your fears more objectively.

Here are some **tips for making good decisions**:

- It's ok to hold off a decision until you have more info or are feeling calmer, but always set a *firm deadline*.

- *Allocate time* based on the size of the decision. Don't drag out small decisions (e.g. making a $10 purchase), but set aside enough time to research and test your options before making big strategic decisions.

- The best cure for fear and lousy decisions is to have *lots of options*. Don't settle for a bad option; keep searching until you find better ones.

- Invest time/effort to *gather information* so you can make sound decisions. Get inputs from both internal and external experts who have real-life experience in an area (e.g. lawyers, marketers). Consult your spouse for important business decisions and you may be surprised at the insights he/she can offer.

- *Coach/equip your team* to make good decisions so your business can eventually run without you. Start by sharing ideas/options with your team members and have them return with 3 proposed options and an action plan. Involve them in the decision-making process so they can learn how you think. Your goal is to reach the point where your team members can make decisions and simply update you on the issue, possible options and how they resolved the problem/opportunity.

KEY QUOTES

"Leadership is not for the weak and the timid; it requires tremendous backbone, tremendous strength."

"A powerful element of good decision making is to have lots and lots of options."

"Ninety percent of making the right decision is the gathering of information…Information removes fear."

- Establish *clear principles/values* for decision-making. For example, Ramsey's team is closely guided by the Golden Rule to "Do unto others as you would have them do unto you."

- Break down *big, complex decisions* into smaller parts. Try writing a report on your decision to activate a different part of your brain and gain clarity.

- Consider the *financial implications* e.g. impact on cashflow and profits. Ramsey recommends not to proceed with an idea unless it (i) can be achieved without borrowing money *and* (ii) won't be fatal even if it's a wrong decision.

Know the Recipe for Great Marketing

Marketing is basically your plan to get your product/service to the customer. It's much more than selling and advertising, but there's no mystery or magic to it. It's about **having the right ingredients and recipe**.

- *Timing* is critical in marketing, including when to enter a market or launch a store/product. For instance, opening a retail store in February could be risky as you must survive many months before the peak sales period between Thanksgiving and New Year.

- The first version of your product is almost never the version that succeeds in the marketplace. Don't overstock for a new product launch. Start small with a *prototype* and keep revamping it.

- Don't rely on your intuition. Always *test, measure and refine* your options. You can do paid research and focus group studies, or find creative ways to get feedback for little/no cost, e.g. asking people to vote on a product cover/design to identify the best option.

- Take the right actions depending on where you are in the *product or market life cycle*:

  (i) Introduction: you've just launched and have no/low profit.

KEY QUOTES

"Have a long-term vision and execute it…slow and steady wins the race."

"A great idea timed poorly can die a thousand painful deaths."

"Allow your idea to die and be reborn repeatedly; it will get better each time."

"Target your idea, test it, measure your results, then change it."

(ii) Growth: sales start to grow and per-unit costs decrease.

(iii) Maturity: the most stable/profitable phase with low costs and high sales, but also when more competitors enter the market.

(iv) Decline: sales and profit start to drop and it's time to reinvent your product or move on to a new one.

- *Move your customers through a funnel*. Draw people in with free/inexpensive services, let them interact with your brand, then progressively introduce more expensive and time-consuming products. For example, you may have 100 people download a free report, of which 15 buy a small service for $69 and 1 buys an expensive product for $4900.

- Spice up the components above with these *essential ingredients*:

(i) Passion: Marketing is only effective if it's infused with energy.

(ii) Scarcity: When people believe your product is scarce and precious, they'd line up and pay a premium for it.

(iii) Urgency: Give people a reason to buy *now*, e.g. offering a limited number of items at a discounted price.

(iv) Momentum: Use the formula below to gain massive traction.

Ramsey's team came up with "**The Momentum Theorem**" to explain how unstoppable momentum can be created:

$$\frac{Fi}{T}\,(G) = M$$

- *F = Focus*. Stay focused; don't be distracted by greed or the fear of failure.

- *I = Intensity*. To get results, pack a lot of activity (promotion, sales calls, advertising etc.) into a short timeframe.

- *T = Time*. Success won't happen overnight. Keep going even if you don't see instant results.

KEY QUOTES

"The more money and time you ask your customers, the fewer will follow you down the funnel."

"The mystery of marketing is not really a mystery. There are just so few people in business who do all the parts intentionally."

"Cram a ton of activity in a small space of time and your marketing engine will run."

- *G = God*. If you're a person of faith, remember that your limited personal abilities can become phenomenal when multiplied by God's unlimited prowess.

What seems like a lucky break is often the result of years of **consistent hard work** behind the scene. With the right recipe and persistence, you too, can create unstoppable momentum.

How to start a Business & Realize your Dreams

It's perfectly fine to **start small** and grow via bootstrapping. There's no point in taking huge loans to launch big, only to collapse quickly.

- It's a good idea to *start a business part-time* while holding a job. It'd mean working much harder initially, but it gives you time to build a proper business foundation. Focus on finding solutions to people's needs/problems. Only quit your job when you have a good chance of sustaining yourself and your business without it.

- Until your business is profitable, just suck it up and do the hard-lifting. You're only ready to *expand* when you're making profits.

Selecting your business. Ideally, you'd want to start a business that makes money and fits your calling/passion. However, don't sit around waiting for the perfect opportunity.

- It's perfectly fine to work for *money* initially; just make sure you do it with passion and excellence as if it was your calling. Don't waste money on programs/courses that promise overnight success. There's no shortcut; do the work.

- In the longer term, it's vital to *find your calling* such that your business matches your skills/abilities, personality, values, dreams and passions. Business is hard work, and you'll need a strong reason (beyond money) to persist. Working on your calling gives you energy, fulfillment, and a clear direction as your business changes and evolves.

Ramsey also explains **franchising and multi-level marketing** (MLM) in detail. In a nutshell:

KEY QUOTES

"Momentum is not a random lightning strike, but on the contrary it is actually created."

"Great oaks are grown from humble beginnings as small acorns."

"Work isn't really hard to find if you look at the needs people have and how you might serve them."

"If you choose well, the way you spend most of your life, your vocation, will truly be a vacation."

"Find something you love doing so much that on the tough days you have a reason to fight on."

- *Franchises* offer an established brand and system to reduce startup risks, but they're not fail-safe. Only take up a franchise if (i) it's your passion, (ii) there're long-term competitive advantages, (iii) you'll still be ok with the model 10 years later, and (iv) you've done reference checks with both successful and struggling franchisees.

- Legitimate *MLM* companies sell their products/services and recruit new members through existing members. You *can* make lots of money with a low cost of entry. Consider this option if (i) you'd like to recruit, train and lead a high-performing salesforce, and (ii) you're passionate about the product/service.

Learn to Hire and Fire Effectively

Turnover is costly as it means (i) time/resources spent hiring and training someone else, (ii) lost opportunities while the person is being replaced, and (iii) reduced team morale. Often, this can be avoided by hiring the right people in the first place.

Hiring. The key is to sieve out people who're not a good fit *before* you hire them.

- Pray to God to send you the right people, or do quiet reflection on the type of people you want/don't want. Define the *key results areas (KRAs)*, i.e. what success looks like for that role.

- *Referrals* are usually more effective than advertising.

- Do an initial *screening* with a short 30-minute interview. Use the resume for an overview of the person's skills/experience, and testing tools (e.g. personality tests) to assess potential fit.

- *Selection*. Observe if the candidate "lights up" when discussing the role. Only hire someone if (i) you can pay them enough to meet their personal needs and (ii) the role fits with their dreams/goals. Don't hire anyone you don't like. Meet their spouse for additional insights.

KEY QUOTES

"Business is easy…until people get involved."

"The person hired properly will perform better, will not cause problems, and will be more likely to stay."

- Use a *90-day probation* to mutually test out the arrangement before making a firm commitment.

Course corrections. It's the EntreLeader's responsibility to demand excellence. Don't close an eye to underachievement or misbehavior, as you'll only endorse and perpetuate mediocrity.

- When someone falls short of expectations, start with a *verbal reprimand* to remind them of what's expected. Keep it short, focus on the problem (not the person), reprimand privately (not publicly) and be gentle/kind.

- Repeat the reprimand as needed, laying out the expectations and *course-corrections* clearly. People may leave voluntarily if they realize that they're not suited for the role.

Firing. There're only 3 reasons for someone to be fired:

- *Leadership breakdown*, e.g. lack of clear KRAs and proper training/resources, or unresolved conflict. Fix it asap.

- *Personal challenges*, e.g. a divorce or a sick child. Understand the issue and treat people the way you'd have liked to be treated, but ensure (i) there's some observable progress and (ii) you can accept a temporary dip in performance.

- *Incompetence*, e.g. skills or behavioral issues. Quantify the gap and identify ways to bridge it (e.g. via training and counselling).

Where possible, give people a chance to improve first. However, release someone *immediately* if (i) you discover a character flaw (e.g. sexual harassment or stealing) or if (ii) the person is found to be unsuitable during the 90 day probation.

Master the Art of Selling by Serving

Sales is not about pushing or manipulating others; it's all about human interaction. Everyone—from production to logistics and customer service—is part of the process of delivering a great product and experience. To **cultivate life-time customers**, you must truly believe in your product, serve customers whole-heartedly, and understand human decision-making processes.

KEY QUOTES

"Treat your team like family and they will act like family."

"When someone doesn't belong on your team you are doing them a huge favor to set them free."

"Don't teach your team techniques to pressure people. Teach your team to serve."

Master the 4 key steps in any sale:

- *Qualification*. Only sell to qualified prospects who have the money, time, need/want and decision-making power to buy.

- *Build rapport*. People will only buy if they trust your company and product/service. You typically have only 1 minute to establish common ground with the buyer and start a dialogue through your website, product packaging, graphics, or in person. You can also find common ground through referrals—make sure you research on the person so you can appeal to commonalities (e.g. same religion, interests) and adopt their personality style (e.g. know whether they require details or speed).

- *Education*. Great salespeople don't push; they *pull* people by serving them. To do that, you need (i) detailed product knowledge, (ii) conviction that your product will help the customer, and (iii) info on how exactly you're stronger or weaker than competitors. Show your clients that they'll get more value than the time/money invested in the purchase.

- *Close the sale*. Never try to close without the previous 3 steps. You can close using several approaches: (i) *feel-felt-found* (e.g. "I understand how you *feel*. I know other people also felt the same way. What they *found* was..."), (ii) *the assumptive close* (i.e. just fill the paperwork and serve the customer), (iii) *the alternative close* (e.g. "would you want to go with A or B"), (iv) *the calendar close* (e.g. "would you prefer the product to be delivered on Date A or B?"), or (v) *the integrity close* (i.e. let the customer bring the product back for a trial period). Sometimes, it's better to ask questions then shut up and let the customer tell you exactly how to serve them. Remember: the sale isn't done until the money's received.

Apply Sound Financial Principles

Becoming financially healthy is actually very simple if you follow the **right principles**.

- Don't make important decisions when you're feeling *emotional*.

KEY QUOTES

"Sales is nothing more than a transference of feeling."
—Zig Ziglar

"Serve, don't sell...A great salesperson pulls someone, serves someone through the process rather than pushes."

"Regardless of the close, no sale has occurred until there is money in the house."

"Some of the most profound truths in any field of study are very simple yet deeply profound."

- Many small businesses sink because they start with insufficient capital, spend too much and run into cash-flow problems. Keep your personal and business accounts separate, and *account for every cent* that's earned/spent in your business.

- Use *business budgeting* to plan ahead. Your initial forecasts will be mainly guesswork, but it'll get more accurate with time.

- *Invest only in things that affect profits*. Don't buy things just to seem credible or to save on taxes.

- *Avoid debt*. When you operate with available/limited resources, you're forced to be more prudent and creative. Loans amplify your risks and the cost of mistakes, to make failure (which are inevitable in business) potentially fatal. Set aside cash or retained earnings for low seasons (so you don't have to borrow) and use debit cards or cash (not credit cards). For large purchases, save up and pay cash, or rent first and buy later. Consider buying used items (instead of new ones) for a fraction of the cost.

- As your business grows, set aside part of your profits as *retained earnings*. Use it (i) as an emergency fund (with 6 months' operating expenses), (ii) for business investments (e.g. hire people, launch a new product), and (iii) to leverage on unexpected opportunities.

- Set aside resources (products/services or profits) so you can *give generously* to your team and meaningful causes.

If your business is in debt or has no retained earnings: (i) temporarily decrease your personal income to the minimum you can live with, then (ii) set aside part of the remaining profits for debt repayment and another part for investment (to grow your cash). Only pay yourself more when you're **debt free with some retained earnings**.

Create a Culture of Communication

When communication breaks down, people imagine the worst; they gossip and speculate, feel frustrated and distrustful

KEY QUOTES

"If you and your business are attractive you don't have to impress anyone with your furniture or toys."

"The truth is that by starting small and gradually expanding you lower risk and minimize the size of the mistakes you will make."

"When opportunity knocks, if you keep some cash you can answer the door."

"Being generous is the hallmark of people who live successful lives and who operate business with soul."

"If the right hand doesn't know what the left hand is doing, disunity, anger, and frustration will fill your company."

If people don't see the big picture, there'll also be lots of missed opportunities. Great companies **constantly reinforce the value of communication** and are intentional about how/what they communicate.

- Keep repeating your company's *dream, vision, mission statement and goals*. Messages won't stick until people hear it many times. Share your company's story and history, as well as the future you're building together.

- *During crises*, it's critical to over-communicate with your team in terms of the frequency and amount of details.

- Don't tolerate any *gossip*. Get people to bring problems to leaders instead of complaining to peers or subordinates.

Facilitate communication using various tools/methods, e.g. weekly company-wide staff meetings (where each department quickly shares what it's doing), focused meetings (between senior leaders or within departments), mail (e.g. email or text messages), and 1-page weekly reports (for team members to consolidate and share what they've done). The goal is to create free-flow communication and alignment across the team. Leaders should also walk around the company regularly, sense the vibes and connect with people face to face.

Build Loyalty and Unity

You can't win your employees' **loyalty** unless you're first loyal to them. You're working with real people with dreams, goals, hopes and pain; get to know each person on your team, fulfill your promises and help them to live better lives.

Unity. Businesses are like a sports team or a music band—individual talent is useless if the members don't play in unity. Unity requires 5 key components: (i) frequent, open communication, (ii) A shared purpose (dream, vision and goals), (iii) no gossip, (iv) conflict resolution (so problems won't fester) and (v) performance management (so there's no sanctioned incompetence).

KEY QUOTES

"When in doubt, over-share."

"Communication is the grease in the gears."

"Hand your negatives up and your positives down. Otherwise it starts to sound a lot like gossip."

Magnify Success with Recognition and Inspiration

Every human being wants to be **recognized and appreciated**. Make the effort to catch people doing the right things. Recognize them with a nod/smile/compliment, in writing, with small tokens, and/or in front of those who matter to them (e.g. their peers or spouses). The key is to be intentional and sincere.

Create an **inspiring environment** by (i) casting vision, (ii) rewarding people when they win, (iii) focusing on a wider cause, (iv) telling stories of your past struggles/triumphs as well as current journey (customer emails, stories of outstanding service), (v) role-modelling your values and passion and (vii) leading by example.

Get a Grip on the Day-to-Day Operations

Get on top of these **3 technical aspects** of operations—contracts, collections and vendors—which affect your business health and send powerful signals to your team and customers.

Don't treat **contracts** as a form of protection or control. Contracts won't guarantee that people perform, keep their word or behave in a certain way.

- When a contract is violated, the cost of suing the other party is often too high to be worth the effort. Your best protection is to deal only with people with *integrity*.

- Instead, treat contracts as a *communication tool* to capture what you've agreed on. Do get a good attorney, consider various scenarios (including the best/worst-case scenarios), craft mutually-beneficial deals and educate yourself on key contractual terms.

Difficulties with **payment collection** are usually a sign of underlying problems, e.g. an unqualified prospect or a poorly-setup sales relationship.

KEY QUOTES

"People only allow themselves to be led when they feel valued and when they are treated with dignity."

"A contract is only as good as the people you are dealing with, so deal only with good people."

"Enter lawsuits only after you are ready to lay siege and wait years for the outcome."

"Collections problems are not the problem, they are the symptom."

- Set up proper *collection procedures*, e.g. a series of courtesy calls/reminders, followed by account termination or a shift to cash-on-delivery after 60/90 days.

- Ramsey recommends that you forgive *bad debts* if your company screwed up the service or if the customer is totally broke. Only consider suing if the customer has the money but refuses to pay, and the debt is a sizable one.

Build strong, long-term relationships with **essential vendors** who supply vital services to your company. Ensure that such vendors (i) are led by people with integrity, (ii) have the capacity to handle your needs, (iii) can operate viably at the prices you want, and (iv) are able to uphold the quality of your product/ service.

Motivate People with the Right Compensation Plans

How much you pay people tells them how much you value them. **Be intentional** about the message you send and reward only what you want more of.

- Use a *blend of compensation tools* including: (i) salary, (ii) profit share, (iii) commissions, (iv) profit and loss bonus (tied to a department or unit's P&L), (v) vesting (salary plus % gross revenue), and (vi) benefits (tailored for your company).

- It's easier to increase than decrease compensation. If you're launching a *new comp plan* (or a plan for an new area), reserve the right to adjust the plan for a period of time.

Delegate Effectively

For your business to grow bigger than you, you must **delegate**. Yet, you can only do so effectively after all the other components above are in place, i.e. you already have a clear vision, culture, operational foundations etc.

Delegating to your team is very much like giving freedom to a teenager. **Trust** is earned each time someone delivers what's promised, and shows that he/she has the integrity

KEY QUOTES

"Salespeople who beg instead of serve end up begging for the customer's money."

"You should outsource because a vendor has knowledge you don't have, can do something you can't do or can do something cheaper than you can."

"Be generous to the people who cause you to win."

"What you spend money on says what is important to you. A company's compensation system is a clear reflection of its corporate values and culture."

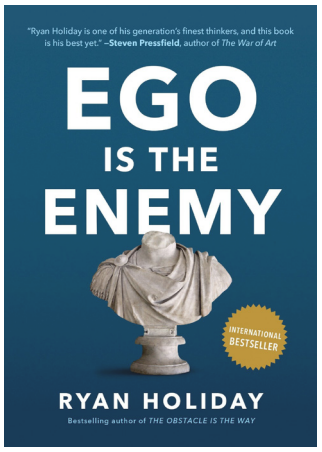
"Competency is about much more than whether the task is accomplished; it is also about how the task is accomplished."

and competency to handle a task in the desired way. The reverse happens when someone fails to deliver on their commitment.

Such a process takes time. Initially, you must **invest time/effort** to teach new people every detail that'd help them succeed in a role. Once you delegate something, make sure you give the person the authority along with the responsibility/ accountability.

KEY QUOTES

"Never give someone responsibility without the authority to perform.



EGO IS THE ENEMY

The Fight to Master Our Greatest Opponent

RYAN HOLIDAY

The Big "So What"

Ego is a primary obstacle to success in any phase of life. Whether you are just setting out, sitting at the pinnacle of success, or reeling from a precipitous fall, you must subdue your ego if you wish to capitalize on your opportunities and gifts. In this book, Holiday shares how we can master our ego to achieve what truly matters to us.

Introduction

By 25 years of age, Holiday had achieved considerable career progress with all the trappings of success, from money to press coverage and influence. Then, things fell apart and he lost his reputation, businesses, wealth, promoters and admirers. As he struggled to reconcile who he was without those success symbols, he realized that his ego had been his undoing—it had deceived him, set him up to fall and kept him from rebounding from failure.

In this book, Holiday shares the deep insights about ego, which he has developed through his personal experience and extensive research. He hopes that the pearls of wisdom will help you to make the right decisions at the critical junctures of *your* life.

What is Ego?

In the context of this book, ego refers to the belief that we're special and better than we really are. It's an inflated sense of self that wraps us in fantasy and blinds us to the truth about ourselves.

- To attain true *excellence and mastery*, you need to face your inadequacies and fears. Ego makes you less receptive to

KEY QUOTES

"I wrote this book not because I have attained some wisdom I feel qualified to preach, but because it's the book I wish existed at critical turning points in my own life."

"I hope you will be less invested in the story you tell about your own specialness, and as a result, you will be liberated to accomplish the world-changing work you've set out to achieve."

"We assume the symptoms of success are the same as success itself—and in our naiveté, confuse the byproduct with the cause."

feedback, miss out on learning opportunities, and lose touch with yourself and others around you. It creates a sense of entitlement, so you blame others when things don't go as expected.

- *Modern culture promotes egotism*. We're constantly surrounded by messages that tell us we're special and deserve success. We can use social media to self-advertise and be "liked", we can self-publish to make ourselves "authors" or even print business cards with fancy titles.

Everyone goes through **3 experiences**: aspiration, success and failure. The book shows how ego can get in the way at each phase, and what you can do about it.

Mastering your ego doesn't mean denying your talents or individuality. It's about putting aside the sense of superiority so you become connected and grounded in reality, and can be confident without being arrogant. This frees you up to focus on your inspiration or mastery, so you'll achieve even more.

Part 1: Aspiration

When you're just starting out, your ego can be an obstacle if you think you already have what it takes and know exactly know what to do. You end up focusing on appearances instead of objectively examining the situation, addressing your shortfalls and doing the hard work with humility and patience.

Big dreams alone won't deliver success in a new venture, and can even derail you if they're not grounded in reality. Success doesn't come from 1 big leap, but a series of small, iterative steps. It's ok to have a big vision so long as you take the **small, concrete steps** to move toward your goal.

There's nothing wrong with talent and ambition. The problem is when they're not backed by real work and achievements. **Build self-awareness, not self-esteem**.

- Don't focus affirming how good you are; self-esteem, talent and potential are useless without realism, effort, and perseverance. It's more vital to develop self-awareness so you know where you stand and what you must learn/do.

KEY QUOTES

"If you start believing in your greatness, it is the death of your creativity."
—Marina Abramovic

"Ego is the enemy of building, of maintaining, and of recovering."

"To whatever you aspire, Ego is your enemy."

"Though we think big, we must act and live small in order to accomplish what we seek."

"Ego is stolen; confidence is earned."

"Facts are better than dreams."
— Winston Churchill

- Union General William Sherman, one of US' greatest military general and strategic thinker, was someone who kept his ego in check in spite of real achievements. He accepted his promotion to brigadier general on the condition that he'd remain second-incommand until he gained the necessary experience. At the siege of Fort Donelson, he ceded command to General Ulysses Grant (whom he assessed to be more suited for the task) and happily played a supporting role. Despite his fame by the end of the war, Sherman chose to do his job humbly instead of seeking political office.

Talk is Cheap

Big talk is no substitute for action and only **hinders results**.

- You can't chatter and think deeply at the same time. Talking exhausts valuable time and energy which could've been better spent on brainstorming, planning, learning, or problem-solving. People also use talk to escape from the difficult tasks at hand—they spend so much time talking about something that they *think* they've done the work or put in their best effort when they haven't done anything of value.

- In 1934, author Upton Sinclair was running for the governor of California. He wrote a book that detailed his political exploits as the governor as if they were already accomplished. Having exhausted his inspiration on the book, he lost the election by a huge margin.

- Social media only encourages us to "talk" more. It's easier to post and tweet about how well we're doing rather than actually do the work. We end up looking great but not getting any real results.

Silence is a mark of strength, not weakness. People who need validation will keep talking about how great they are. People who're strong and confident will quietly do the work and let the results speak for themselves.

KEY QUOTES

"Be natural and yourself and this glittering flattery will be as the passing breeze of the sea on a warm summer day."
— General William Sherman

"Success requires a full 100 percent of our effort, and talk flitters part of that effort away before we can use it."

"Those who know do not speak. Those who speak do not know."
— Lao Tzu

"Silence is the respite of the confident and the strong."

Go for Substance over Image

To satisfy our ego (our pride, need for approval and desire for power/status), we often **choose image over real accomplishment**.

- Titles, accolades and fame do not equate greatness. Don't allow your desire to *appear* successful to overpower your ability to become *truly* successful.

- John Boyd was a brilliant fighter pilot and strategist whose biggest impact came from the people he mentored and inspired. He told his protégés that life is full of crossroads where you have to choose between *being* someone (with wealth, status, fame etc.) and *doing* what you truly believe in (even if it's unpopular or unseen). The choices you make will define your life. Be a doer, not a pretender.

Be guided by a purpose that's larger than you. Each time you're tempted by something, ask yourself if it *really* serves your wider purpose or if it's just your ego calling. Go for true accomplishments in line with your purpose, not the mirage of being accomplished.

Be a Lifelong Student

Learning is a process, not an event. Real success goes to those who keep learning in the University of Life. When guitarist Kirk Hammet was hired by Metallica, he didn't take it as a sign that he had "arrived". Instead, he sought an instructor (Joe Satriani) who challenged him to learn and improve. Hammet went on to become one of the greatest Metal guitarist of all time.

A **great student** is humble, curious, observant, eager to improve and open to feedback. Put aside your ego so you can acknowledge your learning gaps and address them.

KEY QUOTES

"Appearances are deceiving. Having authority is not the same as being an authority. Having the right and being right are not the same either."

"To be somebody or to do something. In life there is often a roll call…To be, or to do? Which way will you go?"
— John Boyd

"The pretense of knowledge is our most dangerous vice, because it prevents us from getting any better."

Focus on Purpose, not Passion

Passion (raw, uncontrolled enthusiasm) isn't enough for success and may even **obstruct progress**. Passion is often a cover for weakness, impatience or naiveté. When you're fueled only by passion, you may jump into something recklessly, or get so lost in daydreams that you neglect real action.

Focus on your purpose instead, i.e. passion tempered with direction, discipline and realism. You can stay in motion without being constantly excited or excitable.

- UCLA football coach, John Wooden, took his team to multiple victories by focusing on hard work and self-control, not the drama around football. Eleanor Roosevelt, one of the most influential female activists in history, was known for her purpose, direction and reason (not her passion).

- Purpose injects a dose of realism to shift the focus away from personal enthusiasm/glory to the often-unglamorous steps needed to deliver real results, including planning, hard work and self-assessment.

Be an Ace Apprentice

Today, many young people are unwilling to serve. They expect to start with a high position, set their terms of employment, and would rather stay unemployed than take a job that's "beneath" them. Many famous people (from Michaelangelo to Ben Franklin) started as apprentices and worked their way **from bottom up**.

If you're just starting out, you're not as great as you think and much of what you know isn't even relevant. Drop the sense of superiority and entitlement and adopt the "**canvas strategy**": be the canvas upon which others can display their work.

- Apprentice yourself to a great person/enterprise, and offer exemplary service in whatever capacity you find yourself. Devote yourself to your superior's success without seeking credit, e.g. share ideas freely, reduce waste, connect people, and do what nobody wants to do.

KEY QUOTES

"Great passions are maladies without hope."
—Goethe

"Purpose, you could say, is like passion with boundaries."

"Greatness comes from humble beginnings; it comes from grunt work."

"Be lesser, do more."

- When you clear the path for others, you're also creating a path for yourself since you'll learn, grow, and become valuable.

Maintain Self-Control

Regardless of who you are or what you've achieved, you will experience **mistreatment**, e.g. indifference, rejection or even sabotage. Your success will depend, at least in part, on how much nonsense you can bear.

Learn to **stay calm and restrain yourself**.

- When others treat you poorly, it reflects badly on them, not you. You're responsible only for *your* response. It takes more courage not to fight back to protect your pride/ego.

- Jackie Robinson suffered much racist opposition while attempting to break into baseball. It wasn't fair, yet he took it in his stride and focused on his goal, eventually becoming the first black player in the Major League Baseball.

Get Out of your Head…into the Real-World

When you spend all the time in the **egocentric world in your head**, you can't make progress in the real world.

- Some people dwell so much on their dreams (as if they're already real) that they lose the ability to take concrete action. General George McClellan spent so much time imagining all the victories he accomplished that he failed to take action for months, leading to many lives lost in reality.

- Others waste all their efforts on polishing their personal brand instead of backing it up with actual outcomes.

Stop thinking that everyone is watching you—they're not. **Stay anchored in reality** and do the work.

KEY QUOTES

"It doesn't degrade you when others treat you poorly; it degrades them."

"You're not able to change the system until after you've made it."

"Don't live in the haze of the abstract, live with the tangible and real."

"There's no one to perform for. There is just work to be done and lessons to be learned, in all that is around us."

Pride Goes Before the Fall

Regardless of whether you're a beginner or a veteran, **pride is damaging** because it deludes you into thinking you're better than you are. It distracts you from the practical tasks at hand. Even if you appear humble on the outside but *think* you're superior, it's still pride.

Don't allow your self image to exceed reality. Seek advice and feedback (not affirmation) and stay focused on your goal (not how great you are). Genghis Khan's advice to his sons and generals was: "If you can't swallow your pride, you can't lead." Ask yourself: what could a humbler person see that you're currently missing?

Keep Doing the Work

Dreams and ideas are worthless if you don't put in the work to bring them to fruition. You can't become a poet by experiencing the poetry in your mind; you must put it into words. And, since there's no end-point to mastery, **your work never ends**. Just keep going.

Your ego doesn't want the hard work; it only wants to share big ideas, get affirmation and applause. Don't "fake it until you make it". Do the work and **actually make it** so you needn't fake it.

Part 2: Success

Once you've achieved some success, it's normal to feel a sense of pride and accomplishment. The danger comes when you start believing that you're special and above the rules. Ego can make you complacent (you think you've "arrived") or push you to blindly pursue more. You stop doing what brought you success in the first place. No matter how much you've achieved, stay anchored in your purpose, values and principles, and remain humble and disciplined.

KEY QUOTES

"Whom the gods wish to destroy, they first call promising."
—Cyril Connolly

"Let's call [pride] what it is: fraud."

"You can't build a reputation on what you're going to do."
— Henry Ford

"There is no triumph without toil."

"Make it so you don't have to fake it."

"You thought it would get easier when you arrived; instead, it's even harder—a different animal entirely."

"Can you handle success? Or will it be the worst thing that ever happened to you?"

Keep Learning

With each success (e.g. getting promoted to a bigger role or growing your business to a new level), you'll face **new challenges**. To stay successful, you must keep learning, improving and adjusting.

- The higher we rise, the more we see and realize how much we *don't* know. Yet, ego pushes us to pretend to know, or to confine ourselves to a niche where we won't be challenged.

- Gheghis Khan was one of the greatest conquerors and military minds in history because he was a lifelong student. With each culture he conquered, he broadened his knowledge of warfare and learned ideas and technologies from smart people like astrologers, doctors, and scribes.

Learn from everyone and everything. Read up on a totally new subject, learn from both your friends and foes, and sharpen *how* you learn.

Focus on Facts, not Stories

It's common for people to look back and **tell stories about their success** as if it was inevitable and they knew exactly how/when they'd get there. The ego filters out doubts, failures, lucky breaks and the fact that they never had complete foresight or control.

Such false expectations can cause you to lose what you've worked so hard to achieve. **Focus on facts**, not stories (be it others' stories, your stories or what others say about you). Coach Bill Walsh transformed the 49ers from worst team in football history to Super Bowl champions in 3 years. He refused to speculate when they'd win the Super Bowl; he simply focused improving the team's standards—from the cleanliness of the locker room to sportsmanship and precision in training/practices. The results spoke for themselves.

KEY QUOTES

"As our island of knowledge grows, so does the shore of our ignorance."
—John Wheeler

"We must be willing to lay down our trophies and pick up the resources for learning."

"Instead of pretending that we are living some great story, we must remain focused on the execution—and on executing with excellence."

Know What Truly Matters

Your ego has an insatiable appetite. Once you've tasted success, it'll keep telling you to **push for *more***. It wants what others have and refuses to accept trade-offs. In reality, you can't have everything. You can't be a faithful husband *and* have many lovers. You can't concurrently be a sumo wrestler *and* a professional ballerina.

Say "yes" *only* if something is **aligned with your goals/priorities**, not for others' approval or for fear of losing out.

- After their Union victories, both Grant and Sherman were celebrities in the country. Grant's desire for fame and fortune led him to run for presidency and later invest in a brokerage house, neither of which were his areas of strength. His 2 terms as President were a political mess, and the brokerage firm left him in financial ruin. On the other hand, Sherman chose to focus on his strengths/interests before retiring in New York.
- Strive for *Euthymia*—a calm confidence in knowing and sticking to your own path.

Recognize the 3 Faces of Ego

Ego creates **3 fatal delusions** that exhaust everyone around us, rob us of the joy of success and invite the exact outcomes that we fear.

- *Entitlement*: We feel that we've earned or deserve whatever rewards we want. We act as if the world is indebted to us.
- *Control*: We want everything to be done our way. We quibble over trivial details or things beyond our control.
- *Paranoia*: We think the world is out to get us or people around us are all fools.

KEY QUOTES

"The more you have and do the harder maintaining fidelity to your purpose will be."

"He who indulges empty fears earns real fears."
—Seneca, Roman advisor

Know What Truly Matters

With success, your roles and responsibilities will **grow and change**. You may have to delegate tasks that you enjoy doing, seek advice from others, and learn to make important decisions.

- Dwight Eisenhower could juggle the heavy responsibilities as the 34th US president and still have time for himself because he resolutely focused on the most critical matters. On the other hand, John Delorean (founder of DeLorean Motor Company) was brilliant as an inventor but terrible as a business owner because he lacked the discipline and focus for execution. To succeed, you must *manage yourself* and direct your resources in line with your goals/principles.

Don't Catch the "Disease of Me"

Championship coach Pat Riley said that there's a pattern among great teams. Before they taste victory, they're "innocent" and work in unity toward a common goal. Once they start winning and attracting media attention, personal egos take over. The "**Disease of Me**" sets in, unity crumbles and results dip. Early in our careers, we're usually more willing to make sacrifices or be looked over. Once we "get there", we feel entitled, start to glorify ourselves and lose sight of the bigger purpose.

General George Marshall's accomplishments eclipsed those of other WWII generals primarily because he stayed out of the politicking and limelight to focus on his priorities—his men and country. There's nothing wrong with wanting to excel and be recognized. The key is to **temper ambition** with humility, purpose and contribution.

Connect with the Big Picture

Self-centered achievements will always leave you feeling isolated and empty. The only way to derive **true meaning** is go beyond yourself. Stoics use *sympathica* to refer to this deep sense of connection to something bigger than yourself.

KEY QUOTES

"Every man is a quotation from all his ancestors."
—Emerson

Whenever you think the world revolves around you, step out and remind yourself **how immense the world really is**. Spend time alone in the wilderness, or visit an important historical site/museum to sense the generations of people and living creatures that've walked the Earth before you (and will continue to do so after you). Yes, you have a role to play. But you're still just a grain in the sands of time.

Maintain Your Sobriety

Our ego tells us we're invincible and can maintain our success with our zeal/enthusiasm alone. In reality, we don't have an infinite supply of energy. We need sobriety (a command of self) to restrain the ego and make **sound judgment** so we don't expend ourselves needlessly.

Don't be deceived by the trappings of success around you. German Chancellor Angela Merkel is a modest, plain and reserved leader, Yet, she was re-elected time and again over her peers. It's possible for successful people to live modestly under the radar, and many do.

Part 3: Failure

Failure (big or small) happens to everyone. There's no point in lamenting how unfair it is. Your response to setbacks will decide your outcomes: stay strong and resilient so you can rebound and move ahead. The end goal is not just to achieve success; it's to know that we can handle whatever life throws at us. John Kennedy Toole took his life after his manuscript for "A Confederacy of Dunces" was repeatedly rejected. His mother eventually got the book published and it won the Pulitzer Prize. The material was the same; what differed was their response.

Exploit Your Downtime

Failure can disrupt our lives and bring things to a standstill. You can **use your downtime** to wallow in self-pity or to improve yourself. After landing in prison at 21 years old, Malcolm X

KEY QUOTES

"Yes, we are small. We are also a piece of this great universe and a process."

"We have to fight to stay sober, despite the many different forces swirling around our ego."

"Failure always arrives uninvited, but through our ego, far too many of us allow it to stick around."

"The only way out is through."

decided to use this time to self-study. His time in prison ended up paving the foundation for his future success. When Ian Fleming was put on bed rest, he wasn't allowed to use a typewriter. So, he started writing with a pen and produced his well-loved fantasy Chitty-Chitty Bang-Bang.

When you're hit with failure, don't dwell on the problems, hide from them, or plot revenge. Reflect on how your choices have led to where you are, and use what you have to **turn things around**.

Do Your Best and Release the Rest

No matter what you do or achieve, there'll always be people who react negatively. Don't let that stop you from **doing what you believe in**. Belisarius was Rome's top commander under emperor Justinian. Despite his victories and service to Rome, Justinian repaid him with jealousy and accusations. According to legend, he had Belsarius blinded and consigned to a life as a beggar. In spite of that, Belisarius retained his equanimity. Right till the end, he dedicated himself to his sacred duty and said "This, too, I can bear; I still Am Belisarius."

Just do your best and leave the outcome in God's hands. **Draw inner satisfaction** from knowing you've done what you should, regardless of others' response.

Rebound from Rock Bottom

At some point, **everyone hits rock bottom**, be it an illness, accident, bankruptcy or betrayal. Crises are actually opportunities to uncover deep insights that'd help us to leap forward. They force us to confront fallacies that we may have been avoiding.

Transformation can only occur if we're willing to **hear and accept the truth**, even if it hurts. Unfortunately, ego tends to deny the truth and reinforce the lie. When Lance Armstrong's doping became public he could have owned up, faced the consequences and moved forward. Instead, he doubled down on his delusion only to do further damage to himself and others.

KEY QUOTES

"We don't need pity—our own or anyone else's—we need purpose, poise, and patience."

"Success is peace of mind, which is a direct result of self satisfaction in knowing you made the effort to do your best to become the best that you are capable of becoming."
—John Wooden

"Do your work. Do it well.... That's all there needs to be."

"There are many ways to hit bottom. Almost everyone does in their own way, at some point."

"We cannot be humble except by enduring humiliations."
—Reverend William Sutton

Don't Make it Worse

Our ego wants to hide our failures and protect our image at all cost. It leads us to take **drastic steps** that only make things worse. When John Delorean's business started to fail, he resorted to drug dealing to raise money, sealing his own ruin when he was arrested.

It's inevitable to mess up now and then. Don't let a loss or bad stretch ruin your whole life. Humble yourself, take ownership for your failure and move forward with **fortitude/integrity**. Steve Jobs' poor leadership and out-of-control ego caused him to be fired from Apple. After devoting himself to his new companies, learning and correcting his flaws in the process, he returned to Apple as a much better leader.

Establish your Own Standards

Successful people don't live by others' standards or try to work around the system. They hold themselves to an inner moral compass and their **own exceptional standards**. New England Patriots' quarterback Tom Brady was selected in the 6th round of their draft pick. When the Patriots realized how good Brady was, they didn't congratulate themselves. They set out to improve their scouting process and investigate how they'd missed such a talent in the first 5 rounds.

Seek to **become the best possible version of yourself**. Focus on staying true to yourself and beating your personal bests. That way, you won't be carried away with a win or feel degraded with a loss. It'll keep you steady and resilient.

Choose Love over Hate

When things go wrong, our ego focuses on **hate and blame**, which only wastes our precious time/energy and makes us feel miserable. Any retaliatory action may also backfire. When Barbara Streisand insisted on removing a picture of her home from the Internet, it only roused people's curiosity and generated *more* views of the photo.

KEY QUOTES

"Most trouble is temporary... unless you make that not so."

"If your reputation can't absorb a few blows, it wasn't worth anything in the first place."

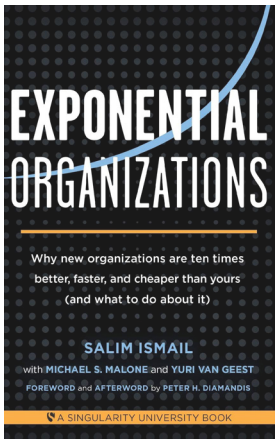
"Your potential, the absolute best you're capable of—that's the metric to measure yourself against. Your standards are. Winning is not enough."

"Attempting to destroy something out of hate or ego often ensures that it will be preserved and disseminated forever."

It's much better to **choose love**: love the person who cuts in front of you in the queue or the colleague who "stole" the credit for your work. If you can't love them, at least forgive them. Let it go. Media magnate William Hearst believed that Orsen Welles' movie, Citizen Kane, was all about him. He poured his wealth and influence into a huge campaign to suppress the film, which succeeded only in putting himself in bad light and delaying the film's success. Welles, on the other hand, responded with restraint and humor. He soldiered on and eventually attained great success.

KEY QUOTES

"Why should we feel anger at the world? As if the world would notice.
—Euripides



EXPONENTIAL ORGANIZATIONS

Why new organizations are ten times better, faster, cheaper than yours (and what to do about it)

SALIM ISMAIL (with Mike Malone & Yuri van Geest)

The Big "So What"

Today, we're surrounded by massive, disruptive changes, which will grow even faster and more extensive. No company or industry is immune. This book equips business leaders with the knowledge and strategies to build and scale organizations that can thrive in times of exponential change.

Introduction

In the early days of agriculture, there was a linear relationship between input (e.g. # oxen or human laborers) and output (e.g. amount of crops). With the birth of machines during the industrial age, the input-output ratio grew dramatically. Large corporations that invested in machines and long-term R&D thrived.

Yet, these large corporations are now being obliterated by a new breed of companies. Between the 1920s and 2014 (when this book was published), the lifespan of Fortune 500 Companies fell from 67 to 15 years. Billion-dollar companies like Instagram, Youtube and Airbnb are achieving exponentially higher growth at a fraction of the time/cost, making it impossible for traditional businesses to compete.

To survive and thrive in times of exponential change, we need to build Exponential Organizations (ExOs), i.e. organizations whose impact or outputs are ≥10x larger than their peers due to how they leverage accelerating technologies. This summary is organized into 2 parts:

- Understanding ExOs: the factors and attributes behind ExOs' exponential growth, and why they thrive in this new environment; and

KEY QUOTES

"We've learned how to scale technology; now it's time we learned how to scale organizations."

"Any company designed for success in the 20th century is doomed to failure in the 21st."
—David S. Rose

"This new age calls for a different solution to building new business, to improving rates of success and to solving the challenges that lie ahead. That solution is the Exponential Organization."

- Building ExOs: how to start ExOs, transit or respond to ExOs.

Part 1: Understanding Exponential Organizations (ExOs)

From Linear to Exponential Growth

Moore's Law says that the power of computation doubles every 18 months. Kurzweil's Law of Accelerating Returns goes further to say that:

- Moore's Law can be found in *any information technology*;
- The accelerated growth is triggered once something (a technology, industry etc.) becomes *powered by information*;
- Once the doubling starts, it *doesn't stop* (because the new tech is used to build even better tech); and
- *More and more technologies* are now undergoing accelerated growth, including medicine, biotech, robotics, artificial intelligence (AI), etc. This means a higher chance of them *intersecting* to create even *more* explosive growth. For example, the introduction of digital cameras brought the marginal cost of photo-taking down to zero. Concurrently, there were exponential changes in social media, smart-phone technology, network speed, etc. When combined, these allowed digital photos to be taken, edited, stored, shared and used in countless ways that weren't even conceivable in the analog age.

ExOs can grow so rapidly because they **rely on information technologies, not physical resources**. This allows them to halve their prices and/or double their performance every 1-2 years.

- Yet, experts and traditional organizations still tend to *think linearly*. In 1990, the Human Genome Project was launched to fully sequence 1 genome. By 1997, the team had only sequenced 1% of the human genome. Experts condemned the project to fail, saying it'd take another 700 years to finish the project. Yet, the project was completed just 4 years

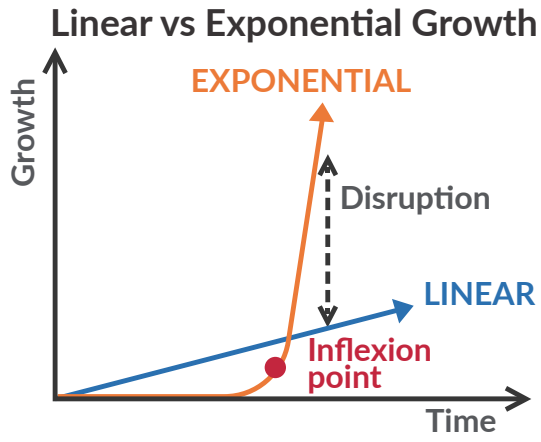
KEY QUOTES

"The era of traditional, hierarchical market domination by dinosaur companies is coming to an end. The world now belongs to smarter, smaller and faster-moving enterprises."

"An information-based environment delivers fundamentally disruptive opportunities."

later in 2001 because it was moving at an exponential (not linear) rate. Genome sequencing continued to progress exponentially, with costs plummeting from $2.7bil for the first project to $100k in 2011 and $1,000 in 2014.

- This same trend can be found across other exponential tech. Average 3D printing costs fell 400x in 7 years, industrial robots cost fell 23x in 5 years, solar costs fell 200x in 20 years, and so on. The internet and and info revolution may have brought *disruptive changes* to many industries (e.g. publishing, travel, advertising), yet we've probably seen only <1% of the changes to come in the next 30-40 years.



Linear thinking works in a stable/predictable environment, where past successes can be used to project future growth. In face of exponential changes, you need a **fundamental shift in thinking**.

- In 2007, Nokia invested $8.1bil to buy Navteq, the market leader in road sensors. That same year, Apple launched the iPhone, catalyzing a tsunami of changes in smartphones and related apps.

- A small Israeli company, Waze, soon entered the market. Unlike Nokia (which followed old rules and invested in physical infrastructure), Waze used crowdsourcing to tap on the GPS sensors on users' phones. They could gather traffic data rapidly and ride on technology upgrades on users' phones without heavy hardware investments. Waze grew exponentially and was acquired by Google in 2013 for $1.1bil. Nokia's market valuation tanked and was knocked out of the game.

ExO Characteristics and Attributes

The authors **studied 100 fastest growing startups** globally over 6 years, focusing on ExOs that grew their outputs by at

KEY QUOTES

"When you think linearly, when your operations are linear, and when your measures of performance and success are linear, you cannot help but end up with a linear organization."

"Traditional linear thinking doesn't work in an exponential world. Simply put, it cannot compete."

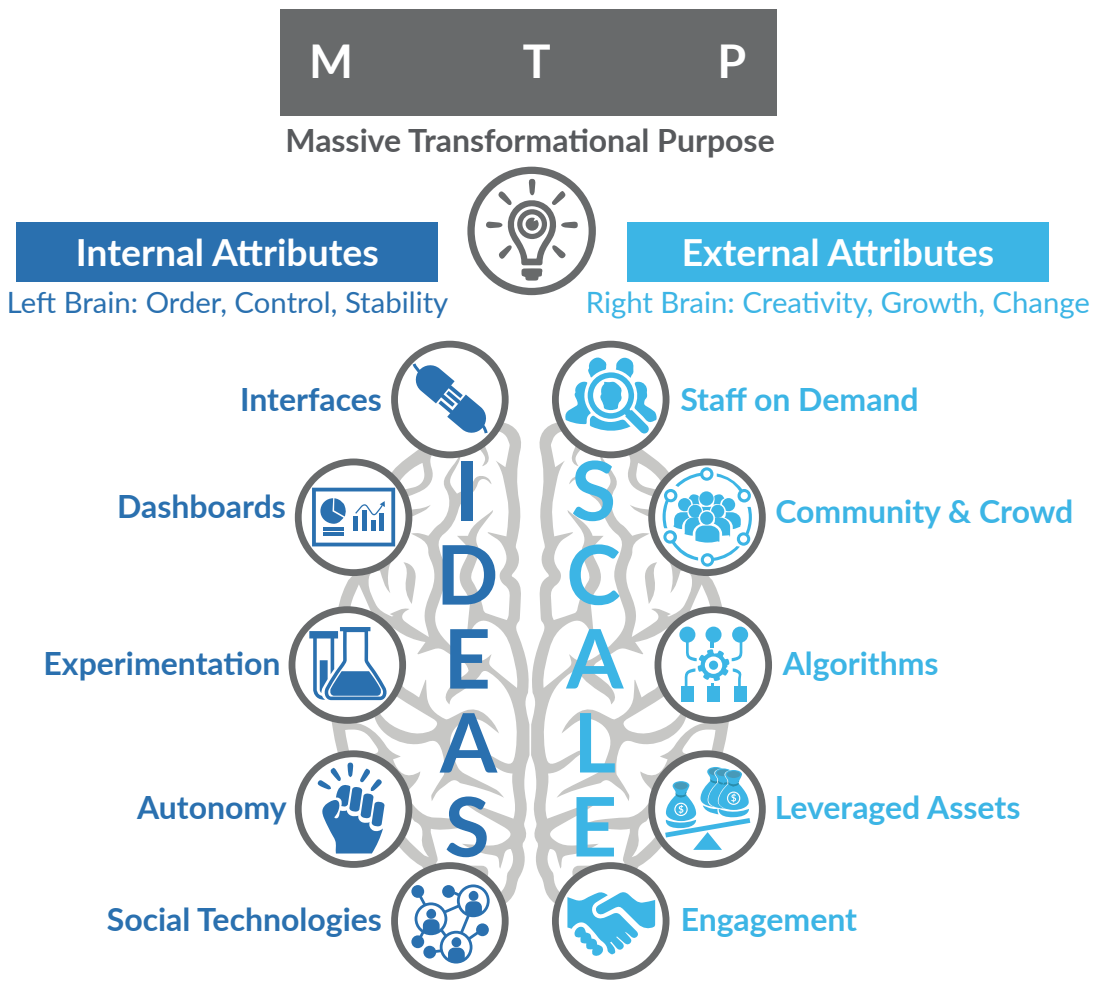
least 10x in 4-5 years. These included: Airbnb, GitHub, Local Motors, Quirky, Google Ventures, Valve, Tesla, and Tangerine.

- Each of these ExOs *reached billions in valuation in <6 years*. For example, Quirky can bring a product from concept to retail shelves in just 29 days (vs 253 days for an average Consumer Packaged Goods company). Airbnb reached almost $10 bil in valuation—more than Hyatt Hotels—within 6 years of its startup, even though it had no physical assets.

- *All* of these ExOs (i) leverage resources that they don't own, and (ii) use information as a key driver. In particular, each ExO fulfills *at least 4 of 11 key attributes* including:

  (i) A Massive Transformative Purpose (MTP); and

  (ii) ≥3-4 of 10 key internal/external attributes that accelerated their growth. These are akin to the 2 two hemispheres of the brain—the right brain focuses on creativity and growth while the left brain focuses on control and stability.



KEY QUOTES

"The real, fundamental question of our exponential age is: 'What else can be information-enabled?'"

Massive Transformative Purpose (MTP)

Every ExO has an MTP or a **higher, aspirational purpose** that drives them to pursue unconventional strategies and rapid growth.

- An effective MTP must be unique and supported by leaders who walk the talk. It must also be *aspirational*, i.e. it captures what the ExO aspires toward, e.g. "Ideas worth spreading" (TED) or "Organize the world's information" (Google).

- It's broad enough to capture the imagination and ambitions of both internal and external stakeholders, creating a *cultural movement and ecosystem* around the ExO. Think of Apple fans queuing up for their product launches and the large community of iOS app-developers.

A strong MTP offers real **competitive advantages**:

- It creates a strong *brand positioning* that's hard to dislodge.

- It attracts *talent*, acts as an anchor in face of change/ uncertainty and thus reduces acquisition, retention and attrition costs.

- An ambitious MTP solves a big problem to create *economic value*.

5 External Attributes: SCALE

Staff on Demand (SoD). In a fast-changing environment, it's hard to keep employees' skills and knowledge updated. Most ExOs don't have permanent, fixed relationships with the bulk of their workers. For example, Gigwalk taps on a network of smart-phone users who can be hired for gigs.

- With billions on people on the internet, a growing number and quality of freelancers as well as hiring platforms, it's now possible to *get talents for almost anything*. P&G uses Gigwalk's network to do real-time checks on their stocks on supermarket shelves. Insurance giant Allstate uses contests

KEY QUOTES

"Aspirational brands create positive feedback loops in the ExO's community: customers feel good about the products and are increasingly proud to be part of a larger, virtuous movement."

"No matter how talented your employees, chances are that most of them are becoming obsolete and uncompetitive right before your eyes."

to improve its algorithms. CEOs can even hire people to track and manage their board of directors.

- SoD provides *several benefits*, including (i) low fixed costs, (ii) flexibility to rapidly scale up/down or change your skills-mix, and (iii) diversity and fresh ideas.

Community & Crowd. ExOs customers are often connected in self-supporting communities. They work with each other and with the ExO. Chris Anderson's "DIY Drones" community managed to design and build a $300 drone that's similar to the US military's Predator drone (which costs $4mil).

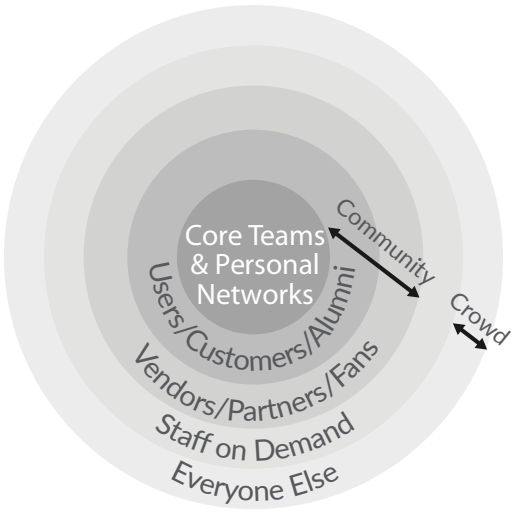
- You can find *communities* on the internet for almost any interest, goal or belief. Startups can join existing communities, then branch out after building a critical mass. To build a community:

  (i) Use the MTP to attract and engage your initial members.

  (ii) Nurture the community by listening and contributing to it. Treat this as a long-term investment, not a transactional relationship.

  (iii) Create a platform to facilitate/automate peer-to-peer exchanges, like how Airbnb connects hosts and users for bookings and reviews.

- *Crowds* are beyond your core community. They're harder to reach, but include many more people. You can leverage on crowds for (i) creativity (e.g. generate, develop or spread ideas & innovations), (ii) validation (e.g. check if a product/service meets expectations), or (iii) funding (e.g. via crowdfunding).



Algorithms and AI can reduce human biases and errors in decision-making, as well as handle complex modelling. Google grew its revenue by >100x from 2002 to 2012 primarily due to its PageRank algorithm. Today, it uses data in *all* aspects of its operations.

KEY QUOTES

"If you build communities and you do things in public, you don't have to find the right people, they find you."
—Chris Anderson

"True community occurs when peer-to-peer engagement occurs."

"Almost all the business insights and decisions of tomorrow will be data-driven."

- There are now *2 types of algorithms* shaping the future:

  (i) Machine Learning (ML) is about using training/historic data to predict and perform new tasks, e.g. using past movie ratings to create algorithms for movie recommendations.

  (ii) Deep Learning (DL) is a subset of ML. It's about using discovery and self-indexing (*without* historical/training data) to identify/learn new patterns. It's similar to how a child picks up a new language.

- ExOs typically *apply algorithms in 4 steps*:

  (i) Gather data (via humans/sensors or from external sources);

  (ii) Organize the data (extract → transform → load);

  (iii) Apply ML or DL tools (to analyze trends, insights or create new algorithms); and

  (iv) Expose the data to the ExO community, so they can use it to develop new services, functions or innovations.

Leveraged Assets. It's common for businesses to lease non-strategic items like office space or copiers. However, ExOs also lease assets in *strategic* areas, e.g. Airbnb doesn't own the rooms being rented out. This (i) lowers the marginal cost of supply, (ii) removes the need for assets management, and (iii) provides the flexibility to scale up/down quickly. The only exception could be for scarce resources (e.g. Tesla owning its factories).

Engagement is about creating positive feedback loops that improve loyalty, ideation and learning, all of which allow ExOs to create network effects for rapid growth.

- *Key techniques* include: gamification, digital reputation systems, and incentive competitions (e.g. prizes for the best ideas or the "Employee of the Month" award). Effective engagement usually involves elements like social comparison, a sense of control/impact, clear rules/goals, instant feedback, a scoring system, and rewards for outputs/results.

KEY QUOTES

"Gaming isn't just something that young people do, it is a large part of what and who they are."

- It can increase *collaboration, loyalty and innovation* in both internal and external ecosystems.

5 Internal Attributes: IDEAS

Interfaces. SCALE generates so much external data/activities (and at such a fast pace) that ExOs must have strong internal mechanisms to robustly filter and match these inputs to their internal goals. Interfaces basically act as the *bridge* between external growth drivers and internal stabilizing factors.

- Interfaces usually start out as manual processes (which are slower and more error-prone). Over time, they're *progressively automated* until the ExO can run certain processes fully on algorithms, e.g. Google Adwords use algorithms to manage online searches/ads. Quirky's interfaces help it to filter, rank and manage >1 million inventors in its community.

- Such interfaces are usually *unique and proprietary* to the ExO, and become a valuable intellectual property.

Dashboards. ExOs make key external/internal data clear and accessible to everyone.

- Today, it's much *easier to collect and process data* like #users, registrations, upgrades, and cash receipts. With technology (e.g. Internet, cloud and sensors), you can also track and analyze data across time and geographical boundaries.

- ExOs widely use *Objectives and Key Results (OKRs)*: they define where they wish to go (objectives) and the metrics (key results) that'd tell them if they're on-track. Focus on *value metrics* that provide real insights for business growth (e.g. repeat usage, retention %, Net Promoter Scores). Put these metrics on a *live dashboard* so you can evaluate your organization's internal and external performance real-time and take timely actions.

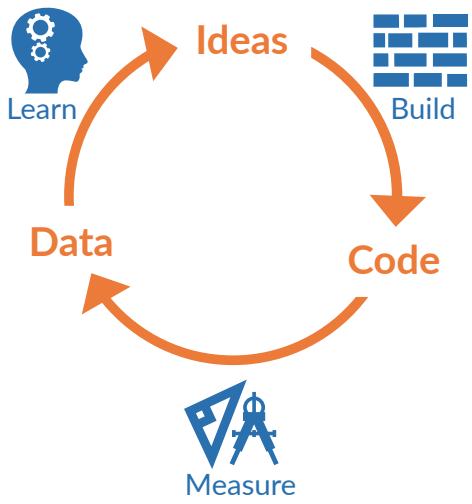
Experimentation. With today's rapid rate of change, you can't afford not to try new ideas. Use experiments to quickly test and filter lots of ideas at minimal costs/risks.

KEY QUOTES

"Interfaces are critical if an organization is to scale seamlessly, especially on a global level."

"Large numbers of bottom-up ideas, properly filtered, always trump top-down thinking, no matter the industry or organization."

- Use the *Lean Startup approach* to constantly test assumptions and validate ideas in the Build-Measure-Learn loop, i.e. research customer needs → test if an idea fulfills those needs → refine & test next iteration. Your goals are to (i) know asap if you're on the wrong track, and (ii) discover new insights/paths that you wouldn't otherwise have considered.



- In ExOs, ideas are generated and tested at *all parts of the organization*. For example, Adobe Systems encouraged its employees to pursue new ideas by equipping them with a workshop, a startup guide, $1,000 seed money, and support from innovation coaches.

- Successful experimentation requires a *willingness to fail*. Validate ideas in weeks or months instead of wasting time/resources building things the market doesn't want. If a product doesn't meet your goals, pivot or redirect the resources elsewhere.

Autonomy is about having small, self-organizing, multi-disciplinary teams that operate with decentralized authority.

- This allows the organization to *innovate and evolve rapidly*. For example, gaming company Valve Software gives its staff the freedom to join or start projects that fit the company's MTP.

- *Autonomy ≠ No accountability*. The difference is, people and resources are organized around competencies and results (not job titles). People are regulated by peer-accountability (not top-down authority).

Social Technologies are about using digital mediums and platforms to achieve *3 key goals*: (i) close the gap between info and decision-making, (ii) let info flow to you instead of having to look for it, and (iii) leverage communities for ideas.

- These can be broken down into *7 main components*: (i) social goals (e.g. manage employee relations), (ii) activity streams (e.g. share key data/updates), (iii) task management

KEY QUOTES

"Success is a lousy teacher. It seduces smart people into thinking they can't lose."
—Bill Gates

"Autonomy is a prerequisite for permissionless innovation."

(e.g. dynamic metrics & results-tracking), (iv) file-sharing (using tools like Google Drive or Dropbox), (v) telepresence (e.g. connect via videoconferencing), (vi) virtual worlds (where people can collaborate & interact), and (vii) emotional sensing (using tools like sensors or neurotech).

- Social technologies can increase transparency and connectedness to *accelerate decision-making, learning and innovation*. This reduces the time taken for a fresh idea to be reviewed and implemented.

Most ExOs do *not* have all 10+1 attributes. Generally, if you have ≥4 out of 11 attributes, you're likely to achieve 10x better performance. You can use the diagnostic test in the book to evaluate how exponential your organization is.

9 Dynamics of an ExO Ecosystem

Ultimately, ExOs internalize certain philosophies that shape how they think and act. The 10+1 attributes are a manifestation of those philosophies and explain how ExOs exploit 9 key dynamics.

Info-enabled acceleration. Once something physical is digitized and info-enabled, it gets on the accelerated growth path of Moore's law. When digitization happens concurrently in multiple domains (like the case of digital photos), the combined effects are explosive. Increasingly, we'll see winner-takes-all markets emerging, e.g. 1 search engine (Google), 1 e-commerce site (Amazon).

Demonetization. The internet offers abundant resources at low/no costs, creating new opportunities and rendering many business models obsolete.

- The marginal cost of *sales and marketing* has fallen to almost zero with free advertising options like Craigslist and Amazon. Companies with a high Net Promoter Score (which measures how likely a customer will recommend a brand or product to others) basically have free sales through word-of-mouth.

- The same trend is found in *other areas*, from R&D to delivery. Social networks, crowdsourcing and "collaborative

KEY QUOTES

"Once you change the substrate from a material, mechanical basis to a digital and informational one, the match is lit for an inevitable explosion."

"Whatever business you are in, chances are your competitors are not what they used to be."

"As technology brings us a world of abundance, access will triumph over ownership."

consumption" (e.g. coworking space, car-sharing) have revolutionized markets. For example, it costs Uber almost nothing to add a car and driver; it costs Airbnb almost nothing to add an additional room. Access is now more important than ownership.

Disruption is the new norm. In the past, disruption was rare. Today, it's *expected*. It's also more likely to come from startups than incumbents. There's a common pattern for disruptive innovation: Something is info-enabled → Costs drop drastically & access is democratized → An open-source community emerges → Convergence with other new tech brings phenomenally better & cheaper products/services → Status quo is disrupted.

Beware of Experts. The best innovations tend to come from people *outside* a domain with fresh perspectives, not industry experts. The authors believe that ExOs will increasingly adopt a hybrid approach, where experts highlight challenges and suggestions, but the best solutions are validated by geeks, using data.

Thrash the 5-Year Plans. In face of complex, exponential changes, you can't accurately predict the future. 5-year strategic plans are potentially dangerous as your forecasts may be so off-the-mark that you take the company down a wrong path. Instead, it's better to:

- Establish a clear vision or MTP;
- Set up an ExO structure (including dashboards with live metrics);
- Make effective strategic decisions; and
- Implement with a 1-year plan (or less), refining your approach along the way.

Small triumphs big. Today, the benefits of being nimble and flexible far outweighs those from economies of scale. Small organizations can now access resources that were previously available only to the big boys. In addition, they can take bigger risks since they have limited downsides and huge upsides. So, what happens when ExOs become big and successful?

KEY QUOTES

"You now must assume that someone will disrupt you, and often from a direction you least expect."

"History has shown that the best inventions or solutions… almost always come from outsiders….who offer a fresh perspective."

"In an exponential world, the five-year plan is not only unworkable, it is seriously counterproductive."

"Both now and in the coming years, adaptability and agility will increasingly eclipse size and scale."

So far, established ExOs tend to evolve into platforms that enable *other* companies to grow in a symbiotic way (e.g. Google, Facebook, Amazon, Apple).

Rent, not own. There're a growing range of technology and tools that can be rented at low cost, from cloud computing to labs and even aircraft engines. You can also rent people, from temps to groups or people-on-demand.

Trust and openness are vital for fast info-exchange and decision-making, to assess performance honestly and evolve quickly.

Anything is measurable and knowable. With new tools and sensors, it's a matter of time before *everything* inside/outside your body can be measured and diagnosed. You can also tap on billions of smartphone users—each equipped with cameras, apps and GPS—to measure, record, track and share all sorts of data.

Part 2: Building an Exponential Organization

Starting an ExO

Any startup—be it a brand new startup or a "startup" within an existing organization—must address **3 key startup risks**:

- *Technology risk*. Costs for servers, cloud-computing, coding etc. have plummeted in the last decade. You can also plug in to many third party software using API functions. Thus, tech risks are now negligible for info-based or info-enabled businesses.

- *Market risk* is also negligible given the range of options for A/B testing, digital marketing and even crowdfunding. Now, you can validate an idea and even sell something before you produce it.

- *Execution risk* is the only real risk, and this section addresses how to set up your team/organization to minimize this risk.

KEY QUOTES

"Transparency is the new currency. Trust is the bill we'll just be paying for."
—Theo Priestley

"We are moving toward a world in which everything will be measured and anything can be knowable…Only enterprises that plan for this new reality will have a chance at longterm success."

In 2013, Aileen Lee released findings on success factors of "Unicorns" or US-based software startups with >1bil market cap. These are basically high-performing ExOs. Notably, most of them stuck to their original vision (or MTP) instead of pivoting to a different area. Drawing from Lee's research and their own analyses, the authors break down the **key steps involved in building an ExO**:

- *Select an MTP* that's an extension of the founders. Ask questions like: What's the biggest problem I'd like to solve? What do I truly care about? What am I meant to do? Ensure your MTP is indeed massive, transformative *and* purposeful.

- *Join/start relevant communities* that share your MTP. Build long-term relationships instead of trying to reap short-term returns. Always do/choose what's good for the community, not the company.

- *Build a synergistic core team*. Ensure everyone is passionate about the MTP. Have a diverse team with complementary skills (including visioning, user experience design, engineering, and business).

- *Breakthrough idea*. An ExO idea must be transformational, i.e. it must (i) deliver ≥10x improvement over the status quo, (ii) leverage info to drastically cut the marginal cost of additional supply, and (iii) offer a solution that customers will use several times a day. Be prepared to persevere through many iterations and/or investor pitches before you achieve your breakthrough.

- Use the *Business Model Canvas* by Osterwalder to consider how to bring the idea to market. Keep it simple.

- *Develop a Business model*. Disruption usually comes from new business models, not new products. Typically, these are freemium models that (i) use 8 new value drivers below (by Kevin Kelly) to generate revenues, and (ii) align/partner with other ExOs to disrupt an entire domain instead of just 1 product/service.

KEY QUOTES

"An MTP is not a business decision. Finding your passion is a personal journey."

"Whatever your passion...there are communities out there filled with other passionate, purpose-driven people devoted to the same crusade."

"This is about conviction and passion on the one hand, and radical, unconventional, breakthrough ideas on the other."

"If you're going to achieve a 10x improvement, there's a strong likelihood that your company will require a completely new business model."

Value Driver	Description
Immediacy	Let people be the 1st to know about or experience something of value
Personalization	Tailor something to make it "sticky": improve the experience, ease-of-use or functionality
Interpretation	Make something faster, easier or better to use
Authenticity	Give assurance that something is reliable/safe/warranted
Accessibility	Help people to organize and find things quickly
Embodiment	Give digital info a physical form (e.g. movie screen, smartphone)
Patronage	Let fans show their appreciation: make it easy to pay, have a reasonable fee, and show how it'll help the creator
Findability	Stand out amidst all the noise

- *Build a Minimum Viable Product (MVP)*. This is the simplest possible form of the product to test assumptions and gather feedback for the next product iteration.

- *Validate Marketing & Sales*, i.e. attract qualified prospects and convert them into users.

- *Implement SCALE + IDEAS*: Start with at least an MTP plus 3-4 other attributes.

- *Establish your culture* to anchor the organization amidst ceaseless change. Design your OKRs, introduce transparency, accountability and excellence, then track, manage and reward performance.

- Repeatedly ask *8 key questions*: Who's your customer? What customer problem are you solving? What's your solution (and does it improve status quo by ≥10x)? How will you market it? How will you sell it? How do you turn customers into advocates? How will you scale your customer segment? How will you drive the marginal cost of supply towards zero?

- *Build & maintain a platform*, using 4 steps by Sangeet Paul Choudary: Identify a pain point (or use case) for a consumer → Identify a core value unit of interaction that you can leverage (e.g. pictures, reviews) → Find ways to facilitate that interaction → Find ways to build a network around that interaction.

KEY QUOTES

"In a fast-scaling organization, culture…is the glue that keeps a team together."

Unlike new startups, **Enterprise ExOs** (EExOs) face extra resistance from their parent companies. To address that:

- Only target *new markets*, to avoid being attacked by your own parent company. Set up a small, autonomous unit to do so.
- Get direct *support from the CEO*.
- If you're successful, *spin it out* as a new company with its own systems and policies.
- Get the *biggest rebels and change-makers* in your organization to work on the EExO.

Transforming Mid-Market Companies

To transform an established company, you must use what you already have. This means that the approach varies with each case and there's no fixed formula. Generally, there're **2 prerequisites**: (i) a highly adaptable culture and (ii) a visionary leader who's fully supported by the board and senior management.

The authors present several **case studies** (including GitHub, Coyote Logistics and GoPro) to show different scenarios. For example:

- TED (Technology, Entertainment, Design) Conference was created in 1984 by Richard Saul Wurman. It grew steadily and was a stable company. In 2001, Chris Anderson acquired TED and transformed it with 2 major changes: (i) all past/new TED talks were made free on the Internet, and (ii) a toolkit was created to let TED members create their own TEDx events.
- TED grew exponentially by leveraging its MTP ("Ideas Worth Spreading") and several ExO attributes. These included: (i) community & crowd (the TED community), (ii) algorithms (to choose TED talks to promote), (iii) interfaces (for creating TEDx events), (iv) dashboards (with live statistics on TEDx events) and (v) experimentation (to test different formats).

KEY QUOTES

"When it comes to established companies, every ExO solution is a custom creation."

ExOs for Large Organizations

In most cases, large organizations *fail* to transform themselves due to **3 inherent obstacles**: they (i) focus inward (not outward), (ii) focus on technologies that can be leveraged with existing expertise (not converging/adjacent tech), and (iii) rely on internal (not external) innovation.

The authors presented **4 strategies** that large organizations can use to move toward ExO thinking while retaining their core businesses:

Strategy	Sub-strategies & Tips
Transform the Leaders	• Educate **senior leaders** on accelerating technologies/trends • Educate the **board** and use OKRs to track their performance • Have **diversity** (age, gender, experience) amongst senior leaders • **Match employees to roles** based on skills & leadership levels
Collaborate with, invest or acquire ExOs	• **Create internal ExOs** when (a) the opportunity is 1-2 adjacents away from your core business, (b) there's no urgency yet, and (c) the company can hire the required talent. • **Acquire ExOs** if (a) the market is strategic but very different from your current model (≥3 adjacents away), (b) the market inflexion point is near, (c) it's hard to hire the right talent. • **Partner with external ExOs** if there's no short-term strategic need to own it. Use the chance to learn so you're in a better position to start or acquire ExOs in future.
Disrupt[X] i.e. leverage disruptive technologies	• **Incubate ExOs at the Fringes**. Identify proven changemakers → Re-assign them to emerging opportunities that can scale quickly to become new core businesses → Give them flexibility to build ExOs using the Lean approach. Provide minimal resources (to push their limits) but encourage them to leverage existing eco-systems and develop new market/ product areas. • **Create Black Ops Teams**, i.e. secret internal/external teams to compete with each other, disrupt the mothership, and address blind spots & weaknesses that'd otherwise be overlooked. Copy Google[X], i.e. start your own accelerating tech lab to (i) develop breakthrough innovations at budget prices, and (ii) leverage your core competencies. • **Partner with accelerators, incubators and hackerspaces** (e.g. TechShop, Singularity University Labs).
Implement ExO Lite	**Minimally incorporate these attributes in your organization:** • Migrate toward an MTP; and • Explore a combination of these attributes: Community & Crowd, Algorithms, Engagement, Dashboards, Experimentation, Social Technologies.

KEY QUOTES

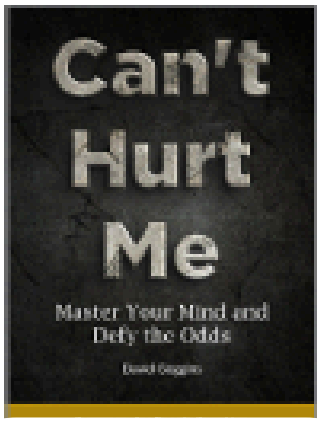
"The core competencies of a large organization combined with new technology breakthroughs create a potent force that can generate a new future for many big legacy companies."

The book includes several **case studies**—such as The CocaCola Company, Haier, Xiaomi, General Electric and Zappos—to show how large organizations are applying the 4 strategies above.

The Exponential Executive

C-level executives (e.g. CEO, CMO, CTO, CFO) will increasingly have to make crucial, time-critical decisions in face of exponential technologies and ExOs. In the book, the authors also outline (i) a list of key accelerating technologies (e.g. sensors, data science and analytics, virtual/augmented reality, bitcoin/blockchain), (ii) related meta-trends, and (iii) key questions, opportunities and implications for various C-level functions.

KEY QUOTES



CAN'T HURT ME

Master Your Mind and Defy the Odds

David Goggins

Introduction

"Can't Hurt Me" is a memoir by David Goggins—a retired Navy SEAL, a Guinness world record holder, and an ultramarathon runner.

- This book chronicles his *remarkable transformation* as he overcame adversity, mastered his mind, and pushed past his limits. Specifically, Goggins shared how he overcame childhood physical abuse, racial prejudice, learning disabilities, went from being overweight to one of the fittest men in the world, and achieved endurance feats from 100-mile races to breaking the Guinness World Records for pull-ups.
- He also shared the turning points in his life, as well as the *philosophies and strategies* he used to overcome his challenges and redefine his limits.

The ideas are relevant for anyone who wishes to improve their physical and mental strength, and tap into their hidden potential. In this summary, we'll present the insights in 2 parts:

- Highlights of Goggins' transformative journey; and
- Strategies to explore and unlock your own potential.

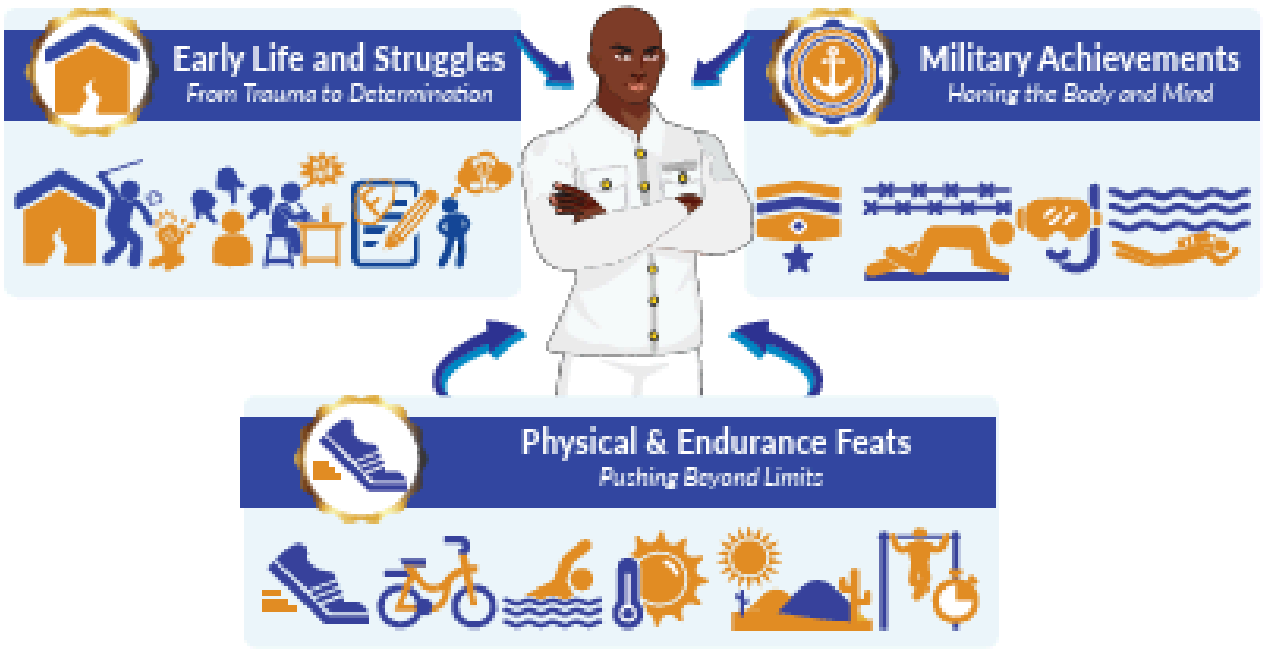
Goggins' Journey: Breaking Barriers & Defying Limits

Goggins' personal transformation can be broadly classified into 3 phases: his early life, military achievements, and endurance feats. In each phase, he endured extreme physical, mental, and emotional pain. Yet, each challenge helped him to transcend his physical, mental, and emotional boundaries.

KEY QUOTES

"The story you are about to read...will illuminate a proven path to self-mastery and empower you to face reality, hold yourself accountable, push past pain, learn to love what you fear, relish failure, live to your fullest potential, and find out who you really are."

"We all make habitual, selflimiting choices. It's as natural as a sunset and as fundamental as gravity."



Early Life: From Trauma to Determination

Born in Buffalo (New York) in 1975, David Goggins' early life was marked by violence, poverty, and prejudice.

- Goggins lived in a *broken home*, and lived in constant fear of his father's uncontrolled anger. From the young age of 6, he had to work at night, and endure frequent and brutal beatings by his father. Although his mother eventually escaped with him, the trauma left deep emotional scars in Goggins' young mind.

- In school, Goggins was the only African-American kid, making him a target for *racial prejudice*. He was called "nigger", received threats, was physically attacked, and had his belongings vandalized. Each day was a battle for survival.

- He also struggled with dyslexia, attention deficit disorder (ADD), and toxic stress from the abuse at home and racism in school. These *learning disabilities* made it hard for him to concentrate, read and write. He even stuttered when he was stressed.

- Goggins felt *angry and helpless* with his lot in life. He started cheating to get by in school, unknowingly choosing the path of least resistance.

Then one day, he learned about Scott Gearen, a pararescueman who miraculously survived a catastrophic fall, and it gave him hope that anything was possible. Spurred by his new dream to

KEY QUOTES

"Prejudice is everywhere...if you are the only in any given situation, it's on you to decide how you're going to handle it because you can't make it go away."

"When you're driven, whatever is in front of you, whether it's racism, sexism, injuries, divorce, depression, obesity, tragedy, or poverty, becomes fuel for your metamorphosis."

join the Air Force as a pararescueman, he took steps to shape up mentally and physically.

- Goggins studied diligently for the *ASVAB entrance exam*, putting in extra effort to overcome his learning disabilities and passing the exam on his 3rd attempted. He also transformed his physique to meet the stringent Air Force standards.

- During pararescue training, Goggins started out strong. However, he *floundered* during Water Confidence Training because of his deep fear of underwater submersion. When he was diagnosed with a medical condition, the sickle cell trait, he took the chance to opt out of pararescue. He shifted to the Air Force Tactical Air Control Party (TACP), where he helped to coordinate precision air strikes and battlefield intelligence. This was a meaningful role, but Goggins had lost his drive and confidence because he knew he had given up on his dream.

- After he left the Air Force, Goggins fell into a dark place mentally and physically. He felt *lost and aimless*, stopped working out, started binge-eating, and gained so much weight that he reached 300 pounds and became pre-diabetic.

One night, Goggins saw a documentary about the Navy SEALs, and it sparked something in him. He badly wanted to have the SEALs' discipline and physical-mental toughness. But, he knew he was unqualified to even get admitted to SEALs training. Standing in his bathroom, he faced his "accountability mirror" for the first time.

- He was brutally honesty with himself, acknowledging his unhealthy lifestyle and lack of direction. He resolved to change and used the mirror to hold himself accountable.

- Goggins wrote down his goals and what he needed to change, and placed the sticky notes on the mirror. Each day, he'd look at himself and the notes to remind himself of what he must do to achieve his goals. This became one of his foundational practices for self-development and success.

KEY QUOTES

"Only when you identify and accept your weaknesses will you finally stop running from your past. Then those incidents can be used more efficiently as fuel to become better and grow stronger."

Military Achievements: Honing the Body and Mind

To become a Navy SEAL, Goggins had to get in shape and complete the notoriously brutal BUD/S (Basic Underwater Demolition SEAL) training.

- To *qualify for training*, he had to lose 106 pounds in 3 months and pass the entrance exam. So, he adopted a rigorous routine: he woke up daily at 5am, spent 2 hours on the stationary bike ride, followed by a 2-hour swim, a gym session, and another 2 hours on the bike. If he missed just 1 pull-up, he'd force himself to redo an entire set of 250 pull-ups. To overcome his aquaphobia, he trained underwater, swam for miles, took a dip in freezing ponds, then ran in wet clothes—all during winter. Every spare moment was spent studying for his exam.

- BUD/S training culminates in *Hell Week*, where trainees must go through 5.5 days of continuous training (e.g. run 200 miles, do >1,000 push-ups daily, and conquer freezing waters) with only 4 hours' sleep. The average dropout rate is above 80% and Goggins had to endure Hell Week not just once but 3 times.

  (i) The first time, he contracted double pneumonia and was vomiting blood during training. The second time, he fractured his kneecap but kept going regardless. Both times, he was forced to stop, recover, and start the ordeal all over again. Along the way, he confronted his inner demons, and developed various strategies to build his mental toughness. He learned to stop blaming others, and finally came to terms with his past trauma. He also started to see his pains and struggles as tools to make himself stronger and harder.

  (ii) On his 3rd attempt, he successfully completed the BUD/S training to become the 36th African American in the history of the U.S. Navy SEAL.

Goggins didn't stop at becoming a SEAL; he sought to keep learning from other elite military units.

KEY QUOTES

"Everything in life is a mind game!"

"Know why you're in the fight to stay in the fight!"

"To develop an armored mind—a mindset so calloused and hard that it becomes bulletproof— you need to go to the source of all your fears and insecurities."

- For example, he earned the prestigious Ranger Tab from the *Army Ranger School*. This further stretched his physical and mental limits, and honed his ability to lead under extreme conditions.

- However, Goggins' single-minded pursuit of excellence started to isolate him from his peers, and he *became overly arrogant and confrontational* at one point. He only realized this after he was rejected by both the Navy's elite DEVGRU and the Army's Delta Force. After some self-reflection, he returned to the SEALs with a renewed commitment to become the best-possible instructor to nurture the next generation of SEALs.

- Goggins simultaneously started to participate in ultra-marathons (more details below). He also became a *recruiter for the Navy*, traveling around the country to share his story, and to inspire people to challenge themselves and explore new possibilities. He developed his own unique style as a speaker, e.g. running 50 miles to an event, doing pull-ups on stage while speaking, or inviting students to train with him.

KEY QUOTES

"When it comes to mindset, it doesn't matter where other people's attention lies. I had my own uncommon standards to live up to."

"A true leader stays exhausted, abhors arrogance, and never looks down on the weakest link."

Endurance Feats: Pushing Beyond Limits

Goggins' entered the world of extreme endurance sports to further push his boundaries and explore the potential of the human spirit. He saw every challenge as a chance to conquer his inner demons and transcend his personal limits.

He decided to run the world's toughest ultramarathon, Badwater 135, to raise money for the Special Operations Warrior Foundation (which supports the families of fallen special ops personnel). Although he had no prior experience, he went into a series of 100-mile races, including the San Diego One Day, The Las Vegas Marathon and The Hurt 100.

- Initially, he was severely under-prepared and finished the *100- mile runs* through sheer perseverance. With each race, he learned something new, and progressively developed new strategies such as the "Cookie Jar" and splitting big goals into smaller parts.

(i) His first ultramarathon was the San Diego One Day, where he had to finish 100 miles in 24 hours. He was so dehydrated and depleted that his blood thickened to sludge and he urinated blood. Upon completing the race, he collapsed on the brink of rhabdomyolysis—a life-threatening condition associated with kidney failure. He trained harder for the Hurt 100, but still struggled with nutrition and hydration issues.

(ii) Then came Badwater 135—a 135-mile race through the blazing heat of the Death Valley with a total elevation gain of >14,600 feet. This time, he researched extensively for the race, visiting Death Valley to assess the terrain, and trained in layers of clothing to simulate the Valley's heat. Despite this, he was severely dehydrated during the race, and had to push himself onward despite blistered feet, hallucinations, and the agonizing pain of muscle breakdown. He finished the race in 5th place.

- He also participated in Ironman *triathlons* to challenge himself with back-to-back segments of swimming, biking, and running.

Goggins' intense participation in endurance sports created extreme strains on his body, and he suffered from problems with his feet, knees, and back. He was also diagnosed with a hole in his heart and develop lumps in his neck and other parts of the body. He decided to shift from running to a new challenge—to break the Guinness World Record for pull-ups in 24 hours.

- Despite a less-than-ideal physique and being surrounded by naysayers, he persevered and *succeeded on his third attempt*.

(i) During his first try, he lacked a proper venue and nutrition plan, and stopped just halfway to his goal. He was more prepared for the second attempt, but still failed to meet his target after his palms started to blister, crack, and tear all the way to the nerve-endings.

(ii) To prepare for his third try, he examined his past failures, worked on all possible areas of improvements, surrounded himself with positive people, managed his inner dialogue, and focused on what he had to do to achieve his goals. He successfully completed 4030 pull-ups in just over 17 hours to break the record in 2013.

KEY QUOTES

"It's possible to transcend anything that doesn't kill you."

"The ticket to victory often comes down to bringing your very best when you feel your worst."

"Most wars are won or lost in our own heads, and when we're in a foxhole we usually aren't alone, and we need to be confident in the quality of the heart, mind, and dialogue of the person hunkered down with us."

Conquering health challenges. Goggins' physical feats are especially remarkable given various health challenges.

- He had suffered from *asthma* since childhood. And, after numerous ultramarathons and triathlons, he was diagnosed with *atrial septal defect* (a hole in the heart)—a defect that had been affecting him since birth, without his awareness. Imagine what more he could have achieved without those ailments.

- After 2 heart surgeries to close the atrial septal defect, Goggins found that the *lump in his neck* had doubled in size. This was diagnosed as a benign growth and he later removed it through a surgery. Throughout the process, Goggins didn't stop challenging himself, e.g. switching from running to pull-ups.

- At the age of 38, Goggins faced yet another *health crisis*. This time, his muscles became rigid, his pulse rate escalated rapidly, and his condition deteriorated over several days to the point he thought he was dying. Again, he refused to give up. He recalled the lumps on his neck and hips, and a previous advice from a physical trainer's advice about the importance of stretching. So, he started to do hours of intensive stretching each day and eventually restored his health. This regime not only saved his life but left him in better physical condition in his forties than in his youth.

- After recovering, he *resumed extreme endurance sports* to keep pushing his limits and resilience.

Goggins retired from the Navy as a Chief Petty Officer in 2015, but his journey of self-improvement didn't stop there. He took on a new challenge as a **woodland firefighter** and continued his journey of learning and growth.

Exploring and Unlocking Your Potential

In this section, we'll detail the philosophies, strategies and approaches you can adopt to build mental toughness and explore your personal potential.

KEY QUOTES

"We should never feel that our work is done. There is always more to do."

Philosophies, Strategies, and Action Steps

Journal and confront your challenges. Confront your past traumas, current difficulties, or ingrained insecurities, take control of your narrative, and convert hardships into fuel for transformation.

- *Reflect on the difficulties and challenges* you've encountered. What circumstances, events, or people have hindered your growth and success?

- *Write down all your struggles and limitations* in a journal. Be as specific and thorough as possible. Give shape to your pain so you can overcome it.

Face yourself in the Accountability Mirror daily. Have a brutal conversation with yourself in the mirror.

- What are your *dreams, goals, and insecurities*? What problems or shortcomings are you avoiding? If you're overweight, admit it. If your temper is affecting your relationships, acknowledge it. Don't find excuses or sugarcoat it.

- *Break down your goals* into achievable steps. Write each step on a separate Post-It note.

  (i) Stick the 1st step on the mirror, then hold yourself accountable with the mirror at the end of each day. Once you've completed step 1, replace it with step 2 and repeat the process. For example, if your goal is to run a marathon, start with a smaller target like finishing your first 1km, then upgrade to 3km, 5km, 10km, and so on.

  (ii) Celebrate each small step toward your ultimate goal.

Develop a "calloused mind". Just as our hands become calloused from hard work, our minds can be toughened through adversity. Each time you step outside your comfort zone or overcome a challenge, you're strengthening your mind.

- *Embrace and seek out discomfort proactively.* Write down all the things that are good for you, but make you uncomfortable. Choose one task and do it daily until it no longer seems painful, then move on to the next item.

KEY QUOTES

"In order to change you have to work through shit. Confront it and get real."

"The only way we can change is to be real with ourselves."

"It's okay to be cruel to yourself as long as you realize you're doing it to become better. We all need thicker skin to improve in life."

"Your entitled mind is dead weight. Cut it loose. Don't focus on what you think you deserve. Take aim on what you are willing to earn!"

- *Progressively increase the level of difficulty* of your tasks. Each time you push through your pain, you thicken your mental callouses. Gradually, you'll build a strong, positive, a strong and calloused mind that stays resilient during tough times.

"Taking souls" is an ideal strategy for competitive situations.

- To develop a tactical advantage, you must *know who you're up against*. Is it your boss, your teacher, or a difficult client? Understand your opponent, yourself, and your circumstances. Show your rivals that you're not affected by the things that give them pain or discomfort. For example, if you're playing basketball against a team known for its strong defense, you must study their defensive strategies, understand each player's strengths, weaknesses, and tendencies, then develop counter-strategies for different scenarios. You must also cultivate mental toughness to stay calm and focused when the game gets intense. During the game, you'd have taken your opponents' souls when they realize that their usual strategies don't work and they can't get into your head.

- The best way to take someone's soul is to use their negativity to *drive yourself to excellence*. Get the top score in a test, deliver an outstanding project, or smash your sales goals. Do whatever it takes to exceed all expectations, so they cannot help but notice and respect you.

Visualization and mental preparation help you to take control of the thoughts running through your mind.

- Picture yourself achieving a goal, including all the obstacles you must overcome to get there. You're essentially preparing for and *rehearsing the solutions* in your mind. Remember: visualization is not the same as day-dreaming, and it cannot replace hard work. You must still back it up with real action, consistent effort, and discipline.

- It's equally crucial to *get clear on your purpose and motivation*: Why are you doing this? What motivates you? What drives or sustains you? In moments of doubt and pain, your answers to these questions will decide if you persist or give up.

Fill your "Cookie Jar"—a metaphorical container that holds all your past victories and the obstacles you've overcome. During tough times, these cookies will motivate you and keep you focused on your strengths and abilities, instead of your pain and doubts.

KEY QUOTES

"Know the terrain, know yourself, and you'd better know your adversary in detail."

"Taking Souls is a ticket to finding your own reserve power and riding a second wind."

"We don't rise to the level of our expectations, we fall to the level of our training."

"It's not the external voice that will break you down. It's what you tell yourself that matters. The most important conversations you'll ever have are the ones you'll have with yourself."

- Open your journal and *list down every achievement and obstacle* that you've overcome, no matter how big or small. This could range from quitting a bad habit to achieving a goal. Some of Goggins' cookies include: losing 100 pounds in 3 months, overcoming his fear of water to graduate from SEALs training, and breaking the world pull-up record. What are yours?

- Take a moment to re-live the *mental-emotional state* that got you through each challenge, and the sense of accomplishment from each victory.

- Set ambitious goals for the future. Each time you encounter difficulties and feel like giving up, dip into your Cookie Jar and *let your past successes fuel you*. Remember your strength and resilience, and use that energy to propel yourself forward.

Push beyond the "40% Rule". Most people only reach 40% of their true capacity because they stay within their comfort zone. To access your 60% untapped potential, you must push through your pain threshold and master your mind through consistency and hard work.

- For example, an amateur boxer might be knocked out by a single punch to the face. But after 10 years of experience, he will develop a much higher pain tolerance and can keep fighting even after being hit several times. Likewise, you can *train your mind* to handle a higher load.

  (i) Choose a measurable physical activity (e.g. running or pullups). Push yourself to the point where your mind is begging you to stop, then keep going for another 5-10%.

  (ii) Keep doing this to increase your baseline. Before long, you'll find that what seemed impossible is now within reach.

- Shift your thoughts away from questions like "What am I doing here?" to "*What am I capable of?*" As you expand your physical and mental strength, you'll start performing better in all areas of life.

Compartmentalize your day to improve your focus and productivity. Multi-tasking dilutes your focus and results. To get the most from your day, structure your schedule into time-

KEY QUOTES

"I was the sum total of the obstacles I'd overcome."

"You'll feel pain, but if you accept it, endure it, and callous your mind, you'll reach a point where not even pain can hurt you."

"Self doubt is a natural reaction to any bold attempt to change your life for the better. You can't stop it from blooming in your brain, but you can neutralize it, and all the other external chatter by asking, What if."

blocks, then work on 1 thing at a time. You can set this up progressively over 3 weeks:

- In the first week, *observe and document* everything you do and the time it takes. Include all activities, such as work tasks, meetings, breaks, naps, errands, and even distractions. This is to establish your baseline and identify the time-wasters.

- In the second week, start to *optimize your schedule*. Break down your day into blocks of 15-30 minutes. Then, assign specific tasks or activities to each time-block. Eliminate distractions, do 1 thing at a time, and give each task your full attention. Also set aside time for meals, exercise, and rest.

- In the third week, *evaluate and adjust* your schedule. By now, you should see an increase in productivity. Review how you used your time the previous week, and keep identifying ways to improve time-usage. Progressively cut back on unproductive tasks to free up time for dreams and goals. Create some buffers for unexpected events.

KEY QUOTES

"If you audit your life, skip the bullshit, and use backstops, you'll find time to do everything you need and want to do."

Fortify yourself through failures. Analyze your failures thoroughly to learn from them and prepare yourself for future challenges.

- Use your journal to write about your *recent and most painful failures*. Do this by hand and be honest with yourself. For each setback:

  (i) List down the positives;

  (ii) Reflect on how the event has impacted your life and relationships;

  (iii) List down everything that went wrong and what could have been done differently; and

  (iv) Examine your thought processes during the preparation and execution stages: were there any negative or unhelpful mindsets?

"In life, there is no gift as overlooked or inevitable as failure."

"The point is not to allow a setback to shatter our focus, or our detours to dictate our mindset. Always be ready to adjust, recalibrate, and stay after it to become better, somehow."

- *Schedule another attempt* in your calendar. During your preparation and execution, use all the principles and tools above, e.g. the Accountability Mirror, the Cookie Jar, the 40% Rule, and the calloused mind. If you fail again, just repeat the steps above.

Surpass the elites. This philosophy is not for everyone. It's about pushing yourself to become the best of the best, to sustain growth even if you've reached the top, and never get complacent.

- Acknowledge your past achievements, then set them aside and *start again from zero*.
- Keep set *newer and harder goals* for yourself. If you're a marathon runner, try ultramarathons. If you're a software developer, explore artificial intelligence or quantum computing. If you break a hand and cannot play the guitar, try playing the piano with your other hand as you recover.
- Intentionally put *obstacles in your path* to push yourself. Join elite groups and aim to become the best in every group.
- Such a singular focus on growth will mean disrupting other areas of your life, and you'll often stand alone as an over-achiever. Accept this as *the price of true greatness*.

KEY QUOTES

"There's power in victory... but after our celebration we should dial it down, dream up new training regimens, new goals, and start at zero the very next day."

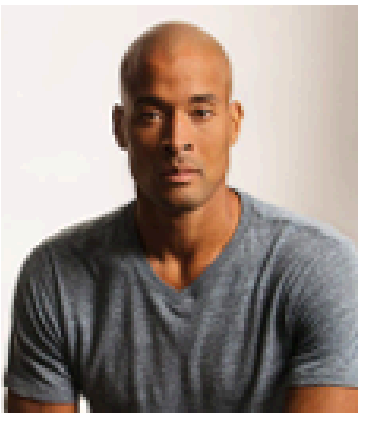
"I refused to compromise who I was to conform to their unwritten rules."

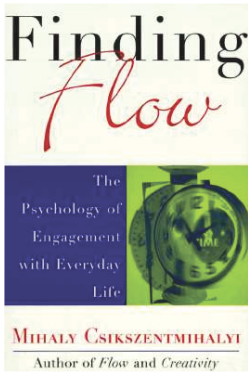
Other Details in the Book to Look out For

In the book, Goggins details his journey, insights, and transformation in vivid detail, helping the reader to understand his failures, triumphs, perspectives, and breakthroughs. He demonstrates that anyone—no matter your starting point—can change your life's trajectory through sheer will, determination, and an unwavering belief in yourself. For more information, please visit https://david goggins.com/.

About the Author

David Goggins (born 1975) is a renowned American ultramarathon runner, retired Navy SEAL, and former United States Air Force TACP member. He's also a public speaker and author. He has completed over 60 ultramarathons, triathlons, and ultratriathlons, setting new course records and regularly placing in the top five.





FINDING FLOW

The Psychology of Engagement with Everyday Life

By Mihaly Csikszentmihalyi

The Big "So What"

The book answers the questions: "what is a good life", "how anyone can create an excellent life" and "how to transform every day activities into an opportunity for engagement, enjoyment and growth." It explains why happiness alone isn't enough, and how "flow" can create true excellence and quality of life.

Introduction

The insights from the book are built on ***3 key assumptions or foundations***:

- Important truths about life have already been captured over the years by philosophers, prophets and sacred books. This book seeks to express and re-interprete them in the modern context.
- Current science provides useful information about mankind. However, our knowledge is still far from complete, and many of the "scientific truths" is by no means proven fact.
- To understand life in the present, we must integrate the realities of the past with the possibilities of the future.

The Content of Experience: What Affects Quality of Life?

To improve our quality of life, we need to first understand how we experience life.

Time is the essence

Our quality of life is essentially the accumulation of

KEY QUOTES

" 'To live'...must mean to live in fullness, without waste of time and potential, expressing one's uniqueness, yet participating intimately in the complexity of the cosmos."

"There is probably as much superstition and misunderstanding embedded in modern science as there was in the old myths, but we are too close in time to tell the difference."

"One of the most essential decisions any of us can make is about how one's time is allocated or invested."

experiences (what we do, feel, think) over time. Since experiences take place at a point in time, time is the scarcest resource that we have. How we choose to allocate or invest time will determine what we experience, which add up to determine our quality of life.

What we do

Whenever we think about or do something, it consumes psychic energy. Most of us spend our time and psychic energy in these proportions:

- 24-60% on **productive activities** to generate energy for survival (e.g. working, studying, eating)
- 20-42% on **maintenance activities** (e.g. commuting, grooming, housework)
- 20-43% on **leisure activities**

Thought leaders and philosophers have long suggested that people start to develop their true potential during their "leisure time", when they can devote their time and energy to self-development.

Who we are with

Our experiences (and hence quality of life) are largely affected by the people we are with. Most people spend their time evenly in 3 social contexts:

- **"Public" space,** where we are evaluated by others, compete for resources & may establish collaborative relationships. This is the domain that presents the highest risks and also the highest rewards.
- **Family**, including time with parents, siblings, children and close relatives.
- **Solitude**, i.e. time on our own, which may be enjoyable to some but not to others.

Our intentions and goals

Our intentions focus our psychic energy in the short run, while our goals focus our energy in the long run, and this in turn shapes who we become.

KEY QUOTES

"Without a consistent set of goals, it is difficult to develop a coherent self."

Immersing/focusing on our goals typically takes a lot of psychic energy:

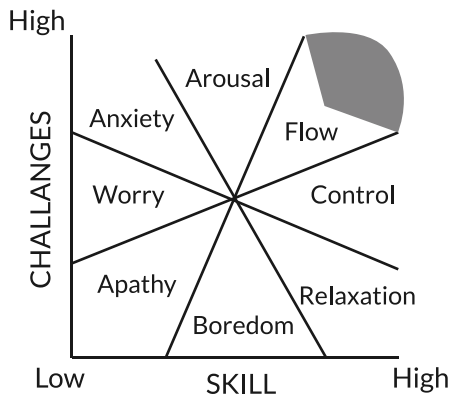
- **Managing our goals** can take up a lot of energy, especially those that go against our pre-programmed beliefs and behaviours.
- **Concentration** takes energy and effort, especially when it goes against our inner feelings and motivations.
- We also **struggle with conflicting desires & thoughts** in a typical day. For example, we may enjoy an expensive dinner and drinks with friends after work, but feel guilty about spending money and not being at home with the kids.

However, "flow experiences" occur when the act of focusing and immersing in our experiences seem effortless.

"A person in flow is completed focused. There is no space in consciousness for distracting thoughts, irrelevant feelings. Selfconsciousness disappears, yet one feels stronger than usual. The sense of time is distorted: hours seem to pass by in minutes. When a person's entire being is stretched in the full functioning of body and mind, whatever one does becomes worth doing for its own sake…In the harmonious focusing of physical and psychic energy, life finally comes into its own."

Being in flow typically comes with :

- **Clarity** of goals and required activities, i.e. knowing what to do .
- **Immediate feedback**, i.e. knowing how well you are doing.
- **High level of "skills" and "challenges",** i.e. the challenges are big enough to be motivating but not insurmountable to cause anxiety, and you can use your skills to the fullest.



KEY QUOTES

"The only way to take over the ownership of life is by learning to direct psychic energy in line with our own intentions."

"Given that attention is a limited resource, when one goal takes up all our psychic energy, there is none left over."

"A typical day is full of anxiety and boredom. Flow experiences provide the flashes of intense living against this dull background."

"The flow experience acts as a magnet for learning – that is, for developing new levels of challenges and skills."

"It is the full involvement of flow, rather than happiness, that makes for excellence in life."

"Flow is a source of psychic energy in that it focuses attention and motivates action."

Excellence in life comes from being engaged in flow, not from pursuing happiness. When we are in flow, we direct our energy fully towards complex tasks, learning, and growing our consciousness. Flow is in fact a source of psychic energy, because it helps to focus our attention and motivates us to take action.

Finding Flow in Work & Leisure

Work is often seen as a necessary evil, while having free time to relax and do nothing seems desirable. However, evidence suggests the opposite – work isn't necessarily bad, and leisure time doesn't necessarily improve quality of life.

The Paradox of Work

Work is a central part of most of our lives, and typically takes up a third of our available time. Work can provide meaning, focus, and challenge to our lives, yet most of us are glad to avoid work if possible.

Many people resent their jobs for 3 key reasons:

- The jobs are meaningless or even cause harm
- The jobs are boring and routine (with no variety or challenge)
- The jobs are too stressful (due to relationships with colleagues or superiors, lack of recognition etc.)

On the other hand, work can be a positive experience when it is perceived to be voluntary and we are satisfied with our results. This is especially so given how the concept of "work" has evolved over the centuries - from hunting for food, to manual labour, to an expression of skills and creativity today. Many modern professionals (e.g. artists, entrepreneurs) are enjoying much more intrinsic rewards from work that were not readily available in the past.

In short, we cannot blame our jobs for the lack of inspiration in our lives. Rather, when we find flow at work, it helps us to develop new skills and opportunities for growth and fulfilment.

KEY QUOTES

"Work is a strange experience: it provides some of the most intense and satisfying moments, it gives a sense of pride and identity, yet it is something most of us are glad to avoid."

"It is always a better deal to do something one feels good about than something that may make us materially comfortable but emotionally miserable."

"Without the goal and the challenges usually provided by a job, only a rare self-discipline can keep the mind focused intensely enough to insure a meaningful life."

Csikszentmihalyi gave several examples of how people in seemingly poor or unenviable conditions found inspiration and fulfilment in life by focusing their energy on creating value for others, e.g. a lady who dedicated her life to helping homeless urchins who were in even more desperate conditions than her.

The risks and opportunities of leisure

Contrary to common perception, free time doesn't improve the quality of life, unless it is used effectively. In fact, people without goals and meaningful interactions tend to lose motivation, focus, and experience greater anxiety as their minds wander to unresolvable problems.

There's a distinct difference between active and passive leisure. Sports and active games are 3 times more likely to generate a state of heightened enjoyment than watching TV (while hobbies are 2.5 times more likely to do so).

To improve the quality of life, it is important to give our free time the same focus and attention as our work. Ensure that your free time is used to explore the potential of the self and the environment, hence creating opportunity for flow, which brings growth, fulfilment and better quality of life.

Finding Flow in Work & Leisure

To create flow and inspiration in what we do (be it work or leisure):

- **Pay attention**, so you understand thoroughly what is happening and why. This helps us to understand the full impact of our actions (however trivial) on the whole, to give meaning, clarity and awareness over time.
- Don't accept that the current way of doing the job is the only way – **explore and experiment** with new and better ways of doing things. No matter now routine a job or task, there are always small adjustments and improvements that you can focus on (and enjoy fulfilment from) if you treat it as a professional challenge.
- **Exercise personal control** to prevent stress (which hinders flow):

KEY QUOTES

"Just as the excellence of an individual life depends to a large extent on how free time is used, so the quality of a society hinges on what its members do in their leisure time."

"To make the best use of free time, one needs to devote as much ingenuity and attention to it as one would to one's job."

"By taking the whole context of the activity into account, and understanding the impact of one's actions on the whole, a trivial job can turn into a memorable performance that leaves the world in a better shape than it was before."

"As minute changes can results in great discoveries, so small adjustments can turn a routine job one dreads into a professional performance one can look forward to with anticipation each morning."

"While everyone has the psychic energy needed to cope with strain, few learn to use it effectively."

- Develop a personal strategy that provides order & priority.
- Match your skill with the identified challenges. For example, learn a new skill, delegate a task, break up the task or transform it such that you can manage it.

Finding Flow in Relationships

Relationship with Others

Our relationships have a significant impact on how we feel and on our quality of life. To develop relationships, we need to invest energy in them. A relationship that brings consciousness meets 2 conditions:

- Compatibility between goals, i.e. **shared goals**
- A willingness to **invest attention** in the other person's goals.

How rewarding our relationships are depend on a several factors, including:

- **Socialization.** Socialization shapes our behavious, cultural expectations and aspirations, and hence affects how we experience life. We feel shame and guilt (as opposed to pride and accomplishments) when we feel we have let others down (based on social norms and standards).
- **Our friendships.** The lack of friendship is a common personal complaint. In an ideal world, friends provide mutual benefits and stimulation to hone our skills and support our growth. However, in reality, it is common for friendships to provide a safe haven for us to preserve our self-image, without contributing to our growth.
- **Our sexual relationships.** Fulfilling sexual relationships are another important aspect of a quality life. This come from neither celibacy nor promiscuity, but being conscious of the role of sexuality in our lives.

Relationship with Self

Being alone. Most people experience lower moods when they are alone than when they are with others. The only

KEY QUOTES

"Instead of promoting growth, friendships often provide a safe cocoon where our self-image can preserved without ever having to change."

"If one has a hobby, or a rich inner life, then being alone is not only enjoyable but necessary."

time people feel better when they are alone is when they are in full concentration on a goal/ hobby or have a rich inner life.

Attitude towards "others". People generally assume that people who are different from us – be it in race, language, religion, social class etc. – have different goals and cannot be trusted. Yet, we are fascinated by their differences. Being around strangers and different cultures bring excitement and creativity that improve the quality of life, so long as we believe that the "others" will share our basic goals and behave predictably within certain parameters.

Extroversion (expression through "public" action) versus introversion (ascension by looking inward). Extroversion and introversion need not be mutually exclusive. In fact, the most creative and successful individuals tend to embrace both ends of the spectrum – they set aside time for themselves (e.g. working alone from home, meditating) and create opportunities to meet others (to expose themselves to new possibilities, ideas etc.). By doing so, they have access to the full range of human experiences rather than box themselves into a corner and limit the possibilities of enjoyment.

Balancing Work and Relationships

The "balance" between work and relationships (family and friends) has been an ongoing challenge. People who love their work tend to direct so much psychic energy into work that their relationships suffer.

The solution to balancing work and relationships is to balance the meaningfulness of the rewards we get from work and from relationships. People are held together by 2 types of energy:

- **Material energy** (from food, warmth, physical care, money)
- **Psychic energy** (from investing attention in each other's goals)

Successful relationships are like successful careers – they require an ongoing investment of thought and energy. In modern society, contracts and social control can no longer hold marriages together – only intrinsic rewards (i.e. mutual enjoyment) will motivate people to continue the relationships.

KEY QUOTES

"Instead of looking for models in the past, we should figure out what a safe yet stimulating social environment could be like in the future."

"It is possible to be both extroverted and introverted at the same time. In fact, expressing the full range from inner to outer-directedness might be the normal way of being human."

"Now that the integrity of the family has become a matter of personal choice, it cannot survive except through the regular infusion of psychic energy."

Finding Flow in relationships

Creating flow in relationships involve joint activities that help people to pay attention to each other. For example, to make parenting a more rewarding experience, parents can:

- Pay attention to learn what the child is "into" or is "proud of".
- Devote more attention to share such activities with the child, hence creating joint goals that everyone is investing psychic energy into.

Likewise, when we are appreciated at work, we feel more satisfied, because we feel that our goals are being supported.

Finding Flow through Awareness & Self-Development

To achieve excellence in life, we need to commit ourselves fully to experience all aspects of life & develop all of our potentials.

Awareness and Quality of Life

To improve the quality of life, the first step is to start engineering our daily activities to get the most rewarding experiences. There's no fixed formula, so it's important for you to find what works best for you. Start by keeping a diary or reflecting on your day, so you can become conscious of how you spend your time. Take stock of the activities and people that generate positive versus negative moods:

What you do: With awareness, you can increase the frequency of positive activities and decrease the negative ones. People in flow also tend to be so focused on the task at hand that they "forget" about their physical pains, fatigue and ailments. Csikszentmihalyi gave an example of how a mental health patient was able to rejoin the community and become financially self-sufficient simply by paring nails for others (an activity that brings her flow).

Who you spend time with. While companionship can improve the quality of experience, real growth comes when we are with people who stimulate our learning. Invest psychic energy in the right relationships.

KEY QUOTES

"When people pay attention to each other, or to the same activity together, the chances of flow binding the family increases."

"The first step in improving the quality of life consists in engineering daily activities so that one gets the most rewarding experiences from them."

"When attention is focused, minor aches and pains have no chance to register in consciousness."

"It takes a total commitment to a fully experienced life, one in which no opportunities are left unexplored and no potential undeveloped, to achieve excellence."

The Autotelic Personality

An autotelic activity is one that we do for its own sake, because experiencing the activity itself is the goal. For example, if you are playing a game because you enjoy it, that's an autotelic activity; if you are playing it to win a prize, that's an exotelic activity. To have ownership of our lives, it is important to enjoy an activity for its own sake and in the process, learn to control our attention and direct our psychic energy in line with our intentions.

People fall into a spectrum - some almost never feel that what they do is worth doing, while others (autotelic people) feel that almost everything they do is important and valuable in its own right. Those who are autotelic tend to:

- Already feel so rewarded that they need very little material possessions or titles/power.
- Be typically more autonomous and independent, yet are more involved or immersed in what's happening around them.
- Have a seemingly inexhaustible supply of psychic energy: they pay attention more, notice more, and are willing to invest more attention in things for their own sake (rather than external rewards).
- Be able to direct their psychic energy to experience life, because they are less concerned with themselves.

The Love of Fate

Leading a truly excellent life requires us to feel that we are part of something greater and more permanent than ourselves. The challenge is to be engaged and carefree at the same time – to be serious in our concern for the world at large, yet humble about the impact that we can make individually.

The starting point is to get a clearer understanding of our self-image – this imaginary entity tends to shape how we direct our psychic energy:

- Without a sense of self, humans will be like animals, exerting ourselves only to fulfil our biological needs.
- On the other hand, a sense of self based on wealth and

KEY QUOTES

"The point is to be happy while doing things that stretch our skills, that help us grow and fulfill our potential."

"Even the most routine tasks, like washing dishes, dressing, or mowing the lawn become more rewarding if we approach them with the care it would take to make a work of art."

"The important thing is to enjoy the activity for its own sake, and to know that what matters is not the results, but the control one is acquiring over one's attention."

"An active responsibility for the rest of humankind, and for the world of which we are a part of, is a necessary ingredient of a good life."

"Act always as if the future of the Universe depended on what you did, while laughing at yourself for thinking that whatever you do makes any difference."
- Buddhist advice -

power can lead someone to exert himself relentlessly at the expense of health and relationships.

- We cannot totally remove our ego. However, by developing a deeper understanding of ourselves, we can learn to separate the needs that support us in life from those that make our lives miserable.

It takes skill to reflect. When we have not mastered the skills of reflection, thinking about our problems tend to aggravate them instead of alleviating them.

- Hence, it is better to reflect on our life when we have reason to feel good about it – experiencing flow automatically helps us to feel better without even trying.
- To experience flow, it helps if we have clear goals to focus our attention on. Even if we are faced with a task that we hate or dread, setting a goal (e.g. to finish the task as quickly as possible) can transform how we experience it.

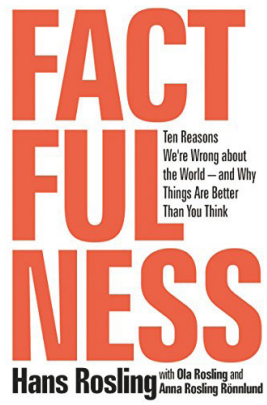
The love of fate, or *amor fati*, refers to our attitude towards our choices. If we learn to take ownership of our actions and love what we have to do, our quality of life will be improved.

KEY QUOTES

"The question is, why don't we want to do more things? The sheer act of wanting focuses attention, establishes priority in consciousness, and thus creates a sense of inner harmony."

"I want to learn more and more to see as beautiful what is necessary in things; then I shall be one of those who make things beautiful."

- Friedrich Nietzsche -



FACTFULNESS

Ten Reasons We're Wrong About the World —and Why Things are Better Than You Think

HANS ROSLING

The Big "So What"

Most people—including business/political leaders and professionals—have grossly inaccurate views of the world we live in, and see the world to be much worse than it really is. This book helps us to recognize and manage 10 mental filters that distort our perceptions, and to develop a fact-based worldview so we can avoid unnecessary stress and improve our ability to make sound decisions.

Introduction

Over the years, Rosling presented various multiple-choice questions about global trends (e.g. poverty, health, environment) to thousands of people worldwide. Even if people randomly chose 1 of the 3 answers provided, they should've gotten 33% of the questions right. Yet, consistently less than 33% of the questions were answered correctly, i.e. **we are systematically wrong in our worldview**.

- For example, in the last 20 years, the proportion of the world population living in extreme poverty has almost halved. Yet, only 7% of the people surveyed got that right; the majority believed that the proportion of people living in extreme poverty has remained the same, or has almost doubled.

- Generally, people believe the world is getting worse, when facts and data show that the world is getting better. More girls in low income countries are going to school, children are getting vaccinated, most people have moved out of extreme poverty, and child mortality rates have decreased in every country worldwide.

In reality, most of us don't see the world as it is, because we sift the inputs through a **mental filter** that favors dramatic information.

KEY QUOTES

"Every group of people I ask thinks the world is more frightening, more violent, and more hopeless—in short, more dramatic—than it really is."

"Step-by-step, year-by-year, the world is improving…. Though the world faces huge challenges, we have made tremendous progress. This is the fact-based worldview."

- Thus, we tend to have an *exaggerated and overly-negative view* of the world, which creates unnecessary fear and stress. We also can't make sound decisions if we're operating on wrong facts.

- In this summary, we'll explain the 10 "dramatic instincts" that all humans have, how to control these instincts and apply factfulness to see the world more accurately.

The 10 Dramatic Instincts

1. The Gap Instinct

We tend to divide things into 2 distinct groups and imagine a gap between them, e.g. good vs bad, rich vs poor. This is one of most damaging instincts as it creates an imagined chasm that leads to all sorts of misperceptions.

Most of us still mentally divide the world into 2 parts: **developing non-Western countries** vs developed Western countries. This notion is at least 20-30 years outdated.

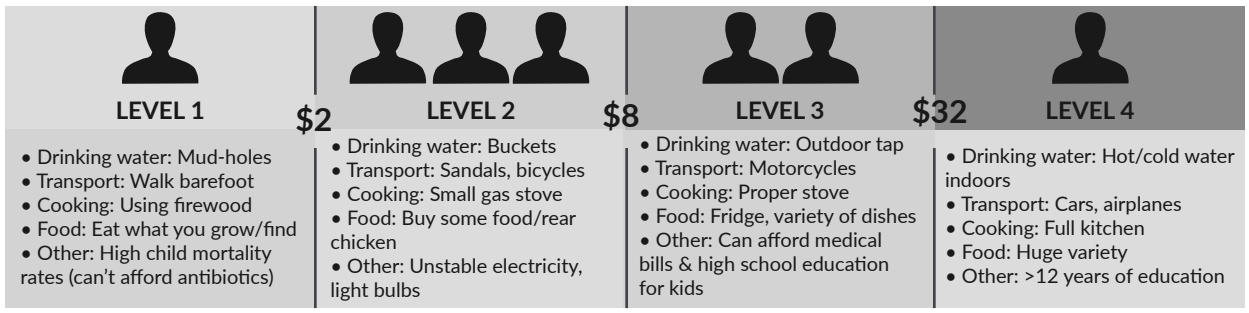
- We have a *wrong mental picture* of how people in poor non-Western countries live (e.g. life expectancy, water quality, vaccination rates, under-nourishment); and

- We over-estimate h*ow much of the world population* live in these low-income countries.

In short, we imagine a big gap between the developed and developing countries, with most people living in dire conditions. In reality, most people are living **in the middle** where we *think* the gap is.

It's more meaningful to look at the world with 4 levels of income:

World Population & Income levels as of 2017



= 1 bil people Income: per person per day, adjusted for price differences Source: Gapminder

KEY QUOTES

"The idea of a divided world with a majority stuck in misery and deprivation is an illusion. A complete misconception. Simply wrong."

- People living in extreme poverty (*Level 1*) suffer from high child mortality rates, malnutrition and terrible living conditions.

- However, once they can earn $2 a day, they'll cross over to the next level and can afford some basic essentials. By the time they get to Level 3, they're usually working multiple jobs and have decent savings to enjoy choices in life and send their kids to high school. The majority (5 out of 7 people) today are living on *Levels 2 and 3*.

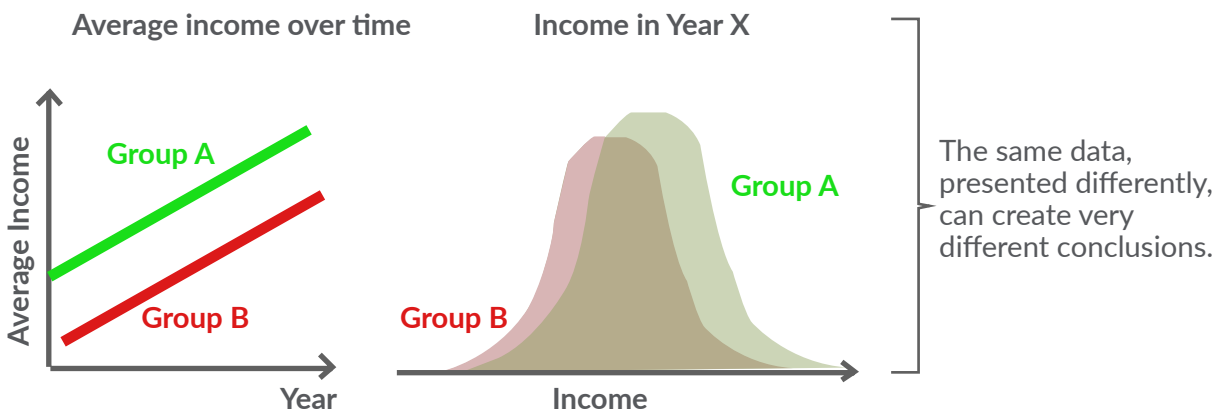
- If you're reading this summary, you're probably living on *Level 4*, with at least 12 years of education, an income of at least $32 a day and access to a range of modern amenities.

- Everyone in human history started at Level 1 and it usually takes generations for a family to move from Level 1 to Level 4. About 200 years ago, 85% of the population was living on Level 1. While it's bad that some people are still living in extreme poverty today, the overall situation is certainly *getting better*, not worse.

When we split the world into 2 distinct groups with a big gap in between, it suggests **conflict**. In reality, things usually fall on a spectrum—there're commonalities between groups with no clear lines in between.

There are **3 types of "gap stories"** that trigger our gap instinct:

- *Comparing averages*. Averages help to simplify information, but draw our attention to the *gap* between 2 sets of numbers. For example, when you compare the average incomes between 2 groups (see the left diagram below), it creates the perception that there's a clear separation between the groups, when in reality the areas of overlap may be greater than the differences (see the right diagram below).



KEY QUOTES

"Dividing the world into two distinct sides is simple and intuitive, and also dramatic because it implies conflict, and we do it without thinking, all the time."

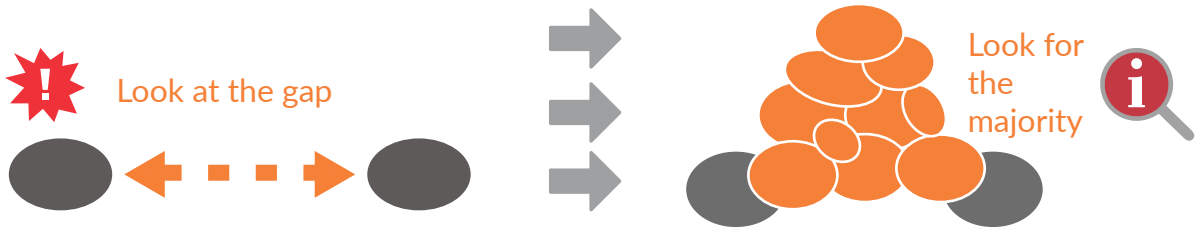
"The gap instinct makes us imagine division where there is just a smooth range, difference where there is convergence, and conflict where there is agreement."

- *Comparing extremes*. We tend to remember extreme examples (e.g. the richest vs poorest people) as these are more dramatic. However, such extremes are usually the minority and do not reflect the majority which are in the middle.

- *View from above*. From the top of a tall building, the objects on the ground level look deceptively small. Likewise, when you're living on Level 4, your perception of lives on Levels 1-3 is distorted. Your information on other levels are filtered through the mass media which tends to focus on the extreme and the dramatic.

To control this instinct, realize that in reality, there's usually no gap, extremes are the minority, and the majority are in the middle were the gap is supposed to be. When you hear a story of 2 distinct groups with a gap between then, examine the spread of data and you're likely to find 2 overlapping groups with no real gap.

CONTROLLING THE GAP INSTINCT



2. The Negativity Instinct

We tend to instinctively notice the bad more than the good.

Global trends. Most people believe that the world is becoming worse, when in reality it's becoming better.

- In the last 20 years, the proportion of people living in extreme poverty has fallen from 29% to 9%, while average life expectancy has increased from 30 to 70 years old. Rosling also presented charts of 16 bad things decreasing globally (e.g. legal slavery, oil spills, HIV infections, ozone depletion) and 16 good things increasing globally (e.g. new movies per year, women's right, electricity coverage, child cancer survival).

KEY QUOTES

"The fact that extremes exist doesn't tell us much. The majority is usually to be found in the middle, and it tells a very different story."

"The reality is often not polarized at all. Usually the majority is right there in the middle, where the gap is supposed to be."

- He showed Sweden's health and wealth statistics from 1800 to 2017, and how they corresponded with other countries' statistics in 2017. In a nutshell, Sweden as a country had moved from Level 1 to Level 4 progressively over the generations, just like other countries. Specifically, 1921 Sweden was comparable to 2017 Zambia, 1947 Sweden was comparable to 2017 Egypt, while 1975 Sweden was comparable to 2017 Malaysia.

Our overly-negative worldview comes from **3 key factors**:

- *Selective news & reporting*. The mass media tends to cover dramatic stories about wars, disasters, scandals or accidents—rather than gradual improvements—as those stories are more attention-grabbing. Activists and lobbyists also play up short-term dips and play down long-term growth. Thus, we get the impression that things are deteriorating when they're actually improving.

- *Poor recall of the past*. We avoid reminding ourselves and our children of past miseries and thus remember the past to be better than it really was.

- We *feel bad* about celebrating improvements when things still seem so bad.

To **control this instinct**, remember that you're more likely to receive negative than positive news.

- Expect bad news, but ask yourself if there could be good news of equal or greater scale that haven't reached you. You can also *validate the real picture* using statistics.

- Realize that things can be *both "bad" and "better"* at the same time, i.e. the situation has improved from the past, but still needs improvement. With an objective viewpoint, you can take constructive actions rather than lose hope for the future.

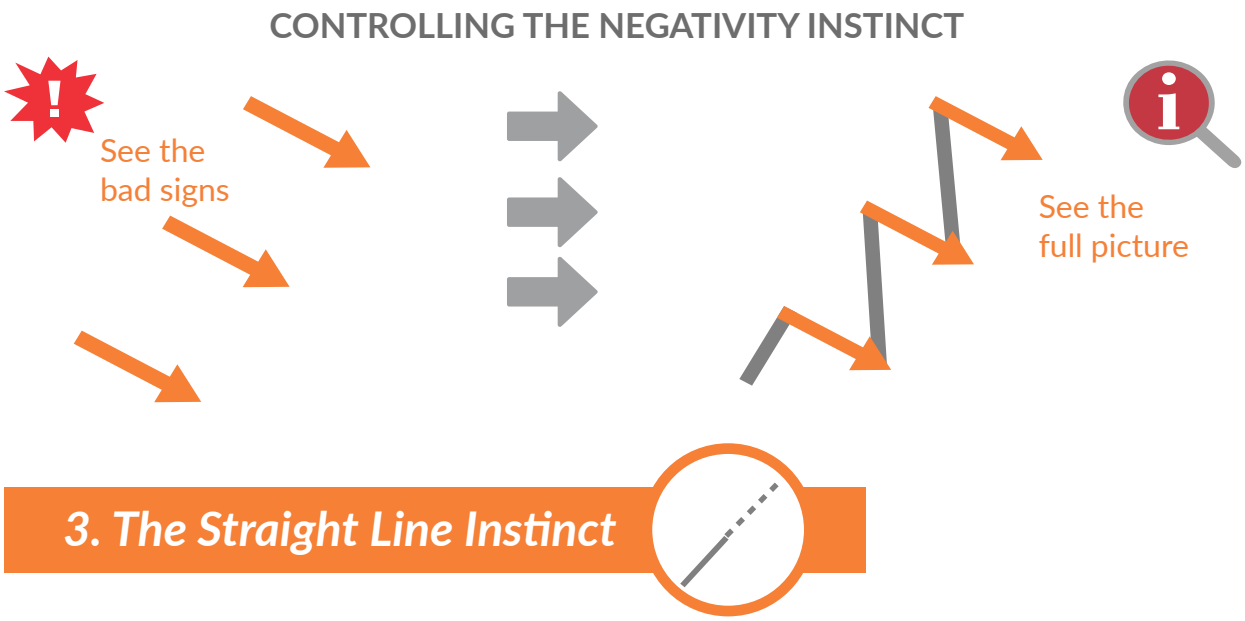
- Beware of *over-glorified histories* and don't hide the past to protect your children.

KEY QUOTES

"The positive changes may be more common, but they don't find you. You need to find them."

"Remember: things can be bad, and getting better. Getting better, but still bad."

"The loss of hope is probably the most devastating consequence of the negativity instinct and the ignorance it causes."



3. The Straight Line Instinct

When we see a line going up steadily, we tend to assume the line will continue to go up in the foreseeable future.

Most people think the **world population** will continue to grow rapidly, with the bulk of the growth coming from babies born in poor, developing countries. In reality, the population will grow because people are now living longer, not because more babies are born. As families move out of extreme poverty, they tend to have fewer babies, since women are educated about contraceptives and no longer need so many kids for manual labor or to replace children who die from diseases or malnutrition. As of 2017, most families have an average of only 2 children.

In reality, **most lines will bend at some point**.

- Certain trends or relationships may follow a *straight line*, such as the relationship between wealth and health, and the relationship between income and education or recreation spending.

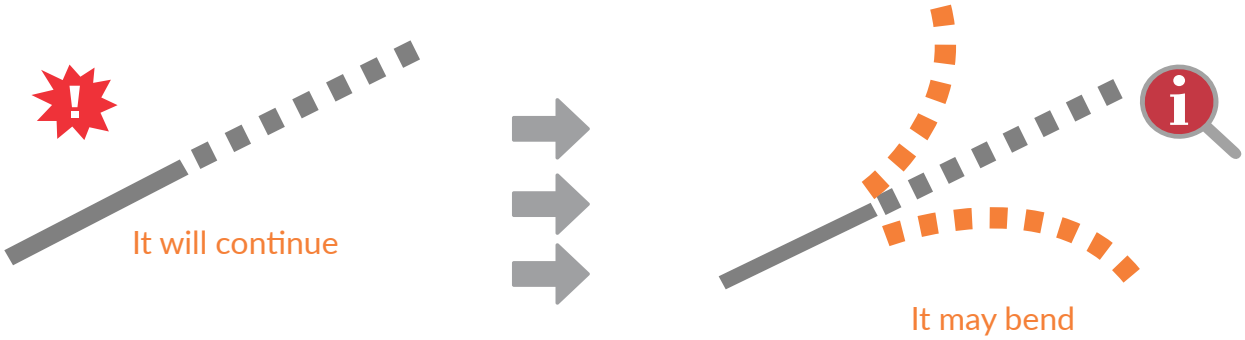
- However, most charts follow *other shapes*. *S-shaped curves* start out relatively flat, then go up steeply before flattening out again (e.g. the relationship between income and vaccination). *Slides* look like reverse S-curves. *Humps* show trends that get worse before they get better (e.g. the relationship between income and dental health). *Doubling lines* show numbers doubling to exponential growth in the long term (e.g. the relationship between income and distances travelled).

KEY QUOTES

"To understand a phenomenon, we need to make sure we understand the shape of its curve. By assuming we know how a curve continues beyond what we see, we will draw the wrong conclusions and come up with the wrong solutions."

To control this instinct, remember that most curves and trends come in different shapes, e.g. S-bends, humps or doubling lines. Know the shape or direction of a trend to find the right solution.

CONTROLLING THE STRAIGHT LINE INSTINCT



4. The Fear Instinct

We tend to perceive the world to be scarier than it really is.

Most of our fears (of violence, contamination, captivity etc.) are **exaggerated** due to mass media influences and our mental filters.

- The media tends to cover topics like natural disasters, terrorist attacks and diseases because these attract our attention and response. Images of dead and injured people trigger feelings of fear and sorrow, creating an *emotional, illogical urge* for us to take action (e.g. share the news or donate money).

- Rosling presented detailed statistics to prove that these events are *much less threatening than we think*. In reality, only 0.1% of all deaths come from natural disasters, 0.001% from plane crashes, 0.7% from murders, 0.05% from terrorism, and 0% from nuclear leaks. Yet, such events get disproportionate coverage on the mass media.

To control this instinct, realize that there's a difference between what's frightening (i.e. poses a *perceived risk*) and what's dangerous (i.e. poses a *real risk*).

- Something is truly risky only if it's dangerous *and* you're exposed to it. *Calculate the actual risk* of an event with this formula:

Risk = danger x exposure.

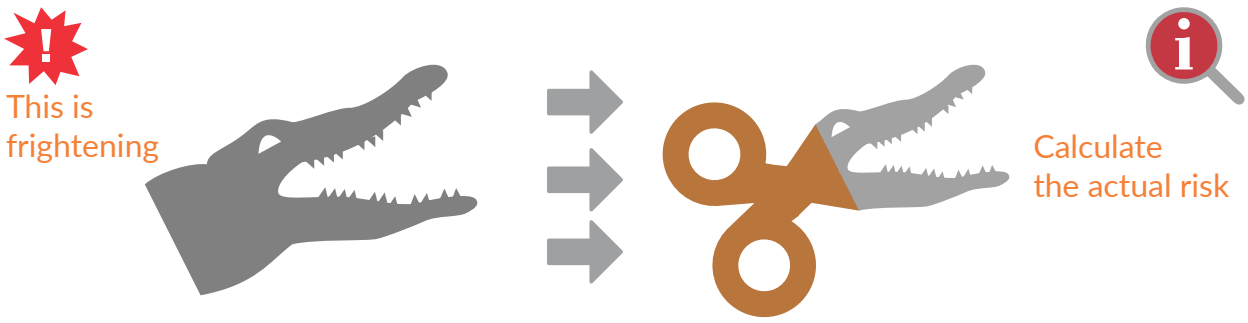
KEY QUOTES

"There's no room for facts when our minds are occupied by fear."

"Here's the paradox: the image of a dangerous world has never been broadcast more effectively than it is now, while the world has never been less violent and more safe."

- Don't let frightening news dictate your actions. Calm yourself down first to resume your analytical abilities, then adopt a *fact-based perspective* to make informed, effective decisions.

CONTROLLING THE FEAR INSTINCT



5. The Size Instinct

We tend to see things out of proportion, over-estimating (a) the importance of a single event or person that's visible to us, and (b) the scale of an issue based on a standalone number.

Our resources are limited and it's sub-optimal to focus them on the **visible problems** in front of you. It's better to step back to see the big picture, then tackle the root of the problem for a bigger impact. For example, a doctor in a Level 2 city can save many more lives if he diverted some of his time and resources to train village health workers and vaccinate children *outside* the hospital, rather than focusing only on the patients *in* the hospital.

To control this instinct, never interpret a number on its own. Instead, compare and divide numbers to see things in proportion:

- *Compare the numbers*. In 2016, 4.2mil babies died from preventable diseases; this sounds massive until you compare it with 14.4mil deaths in 1950. Use the 80/20 rule to identify where 80% of your problem cases are, then focus your resources there.

- *Divide the numbers*. Make a large number more meaningful by dividing it against another number to get a rate. For example the number of babies dying divided by the number of births gives you the child mortality rate. Total carbon

KEY QUOTES

"The fear instinct…makes us give our attention to the unlikely dangers that we are most afraid of, and neglect what is actually most risky."

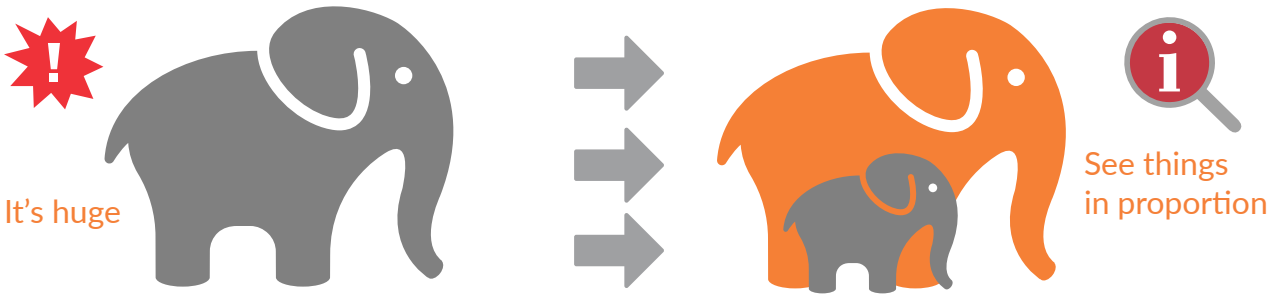
"The size instinct directs our limited attention and resources toward those individual instances or identifiable victims, those concrete things right in front of our eyes."

"To know how to act, and how to prioritize resources, nothing can be more important than doing the cool-headed math and realizing what works and what doesn't."

"So long as resources are not infinite—and they never are infinite—it is the most compassionate thing to do to use your brain and work out how to do the most good with what you have."

emission divided a country's population gives you a per-capita rate, which is more meaningful than a large number without context.

CONTROLLING THE SIZE INSTINCT



6. The Generalization Instinct

Categories are needed for us to handle the overwhelming amount of detail around us. However, we tend to wrongly assume that everything or everyone in a category is similar.

We subconsciously put people into **"us" vs "them" categories** and make all sorts of wrong assumptions about "them".

- For example, *businesses* often dismiss Level 2 and 3 markets as "poor countries", thus missing out on large numbers of consumers with buying power.

- When we make *wrong assumptions* about others based on our own experiences, it's ineffective and even dangerous. During a visit to a Level 2 hospital, one of Rosling's students tried to stop the lift-doors from closing by sticking her leg between the doors—she almost lost her leg on the assumption that all lift-doors had closing-sensors.

To control this instinct, be mindful of how you're using categories to explain or predict something.

- *Question if your categories are relevant*. Look for differences *within* groups, as well as similarities *across* groups. Split large groups into smaller, more meaningful categories (e.g. not everyone in China and Africa have the same income levels). Replace categories that are over-simplified and misleading, like how Rosling replaced "developing countries" and "developed countries" with the 4 income levels.

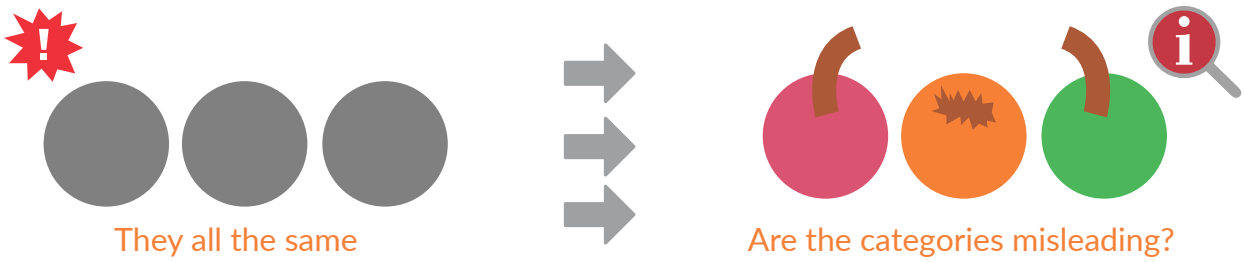
KEY QUOTES

"Strategic business planners need a fact-based worldview to find their future customers."

- Beware of *extreme examples* or vivid images that may be memorable but represent the exception rather than the norm. Be mindful that the word "*majority*" can mean anything from 51%- 99%.

- *Broaden your perspective*. When you can't make sense of a solution or practice, consider if it could be smart from a different angle, rather than assume people are stupid. When you travel, stay with people from other income levels rather than in tourist hotels. Examine the photos from Dollar Street to understand how people from different income groups across the world live.

CONTROLLING THE GENERALIZATION INSTINCT



KEY QUOTES

7. The Destiny Instinct

We tend to assume that (a) the destinies of people, cultures, countries etc. are predetermined by certain factors, and (b) such factors are fixed and unchanging. As a result, we assume that other people, groups or countries will always behave in a particular way and are destined to succeed or fail.

In reality, societies and cultures are **constantly shifting**.

- Over the last 100 years, societal structures, values, and practices have changed everywhere. For example, the strong support for women's rights in Sweden today is a huge shift from the predominantly patriarchal values of the 1960s. Likewise, life expectancy in several large African countries have improved to be above world average.

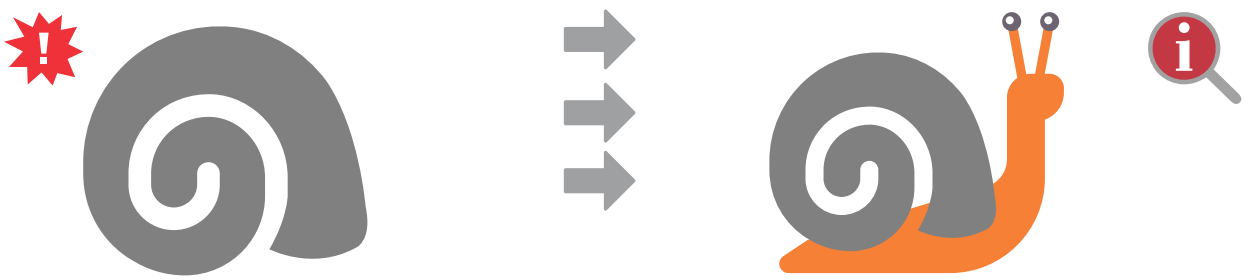
- We also shouldn't assume that all Western countries will continue to grow steadily, nor that they will always stay ahead of the "developing countries".

"Societies and cultures are not like rocks, unchanging and unchangeable. They move."

To control this instinct, realize that gradual shifts may not be obvious, but will add up over time to create massive change.

- *Slow change ≠ no change*. A gradual improvement of 1% a year will accumulate to 200% improvement in 70 years.
- Realize that knowledge can go out of date quickly and seek to *update your knowledge regularly*.
- Look for *examples of cultural change* which can be found everywhere. For example, speak with your grandparents about their lives in the past and compare their values with yours.

CONTROLLING THE DESTINY INSTINCT



KEY QUOTES

"Challenge the idea that today's culture must also have been yesterday's, and will also be tomorrow's."

8. The Single Perspective Instinct

We tend to focus on single causes or solutions—such singular perspectives are easier to grasp and make our problems seem easier to solve.

Unfortunately, **singular worldviews** are completely misleading, and you shouldn't trust any one information source. For example:

- *Experts* are just as susceptible to dramatic filters as other people. They may also be biased toward their area of expertise and lack knowledge in other problem areas.
- *Activists* tend to play up the scale of the problems they are devoted to solving (e.g. human rights, animal protection), and play down the progress that has already been made.
- *Idealogues* tend to narrowly present their ideology (e.g. equality, free markets) as the best way to solve the world's problems, when there's always more than 1 way to solve any problem.

"Great knowledge can interfere with an expert's ability to see what actually works."

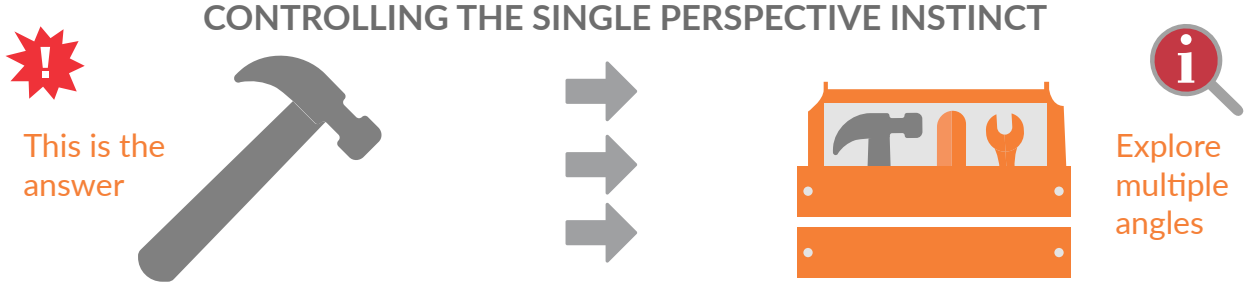
"Beware of simple ideas and simple solutions. History is full of visionaries who used simple utopian visions to justify terrible actions."

- Likewise, *numbers* help us to understand the world, but we can't explain everything using numbers. *Medicine* is vital in battling diseases, but it's not the only way to save lives. *Democracy* may be a great way to run a country, but it's not the only way to deliver economic and social progress.

To control this instinct, examine problems from multiple angles.

- *Work with a toolbox, not just a hammer*. Don't let your expertise blind you to alternative views, and don't rely on 1 tool to solve all problems. Work with people who're strong in other fields. Use numbers but don't rely only on them.
- *Test your ideas or hypotheses* on a wide range of samples, including people who disagree with you.

CONTROLLING THE SINGLE PERSPECTIVE INSTINCT



9. The Blame Instinct

When something goes wrong, we instinctively blame it on someone or something. If you slip on a puddle of water, your first instinct may be to blame the person who spilled the water, or the cleaner who failed to mop it up. By focusing on these factors, you miss the simple fact that you slipped because you weren't paying attention to your steps.

The blame instinct **distracts you from the real causes** behind the problems and hinders your ability to solve them. When you blame the "bad guys" (e.g. unscrupulous businessmen or dishonest journalists), you:

- Exaggerate the influence of a *single individual or group*;
- *Stop thinking* about the problem in depth; and

KEY QUOTES

"No single measure of a good society can drive every other aspect of its development. It's not either/or. It's both and it's case-by-case."

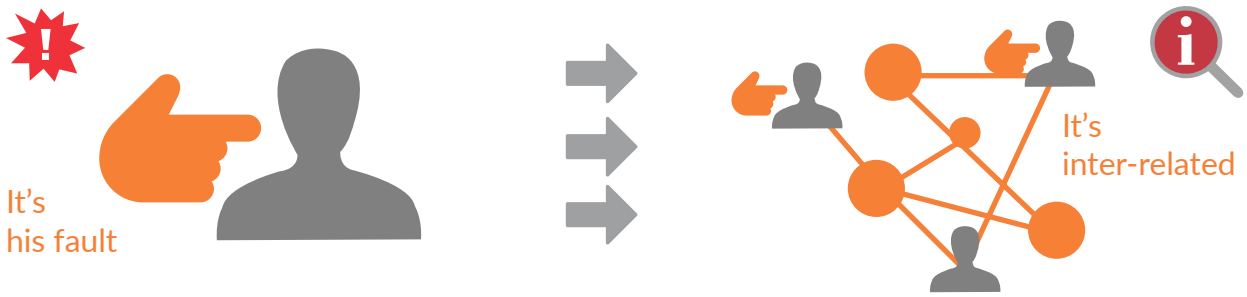
"This instinct to find a guilty party derails our ability to develop a true, fact-based understanding of the world: it steals our focus as we obsess about someone to blame, then blocks our learning because… we stop looking for explanations elsewhere."

- Neglect the *interrelated roles* of systems, institutions and technologies. For example, you can launder your clothes with a washing machine not just because of the supplier who sold you the machine, but because of countless people and organizations who led to the invention of the machine, and deliver water and electricity to your home.

Any issue—especially complex ones like global warming—always involves a system of **interrelated causes**. It's futile to blame any single entity. Likewise, no single leader or group can claim full credit for a certain outcome.

To control this instinct, look for causes and systems, instead of villains and heroes. Seek to understand how multiple factors interact in a wider system to create the situation. Ask yourself if the outcome would still have happened without an individual or organization.

CONTROLLING THE BLAME INSTINCT



10. The Urgency Instinct

We tend to rush into a problem or opportunity for fear that there's no time and we may be too late.

Businesses, political/religious leaders all understand this instinct. That's why we're constantly bombarded by limited-time offers or predictions of impending danger to scare us into action. Unfortunately, when we're stressed or fearful, we cannot analyze the situation properly and tend to make **bad, impulsive decisions**.

To control this instinct, realize that what feels urgent usually isn't.

- Calm down and look for *relevant and accurate data*, so you can validate the claims and understand the real situation.

KEY QUOTES

"It's almost always about multiple interacting causes—a system."

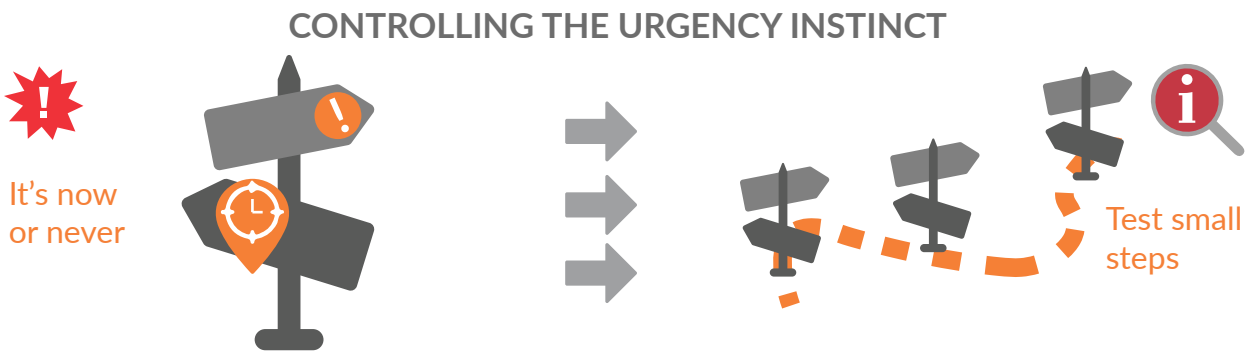
"If you really want to change the world you have to understand it. Following your blame instinct isn't going to help."

"When we are afraid and under time pressure and thinking of worst-case scenarios, we tend to make really stupid decisions."

"When you are called to action, sometimes the most useful action you can take is to improve the data."

- *Beware of predictions* about the future, since most long-term forecasts (be it of the weather, economy or stock markets) are inaccurate.

- Don't jump into drastic solutions, as they may create other unexpected problems. Instead, consider if an idea has been tested, and use *step-by-step improvements* so you can validate if they're effective.



Using Factfulness in Daily Life

Our dramatic instincts exist for a reason and everyone has them. The key is to manage these instincts, so we can think factfully and find better solutions based on a real understanding of the world.

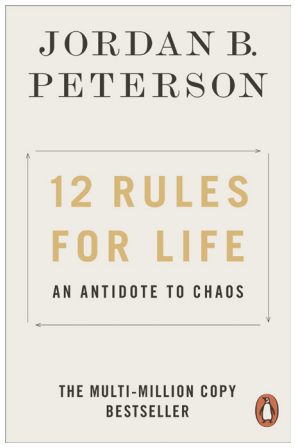
- Education: Teach our children about the 4 income levels so they can understand the world they live in. Help them to use factfulness as a part of critical thinking, challenge their assumptions and stay open minded to new information. As adults, we should also constantly update our knowledge. Improve how you filter and consume the news, rather than rely on journalists, activists, and politicians to present factual and balanced reports.

- Business: By using facts rather than assumptions, businesses can make better decisions about consumers, recruitment, investments etc. Start by identifying the most important facts your organization should have, and ask how many people actually know them.

KEY QUOTES

"When we have a fact-based worldview, we can see that the world is not as bad as it seems—and we can see what we have to do to keep making it better."

"Ultimately, it is not journalists' role, and it is not the goal of activists or politicians, to present the world as it really is…it is up to us as consumers to learn how to consume the news more factfully."



12 RULES FOR LIFE

An Antidote To Chaos

JORDAN B. PETERSON

The Big "So What"

For centuries, religion has played a major role in man's quest for stability and meaning. The rise of secularism and nihilism brought new ideologies, but also a growing sense of emptiness. Based on years of research across various topics, Peterson presents 12 rules of life to help you live with meaning and purpose.

Introduction

Rules vs freedom. Human beings don't like rules and restraint. Yet, we need structure in our lives, which is impossible without rules. Rules bring order, facilitate cooperation and stable relationships. Without rules, there'll be chaos and uncertainty.

Peterson believes that the way to live a free and full life is to embrace rules that help you to produce good in life.

- *Relativists* believe that there's no universal truth—everything from moral values to virtues is subjective, and there's no "right" or "wrong". Yet, if you tolerate *everything* and won't make a stand on *anything*, your life becomes directionless.

- On the other extreme, *ideologues* impose their beliefs on others, thinking they know what's right/best. They adopt an authoritarian approach to judge and censor everything.

- Instead of adopting either extremes above, Peterson believes that Good is the simply the prevention of Evil, and *good rules* that reduce unnecessary human suffering will help us to live better lives.

After years of researching various topics (from history to religion, mythology, neuroscience and psychology), Peterson developed the **12 Rules of Life** in this book. These rules are

KEY QUOTES

"The best rules do not ultimately restrict us but instead facilitate our goals and make for fuller, freer lives."
- Dr Norman Doidge

"Alongside our wish to be free of rules, we all search for structure."
- Dr Norman Doidge

"Shared beliefs simplify the world…because people who know what to expect from one another can act together to tame the world."

"We must each adopt as much responsibility as possible for individual life, society and the world."

"If we each live properly, we will collectively flourish."

built on the fundamental rule that we must each take responsibility for our own lives. Get your life in order and do the best for yourself, your society and the world at large. Only then will you discover the true extent of your potential and resilience, while helping mankind to thrive collectively.

The 12 Rules for Life

Rule 1: Fix your posture

All animals, including humans, are governed by **dominance hierarchies** and involuntary biochemical responses.

- Lobsters battle for dominance. During a confrontation, 2 lobsters size each other up using their body/claw sizes and chemical secretions (which signal their health, strength and mood). Dominant lobsters have higher serotonin levels, project greater confidence, a better posture, and can fight longer. An alpha lobster typically "wins" without even having to fight physically.

- After each confrontation, a lobster's brain changes—the loser avoids further conflict, whereas the victor gains even higher confidence and serotonin levels. Similar patterns can be found in other animal species—generally, stronger animals get more food, better "homes", higher status, better mates, and greater cooperation from others. That's nature's way of distributing scarce resources.

Likewise, humans have a dominance detector in our brain. How we perceive our social/economic status affects our well-being which reinforces our status in a **positive feedback loop**.

- People with *strong self-esteem* feel/transmit a sense of security and confidence, which makes them more attractive and respected. This improves their productivity and well-being, which further reinforces their self-perception. Higher serotonin levels are associated with greater resilience, happiness, health, lifespan, pro-social behavior and leadership.

- On the other hand, people with a *low self-perception* feel insecure. They're more likely to be stressed, jumpy and

KEY QUOTES

"The dominance hierarchy...is a master control system, modulating our perceptions, values, emotions, thoughts and actions."

"There is an unspeakably primordial calculator, deep within you...It monitors exactly where you are positioned in society—on a scale of one to ten, for the sake of argument."

"Circumstances change, and so can you."

reactive. They make poor decisions, fail to command respect/resources, which reinforce their loser complex.

In short, our self-perception affects the vibes we transmit to create a self-reinforcing loop. If you feel like a loser for whatever reason, the first step is to **break the negative cycle by correcting your posture**.

- *Don't slouch*. It conveys defeat and a low status, which prompts others to treat you poorly and reinforce your low self-perception.

- *Fix your posture*. Stand straight, push your shoulders back, speak up and make eye contact. This signals confidence to yourself and others. You'll feel better, others will show you more respect, and it starts a virtuous cycle. It's about standing tall, facing up to reality and taking responsibility to become all you can be.

Rule 2: Care for yourself the way you care for others

We tend to take better care of our pets than we do ourselves. When a pet is sick, we diligently follow the prescribed care. Yet, when we're sick, we fail to fill/take our prescriptions. Peterson argues that we self-sabotage our success because of our **self-loathing**, or an inner belief that we're not worth helping.

- He explains this using the Biblical story of how Adam and Eve ate the forbidden fruit and saw themselves as naked, ugly and shameful. We still carry the original sin today—we are aware of the human capacity for evil and secretly loathe ourselves.

- On the other hand, our pets and children are faultless—they're innocent and hence deserve all the help/care we can give.

Chaos and Order must coexist. They're 2 sides of the same coin, like the duality of yin and yang, of masculinity and femininity. Even in the garden of Eden (a place of goodness created by God), Chaos wove its way in (as the evil serpent).

- *Order vs Chaos*. Order is the "explored territory" of what we know and understand. Things are in order when they

KEY QUOTES

"To stand up straight with your shoulders back is to accept the terrible responsibility of life, with eyes wide open...It means willingly undertaking the sacrifices necessary to generate a productive and meaningful reality."

"Order is the place where...all things turn out the way we want them to."

go according to our expectations and desires. You're surrounded by familiar environments, routines and concepts you understand. Chaos is the "unexplored territory" of the things we don't yet know or understand. When you're betrayed by someone or hit by disaster, your world collapses around you and you fall into an emotional turmoil.

- Order gives us structure, stability and certainty, but can also bring oppression and limitation if taken to the extreme. Chaos represents instability and uncertainty, but can also bring freedom and potential. Life is about *balancing the two forces*—we need a blend of stability and renewal, of security and change. We need danger and challenges in order to grow and mature.

To counter self-loathing, you must **believe you have an important mission in this world**. To do good, you must first take care of yourself and be healthy physically and mentally.

- See and treat yourself the way you do your pet or children—focus not just on your flaws but also your potential.
- Get clear on your strengths and limitations, your principles and priorities, your goals and directions, and what you must learn or do to achieve them. Build discipline by keeping the promises to yourself. These will bring order, hope and direction to your world.

Rule 3: Surround yourself with people who want the best for you

We become the average of the people we spend the most time with. In the wrong company, we can end up in crime or even suicide. So, **why do we hang around people who drag us down?**

- We may think we're *"rescuing" others* in need, though our real reasons are often not so altruistic. We may be playing savior to feel virtuous or to make our own conditions seem better (e.g. our drinking problem can seem ok next to a chronic alcoholic). We may secretly enjoy the sense of power over the other person, or use it as a distraction to avoid the real challenges that we should be tackling.

KEY QUOTES

"Chaos is the domain of ignorance itself. It's unexplored territory....it is...all those things and situations we neither know nor understand."

"You need to place one foot in what you have mastered and understood and the other in what you are currently exploring and mastering...That is where meaning is to be found."

"You should take care of, help and be good to yourself the same way you would take care of, help and be good to someone you loved and valued."

"A hero is something positive, not just the absence of evil."

- Or, we may simply be *taking the easier path* in life. It's easier to engage in vice than to stick to virtue, to not care about anything than to make a stand and fight for meaningful goals.

The truth is, people in the dumps are there often because they won't take ownership of their problems. **You can't help people who're not willing to help themselves**.

- Others may exploit your generosity, try to keep you from outshining them, or drag you down so they feel less like a loser. Or, they may be seeking charity without taking responsibility for their problems, and your help only disempowers them further.

- Studies found that team effectiveness tends to fall to the lowest common denominator. Even with the best of intentions, a negative person can still drag you—and your entire team—down.

Surround yourself with people who want the best for you.

- People who want you to succeed will not allow you to engage in destructive thinking or to mistreat yourself. They'll push you to do what's right (however difficult), and encourage you to move upward. *Real friendship* is not about blind loyalty. It's about reciprocity, with both sides supporting and pushing each other to greater heights.

- Don't associate with people who drag you down, use you as a life buoy, or expect charity without taking personal responsibility for their own actions and growth. Use this *rule of thumb*: If you won't recommend a friendship to someone you care about, then don't keep that friend yourself.

Rule 4: Improve your own game instead of playing others'

In a highly-connected, populous world, you can always find someone who's better than you—be it in looks, wealth, status or relationships. No matter what you've achieved, you can still **feel miserably inferior** compared to others.

- Everyone has different goals and there's no fixed benchmark for success. *Stop being obsessed with others'*

KEY QUOTES

"Loyalty is not identical to stupidity. Loyalty must be negotiated, fairly and honestly."

"No matter how good you are at something, or how you rank your accomplishments, there is someone out there who makes you look incompetent."

"If something can be done at all, it can be done better or worse."

successes. Instead, get clear on your goals and what being "better" means for you.

- Think of life as a game, each with its own set of rules and objectives. You're free to try new games until you find the one(s) that fit your unique strengths, weaknesses, circumstances and goals. There's no need to win every single game—it's more important to *keep improving your game*.

Look deeply inward to **figure out what you truly want and why**. Get to know yourself like how you would a stranger: What are your values, interests and motivators? What makes you tick? With that understanding, you can push yourself to do better.

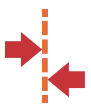
The past is fixed, but what you do today decides the future. If something is not right in your life (or you), fix it. **Take baby steps daily**: set small goals within your abilities, then reward yourself each time you achieve them. Ask yourself, "What could I do, that I would do, to make life a little better?" Every day, find something small that you can fix. Over time, you'll keep raising the baseline and reap the power of compounding.

Your goals determine what you see—once you set your sights on something, you'll zoom in on things that support or hinder these goals. As you focus on daily improvements, your viewpoint will shift.

- For example, if you set a narrow goal to have your boss's job, you'll feel stuck if he doesn't move on. But, if you aim to improve your life in a way that also improves others' lives, you'll suddenly find yourself surrounded by possibilities. The world hasn't changed, but your options have, because the change in perspective has removed your self-imposed limitations.

- Keep focusing on what you can do daily to make your life better, without being fixated on what "better" means. Allow it to evolve as you do.

Rule 5: Teach your children to abide by society's rules



Children aren't born with social-cultural skills—they **must be taught** how the world works and how to navigate human society.

KEY QUOTES

"Before you can articulate your own standards of value, you must see yourself as a stranger—and then you must get to know yourself."

"You could watch the precious days tick by. Or you could learn how to entice yourself into sustainable, productive activity."

"What you aim at determines what you see."

"Children must be shaped and informed, or they cannot thrive."

- Kids push boundaries (e.g. throw tantrums or hit their parents) to learn what's permissible and what isn't. Parents who don't *set clear boundaries* for their young kids only end up hurting them in the long run. If you don't correct your child when he hits or bullies others, he'll struggle to make friends and interact meaningfully with others.

- Many modern parents are afraid to *discipline* their kids, for fear of losing their love or limiting their creativity. Others are simply lazy or negligent. Research shows that boundaries improve (not hinder) creativity, security and achievement in the long run. Discipline can always be done with care and mercy, e.g. using timely rewards and reinforcement (like a praise or a pat on the head) when your child does something right.

- Don't be afraid to *use both positive and negative emotions* to educate your child. Positive feelings (e.g. satisfaction) teach us what to do more of, while negative feelings (e.g. pain) teach us what not to do.

If you want your children to succeed, help them to become well-liked. Teach them the rules now, so they won't be punished harshly by society in the future. Use these **5 principles** as a guide:

- *Limit only to essential rules*, e.g. no violence except in self-defense, pay attention when adults speak to you, take care of your belongings etc.

- Use the *minimal amount of force* required to enforce these rules. Experiment with different approaches to identify what works for your kid, e.g. a firm glare, verbal commands or physical discipline.

- Parenting is *best done with a partner*, so you can cover each other when one party makes a mistake.

- Parents have finite patience too, and are capable of *anger and revenge*. If your kids get out of hand, you may start to resent and subtly punish them (e.g. by ignoring them). This can start a vicious cycle if they resort to more extreme behaviors that trigger even more resentment in you.

KEY QUOTES

"Poorly socialized children have terrible lives. Thus, it is better to socialize them optimally."

"It is an act of responsibility to discipline a child. It is not anger at misbehavior. It is not revenge for a misdeed."

"The fundamental moral question is not how to shelter children completely from misadventure and failure…but how to maximize their learning so that useful knowledge may be gained with minimal cost."

"It is the primary duty of parents to make their children socially desirable. That will provide the child with opportunity, self-regard, and security."

- *Serve as a proxy for the real world*. Teach your kids what's acceptable or unacceptable, and how to behave in a way that'd make others like them. Teach them how to follow social norms graciously without conforming blindly.

Rule 6: Get your own house in order before criticizing others

Setbacks and suffering are inevitable in life. Some people respond with denial, helplessness, anger, or even acts of vengeance (e.g. genocide). Yet, others are positively transformed by adversity—they make peace with what happened and devote themselves to making a positive difference. A victim of abuse can grow up to be a bully, or he can help other victims of abuse.

Evil can breed evil, but it can also teach us about goodness. You can experience pain and setbacks without being "corrupted" by it. The key is to get your own house in order instead of pointing fingers.

- There's *always* something within your control, e.g. you can't control the economy but you can be prepared for a financial crisis. Instead of feeling bitter and resentful (which won't make things better), *redirect your energy* to constructive uses.

- *Take stock of your situation*: Have you taken full ownership of the problem? Have you done everything possible (and used every available resource and opportunity) to make things better? Get your own house in order before you criticize others. Find your internal peace before advising others what to do.

- If you know something is wrong, stop doing it. If you know there's something you should do, then get it done. Be honest with yourself, and trust your *own judgement and standards* instead of constantly looking to others for direction. Do/say only what you believe is right and makes you feel strong. Over time, you'll make peace with yourself, gain clarity on who you are and what you want, and can move ahead confidently in life.

KEY QUOTES

"People who experience evil may certainly desire to perpetuate it, to pay it forward. But it is also possible to learn good by experiencing evil."

"Have some humility. If you cannot bring peace to your household, how dare you try to rule a city?"

"Stop saying those things that make you weak and ashamed. Say only those things that make you strong. Do only those things that you could speak of with honour."

Rule 7: Focus on a higher purpose, not instant gratification

We can use suffering as an excuse to live carelessly in the moment, or we can do something meaningful to minimize the suffering. Unlike other animals, mankind has the ability to control our primal, base desires, and to plan ahead. We understand the concept of **delayed gratification**—to do the hard things today to make our lives better in future—such as saving for a rainy day instead of spending every cent. The challenge is figuring out (i) what/how much to sacrifice today and (ii) whether the future outcome will be worth it.

To know how to live, we must first come to terms with who we are and **what values we will live by**. Peterson explores how mankind's definition of meaning/sacrifice have changed over the centuries. He also discusses how Christianity, despite its significant influence, has its shortcomings in modern society. For instance, it doesn't address present suffering or deal with problems like global warming, it devalues earthly life by focusing on eternal salvation, and frees people from personal moral obligation (since Jesus already died to redeem us). Religion doesn't provide all the answers, but it at least offers a set of guiding principles. Nihilism, on the other hand, removes all rules to create a void, whereas totalitarianism rigidly imposes a singular worldview.

Peterson suggests that a universally good outcome (regardless of your religious or ideological beliefs) is to **alleviate unnecessary pain and suffering**.

- Doing good can fill your life with meaning and even make the world's evils/injustices seem more bearable. Do whatever you can to *make the world a little better each day*, e.g. counsel someone out of a bad situation or empower others to do good.

- Think deeply on who you must become to live your life most meaningfully. The greater the transformation, the greater the sacrifice you must make. Don't focus on expedience or short-term impulses. Inhibit your urges and direct your energy toward a higher goal. Aim to *align everything in your life* so they converge on a single axis. Take actions that concurrently fit your values/purpose and benefit yourself, your loved ones and the world at large.

KEY QUOTES

"The fact of life's tragedy and the suffering that is part of it has been used to justify the pursuit of immediate selfish gratification for a very long time."

"Freedom—even the ability to act—requires constraint."

"Meaning is what manifests itself when the many levels of Being arrange themselves into a perfectly functioning harmony."

Rule 8: Find your personal truth and live it

All of us are guilty of **lying to ourselves and others**.

- We *lie to others*—outrightly, with half-truths or misleading words—to get what we want and to avoid pain, e.g. to seem more competent, avoid conflict or be well-liked.

- We also *lie to ourselves* about who we are, what we want and what we can/can't do, e.g. that we're happy with our jobs, that a bad habit isn't harmful, or things will work out magically.

- When you tell a lie, you feel unsettled. You may try to forget the incident or find excuses afterward, but deep inside, *you know when you're lying*. It's not an unconscious act.

You may get stuck in a "life-lie" because you're too **narrowly fixated on a predefined outcome** that you twist everything—your thoughts, perspectives and actions—to achieve it at all cost. For example, you announce at the age of 20 that you'd retire by 50 with a house by the beach, and refuse to change course even when you realize later that it's not what you truly want. Don't let stubborn pride blind you to signs that you're on the wrong path.

You may also stick with a lie to **escape mistakes from the past**. You can't fix something if you're hiding from it. In fact, one small lie can lead to another, until you're ensnared in a trap of your own making. On the other hand, when you face up to a truth/challenge, you can find new info and solutions. In fact, organisms have been found to activate new genes in a new environment. So, each time you try something new, you're actually transforming yourself.

Find your personal truth and act consistently with it. If your life isn't ideal, start by being honest with yourself about *why* it is so.

- Set a concrete goal to work toward—ideally one that focuses on developing your character/ability, not on achieving power/status. Treat your ambition as a *direction* to work toward, but stay open to new options as you learn and evolve.

KEY QUOTES

"Taking the easy way out or telling the truth—those are not merely two different choices. They are different pathways through life. They are utterly different ways of existing."

"If you make a move and it isn't helping you win, then, by definition, it's a bad move. You need to try something different."

"If you will not reveal yourself to others, you cannot reveal yourself to yourself."

"Error necessitates sacrifice to correct it, and serious error necessitates serious sacrifice."

"You are by no means only what you already know. You are also all that which you could know, if you only would."

- Accept that you have limited knowledge and there'll be uncertainty. Measure your progress and *watch for inner conflict*—it usually comes with a sense of dread or weakness (instead of strength or conviction). Act only in ways that your internal voice doesn't object to.

Rule 9: Learn to be a good listener

People need a listening ear. As a good listener, you can learn while helping others to solve problems.

Talking is a way to help people think. As people verbalize their thoughts/feelings, explore past events, and simulate the future, they can gain clarity on their views and options.

- Deep thinking is hard work. It's like having an *internal dialogue* to debate 2 or more differing viewpoints. You must articulate the ideas clearly, present conflicting arguments, challenge your own assumptions, and agree/disagree with yourself. To stay sane, most people prefer to talk to others.

- As a listener, you can *help the other person to think*. Sometimes, you don't have to say anything. Just by listening fully, you validate others and let them solve their problems. At other times, you can be a voice of reason or a mirror to help them see what they're ignoring.

If you can listen without premature judgment, people tend to trust you and share their thoughts freely. Often, you can learn valuable lessons just by listening to others' experiences.

- By contrast, *poor conversationalists* don't seek to listen or learn. They may try to exert their dominance or convince others of their view. They're constantly thinking of what to say instead of listening to what the other party is saying.

- Enter every conversation with the *assumption that you can learn* something from the other person. Let people talk/think without interrupting or offering inputs to sway their conclusion. Beware of the subtle influences from your responses or body language.

The best conversations are built on the premise that everyone has something to contribute. Everyone listens actively,

KEY QUOTES

"Thinking is an internal dialogue between two or more different views of the world."

"True thinking is rare—just like true listening."

"If you listen…without premature judgment, people will generally tell you everything they are thinking—and with very little deceit."

builds on one another's inputs, and leaves with an improved perspective and/or a better solution than what they started with.

- To ensure you've truly understood what's being said, listen carefully, then *objectively reflect on what you've observed*, e.g. "You said this and I noticed that, which made me aware of this." This helps to clarify how the verbal and non-verbal messages are being interpreted, uncover hidden assumptions and new insights.

- During a *dispute*, pause the discussion and add a new rule: Each person can only speak for himself after he has repeated the ideas/emotions of the previous person accurately to that person's satisfaction. This forces people to *truly* listen and understand each other, while consolidating the ideas to make them clearer.

Rule 10: Define your problem precisely to make it manageable

We simplify our world by seeing only what's required to survive and achieve our goals. Often, we avoid looking deeply into a problem in hope that it'll go away by itself. It's easier to pretend the problem doesn't exist, than to spell it out and confront the associated pain. Yet, left unaddressed, the **doubts and uncertainties** can build up into a catastrophic failure.

Specificity brings order to chaos. When you can't make sense of a problem or situation, you feel fearful and unsettled. You start to speculate and second-guess everything, making the problem more complex than it really is. However, once you can pinpoint the issue specifically, it becomes more manageable.

- You can't fix something if you don't know what's broken, just like a doctor cannot prescribe the right cure without knowing the exact symptoms. The only way to reinstall order is to *diagnose the problem specifically*. Be precise—define exactly what is wrong and why, what you want and what you're going to do about it. Speak carefully and precisely about what's going on, so you can filter out the exact issue and actionable parts instead of being overwhelmed by a host of irrelevant or imagined issues.

- Things left unsaid in *relationships* can cause suspicion and resentment to build up and create a tangle of issues

KEY QUOTES

"Listen, to yourself and to those with whom you are speaking. Your wisdom then consists not of the knowledge you already have, but the continual search for knowledge, which is the highest form of wisdom."

"Not thinking about something you don't want to know about doesn't make it go away."

"Precision specifies. When something terrible happens, it is precision that separates the unique terrible thing that has actually happened from all the other, equally terrible things that might have happened—but did not."

and emotions. If you feel uneasy about something, define explicitly what's troubling you and discuss it with your partner. Tackle interpersonal conflicts by addressing 1 specific issue at a time. Don't allow things to build up, nor drag in other events or issues in your discussions.

Rule 11: Accept that inequality exists

Some postmodernists argue that **gender** is entirely a social construct, i.e. it's no more than a tool for men to oppress women. Peterson disagrees. He cautions against pushing for men and women to behave in *exactly* the same way, as it goes against our biological nature and can backfire.

- The truth is, men and women are *biologically different*. Historically, women were disadvantaged not solely due to male oppression. There were also biological reasons e.g. the burden of reproduction, menstruation, unwanted pregnancies, bodily damage from childbirth etc. Male and female animals play different roles in nature, yet no one calls it gender inequality.

- Peterson advocates giving people the *social freedom* to choose what they prefer instead of insisting on a 50-50 split in every profession. If, given the freedom, women still prefer nursing and men prefer to design bridges, why not leave them be?

Another postmodernist argument is that **hierarchy** exists merely a tool for the rich to suppress the poor. Hierarchies do create inequalities, but not because the rich uses it for exploitation and exclusion. Hierarchies help us to organize ourselves, and status in healthy societies comes from competence, not power.

Peterson warns against simplistic worldviews that focus narrowly on 1 single factor (e.g. gender). **Inequality is a fact of life**. If we insist that women should earn as much as men, should we also insist that everyone of the same race, nationality and age earns the same salary? Leave such choices to the marketplace instead of forcing a homogenous outcome.

- In fact, the extreme views on gender equality may have *tipped the balance against men* in many areas. It's often

KEY QUOTES

"Precision may leave the tragedy intact, but it chases away the ghouls and the demons."

"Any hierarchy creates winners and losers."

"In societies that are well-functioning... competence, not power, is a prime determiner of status."

acceptable for a girl to excel in a "boyish" activity or beat a boy, but not vice versa. In certain university disciplines, males are also disadvantaged compared to females.

- We also risk *"feminizing" boys* by protecting them from danger or teaching them not to be aggressive or competitive. In the end, women still want men who're smarter and tougher than them. As it is, highly-educated women already struggle find suitable partners—by training little girls to stand firm and training little boys to be gentle, we'll only hurt both genders in the long term.

Leave the kids as they are. Don't brainwash them with unproven theories on gender and hierarchy, nor socialize hem to act against their biological nature. Let them find their own way.

Rule 12: Take time to appreciate the good things in life

Suffering is inevitable and some people just seem to have a worse lot in life than others. Peterson's own daughter suffered from a rare juvenile rheumatoid arthritis, and was plagued with years of chronic pain. What kind of god would allow innocent children to suffer or permit atrocities like mass genocide?

Yet, **our pains and limitations are what make our joy and triumphs meaningful**; they make us who we are. If we're all-powerful and omnipresent, life becomes dull and pointless.

- When Superman was first created as a comic book character, he had such godly powers that he could do *anything*. Without struggles, learning and growth, he became boring. So, the franchise recreated Superman with a weakness—kryptonite.

- What we admire about others are intertwined with their struggles and limitations. Loving someone means loving their imperfections too.

You can hate the universe for your suffering. Or, you can accept it as a part of existence, and **focus on goodness and options** instead.

- Limit the time you spend thinking of your *pain and illness*. Never think of it at night to avoid disrupting your sleep.

KEY QUOTES

"If you think tough men are dangerous, wait until you see what weak men are capable of."

"Too much protection devastates the developing soul."

"If you are already everything, everywhere, always, there is nowhere to go and nothing to be...No limitation, no story. No story, no Being."

"Once you are aligned with the heavens, you can concentrate on the day."

- Notice and appreciate the *everyday goodness* that makes life worth living. Watch a kid splash in a puddle, pet a cat when you see one, or enjoy a nice cup of coffee. Do your forward planning when you're feeling good, since you can't do so effectively when you're in the clutches of pain.

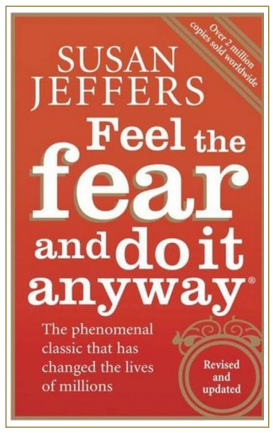
Other Details in the Book to Look out For

In the book, Peterson shares (in great detail) a range of personal stories and perspectives, his interpretation of Biblical and mythical stories, references to and citations from various ancient texts, philosophers, psychologists, etc., to explain how he arrived at the 12 rules of life. For more details, please visit https://www.jordanbpeterson.com.

About the Author

Jordan B. Peterson (born 1962) is a Canadian clinical psychologist and a professor of psychology at the University of Toronto. He holds bachelor's degrees in political science and psychology from the University of Alberta and a Ph.D. in clinical psychology from McGill University. Peterson was a post-doctoral fellow at McGill, before becoming an assistant professor, then an associate professor, at Harvard University. He moved back to Canada in 1998.

KEY QUOTES



FEEL THE FEAR AND DO IT ANYWAY

The phenomenal classic that has changed the lives of millions

SUSAN JEFFERS

The Big "So What"

All of us experience fear. Some people are crippled by it while others thrive in spite of it. This book helps you to understand what is fear, and equips you with techniques and tools to conquer your fear and live life fully.

Introduction

Jeffers believes that fear is not a psychological problem but an educational one.

Many of us think of fear as an obstacle that prevents us from moving ahead. In reality, fear surfaces whenever we take a risk or try something new. The key is to **re-educate yourself** to accept fear as a natural and necessary part of growth.

Everyone feels fear, yet some people move ahead in spite of it while others are paralyzed by it. This shows that the issue is not with fear per se, but how we *handle* that fear. To **deal with fear**, don't try to avoid or remove it. Instead, develop the skills to act in spite of it.

In this summary, we've organized the key ideas into 2 parts: "Understanding Fear" and "Overcoming your Fears". Use this book as a guide to re-educate yourself. Then, each time you feel afraid, use one or more of the tools provided to move ahead.

KEY QUOTES

"Whatever the fear, this book will give you the insight and tools to vastly improve your ability to handle any given situation."

"If everybody feels fear when approaching something totally new in life, yet so many are out there 'doing it' despite the fear, then we must conclude that fear is not the problem."

Understanding Fear

Where your fear comes from

There are **3 key levels of fear:**

- Level 1 fears are "*surface stories*" that you tell yourself about what will happen (e.g. aging, being alone) or things you must do (e.g. making a career switch, making a speech). Often, the fear of 1 thing can spill over into other areas (e.g. a fear of meeting new people can induce fear of crowds, parties, public speaking etc.)

- Level 2 fears involve your inner states of mind rather than external factors. These are *generalized fears* that cut across many areas of life—such as the fear of rejection, failure, success—to reflect your sense of self and abilities.

- Beneath every fear is the *ultimate fear* that you won't be able to handle something, i.e. all fears are fundamentally due to a lack of confidence. Use the tools and ideas in this book to build the confidence that you can handle anything in your life. When you can shift your dominant thoughts from "I can't handle it" to "I will handle it", you'll fear virtually nothing.

While it's useful to know how your past has caused your fears, the solution comes from **taking action in the present.**

- Most fears are instilled from *childhood*. For example, you may have grown up with protective parents who'd constantly worry and warn you to be careful. These send subtle signals that you can't handle yourself.

- However, there's no point examining the past. Instead, *focus on the present* and take action to change what you don't like. If you don't want your fears to stop you from getting the most out of life, make a decision now to conquer your fears.

KEY QUOTES

"One of the insidious qualities of fear is that it tends to permeate many areas of our lives."

"At the bottom of every one of your fears is simply the fear that you can't handle whatever life may bring you."

"If something is troubling you, simply start from where you are and take the action necessary to change it."

The 5 Truths about Fear

A key idea in the book is this: when you can accept your fear and act in spite of it, you'll naturally overcome it. Jeffers helps us to understand why this is so, by breaking it down into 5 truths:

Truth #1: *So long as you're growing and trying something new, you will feel fear*. Hence, there's no point in trying to avoid your fears.

Truth #2: Many people are trapped by when-then excuses, i.e. "when this happens, then I'll do that". The *only* way to remove a fear is to do keep doing what you fear to do. When you face the unknown and handle it, you'll learn to do it better each time and gradually lose your fear of it.

Truth #3: *It's less scary to push through a fear than to constantly feel crippled and worried about the "what-ifs"*. Each time you confront a fear, you remove some of the uncertainty. The more you do so, the more you realize that you can handle anything that life throws at you, and become more liberated and confident to live life fully.

Truth #4: *When you confront your fear and do it anyway, not only do you overcome the fear, you also feel good about yourself*. Mastering something you previously feared can be deeply satisfying and fulfilling.

Truth #5: *Everyone has their fears*; they just don't usually talk about it. In short, you're not alone.

Overcoming your Fears

Moving from Pain to Power

The key to handling fear is to learn to move from a position of pain (helplessness, depression, paralysis) to one of power (choice, energy, action), so your fear no longer holds you hostage.

KEY QUOTES

"We can't escape fear. We can only transform it into a companion that accompanies us in all our exciting adventures; it is not an anchor holding us transfixed in one spot."

"The real issue has nothing to do with the fear itself, but, rather, how we hold the fear."

"Power" refers to the **inner strength and self-love** that empowers you to take control of your life situations. Many women have been conditioned to believe that power is unfeminine and unattractive. In reality, love and power go together—people who are self-assured are generally better able to open up their hearts to love. If you're a woman, Jeffers recommends that you reprogram your beliefs by repeating these affirmations at least 25x every morning, afternoon and night, feeling the energy of the words as you do so:

"I am powerful and I am loved."
"I am powerful and I am loving."
"I am powerful and I love it!"

Pain-to-Power Chart. Pain and power falls on a continuum. Use this chart to develop awareness and start making empowering decisions.

- Place an *enlarged version of this chart* on your wall. You can also make different charts for various areas of your life, e.g. work, health, relationships etc.

- *Place a pin* on the chart where you currently see yourself. Move the pin daily according to how you feel that day.

- Use the chart to guide your *daily decisions*, reminding yourself of the direction you wish to go. If you make a bad decision that brings you pain, don't get angry with yourself; learn from the mistake and move ahead so you shift back to power.

- Keep this exercise *fun and light*. You can even add fun quotes and/or make it a family activity by having your children make their own charts too.

  Getting started is always the hardest. Hence, each step above—even a small one like pinning up the chart—can be powerful to get you moving and to build self-awareness.

Pain-to-Power Vocabulary. Words can empower or wreck us. Choose your words carefully to move yourself from pain to power.

KEY QUOTES

- Jeffers shares a *simple experiment* that demonstrates the power of words. Get Person A to hold out his arm at right-angle and repeat (10x) with emotion "I am a weak and unworthy person". Then, get Person B (standing in front of Person A) to try to pull down Person A's arm—this should be done relatively easily. Next, get Person A to repeat with feeling (10x) "I am a strong and worthy person" before getting Person B to try again. This time, Person B will probably find it much more difficult to pull the arm down!

- What you say reinforces your *subconscious perception* of yourself. Words like "I can't" suggest that you're weak or have no choice, while words like "I won't" suggest that you have choices and know your priorities. Thus, it's more empowering to say, "I'd love to come to the party, but I must prepare for an important meeting tomorrow" than to say, "I can't come to the party."

- In the book, Jeffers explains each of pain-power words/ phrases below and why they empower or weaken you. Choose the words on the right column to *speak more powerfully.*

PAIN	POWER
I can't	I won't
I should	I could
It's not my fault	I'm totally responsible
It's a problem	It's an opportunity
I'm never satisfied	I want to learn and grow
Life's a struggle	Life's an adventure
I hope	I know
If only	Next time
What will I do?	I know I can handle it
It's terrible	It's a learning experience

Expand your comfort zone. All of us have a zone where things feel comfortable. Each time you do something "risky" outside that zone, it pushes your zone outward. By taking 1 small risk at a time (including changing your vocab), you'll expand your comfort zone and the range of things that you can handle comfortably.

- Every night, before sleeping, *plan the risks* you'll take the

KEY QUOTES

"The way that you use words has a tremendous impact on the quality of your life."

"Begin eliminating the terribles, can'ts, problems, struggles, and so on from your vocabulary…The more powerfully you speak, the more you will be a force in the world around you."

"As long as you are taking those risks—no matter how small—you are moving yourself to the right on the Pain-to-Power Chart."

next day, and visualize yourself doing it as vividly as possible, as if you're practicing it in your mind.

- Each time you find yourself hesitating at something, try to *push through the uncertainty*. Even if you fail to overcome your fear at that moment, you can try again in the future.

Taking Responsibility

Being a victim. It's common for people to complain about how their kids make them worry, how their spouses make them upset, or how they're stuck in their jobs due to the bad economy.

- They blame their circumstances or other people for their lousy marriage, lousy career, unhappy life, and think that their lives would be better only if others change. In so doing, they're *giving their power away* and acting as if they are helpless victims.

- In reality, we are in control of how we react to any situation in our life. No one can force you to feel happy or sad—only you can control how you feel.

Taking responsibility means recognizing the choices and power that you have, and putting yourself in the position to exercise them. Jeffers breaks this down into 7 definitions of what it means to take responsibility, and how you can recognize yourself falling into a victim mindset:

i. *Don't blame an external party or factor* for what you feel, do or have. Only you—and you alone—can control your thoughts, feelings and actions.

ii. *Don't blame yourself* for "bad" decisions or for not being in control. You always do the best you can, based on your level of personal growth *at that point in time*. Don't bash yourself for what has already happened or think "I should've known better". Embrace the experience, learn from it and move on.

iii. *Don't be a victim*. Learn to recognize when you're not taking responsibility for what you are being, having, doing or feeling. Each time you feel emotions like anger, impatience, disappointment, self-pity or envy, step back and ask yourself,

KEY QUOTES

"Inside of you, just waiting to emerge, is an incredible source of energy, which is more than sufficient for you to create a joyful and satisfying life."

"If you know you can create your own misery, it stands to reason that you can alone create your own joy."

"Until you full understand that you, and no one else, create what goes on in your head, you will never be in control of your life."

"When you blame an outside force for any of your experience of life, you are literally giving away all your power and thus creating pain, paralysis and depression."

"What am I *not* doing in my life that's causing me to feel this way about the person or situation?"

iv. *Silence the "Chatterbox"*. We all have a little voice in our head that constantly plays out what-if scenarios and predicts how we can fail, lose, or get hurt. Most of us are so used to it that we don't even realize it's there. Become aware of this voice so you can silence it using the exercises in this book.

v. *Identify what's trapping you*. Most of us feel stuck because we constantly choose something we don't want, in order to achieve something that we desire even more, e.g. to feel loved, get attention, or avoid rejection. By identifying these underlying desires, you can see new ways to get unstuck.

vi. *Decide what you truly want and take action*. Only you will know what truly matters to you (e.g. health, relationships). Make things happen; don't wait for others to give it to you.

vii. *Be aware that you always have choices*. In any situation, you always have the power to choose how to feel and act, i.e. you'll never have "no choice". Choose the path that brings you growth and peace of mind.

Cultivate awareness. Learn to face your fears and develop inner power using these exercises:

i. Think of an area where you feel stuck, and *list down all the desires* that may be keeping you trapped, e.g. what you don't want to do or face, or the self-image you want to retain.

ii. When you face a tough challenge, take time out to write down all the positive and negative ways you can feel and act. Imagine yourself going through all of them and realize the wide *range of options* you have. Consciously choose the positive responses.

iii. Think of something you're upset about, and list down all the ways you can change it to a positive experience. Look for *new points of view* in any situation.

iv. Look for *gifts* or positive outcomes that came from a "bad" situation", such as an illness or loss of a job.

KEY QUOTES

"There is no need to wait for anyone to give you anything in your life. You have the power to create what you need."

"When you are aware of what you are doing…you will lead yourself instead of being led."

v. During conversations, pay attention to *what you say*, e.g. do you complain or focus on what you're learning?

vi. Challenge yourself not to *criticize or complain* about anyone or anything, for 1 full week.

Practicing Positive Thinking

Our frame of mind affects how we feel and act, to create our reality and outcomes.

Unfortunately, we're surrounded by so much negativity and naysayers that it takes **conscious effort** to stay positive.

- When you're optimistic about something, it's common for others to tell you that you're being *unrealistic*. However, negative expectations are just as unrealistic as positive ones. In fact, it was found that more than 90% of our worries don't ever happen.
- To *counter the negatives* around you, practice positive thinking daily and surround yourself with positive people.

Use this program to **cultivate positive thinking**:

- *Use affirmations* (positive statements that something good is already happening) e.g. "I am relaxed, knowing I can handle anything." Place an audio player beside your bed, and play your affirmations first thing in the morning when you wake up. End your day with positive, relaxing materials and affirmations.
- Pick a *special affirmation* each day and write it somewhere you will see regularly. Repeat it at least 10x each time you see it.
- Whenever negative thoughts surface in the day, catch yourself and repeat the affirmations to *outtalk the negative voice*. Each time your positive energy wanes, take time out to recharge with your affirmations. Laugh whenever you can and lighten yourself up.
- Write *positive quotes* on index cards/ post-it notes and

KEY QUOTES

"There is an automatic assumption that negative is realistic and positive is unrealistic. Upon inspection, this is pure madness."

"Nothing is realistic or unrealistic—there is only what we think about any given situation. We create our reality."

place them everywhere. Take note of them as you go about your day.

- As you get dressed, play some *relaxing or uplifting music* and repeat your affirmations for at least 10 minutes.

- As you travel, plug in to *positive audio/reading material* instead of focusing on the traffic.

Making "No-Lose Decisions"

Most of us are conditioned to be afraid of making mistakes and bad decisions. We try to figure out if each option is right or wrong, then spend huge amounts of time revisiting our decisions.

In reality, you can't predict the future, and every path comes with opportunities. Make "no-lose decisions" by considering only the opportunities and what can go right with each option.

When making a major decision:

- Focus only on *potential gains*, not potential losses;

- *Research your alternatives* so you understand your options;

- *Identify your priorities*, giving yourself time to gradually discover what truly matters to you;

- After doing your research and considering your options, *trust your intuition*; and

- *Relax* in the knowledge that you'll be able to handle any "bad" decision and learn from it. Treat your whole life as a university, so you can view events like divorce, illness, or retrenchment merely opportunities to learn and grow.

After making a decision:

- *Discard your expectations* of how things "should" be. Focus fully on the actual opportunities in front of you, rather than dwell on the what-ifs.

- *Accept full responsibility* for the decision. Never blame others if things don't go well. Instead, feel good about the

KEY QUOTES

"There really is nothing to lose, only something to gain, whatever the choices you make or actions you take in life."

"There was no right or wrong decisions, just different ones."

"It is through confusion that you finally come to clarity."

"Security is not having things; it's handling things."

"An upset in your life is beneficial, as it tells you that you are off course in some way and you need to find your way back to your particular path of clarity once again."

lessons you're learning and embrace your mistakes as a natural part of growth.

- Allow yourself to *change course*. If you've done your best to make something work, but it turns out to be a bad choice, let it go and move on. There's no point in protecting a past decision for the sake of doing so. Instead, focus on course-correction, recognizing that what's "right" for you could change as you grow. Listen to your inner cues—if you're feeling confused, it's a sign that you may be off-track.

Handling Relationship Changes

As you grow, your close friends and family members may feel uncomfortable and start reacting negatively.

Don't be afraid to **change or expand your social circle**.

- Both positivity and negativity are contagious. As you become more positive, you may find it less enjoyable to be around negative people (including friends who blame and complain). Don't be afraid to *outgrow your old friends*. Stay true to your path—those who're keen to grow will eventually shift under your influence, while others will gradually disappear.

- *Expand your circle* by consciously reaching out to people you admire. Find their contacts and initiate contact via a phone call or email. You can also meet positive, growth-oriented people at self-improvement workshops or seminars.

- Likewise, your *spouse* may feel threatened by your growth. Have faith that he/she wants the best for you, and will one day appreciate your positive changes. If you eventually end an unhealthy relationship, be confident that you'll find a positive mate who'll support you on your growth.

As you try to overcome your fears, you may feel frustrated if your friends/family seem unsupportive. Initially, you may swing between aggression and passivity as you learn how to **assert yourself**.

- If your loved ones discourage you from stepping out or tell you that you that you'll fail, *don't lash out at them*. Instead, understand their insecurity, share your confidence and let

KEY QUOTES

"If you've truly committed yourself to something, given it everything you've got, and then concluded that it is not for you—move on to something else."

"Most of us are not aware that we belong to the moanand-groan crowd until we stop moaning and groaning."

"Like attracts like. As you begin to change, you will automatically draw and be drawn to a different kind of person."

"As soon as you stop agreeing with their victim act, they will either disappear or join you on the path to power and love."

them know you want their support, e.g. "I understand why you feel I'm being selfish. I've not been as available to you as before. It's not easy for me to change, but I really want to grow myself. I'd love to have your support and I want you to know that I love you very much. How can we improve the situation together?"

- *Be patient*. Give yourself the time and space to learn and adjust. Try to center yourself using relaxation audios, meditation, or affirmations.

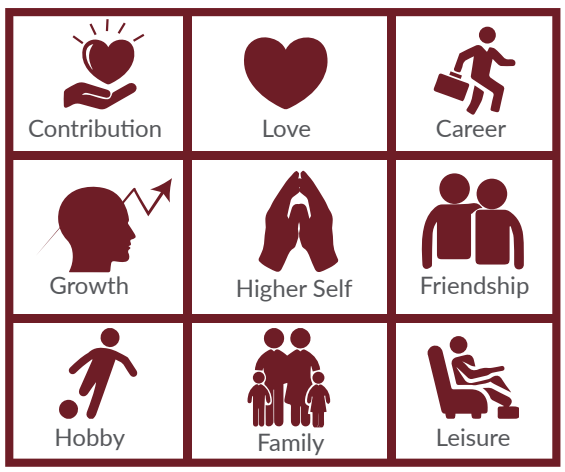
Living a Whole Life

It's common for people to devote their entire lives to someone or something (e.g. their spouse, kids, or work), and feel devastated when they lose what they consider to be the centre of their lives.

Your life comprises **many aspects**, including love, friendships, personal growth, leisure, work, family, contribution etc.

Plot out the key areas of your life on a **whole-life grid**, and make a commitment to grow each of these areas. Try to include "contributions" as one of the key areas for fulfilment and growth.

- Having a *full grid* will make it less scary to lose any one component. Even if something happens (e.g. losing your job), you won't feel as if your entire life has collapsed, and it'll be easier to rebuild that part of your grid.



- Focus on each box in your grid, visualizing what you'd want that aspect of your life to be like. Imagine what you'd do and feel if you truly care about and are committed to that area, then take concrete actions to *make your vision a reality*. Stay motivated by plugging in to a self-help group, a growth buddy or a professional who can help you stay on-track.

KEY QUOTES

"When we are concerned with something bigger than ourselves, our fears are greatly diminished."

"Whatever you create in your grid can become a reality—if you are committed to taking the necessary action."

- Keep asking, "*How whole is my life*?" and set daily goals for *all* the boxes in your grid, rather than focus on only 1-2 areas.

Saying "Yes" to the Universe

One of the keys to facing your fears is to learn to accept what life puts in your path, even if it's painful.

Saying "yes" doesn't mean giving up. It's about **facing the realities** of the situation so you're in a position of power to act on it.

- *Don't resist* what is. Imagine you've just lost both your legs after a major car accident. Rather than lament "why me?" and wish it didn't happen, accept what has happened and focus on what you can do with the situation.

- *Don't deny your pain*, as it'd only build up and manifest in other ways (e.g. anger, depression or physical ailments). Accept and deal with the pain, without blaming yourself.

To help yourself say "yes":

- *Read up about others* who've found meaning in dire situations e.g. those who were imprisoned in concentration camps or were severely crippled. Realize that you can handle it too.

- Surround yourself with *signs and quotes* to remind yourself to make the most of your situation.

- *Physically* nod your head to affirm your acceptance of an idea, or gradually relax your body from head to toe to release tension.

- Practice saying "yes" to small *day-to-day events*, e.g. when you lose something or when someone spills coffee on you. Develop the habit of looking for positives in any experience.

Choose Love and Trust

When we give, most of us subconsciously expect something in return, be it appreciation, love or other rewards. If you can give

KEY QUOTES

"Let go and let the river carry you to new adventures by the way you experience your life. In this way—and only in this way—it is impossible to lose."

"When we give from a place of love, rather than from a place of expectation, more usually comes back to us than we could have imagined."

freely without expecting anything in return, you won't be afraid of being conned or losing out, and you tend to end up getting even more than expected.

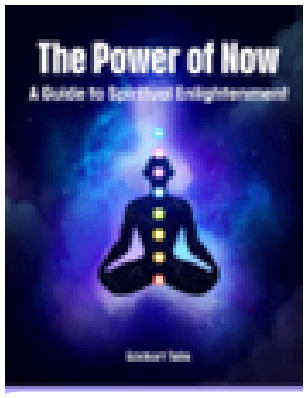
There are many ways to **start giving freely**, including giving your appreciation, praise, money, love, useful information and resources, or your time and energy. The key is to offer them freely without expecting anything back in return.

Our fear of loss or sense of lack is all in the mind. **Build awareness of your abundance** by listing down at least 150 things that you had/have, and keep adding your daily blessings. Try giving away what you think you lack (e.g. money, time, energy), keep reading/listening to positive material and repeating your affirmations. When you realize how much you have, you will no longer be afraid to give.

KEY QUOTES

"What often looks like love is not—it is need."

"Lack is only in the mind."



THE POWER OF NOW

A Guide to Spiritual Enlightenment

ECKHART TOLLE

The Big "So What"

This book is a spiritual self-help guide to help us discover our true Being, release our pain and find deep inner peace. When we are intensely present in the Now, we respond from deep consciousness and flow with ease and joy in life. In so doing, we can better fulfill our outer purpose (to achieve goals and seek to create a better world), while fulfilling our inner purpose and truly changing the world at cause.

Introduction

Tolle started the book by sharing the circumstances and experiences leading to his "enlightenment". Like many others, he had suffered from anxiety and even suicidal depression for many years. Then, when he was 29 years old, he had a personal epiphany which brought him "a state of the most intense joy", and changed the course of his life since.

Tolle only fully understood his transformation years later, and this book acts as a spiritual self-help guide to capture what he has discovered through his experience and years of spiritual study. The book is organized in a Q&A format, addressing common questions about spiritual enlightenment. We have organized some of the key ideas and exercises in this summary into 5 main segments.

Tolle reminds us not to be attached to specific words or images used in the book, as they are simply a means to help awaken the spiritual truth that already lies in all of us. Likewise, we recommend that you focus on the essence beyond the words or images used in our summary, and to focus instead on essence of Tolle's messages.

KEY QUOTES

"True wealth...is the radiant joy of Being and the deep, unshakable peace that comes with it."

"I am not teaching you. You are consciousness, and you are listening to yourself."

"I cannot tell you any spiritual truth that deep within you don't know already. All I can do is remind you of what you have forgotten."

You Are Not Your Mind

One key idea in the book is this–at the core, we are pure consciousness, beings of love, joy and peace. Yet, most of us are struggling and in pain because we have unknowingly "identified with our mind" and a false sense of self.

Enlightenment simply means regaining awareness of our true Being and being deeply connected with Being.

Our Egoic Mind

We use our mind for countless purposes, from learning a language to conceiving a new innovation. The mind also holds perceptions, beliefs, attachments, and as a result, a range of physical and emotional forms.

The mind is a powerful tool, when used properly. The problem is, most of us don't consciously use our mind; instead, we are controlled by our minds:

Incessant mental noise. If you see someone on the street talking incessantly to himself, you would probably consider him crazy. Yet, we talk to ourselves all the time–complaining, comparing, judging, commenting, speculating, voicing likes and dislikes...The only difference is, we do it silently in our minds. Most of us do not have an "off" switch to turn off the incessant mental noise, and our minds keep running, unchecked and uncontrolled.

False sense of identity. Because we are not in conscious control of our mind, most of us aren't even aware of the thoughts, beliefs, and perceptions that are being created in our heads. In fact, we often become so fully identified with the external identity conceived by our mind, that we lose touch with our true inner "Being".

Let's pause for a quick exercise: Take a minute to ask yourself this question: "Who am I and what do I stand for?". Do your answers involve your possessions, job title, social status, education, abilities, relationships, beliefs, religion and even family history?

KEY QUOTES

"All things that truly matter – beauty, love, creativity, joy, inner peace – arise from beyond the mind."

"Being can be felt, but it can never be understood mentally."

"Ego is the unobserved mind that runs our life when you are not present as the witnessing consciousness, the watcher."

"The mind...is a wonderful tool. Dysfunction sets in when you seek your self in it and mistake it for who you are. It then becomes the egoic mind and takes over your life."

Do you realize that most of these things you identify with are merely collective identifications in your mind derived from external sources? They are not you, and they will not follow you beyond your death. Tolle refers to this as our "ego" or our derived sense of self.

Enlightenment: rising above thought

Because the ego is not your true self, it can only exist by drawing on external sources. It feeds on the past (who you think you are, based on past experiences, memories etc.) and the future (who you think you want to be, based on beliefs and perceptions drawn from external influences). So long as you identify with your mind (and the ego-self that it presents), it will remain your biggest obstacle to enlightenment.

In fact, we can become addicted to thinking, because we become so identified with our thoughts, memories, and the associated false sense of self, that we unconsciously fear to stop thinking.

Enlightenment means "rising above thought". In your enlightened state, you'll still use your mind. The difference is, you can lay it aside and quieten your mind when you choose to, i.e. you use your mind, but are not enslaved to it.

Try this exercise: Close your eyes and say to yourself, "I wonder what my next thought is going to be". Then, just wait for the next thought to emerge, like a cat watching a mouse-hole with full alertness. Take a minute to try it now.

You will probably find that you just entered a state of intense presence, when you are free from thought, yet are fully alert.

The Illusion of Time and the Power of Now

Stop the delusion of time

Like your ego, time is a concept created by the human mind, to help us function in the practical world. "Clock time" is useful for tasks like scheduling appointments and running a meeting, as well as to learn from the past and set goals for the future.

However, time is really an illusion. Imagine for a moment if

KEY QUOTES

"Death is a stripping away of all that is not you. The secret of life is to 'die before you die' – and find that there is no death."

"Enlightenment means rising above thought...you still use your thinking mind when needed, but in a much more focused and effective way than before."

"When you are intensely present, you don't need to be concerned with the cessation of thinking... the mind... stops automatically."

"Nothing ever happened in the past; it happened in the Now. Nothing will ever happen in the future; it will happen in the Now."

there are no human beings on this planet –if you were to ask the tree or the bird "what time is it?", your question won't make any sense, because to them, the time at this moment is simply "now".

Indeed, everything that has ever happened or has been created happened in the Now. It is the only moment that we ever truly possess.

- At this moment, the past is only memory traces in your mind. It is over and does not determine who you are now.

- At this moment, the future is just an illusion or an anticipation in your mind. It does not yet exist and does not determine who you are now.

In fact, when you are remembering the past, you are doing it now. Whatever you are creating for the future, you are creating now. So, the most precious moment is Now, because that's the only time you really have, and it is also the only point that can free you from your mind (which we will touch on later).

Unfortunately, your mind can only perceive time in the past and future. Hence, the only way you can understand the power of now is to know and feel it with your Inner Being.

The Power of Now

Most of us are trapped in the illusion of time. We spend the bulk of our energy reminiscing the past, or hoping for a better future. In the process, we are absent in the "Now" - the only real moment that we have. Worse still, we create pain in the present when we unconsciously resist what is, either through judgment and/ or negativity.

All negativity and suffering come from "psychological time" that we create. Feelings of guilt, regret, sadness etc. come when we dwell too much in the past. Feelings of worry, anxiety, stress etc. come when we dwell too much in the future.

We may believe that our past and feelings like fear help to warn us against potential danger. Tolle points out that the physiological state of fear arises from worry or anxiety that something might happen in the future. This "anxiety gap" arises because we are in the now, but our mind is in the future.

KEY QUOTES

"The moment you grasp it, there is a shift in consciousness from mind to Being, from time to presence. Suddenly, everything feels alive, radiates energy, emanates Being."

"If it is the quality of your consciousness at this moment that determines the future, then what is it that determine the quality of your consciousness? Your degree of presence."

"Realize deeply that the present moment is all you ever have. Make the Now the primary focus of your life."

Ask yourself: "What, at this very moment, is lacking?". If you focus on Now - not 5 minutes, 1 year or 10 years from now-you will probably realize that there is no problem, pain nor suffering. You are truly free of problems when you are in the Now.

The key to enlightenment is to stop creating psychological time by dwelling in the pain of the past or the pain of the future. Focus on the Now, and say "yes" to life at the present moment, so it can start working for you.

Accessing the power of Now

Free yourself from the mind

To free yourself of your mind, you need to learn to observe it impartially. Constantly ask yourself "what is going on inside me at this moment?" and "am I at ease at this moment?"

Watch the thinker. The first step is to become aware of the voice in your head – realize that you are not your mind; you're merely an observer of your mind. Listen to your own thoughts, and be especially attentive to any repetitive thought patterns that emerge. When you listen, do it impartially, without judgment or condemnation. When you can observe your thoughts, you will no longer be controlled by them unconsciously.

Watch your emotions. Your emotions are a reflection of what's on your mind. Since we can't observe every single thought, we can use emotions as a tool to bring awareness to our thoughts, including the sub-conscious ones. Watch your emotions without judgement. Do not dwell on the situation, person or event that you perceive to have caused the reaction, as that will only energize the emotion and thought pattern behind it.

When you can allow the emotion to be there without feeling controlled by it, you'll no longer be the emotion. You'll merely be the observer of the emotion.

Dissolve the pain-body. Our past experiences (including our experiences as a child or even past lives) can leave behind residues of pain, like an accumulated "negative energy field". This "pain-body" carries all the stories, baggage and external identities that our egoic mind creates.

KEY QUOTES

"In the Now, in the absence of time, all your problems dissolve. Suffering needs time; it cannot survive in the Now."

"Be at least as interested in what goes on inside you as what happens outside. If you get the inside right, the outside will fall into place."

"Make it a habit to ask yourself: What's going on inside of me at this moment... Don't analyze, just watch."

"When you listen to a thought, you are aware not only of the thought but also of yourself as the witness of the thought. A new dimension of consciousness has come in."

"Whenever you are able to observe your mind, you are no longer trapped in it."

Similar to your thoughts and emotions, you can watch your "pain-body" when it awakens or emerges, taking the form of anger, irritation, depression etc. So long as you unconsciously fear facing the pain in your life, you are identifying with your pain-body and sustaining it. When you become present and conscious of your pain-body, you can start to break identification with it; it can no longer draw strength through you.

If you realize that you are not feeling good about something, either

a) Stop doing what you are doing;
b) Speak to the person concerned; or
c) Decide to drop the negativity that you mind has created around the situation, like how you would drop a hot coal.

When you observe that you have negative emotions or reactions, start by accepting it (not judging or condemning it). Realize that the ability to observe your emotions is already a step forward. When you have practiced acceptance of your emotions long enough, you will eventually stop creating them.

Enlightenment: rising above thought

Stop "Creating Time". Learn to withdraw attention from the past and future when it's not needed. After you have used "clock time" to set your goal, taken the necessary action steps with full attention, and handled other practical activities, withdraw attention from them. Do not continue to depend on those goals for fulfillment, happiness or even self-identity. That way, you do not create and build up "psychological time", unconsciously identify with the past, nor compulsively project into the future.

Instead, focus on the Now. Even if your present moment seems unpleasant or undesirable, start by becoming aware of how your mind is labeling your present situation, and accept it as if you had chosen it. Then, take action from there.

Be Present and Act with "Present-Moment Awareness". Learn to direct your focus fully into the present moment, such that you are alert, aware but not thinking. For example, when doing any routine activity (be it walking up the stairs, washing your hands), become intensely conscious of the activity itself, feeling

KEY QUOTES

"Whenever you are able to observe your mind, you are no longer trapped in it."

"Instead of quoting the Buddha, be the Buddha, be 'the awakened one'."

"When consciousness frees itself from its identification with physical and mental forms, it becomes what we may call pure or enlightened consciousness, or presence."

"Without judgement, without resistance to what is, (negative emotions) would not arise."

"There is nothing wrong with setting goals and striving to achieve things. The mistake lies in using it as a substitute for feeling of life, for Being."

"Whatever the present moment contains, accept it as if you had chosen it. Always work with it, not against it. Make it your friend and ally, not your enemy."

and sensing every breath and moment, without thinking about it.

During life-threatening situations (e.g. a fire or accident), we'll react intuitively and incisively. Our minds have no time to create a problem out of the situation, we're forced into the Now, and we respond out of consciousness. That's why we hear stories of people who show amazing capabilities during life-and-death situations–not because of their fear, but because they are acting from "present-moment-awareness".

When you are Being, you will find joy, ease and lightness in what you are doing. This means that, even when you are pursuing external goals, you will no longer depend on them to make you happy or to "save" you. You will no longer pursue them with fear, stress, discontent, or a psychological need. The "how" of what you are doing – acting out of present-moment awareness - is hence more important than the result you want to achieve.

Accept and surrender to what is. If you are genuinely unable to change your present situation, and you can't even remove yourself from the situation, then "surrender" to it by accepting what is. "Surrender" does not mean weakness, giving up or being fatalistic. It simply means that you drop all inner resistance to what is.

If you realize that at this present moment, your life is already perfect, you should be feeling joyous and peaceful, even as you take action to improve your life situation. Or, you may even find that the situation has changed without any effort on your part. In any case, you are free.

Don't wait

If you are waiting for something in your life to happen before you will be happy, bring yourself back to the Now. If you have been waiting for prosperity, stop waiting. True prosperity is feeling grateful for your life now as it is; when you have that state of mind, you are already prosperous now and prosperity will manifest for you in other ways over time.

KEY QUOTES

"Ultimately, this is not about solving your problems. It's about realizing that there are no problems. Only situations – to be dealt with now, or to be left alone and accepted as part of the 'isness' of the present moment."

"As soon as you honor the present moment, all unhappiness and struggle dissolve, and life begins to flow with joy and ease."

"Do not be concerned with the fruit of your action – just give attention to the action itself. The fruit will come of its own accord."

"Surrender is the simple but profound wisdom of yielding to rather than opposing the flow of life."

"Gratitude for the present moment and the fullness of life now is true prosperity."

Find the Life under your life situation.

We sometimes feel overwhelmed by our present life situation. This arises mainly because we are still caught in psychological time of the past and future. We are resisting what happened in the past and/ or what is. We hope that the future will be better, but that, too, takes our focus away from the present. The key here is to stop focusing on our life situation, and to instead focus on our life, now, at this moment. Realize that there are no problems in the Now, only situations that you can deal with or accept.

Contemplation of space and silence

Being is something that cannot be explained with words, nor understood by the mind. It is like how you cannot explain water to a fish–it can only be felt or experienced.

Space and silence are similar in that, they are essentially no-thing. Yet, there can be no sound without silence, and there can be no form without space. When you become aware of silence, space and "nothingness" in your external world, you'd have achieved stillness within, and experienced a shift in consciousness inside you.

So, to develop greater awareness:

- Rather than listen to the sounds around you, pay more attention to the **silence**, becoming aware of the silence between and underneath the words and sounds.

- Rather than pay attention to the things around you, focus on the **space** or "nothingness" in which they exist.

The Inner Body and Self-Healing

Awareness of the Inner Body

As you develop a deep awareness and connection with your InnerBody or your Being, you will realize that you are not isolated in your physical form, but one with the rest of the Universe.

Try these exercises to connect with your Inner Body.

KEY QUOTES

"What could be more futile, more insane, than to create inner resistance to something that already is?"

"Paying attention to outer silence creates inner silence: the mind becomes still."

"Silence without, stillness within. You have entered the Unmanifested."

"Space and silence are two aspects of the same thing, the same no-thing. They are an externalization of inner space and inner silence, which is stillness; the infinitely creative womb of all existence."

"The inner body lies at the threshold between your form identity and your essence identity, your true nature. Never lose touch with it."

- Feel your body from within. Close your eyes and direct your attention into your body. Feel the life in each part of your body, pausing for 15 minutes as you focus on your feet, legs, hands, arms, stomach, chest... If it helps, visualize each part of your body, your cells and organs, becoming luminous as you focus on it. Feel the energy, become aware of it, but don't think about it.

- Use conscious breathing. Follow your breath as it moves in and out of your body, focusing on how it fills and flows through your body.

Initially, you may need to use these exercises above to help you connect with your Inner Body. However, when you can feel your inner body easily as one field of energy, try to let go of the visual images and only focus on the feeling itself. Use meditation to go deeper into your body. Eventually, focus so deeply into that feeling that you merge with the inner energy field and are one with it.

When you feel and know that your inner and outer bodies are as one, you have effectively transcended your body and connected with the Source.

Inhabit your Body and Stay Rooted Within

As a spiritual practice, learn to retain some energy for your internal connections (rather than focus fully on the external world). Stay deeply connected and rooted with your Inner Body.

Stay connected. When you are doing something (e.g. reading, working), do it with your entire body, feeling rooted and connected within. When you are waiting (e.g. in traffic or queues), take the time to go deeper into the Now and your Inner Body.

Think with your whole body. When you need a solution or a creative idea, don't just think with your mind. Think with your whole body, by shifting your attention inward to your inner energy field. Be still for a moment, as if you are listening internally, and allow your responses to come from a deeper, more conscious level.

Listen with your whole body. When listening to others, listen with your entire body and not just your mind. Feel your inner energy field, and through that, the other person's Being. This

KEY QUOTES

"Transformation is through the body, not away from it."

"When you reach a point of absolute stillness, which is nevertheless vibrant with life, you have gone beyond the inner body and beyond chi to the Source itself."

"By going deeply into the body, you have transcended the body."

is how you listen in a "space of no-mind", without constant mind interference.

Self-healing

The more you "inhabit" your body, or bring consciousness into the body, the more your entire body seems to comes alive. Although your outer, physical body will age and fade with time, your inner body doesn't change. When you're present and connected with the timeless Inner Body, you raise your vibrational frequency, improve your natural self-healing capability, slow down the aging process, and strengthen your immune system.

- Fill your body with consciousness and boost your immune system using this self-healing meditation. Lie down and close your eyes, slowly "scanning" your body and focusing (say, for 15 seconds each) on various parts of your body. Feel the energy in each cell. Do this whenever you are unoccupied, especially just before falling asleep or first thing when you wake up in the morning.

- Remove time from illness. Illness needs a past and a future to take root. In the Now, there is no illness, only physical pain, weakness etc. Do not label your physical discomfort as an illness. Instead, surrender fully to the Now, where illness (like other problems) cannot exist.

- Before you enter the body, Forgive. Often, we have not accepted or forgiven certain people, events or conditions in the past, present or even the future. Before you enter your body, check for emotions or "grievance patterns" like resentment, blame, self-pity etc. When you realize that your pain serves no purpose, and are ready to release your resistance to life, and life can truly live through you.

The Inner Body and Self-Healing

So far, everything we've discussed are all ways for you to de-identify with your mind, and discover/ connect with your inner Body, including an intense presence in the Now, stillness, cessation ofthinking, contemplation of space and time, surrendering etc. These are all "portals" into the UnManifested, Source or God. When the portal is open, love comes through into this world.

KEY QUOTES

"You cannot feel someone else's Being except through your own. This is the beginning of the realization of oneness, which is love."

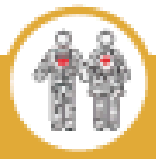
"If the master is not present in the house, all kinds of shady characters will take up residence there. When you inhabit your body, it will be hard for unwanted guests to enter."

"Forgiveness is to offer no resistance to life to allow life to live through you."

"The mind cannot forgive. Only you can...The moment you truly forgive, you have reclaimed your power from the mind."

As you go deeper into your Being and become permanently connected, you become a bridge between the Source and the external world. This is enlightenment.

Enlightened Relationships



Emotions are generally subject to duality, because they are derived from something outside of you. However, there are 3 states-love, joy and peace–which are a part of your inner connectedness. Hence, they have no opposites, and can never be lost.

According to Tolle, true love is not selective nor exclusive, since it is part of our natural Being. However, there may be one person who reflects your love back to you more clearly and intensely (and vice versa) and you are hence in a love relationship.

Duality in "love". Most relationships oscillate between states of being "in-love" and conflict or dissatisfaction. In such cases, the "love" arises from the mind and ego-attachment, and it comes with "clinginess" and a sense of incompleteness. When the ego needs are temporarily met, you feel "in love"; but when your partner no longer meets these needs, your pain-body lashes out. Recognize that true love doesn't cause pain or unhappiness; you are merely experiencing the pain and unhappiness that's already in you.

To move from addictive to enlightened relationships, you'll need to stop judging yourself, then stop judging your partner. When you can accept your partner completely as who he/she is, with no need to judge nor change him/her in any way, then you have transcended your ego self. You can now reflect back to each other the love that you feel deep within. This is true love, one that has no opposite.

Use your relationship as part of your spiritual practice. Similar to how you watch your thoughts and emotions, become an observer of your relationship and your partner's behaviors, doing so without judgment or expectation.

Inner Peace and the Cycle of Life

It is possible to feel deep inner peace regardless of circumstances:

KEY QUOTES

"Love, joy and peace are deep states of Being or rather three aspects of the state of inner connnectedness with Being. As such, they have no opposite."

"Love is a state of Being. Your love is not outside; it is deep within you. You can never lose it, and it cannot leave you."

"Your task is not to search for love but to find a portal through which love can enter."

"You certainly cannot transform your partner or anybody else. All you can do is create a space for transformation to happen, for grace and love to enter."

It is what it is. In many self-help books, we are taught that if we only hold positive thinking and attitudes, we will manifest only positive events and situations. Tolle suggests that, from a higher perspective, there are no positive or negative conditions. Things are simply "as they are"; it is only in our minds that they are labeled "good" or "bad". Obviously, when someone close to us passes away, we'll find it hard to feel happy. However, beyond happiness and unhappiness, we can be at peace. Learn to forgive each moment, and allow it to be as it is, so you do not accumulate new unhappiness to be forgiven in the future. If you can accept the Now while taking action to improve the future, you will enjoy peace underneath your happiness or unhappiness.

Accept impermanence. Nature moves in cycles, such as morning and night, birth and death. Up and down cycles of success are inevitable, and it's not true that the up-cycle is good and the down-cycle is bad. In fact, the down-cycle is essential for spiritual growth, because deep loss or pain are typically what drives us to the spiritual dimension. When you label a condition as "good", your mind becomes attached to it, and you feel a fear of loss or sadness when the cycle ends. Happiness derived from such sources is not lasting nor deep. Instead, when you accept the cyclical nature of life while relishing the present, you'll find true inner peace.

The next time you observe yourself having a negative reaction, imagine that you have become transparent to that external cause of the reaction. Let it go right pass you, and let it "disappear."

Shift in Planetary Consciousness

In our lives, we have our outer purpose (arriving at a goal or destination), and our inner purpose (deepening of our Being). Many of us seek to create a better world, when what we should be doing is to awaken from our own identification with form. Only when there is a mass shift in planetary consciousness can we truly and literally inhabit a new world. We get to salvation and enlightenment by realizing that we are there already there, and by accessing the power of Now.

KEY QUOTES

"Happiness depends on conditions being perceived as positive, inner peace does not."

"Forgiveness of the present is even more important than forgiveness of the past. If you forgive every moment...then there will be no accumulation of resentment that needs to be forgiven at some later time."

"Your happiness and unhappiness are in fact one. Only the illusion of time separates them."

"Only those who have transcended the world can bring about a better world."

So, become aware of your mind-including thoughts, feelings, pain-body-and accept them as part of what is, without analysis nor judgment. When you de-identify with your mind, you can access your true inner Being. When you surrender and accept the Now, you flow with rather than resist life. When there are enough people bringing light and consciousness to the world, it will naturally change – at cause.

In this state, you are more conscious, can see clearly what must be done, and can tackle it one thing at a time, without unnecessarily worrying about the future. You respond from deep consciousness to get more effective results. You bring more love into this world.

If you can find someone who is intensely conscious, being with them and joining them in the state of presence can help you to strengthen your light and increase your consciousness.

Other Details in the Book to Look out For

The ideas in the book may seem simple at first glance, but there are many nuances and insights that can only be gleaned by experiencing the spiritual truths behind the words. Tolle presents them using various angles and perspectives in the Q&A format. Although Tolle isn't identified with any specific religion, he has been influenced by a wide range of spiritual works, and he makes many references to God, Christ, Jesus and Buddha in this book, using these terms interchangeably with words like "presence", "Source", and the "Unmanifested".

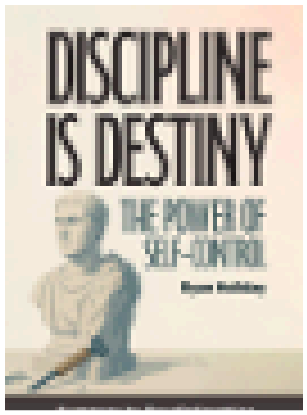
If you resonate with the ideas in the book, we strongly recommend that you read the entire book to personally feel and experience Tolle's message.

KEY QUOTES

"Become an alchemist. Transmute base metal into old, suffering into consciousness, disaster into enlightenment."

"The world is only a reflection... If you accept the image (in the mirror), no matter what it is, if you become friendly toward it, it cannot not become friendly toward you. This is how you change the world."

"Until you are able to experience what I speak of, you may find those passages somewhat repetitive. As you as you do, however, I believe you will realize that they contain a great deal of spiritual power, and the may become for you the most rewarding parts of the book."



DISCIPLINE IS DESTINY

The Power of Self-Control

Ryan Holiday

The Big "So What"

We live in an age of abundance, yet many feel lost and unfulfilled. In this book, Ryan Holiday argues that the path to true freedom and fulfillment lies not in indulgence, but in self-mastery. Drawing on timeless Stoic wisdom and real-world examples, he shows how discipline—of the body, mind, and soul—is the foundation for a meaningful and honorable life.

Introduction: Mastering Yourself with Discipline

Despite modern comforts and freedom, many people feel adrift and overwhelmed. They lack **self-discipline**—the ability to control one's thoughts, desires, and actions—leading to overindulgence, distraction, and dependence.

- Self-discipline isn't about rigid restrictions, but *consistency, balance, and endurance*. It builds strength, freedom, and the ability to shape your own destiny. Holiday uses historical examples to illustrate how discipline can be cultivated in everyday life.
- Stoicism identifies 4 cardinal virtues: courage, justice, wisdom, and temperance. *Discipline is Destiny* centers on *temperance*—knowing when to act, when to hold back, and how to remain steady amid temptation or chaos.

The book is organized into 54 chapters across **3 domains of self-mastery**:

- *The Exterior (physical discipline)*: Mastering our body, physical urges and habits.

KEY QUOTES

"It is through discipline that not only are all things possible, but also that all things are enhanced."

"We must master ourselves unless we'd prefer to be mastered by someone or something else."

"Temperance is not deprivation but command of oneself physically, mentally, spiritually—demanding the best of oneself, even when no one is looking, even when allowed less."

"Discipline...is both predictive and deterministic. It makes it more likely you'll be successful and it ensures, success or failure, that whatever happens, you are great."

- *The Inner Domain (mental-emotional discipline)*: Mastering our temperament, including our thoughts, emotions, and desires.
- The Magisterial (discipline of the soul): Leading with wisdom, humility, and moral strength.

Part 1: Mastering the Body

The body affects the mind. Therefore, self-discipline starts with **physical discipline**. This is about taking care of your body while pushing your limits, recognizing your needs while managing your habits, routines, and basic urges (e.g. food, sleep, exercise).

- Our body serves us for a limited time before it inevitably declines. While we have it, we can choose to master it through discipline, or let it deteriorate through neglect and indulgence. This is exemplified in *Lou Gehrig*, whose remarkable self-discipline made him one of the greatest baseball players of all time.
  - Gehrig played 2,130 consecutive games for the New York Yankees despite fevers, back pain, migraines, and broken fingers. During off-seasons, he continued to train while other players relaxed. An X-ray late in his career revealed at

KEY QUOTES

"Freedom requires discipline. Discipline gives us freedom."

"Discipline is how we free ourselves. It is the key that unlocks the chains. It is how we save ourselves."

"Discipline isn't deprivation... it brings rewards."

"When you love the work, you don't cheat it or the demands it asks of you."

least 17 healed fractures in his hands—none of which he'd ever mentioned.

- He maintained self-control in all aspects, never seeking the spotlight. He eventually removed himself from the lineup when he could no longer perform at the level he demanded of himself, finally ending his historic streak.

Seize Your Mornings

Use the quiet hours of dawn for your most important work. The idea is to carve out uninterrupted time to do what truly matters—focusing, creating, and thinking without distractions.

- Before she became a Pulitzer and Nobel Prize-winning author, Toni Morrison was a single mother with a full-time job as an editor. She woke up before sunrise to write while her mind was clear and uncluttered, before preparing her children for school and heading to work. This discipline enabled her to publish 11 novels, 9 non-fiction works, 5 children's books, 2 plays, and several short stories.

Manage Urges and Excesses

Choose **long-term health, strength and energy** over instant gratification and indulgence. Care for your body, exercise, and reject excesses to improve not just physical health, but also mental resilience and willpower.

- *Babe Ruth* was one of the most gifted baseball players in history. Yet, his undisciplined lifestyle led to weight gain, inconsistent performance, and health issues.

Master Your Habits

Don't be enslaved by your habits, such as alcohol, food, or social media. The real source of suffering isn't the substance or behavior itself, but the need or dependency behind it. Ask yourself: If you hadn't started that habit, would you start now knowing the risks and costs? Then, choose to free yourself from dependency.

KEY QUOTES

"We owe it to ourselves, to our goals, to the game, to keep going. To keep pushing. To stay pure. To be tough. To conquer our bodies before they conquer us."

"Cherish the time. But most of all, use it."

"When you have trouble waking up, when you find it hard...Think of how lucky you are. Be glad to be awake... Feel the joy of being able to do what you love."

"As you're building muscle, you're also building willpower."

"Self-discipline is not a rejection of pleasure but a way to embrace it."

"The body can't be in charge. Neither can the habit. We must be the boss."

- Former U.S. President *Dwight Eisenhower* knew he had to quit his 38-year smoking habit. So, one day, he simply ordered himself to stop smoking totally. He proved that you can take control of a habit—no matter how deeply ingrained—if you decide to do so.

Simplify Your Life

Frugality isn't about deprivation but independence. The less you need, the less you have to defend, and the harder it is for others to manipulate you. **Remove non-essentials** to simplify your life, gain clarity, and focus on what truly matters. Let go of anything that distracts you from your purpose, or adds stress instead of value.

- When *Rubin "Hurricane" Carter* was wrongly imprisoned, he lost his career, possessions, and freedom. Instead of feeling bitter, he devoted himself to learning, reading, and mastering his thoughts. He let go of non-essentials, even sleeping on the floor to remind himself that comfort wasn't a priority. This gave him freedom long before he was released.

Remove Clutter

Physical clutter leads to mental clutter. Keep your environment clean and orderly to remove friction and improve focus/clarity. If your workspace is disorganized, your work, priorities, and even your decisions will reflect that.

- Urban planner *Robert Moses* was known for his ruthless organization and efficiency. He had a meticulously-organized office, and he relentlessly streamlined processes and cut waste.

Show Up Daily

Thomas Edison is often hailed as a genius, yet he attributed his success to a **relentless work ethic**. He lived in his laboratory and never missed a day of work even when he was sick, exhausted, or dealing with personal crises. His breakthroughs came from testing, failing, and refining repeatedly until something worked.

KEY QUOTES

"The only way to stop is to stop...and I stopped."
— Dwight Eisenhower

"The less you desire, the richer you are, the freer you are, the more powerful you are. It's that simple."

"Nothing is cheap if it is superfluous."
—Cato the Elder

"If we want to think well and work well, it doesn't start with the mind. It starts with walking around and cleaning up."

"The space where great work is done is holy. We must respect it."

"Consistency is a superpower....You don't have to always be amazing. You do always have to show up."

- The simple act of showing up daily sets you apart from most people. Don't wait for the perfect moment to start. *Keep doing the work daily*, and the results will come.

Small Details Matter

Tiny mistakes can snowball into huge problems. **Get the details and basics right**, no matter how small. This includes: how you start your day, to how you execute a task or finish a project.

- At the start of each basketball season, renowned coach *John Wooden* reminded his UCLA players how to put on their socks and shoes properly—because a wrinkle in a sock could cause a blister, which could lead to favoring one foot, which could lead to injury and missed games. By sweating the small stuff, his teams went on to win 10 NCAA championships.

Act With Urgency

When it's time to act, **move swiftly and decisively** despite fear or uncertainty. Hustle to move forward consistently when others delay or slow down.

- During the American Civil War, *General George McClellan* had the necessary resources, talent, and manpower, but failed to seize the advantage. His indecision prolonged the war and cost thousands of lives.

Be Deliberate

Intentionality ≠ slowness. Hustling doesn't mean rushing into mistakes. Take time to **prepare methodically**, lay the foundation, then execute with impact.

- At the Battle of Nashville, *General George Thomas* took longer than expected to organize his troops—not because he was slow, but because he was deliberate. When he finally struck, his attack was devastating, crushing the Confederate army in one of the war's greatest victories.

KEY QUOTES

"Details require self-discipline. Even if nobody else notices...or cares."

"We're fit to tackle the big problems only if we do the little things right first. No strategy will succeed—however brilliant—if it ignores logistics."

"Let's push ourselves to be better, to get after it. Hustle because we care. Because we care about the game. Because we care about the cause."

"Hustle isn't always about hurrying. It is about getting things done, properly."

"Do it right and it goes quickly. Try to go too quickly and it won't go right."

Practice Relentlessly

Greatness requires **constant, grueling practice**—but the results are worth it. At critical moments, you default to your level of preparation. The best performers practice tirelessly until their skills become second nature.

- *Miyamoto Musashi*, one of history's greatest swordsmen, lived by the philosophy "Cho tan seki ren"—training from morning to night. He practiced so thoroughly that he could often anticipate his opponents' moves before they did.

Commit To Your Craft

True professionals show up and do the work daily, regardless of their mood. When you find what you are meant to do, **the work itself is the greatest reward**, not the resulting money or status.

- Literary giant *Joyce Carol Oates* published nearly 100 books, short story collections, plays, and poetry anthologies since 1964. Unlike her male peers, who spent time at literary parties, cultivating personas, or lamenting writer's block, Oates simply wrote every single day.

Dress for Your Role

Like it or not, people judge us by appearance. However, you can **balance presentation and authenticity** by presenting yourself in a way that supports your role/identity. Don't obsess over fads or style. Dress to support your work, not for attention.

- *Angela Merkel* knew that appearances mattered in a political career, but she refused to be consumed by it. So, she chose a simple but professional outfit—comfortable shoes, a boxy haircut, and minimal makeup. When asked why she always wore the same pantsuit, she said: "I am a civil servant, not a model."

KEY QUOTES

"We don't rise to the occasion, we fall to the level of our training."

"A thousand days of training to develop. Ten thousand days to polish."
— Miyamoto Musashi

"We don't get anywhere in this life without work. But we can get somewhere magical when we do the kind of work that doesn't even feel like work."

"If you feel that you just can't write, or you're too tired, or this, that, and the other, just stop thinking about it and go and work."
— Joyce Carol Oates

"One ought to use clothing and shoes in exactly the same way as armor, that is for the protection of the body and not for display."
—Musonius Rufus

"We wear the suit, the suit doesn't wear us."

Get Uncomfortable

Modern comforts make us soft. The more we have, the more we fear losing it. To stay strong, **seek small hardships**, like sleeping on the ground, taking cold showers, or performing manual labor. Realize that such discomforts are nothing to fear or avoid. Build resilience so you won't crumble when real adversity strikes.

- Philosopher *Seneca* was one of the richest men in Rome, yet he regularly lived like a pauper—wearing rough clothing, eating the simplest food, and sleeping on the ground for days at a time. By voluntarily embracing discomfort, he stripped it of its power over him.

Recover Strategically

Discipline isn't just about pushing harder—it's also about **knowing when to stop**. Pushing too hard in the short term can lead to burnout and injury, which are more costly in the long run. Use strategic recovery not just to rest, but also to relax and have fun.

- Legendary coach *Gregg Popovich* knew this when he rested 4 of his star players during a major game in 2012. This decision led to a backlash from fans, critics, and even the NBA. But Popovich was playing the long game. By prioritizing recovery, he extended his players' careers and led the Spurs to 2 more division titles and an NBA championship.

Get Proper Sleep

A lack of sleep leads to poor focus, bad decisions, and wasted effort, hurting every area of your life. To operate optimally, you need both **quantity and quality of sleep**.

- Heavyweight boxing champion *Floyd Patterson* slept for 11.5 hours before his 1956 title fight against Archie Moore. He napped for 3 hours before the weigh-in, and again in the dressing room before the fight. He entered the ring fully recovered and focused, knocking out a tired Moore in the 5th round.

KEY QUOTES

"Success breeds softness. It also breeds fear: We become addicted to our creature comforts. And then we become afraid of losing them."

"We must practice temperance now, in times of plenty, because none of us know what the future holds—only that plenty never lasts."

"We don't just want to be fast and strong now—we want to be fast and strong for a long time."

"The most surefire way to make yourself more fragile, to cut your career short, is to be undisciplined about rest and recovery, to push yourself too hard, too fast."

"The best way to master the morning is to have mastered it the night before."

"The higher the stakes, the more driven you are, the more stressful the situation, the more discipline sleep requires."

Endure and Prevail

No matter how talented you are, life will test you. Success depends not just on what you can achieve, but what you can endure. What can you withstand when everything is stacked against you? Those who **persist through adversity** come out stronger.

- In 1915, *Ernest Shackleton's* ship sank in the Antarctic. The crew traveled 350 miles in lifeboats, only to be stranded on Elephant Island. Refusing to accept defeat, Shackleton led a 700-mile journey through hurricane-force winds in a tiny boat to find help, then returned to rescue the rest of his men. After 4 months and multiple failed attempts, he finally brought every man home alive.

Part 2: Mastering Your Temperament

True greatness requires mastery of our inner self, including control of our thoughts, feelings, and impulses. Physical discipline paves the way for **mental-emotional discipline**: to remain steady under pressure, resist temptations, and focus on long-term goals that matter.

- This is exemplified by *Queen Elizabeth II*, whose reign was defined by poise, self-restraint, and unwavering service. As Queen, she had no power to change laws or influence policies, yet she devoted her life to her duties: "I cannot lead you into battle, I do not give you laws or administer justice, but I can do something else—I can give you my heart and my devotion." Over 70 years, she visited >120 nations, met >4mil people and delivered >100,000 speeches. She endured wars, scandals, shifting public opinion, and personal losses—yet never lost control of her emotions, words, or sense of duty.

Adopt Calm Rationality

How you look at situations shapes who you become. In face of frustrations, slights, or difficulties, don't react impulsively. Learn

KEY QUOTES

"What we really need is commitment...a willingness to put our body where the problem is, throwing ourselves completely into solving it."

"Does endurance always conquer? Of course not, but nobody wins by throwing in the towel."

"Discipline is a far rarer commodity at the top than brilliance. Temperament may be less charismatic, but it survives. It stabilizes."

"Greatness is not just what one does, but also what one refuses to do...it's what we're able to do within limitations—creatively, consciously, calmly."

"We know that between every stimulus and its response, every piece of information and our decision, there is space... The pause is everything."

to pause, step back, and assess the situation with a calm, rational mind. **Filter your response through reason** before you act.

- *George Washington* felt emotions like any human being, but he trained himself to stay composed and respond with grace—whether facing a near-mutiny among his officers or enduring slander from subordinates. This habit made him a leader of rare steadiness and integrity.

Protect Your Priorities

Your time, energy, and attention are finite. Whenever you say "yes" to something, you're saying "no" to something else. Know your core purpose and guard it fiercely. **Have the courage to say "no"** to all else. People may not like it, but you'll be too busy doing what matters to notice.

- *Booker T. Washington* was able to run a school, write books, lobby lawmakers, and speak around the country because he regularly rejected other requests. He didn't mind being called aloof or selfish since he was laser-focused on his mission to uplift the Black community.

Give Your Full Focus

Give your priorities time and **undivided attention**. Immerse yourself so fully in your work that you shut out everything else, including distractions, praises and criticisms.

- *Ludwig van Beethoven* was known to abandon something in mid-task to follow an idea when inspiration struck. When he was deep in work, he seemed to be in a trance, oblivious to the world. He was messy, forgetful, and eccentric—because his mind was consumed by something greater.

Let It Ripen

In a fast-paced world, we often chase shortcuts and instant results. Yet, **some things cannot be rushed**, e.g. mastery, trust, and wisdom take time to develop, like fruit ripening on the vines. Have the discipline and patience to wait, instead of forcing progress.

KEY QUOTES

"Slow is the higher self...We pause. We gather ourselves. We put it up to the light."

"No one can achieve their main thing without the discipline to make it the main thing."

"It is impossible to be committed to anything—professionally or personally—without the discipline to say no to all those other superfluous things."

"In a world of distraction, focusing is a superpower."

"If it's worth doing, it's worth concentrating on today. It's worth focusing on now."

"Patience is bitter, but its fruit is sweet."
—Aristotle

- Famous writer Joyce Carol Oates doesn't rush her work. After finishing a first draft, she lets it sit for months—sometimes years—before revisiting it. This gives her time to gain perspective, refine her ideas, and let her work mature.

Stop Perfectionism

Excellence is a virtue, but perfectionism is a trap. It stems from fear and paralysis, not discipline or high standards. **Done is better than perfect**. Don't let fear of falling short hold you back from sharing your gifts.

- Before *Steve Jobs* was ousted from Apple, he kept delaying the release of the Macintosh because it wasn't "perfect." *Ralph Ellison* never published a second novel after Invisible Man—he spent decades rewriting and revising, leaving behind only stacks of unfinished pages.

Do The Hard Stuff First

Instead of procrastinating on uncomfortable tasks, confront them head-on. **Tackle the toughest tasks early** in the day when your energy and willpower are strongest, like how Toni Morrison got her writing done at dawn before anything else. The sooner you get them out of the way, the more confidence and clarity you gain.

Get Up When You Fall

Everyone gets knocked down. The question is: Will you get back up? Defeat isn't final unless you let it be. What defines you isn't the fall, but how you respond. Face the pain, own your mistakes, **rise up and get back to work**.

- In 1959, *Floyd Patterson* lost his heavyweight title to Ingemar Johansson in a brutal defeat. Patterson was devastated. But after encouragement from former rival Archie Moore, he forced himself to review the loss, retrain, and refocus. A year later, he won the rematch, becoming the first heavyweight in history to reclaim the title.

KEY QUOTES

"When your instinct is to go, when you really want to get after it, waiting...is the hardest part."

"We tell ourselves it's self-discipline when in fact, it's self-consciousness."

"It doesn't matter the cause, whether it was from procrastination or perfectionism, the result is the same. You didn't do it."

"Don't wait. Don't tell yourself you'll warm up to it. Don't tell yourself you'll get this other stuff out of the way...Do it now."

"Losing is not always up to us... but being a loser is. Being a quitter is."

"If your standards are so high that you give up when you fall short of them, then actually you don't have high standards. What you have are excuses."

Confront the Pain

Everyone experiences physical, emotional, or spiritual pain. Don't rely on quick fixes (like drugs or escapism) to numb the discomfort. Instead, acknowledge the pain and **address the root cause**.

- *John F. Kennedy* lived with constant pain from a degenerative back injury, Addison's disease, and years of trauma. For a long time, he relied on painkillers, amphetamines, and stimulants to no avail. Finally, a responsible doctor convinced Kennedy to exercise, stretch, and train his body—a lifestyle change that finally eased the pain.

Avoid the Pleasure Trap

Temperance is the ability to **enjoy life's pleasures without being controlled by them**. Reckless indulgence leaves us feeling miserable, not satisfied. Consider long-term effects over instant gratification, and moderate your pleasures to truly enjoy them.

- *King George IV* was a glutton who became so obese that he couldn't even lie down without risking suffocation, unlike *Epicurus* who could find joy in simple things like a small pot of cheese. Let your mind rule the body, not vice versa.

Rise Above the Fray

When someone insults, provokes, or disrespects you, the instinct might be to retaliate. This only gives them power over you and may backfire in the long run. **Refuse the bait** and refocus on your real mission. Choose not to engage or descend to their level, and save your energy for what truly matters.

- When Jewish businessman *William Thalhimer* was insulted and bullied during a land negotiation in the segregated South, he simply endured the humiliation and focused on his goal—to close the deal. So what if he suffered some indignation? As he said, "I got the land."

KEY QUOTES

"We endure pain, but we also have to address the root causes of it."

"'Doing the work' must actually mean thinking about things holistically. It must mean getting to the root causes. It should mean solving for the injury, not the symptoms."

"Don't just think about what a certain pleasure will give, think about what it will take out of you."

"Nobody who has given themselves over to excess is having a good time. No one enslaved to their appetites is free."

"As wrong as they are, as annoying as it is, it takes two for a real conflict to happen."

"Someone else's lack of self-control is not a justification for abandoning our own. Nor is it a good look or a recipe for success and achievement."

Manage Your Impulses

Uncontrolled emotions (be it anger, lust, anxiety, or excitement) can cloud judgment, leading to poor decisions and regret.

- History is full of people who were undone by impulsive moments—an angry letter, a sex scandal, or a rash move. The greater your power and responsibilities, the more destructive such outbursts can be. Always pause, manage your impulses, and *consider the consequences* before acting.

Make Every Word Count

In a noisy, ego-driven world, too many people rush to share their opinions. Often, **silence and actions speak louder than words**. Know when to speak, how much to say, and when to stay silent. You don't have to fill every silence or share every thought. The more powerful or respected you become, the more your restraint matters.

- The *Spartans* were known for their brevity and self-mastery. Once, a Spartan stayed silent in face of an insult. When the opponent challenged, "Are you stupid?" he calmly replied, "Well, certainly a stupid person wouldn't be able to keep quiet." Fewer words, more power.

Hold for the Right Timing

When you only have 1 shot at a big move, it pays to **wait for the right moment**, even if you're under pressure to act.

- In 1940, *Winston Churchill* faced intense pressure to send Britain's remaining fighter planes to aid France against Germany. He held back and kept the planes for a critical Battle of Britain which saved the nation. In 1942 and 1943, Churchill again faced pressure to attack the Nazis in Europe, but he waited until D-Day in June 1944—when victory was finally possible with an alignment of timing, planning, and strength.

KEY QUOTES

"Nearly every regret, every mistake, every embarrassing moment...have one thing in common: Somebody lost control of their emotions. Somebody got carried away."

"You can get angry...the important thing is not to do anything out of anger."

"When you talk, it should matter. When you say something, it should mean something."

"Powerful people impress and intimidate by saying less."
— Robert Greene

"Free speech is a right, not an obligation."

"Sometimes we have to raise our hand, not to give the signal to go ahead, but to wait, wait, wait for it."

"You've decided to act. Now you've got the harder hurdle to clear: holding on."

Master Your Ambition

Ambition can inspire growth and excellence. But left unchecked, it becomes an **obsessive pursuit of more**—more status, more achievement, more power. That's when it stops serving you and starts consuming you, leaving you empty, alone, and unhappy.

- Unlike other bad habits, society rewards ambition, making it harder to control. French emperor *Napoleon Bonaparte* hoarded titles, placed unqualified relatives on thrones, waged ruinous wars, and eventually died alone in exile.

Money Is a Tool, Not Your Master

Money isn't good or bad. It's a powerful tool that can bring comfort, options, and leverage, but also envy, anxiety, and dependency. Use money as a tool to **support your goals and values**, not to prove your worth or escape discomfort. Having "enough" simply means having the option to decline what doesn't matter. True wealth is freedom from need, not freedom to indulge.

- It's not about how much you earn, but *how you handle what you have*. Babe Ruth, for example, earned more than most people of his time. Yet, he spent recklessly on racehorses, suits, parties, and luxury, and had to borrow money from teammates to get by until his next paycheck.

Keep Improving Daily

No matter how far you've come, there's always room to grow. You don't have to be amazing every day. You just need to show up, learn from mistakes, and **do a little better than yesterday**. Small gains compound into greatness over time.

- *Tom Brady*, the most decorated quarterback in NFL history, was obsessed with improving. He was always refining his fourth-quarter accuracy, quickening his release time, and chasing that next edge—even at his peak.

KEY QUOTES

"Ambition is good, it just must be tempered."

"Of all the addictions in the world, the most intoxicating and the hardest to control is ambition."

"No amount of money is ever going to truly free you. But being less dependent, caring less about money? That will free you right now."

"The problem is when people spend what they don't have, to get things they don't need, at a price nowhere near worth the cost."

"Nobody is as good as they could be. Nobody is perfect. Everybody can improve."

"It's a beautiful irony: You're never content with your progress and yet, you're always content...because you're making progress."

Share the Burden

Don't try to do everything yourself—you'll lose focus, burn out, and weaken the cause. Just because you can do something doesn't mean you should. **Focus on what only you can do**, then automate or delegate the rest.

- When *Martin Luther King Jr.* was in jail, his wife Coretta was juggling everything alone—children, cooking, answering the door—because hiring help seemed indulgent. Their close friend and supporter, Harry Belafonte, made the strategic decision to personally pay for their household staff, giving the Kings time, energy, and space to do what they do best: lead the civil rights movement.

Use Your Time Wisely

Time is a your most limited, valuable resource. Once lost, it can't be recovered. We all get the same 24 hours—**use your time intentionally**. Wasted time is wasted life.

- When *Phil Jackson* was a rookie on the Knicks, he was caught chatting on the bench with no idea how much time was left on the shot clock. His coach reprimanded: "You may be going into the game, and if you don't know the time, you could get us in trouble." In the game of life, make sure you know the clock.

Protect Your Boundaries

We get pulled in multiple directions by distractions and others' emotional demands. Set clear boundaries to **protect your energy, focus and identity**. Define what you will and won't share, accept, or take on. This helps you say "yes" and "no" with intention. Respect others' boundaries and stay away from energy vampires who drain energy with their drama and neediness.

- Despite *Queen Elizabeth II*'s decades in public service, almost no one—not even her closest aides—could say what the Queen was *really* like. She gave no personal interviews, stayed out of politics, and rarely offered unsolicited advice, even to family. This is what having clear boundaries means.

KEY QUOTES

"Often, the best way to manage the load is to share the load."

"While a leader must know how to do anything, they cannot conceivably do everything."

"No one can take time or life for granted...as it runs out for all of us."

"Now is the time. Because now is the only time you have."

"Time that is wasted is also wasting us. When we kill time, we are killing ourselves."

"Boundaries are about drawing some lines around yourself—healthy borders between what you'll share and what you won't, what you'll accept and what you won't, how you treat others and how you expect to be treated, what is your responsibility and what isn't."

"Be the adult in a world of emotional children."

Always Do Your Best

While you can't always control the outcome, **you can always control your effort**. Do your absolute best at the things that matter, even when it's hard or no one's watching. If you've given your all, you can be at peace with the outcome. This builds resilience and self-respect, protecting you from arrogance in victory and despair in defeat.

- When *Jimmy Carter* was interviewing for a role in the Navy's elite nuclear program, he was asked "Did you do your best?" Thinking back on the times he held back or didn't push himself, he admitted, "No, sir." The next question—"Why not?"—haunted him for years and brought discipline to the rest of his life.

Part 3: Mastering Your Soul

The highest level of self-mastery comes from **discipline of the soul**. It's about mastering the body and mind (the "Magisterial") in all circumstances, and transcending the self to serve others with wisdom and humility.

- True greatness isn't about rising to the top—it's about how you act once you get there. Will you stay grounded and use *power for the greater good*? Or will you give in to ego and self-glorification?

- *Antoninus Pius* modeled this higher standard. When he was tasked to prepare Marcus Aurelius for rule, he could have seized power for personal glory. Instead, over 23 years, he governed with restraint and devotion, waging no wars and spilling no blood. He became a strong role-model for Marcus, shaping one of the greatest emperors in history.

Be Tough on Yourself, Gentle with Others

Hold yourself to high standards, but don't impose them on others. Do what you believe is right, and lead by example with compassion and humility. Take ownership of your life without trying to control others. Let others walk their own path, at their own pace.

KEY QUOTES

"You always control whether you give your best or not. No one can stop you from that."

"What does matter is that you gave everything...Not perfect. Your best. Leave the rest to the scoreboard, to the judges, to the gods, to fate, to the critics."

"Your body, your mind, your spirit will have to align so that you might discover that you are capable of more than you thought possible."

"It takes courage as well as temperance to be restrained in a world of excess...to remain oneself in a world that pushes for conformity."

"Search others for their virtues, thyself for thy vices."
—Benjamin Franklin

- *Cato the Younger* was famously self-disciplined: he walked barefoot, wore simple clothes, and never lied. But he didn't expect others to live the same way, and unconditionally loved his brother Caepio who was more indulgent and worldly.

Lift Others By Showing The Way

Everyone has role models who made them want to be better. Strive to be that person for someone else. Uplift others not by judging or preaching but through your actions. When you act with integrity, patience, discipline, and perseverance, you inspire change and plant seeds of possibility that take root and spread over time.

- *Queen Elizabeth II* was deeply influenced by her father, King George VI, who led Britain through World War Two, worked through his own speech impediment, and parented by example. *Cato the Younger* was similarly inspired by his great-grandfather's legacy, even though they never met.

Stay Cool Under Fire

The real test of inner discipline comes during times of **stress, danger, or betrayal**. Will you stay calm and do what needs to be done? Or will you give in to emotional impulse to retaliate, escape, or collapse? During a crisis, your response directly affects the outcome and set an example for those who look up to you.

- After the 7/7 London bombings, *Queen Elizabeth II* urged the public to face the tragedy with "calm determination." She role-modeled that by avoiding inflammatory language and focusing on continuity. This prevented further instability from fear and outrage, which would've been exactly what the terrorists wanted.

Bear the Weight for Others

True leaders don't seek comfort or privilege. They push themselves harder, often sacrificing for the greater good. In tough times, they step forward, take the hit, and **help others to move forward**. They carry more than their share not because they must, but because they can.

KEY QUOTES

"While we hold ourselves to the highest standards—and hope that our good behavior is contagious—we cannot expect everyone else to be like us."

"Great leaders...make people better. They help them become what they are."

"We can plant a seed... Because like courage, there is something contagious about discipline."

"The light within us can illuminate the path for others. What we accomplish can make things possible for others."

"The nearer a man is to a calm mind, the closer he is to strength."
— Marcus Aurelius

"For the people we love, we are strong enough to get through anything. For the cause or the calling we have committed to, we are strong enough to endure it."

"The more you have, the more selfless you must be. Not for the sake of optics, but because it is the right thing to do. Because that's what you signed up for when you took the responsibility."

- On Christmas Day in 1998, *Brigadier General Jim Mattis* chose to take over guard duty for a junior guard so the latter could spend time with his family, role-modeling what it means to serve.

Adopt Self-Discipline, Not Self-Cruelty

Everyone makes mistakes. What matters is whether you learn, adjust, and keep going. Be strict and accountable with yourself, but not cruel or self-punishing. Treat yourself with the **same compassion you'd offer a friend**. Aim for progress, not perfection.

Don't Hoard Power

After working hard to gain power or status, many people cling to it. Great leaders **know when to let go**. They use power to serve, then release it, putting purpose above ego and trusting others to carry the mission forward.

- After the American Revolution, *George Washington* could have ruled like a monarch. Instead, he voluntarily stepped down—first after the war, then again after 2 presidential terms. His decision set a lasting precedent and helped shape the norms of American democracy.

Answer With Dignity

When someone wrongs you, the instinct is to lash out. But real strength comes from **choosing not to retaliate** when you could. You can choose to respond with restraint, to defuse conflict, protect your peace, and uphold your values.

- When *Martin Luther King Jr.* was giving a speech in 1962, he was suddenly attacked by a white man. King didn't fight back. He literally turned the other cheek, stopped others from retaliating, and calmly spoke to his attacker afterward, demonstrating self-mastery and nonviolence.

KEY QUOTES

"Don't beat yourself up. Build yourself up. Make yourself better."

"Greatness isn't what you have. It's who you choose to become. Or who you choose to remain."

"Willingly giving away [power]...is the rarest thing in the world. It is temperance embodied."

"It might be possible to punch a person who is that compassionate, but it is impossible to beat them."

Exit With Grace

Sometimes it's best to push forward, while at other times it's **wiser to retreat**—whether it's stepping down, accepting a loss, or closing a chapter of life. Don't cling on stubbornly nor charge ahead blindly. Know when and how to move on with poise and self-respect.

- At the Battle of Delium, *Socrates* retreated without panic. He fought steadily while falling back, refusing to abandon his dignity or his comrades.

Endure What You Must

In times of great loss, pain, grief, or injustice, **tap into your inner strength**. Endure when others collapse. Carry on with quiet, steady perseverance, no matter how badly it hurts, and emerge stronger.

- In 1802, *Beethoven* hit a breaking point—his health was failing, his hearing was deteriorating, and he was emotionally wrecked. He felt "hopelessly afflicted" and considered suicide. But instead of giving in, he chose to endure. He anchored himself in his art and left behind some of the greatest music ever created.

Be Your Best Self

Being the best isn't about outdoing others, but conquering yourself. It means choosing excellence regardless of your title or external rewards, performing every task with character and self-mastery. **Be at your best in everything you do**.

- Theban general *Epaminondas* once accepted the humiliating job of managing the city sewers. But he performed the role so honorably that he elevated the office itself, showing that you can bring pride and dignity to any role.

KEY QUOTES

"Retreats...are only temporary. They are buying us time until we can take the offensive and courageously attack again in pursuit of our victory."

"Sometimes even to live is an act of courage."
— Seneca

"Don't despair. Don't give up. Keep the faith. Because one day, you will look back from the other side of this struggle...and be glad you did."

"The battle to be the best has less to do with beating others and more to do with beating down those urges, those flaws, those selfish instincts that every human has."

"In the end, it's not about what we do, it's about how we do it and, by extension, who we are."

Be Disciplined, Not Rigid

Don't cling to identities, tools, or routines that no longer serve you. Without **fluid growth and adaptation**, your identity hardens, making you brittle and vulnerable to change.

- Samurai *Miyamoto Musashi* won many duels by catching opponents off-guard—using unorthodox weapons, showing up late, or acting unpredictably. As he aged, he continued to learn and adapt his style, striving to achieve "formlessness." Stay open, keep experimenting, and keep stepping outside your comfort zone.

Stay Grounded

The **higher you rise, the more discipline you need** to resist comfort, power, and temptation. When rules feel optional and people start making excuses for you, don't relax your standards or forget who you are.

- After becoming Chancellor of Germany, *Angela Merkel* continued living in her modest apartment, paying for her own concert tickets, and shopping for groceries like anyone else. *Cato the Elder* kept his austere lifestyle even after reaching the highest ranks of power. Let success make you better—not softer, more entitled, or less disciplined.

Conclusion and Other Details in the Book

Discipline is not a single trait but a lifelong practice that spans the body, mind, and soul. When we cultivate self-control in every area of life, we unlock our full potential and become truly capable of shaping our own destiny. This book includes many other detailed stories and examples of historical and modern figures who either exemplified discipline—or suffered from its absence. For more details, visit https://ryanholiday.net.

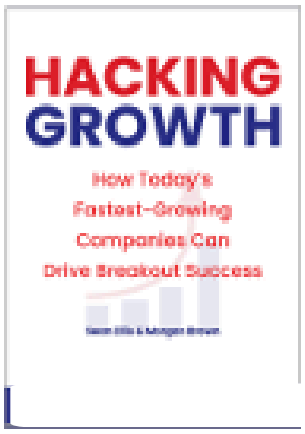
KEY QUOTES

"We must cultivate the capacity for change, for flexibility and adaptability. Continuously, constantly."

"Rigidity is fragility. Formlessness is unbreakable."

"You will show that success has not changed you. Except that it has made you better."

"Temperance is... the ability to adjust, to make good of any situation, to find the opportunity to grow and improve in any situation. And to be able to do this with equanimity and poise, even initiative and joy."



HACKING GROWTH

How Today's Fasting Growing Companies Can Drive Breakout Success

SEAN ELLIS & MORGAN BROWN

The Big "So What"

How can you acquire new customers, keep them engaged, convert them to paying customers/ambassadors, and leverage technology to grow your revenue with a shoestring budget? This book presents the growth hacking method: using rigorous analyses and rapid tests to identify, test and implement high-impact growth opportunities. It can be used by any company (big or small) and for any function (e.g. marketing or engineering).

Introduction

In the 2000s, Sean Ellis started testing unconventional approaches to help various companies to grow rapidly given a limited budget and tough competition. These techniques and processes were gradually expanded and refined to become the growth hacking model presented in this book.

- For example, Dropbox grew from 100,000 to 4 million users in 14 months without any traditional marketing. Instead, it offered 250MB of free storage to each user who referred a friend to try Dropbox. Airbnb struggled until it cross-published with Craigslist to redirect searches for short-term vacation rentals to the Airbnb booking website.

- Growth hacking provides a rigorous method for rapid, cross-functional experimentation. Today, many leading firms—such as LinkedIn, Facebook, Quora, Tesla, Adobe and Airbnb—all use growth hacking as a key engine of growth instead of relying on costly advertising campaigns.

KEY QUOTES

"Growth hacking is so much more than a business strategy, or even an ongoing process. It's a philosophy, a way of thinking, and it's one that can be adopted in any team or company, big or small."

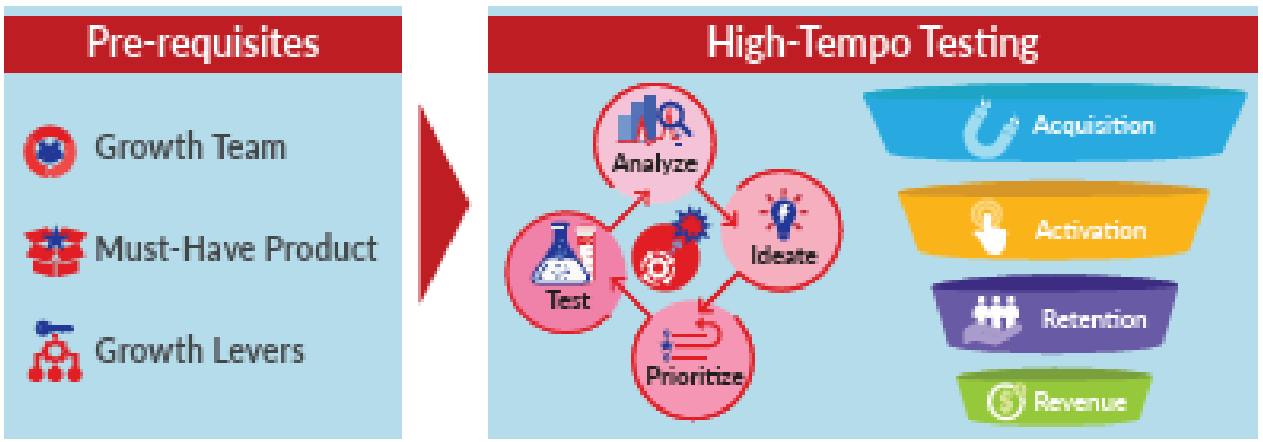
"Growth hacking isn't just about how to get new customers. It's about how to engage, activate, and win them over so they keep coming back for more."

"Growth hacking empowers companies to achieve breakout growth without pouring money into outdated and horribly expensive marketing campaigns of questionable business value."

In this summary, we'll explain growth hacking in 2 parts: an overview of growth hacking followed by a playbook for execution.

Part 1: An Overview of Growth Hacking

Here's an overview of the key components involved in growth hacking:



The Pre-Requisites

There're 3 pre-requisites that must be in place before you're ready to drive growth via high-tempo testing.

A growth team optimizes results by bridging the silos found in most organizations. Growth teams complement rather than replace traditional functions, and can range from 4-5 people to more than 100.

- The key is to have *cross-functional expertise* including business strategy/goals, marketing, data analysis and product development. Key roles include:

  (i) A *growth lead* who sets defines the experiments' goals, pace and metrics;

  (ii) A *product manager* who oversees the delivery of the desired product features;

  (iii) *Software engineers* who write the code for the required tests and product changes;

  (iv) *Marketing specialists* with the relevant expertise (e.g. social media, email marketing);

KEY QUOTES

"Start-ups and established companies alike...simply can't afford to be slowed down by organizational silos."

"Growth cannot be a side project."

(v) *Data analysts* who can collect, integrate and analyze data from multiple sources; and

(vi) *Product designers* who specialize in the relevant products.

- In startups and SMEs, team members often wear multiple hats. As the company grows, the growth team's size and composition will *evolve*. For example, LinkedIn's growth team grew from 15 people to more than 120 members spread over 5 units focusing on network growth, search engine optimization/marketing, onboarding, international growth, and user engagement.

- You can bring in external specialists to strengthen key capabilities, but the *responsibility for growth* must always rest with the top management, e.g. the founder/CEO or a senior executive. Typically, the reporting structure will follow (i) a *product-led model* where the team focuses on improving specific aspect(s) of a product's performance, or (ii) a *stand-alone* team reporting to a VP of Growth.

Don't start rapid growth experimentation until you have a must-have product, i.e. you know its *core value*, to *whom* it's a must-have, and *why*. Pushing for growth prematurely can be costly or even fatal since (i) you'll waste resources promoting something that no one wants and (ii) you'll end up generating critics instead of fans.

- Every wildly-successful product has an "*aha moment*": when a user experiences the core value or benefit of the product, finds it irresistible and becomes a fan. Yelp's aha moment is when users discover local restaurants or businesses via trusted community reviews. Facebook's moment is when users see instant updates and photos that show what their friends/family are doing.

- To assess if you have an aha experience, use these *2 tests*:

(i) The *must-have survey*. Ask users "How disappointed would you be if this product no longer existed tomorrow?", with responses on a 4-point scale (very disappointed, not disappointed, and N/A—I no longer user it). The goal is to have ≥40% users respond with "very disappointed".

KEY QUOTES

"It's vital not to outsource the core responsibility for growth…growth is too important to delegate."

"While creating a must-have product alone is not sufficient for breakout success, it is the baseline requirement for rapid and sustainable growth."

(ii) Whether your *retention rate* is higher than your competitors and stable over time.

- If your product passes both tests, it's ready for growth hacking. If not, you must first *address the gap(s)* using all 3 methods below:

  (i) Do additional customer *surveys/interviews* and/or observe how customers use your product.

  (ii) Run *efficient experiments* (minimum viable tests) for product/message changes across the entire funnel, such as A/B tests to compare 2 options or multivariate tests to compare all possible combinations of a component.

  (iii) Do a *deep analysis* of your user data. Consider creating a data warehouse to store all customer info, so you can identify the complete path for each group of users, exactly how an active user spends time on your website (compared with someone who doesn't), and when/why someone leaves the funnel.

- Be open to *unexpected discoveries* which may lead to a shift or pivot in your business focus. Instagram (originally called Burbn) dropped its confusing host of features after analyses showed that users only used 1 feature—photos. YouTube (originally a video dating site) made a pivot after analyses showed that users were uploading all types of videos, not just those for dating.

Once you know your aha moment, your goal is to get as many users to experience it as quickly as possible. However, you won't create a big-enough impact by testing lots of small changes (e.g. different button colors). You need to focus on high-impact, high-potential tests, i.e. you must identify the right growth levers and have a proper growth strategy.

- Start by figuring out your *growth equation*, which summarizes the key factors that drive your growth. Such equations will vary for different products/businesses, e.g. :

  (i) A news site with a subscription model: Subscriber revenue growth = Website traffic × Email conversion rate × Active user rate × Conversion to paid subscriber + Retained subscribers + Resurrected subscribers.

KEY QUOTES

"The key mission at this stage is to look for the behaviors that differentiate those customers who find your product must-have—that is, those who use or buy repeatedly—from those who don't."

"Growth hacking is not about throwing ideas against the wall as fast as you can to see what sticks, it's about applying rapid experimentation to find and then optimize the most promising areas of opportunity."

"Reducing the complexity of your business operations down to a basic formula is immensely helpful in allowing the growth team to focus on the right signals in this vast sea of data noise."

(ii) An ecommerce site: Gross merchandise volume growth = Number of sellers listing items × Number of listed items × Number of buyers × Number of successful transactions.

- Essential metrics are those that correlate most directly with your aha moment. Narrow down to 1 key metric that'll ultimately drive your growth—this is your "*North Star*" or the metric that best captures the core value for customers. eBay's North Star is the number of items listed for sale, while LinkedIn's is the number of people who have filled in their work profiles.

  (i) North Stars help to *direct your focus*. To improve the number of nights booked (Airbnb's North Star), the team zoomed in on New York City as an under performing market. They found that the quality of photos there were poorer than usual, and a test proved that postings with better photos got 2-3x more bookings. This led to initiatives to help hosts to improve their photo quality, improving global booking rates by 2.5x.

  (ii) North Stars may *evolve* as your company grows. A company can have 1 North Star yet have various growth teams focusing on different metrics, like how LinkedIn focuses on 5 areas of growth despite having 1 overarching North Star.

- *To make the most of your data and analysis*:

  (i) Use a mix of *quantitative analysis and qualitative probing* to figure out why certain trends or gaps exist.

  (ii) Make the North Star and key data/metrics *accessible* to the whole company. Use charts, visuals and ratios to present the key metrics at a glance, and show how you're performing relative to specific goals or benchmarks.

High Tempo Testing

Once the pre-requisites are in place, you're ready to start the growth hacking process. This comprises 4 key steps—analysis, ideation, prioritization and testing—that run in a continuous cycle.

KEY QUOTES

"You want to track, at a minimum, the metrics for each of the steps users must take to reach the aha moment and how often they are taking those steps."

"The companies that grow the fastest are the ones that learn the fastest."

You'll need to run lots of experiments because not all of them will yield significant or conclusive results.

- Small insights and successes add up. A 5% improvement in conversion rate each month will compound into an 80% improvement in a year. The faster you *test and learn*, the faster you'll grow.

- *Start slow and gradually ramp up*. Small teams can start with 1-2 tests per week, while larger teams can go up to 20-30 tests per week.

Kick off the process with a team meeting to define each person's role, and explain the growth hacking principles and processes. Then, adopt this 4-step process in a systematic and disciplined fashion:

- *Analyze: gather data and insights*. At this phase, the growth lead typically works with the data analysts to address questions such as: how do your best customers behave (e.g. shopping and usage patterns), what are their characteristics (e.g. source of acquisition and profile), and what causes users to drop off (e.g. pages with high exit-rates or bugs). The marketing specialists may concurrently conduct user surveys and interviews. The initial data and analyses are compiled and shared with the team in advance, to facilitate discussion at the next team meeting.

- *Ideate: generate ideas*. After the meeting, every member should take 4 days to submit as many ideas as possible in a templated format which includes:

  (i) The *idea name* (<50 characters) and *description* of the idea to be tested (including who, what, where, when, why and how).

  (ii) The *hypothesis* of the expected cause-and-effect, e.g. "By making it easy for shoppers to view and reorder previously purchased items, we can increase repeat purchase by 20%."

  (iii) The *metrics* to be tracked. Use multiple metrics since improvements in 1 area may come at the expense of others.

KEY QUOTES

"Generally, big successes in growth hacking come from a series of small wins, compounded over time."

"You cannot know ahead of time which experiments are going to be most effective. The best you can do is stay nimble and data-driven."

"Ideas are the rocket fuel of growth. And you need a pipeline of them delivering a steady flow."

"The more ideas that go into your pipeline the better your chances of finding winners that spur growth."

You can also get ideas from people outside the team (e.g. customers or suppliers) by sharing your growth levers and target metrics with them.

- *Prioritize what to experiment*. Each idea must come with a score to help the team prioritize what to do.

  (i) You can use the *ICE score* to rate 3 items: (a) *Impact* (how far the idea is expected to improve the key metric), (b) *Confidence* (how strongly the ideator believes the expected impact can be delivered), and (iii) *Ease* (the amount of time/resources needed to run the test). Use a 10-point scale for each component, then calculate the average score.

  (ii) The ratings needn't be perfect—they're just a tool to facilitate *debate and decisions*. The growth lead can review the ideas and suggest improvements prior to each meeting, or get the team to nominate the top ideas they wish to discuss so only the "finalists" are debated at the meetings.

  (iii) After you've shortlisted the experiments, focus on those that can be done in 1 week, and put the rest in the *experiment pipeline* (with an assigned timeline).

- *Test: run the experiments*. The selected tests for the week are moved up the work list, with 1 member in charge of each test.

  (i) Members must collaborate with other colleagues to implement the tests, while the growth lead helps to remove obstacles.

  (ii) Use these *2 rules of thumb* to ensure the results are statistically valid: (a) Use a 99% statistical confidence level so you only get 1 false-positive out of 100 samples, and (b) if there's a tie or inconclusive results, stick to the original/control version.

- *The cycle is repeated* when you review/analyze the results to decide on the next steps.

  (i) *Summarize the test results* including the name/ description, type of test, features impacted, key

KEY QUOTES

metrics, start/end date, hypothesis and results, other variables that may have affected the results, and your conclusions.

(ii) These should be shared and put into a knowledge database for future reference. *Communicate* the results (e.g. sending a "wins" email, creating a group chat or publishing test results on the company dashboards).

The authors recommend holding your growth meetings weekly (or bi-weekly). Any brainstorming and preparation should be done prior, so each meeting can focus on reviewing the previous weeks' results and setting priorities for the next week.

- Here are how GrowthHackers' own meetings are run:

(i) Growth meetings are held every Tuesday so people can finish their preparation on Monday.

(ii) The growth lead is responsible for sending the compiled data/updates and agenda in advance, and for running the meeting effectively within 1 hour.

SAMPLE MEETING AGENDA	
15 min	Review metrics, highlight key positives vs negatives, and update the focus area
10 min	Review last week's test activity (including tempo, # tests and reasons if any tests weren't done as planned)
15 min	Share key lessons learned (e.g. experiment outcomes, Q&A, team's conclusions on next steps)
15 min	Select the next set of growth tests (for the coming week)
5 min	Check the idea pipeline to ensure there's a healthy pool of fresh ideas being added

Part 2: The Growth Hacking Playbook

In this section, we'll break down how you can implement high-tempo testing across the entire sales and marketing funnel: acquisition, activation, retention and revenue.

KEY QUOTES

Hacks for Acquiring Users/Customers

A must-have product means you've already achieved Product-Market Fit, i.e. you have a compelling product for your target market. To start acquiring new customers rapidly, you must achieve 2 additional types of fit and create viral customer loops.

Language-Market Fit is about describing your product in a way that resonates with your target audience. People's online attention span is extremely short and you only have 8 seconds to convey how your product will improve their life.

- When iPod was launched in 2001, it succinctly conveyed its aha experience with 5 words: "1000 Songs in Your Pocket". To find good words/phrases, try *using your customers' language*: talk to your customers and examine the words they use to review, share or describe your product.

- Small word changes can have a huge impact, and can be tested with *A/B tests*. Tickle's growth skyrocketed after it changed just 1 word from "Store your photos online" to "Share your photos online". A dating app saw a jump in growth when they switched from "Find a Date" to "Help People Find a Date".

- Changes in wording can also affect your *brand and product focus*. For example, P&G launched Febreze with the words "cleans bad smells out of fabrics for good". After observing how avid buyers used Febreze, they added scent and changed the words to "for freshness that surrounds you like never before".

Channel-Product Fit is about selecting the most effective marketing channels for your target audience. It's better to optimize a few top channels than to spread your resources too thinly across many channels. This involves 2 parts:

- *Discovery*: Explore channels across *3 key categories*: viral/word-of-mouth (e.g. social media, games), organic (e.g. search engine optimization, email marketing), and paid (e.g. offline or online ads). Consider channels that're the *most appropriate* for your business model and your

KEY QUOTES

"As you plan your first hacks to test, start with language, and then go from there."

users' characteristics (e.g. the types of words they search for, where they shop, the social networks they use). Once you have specific ideas to improve acquisition, *score/ prioritize* which ones to test first. You can score each idea against these 6 factors (on a scale of 1-10), then calculate the average score:

(i) Expected *cost* of running the experiment

(ii) Ease of *targeting* or reaching your intended audience

(iii) How much *control* you have over the experiment (e.g. if you can easily adjust or stop it halfway)

(iv) How much *input time* is needed to launch the experiment

(v) How much *output time* is needed to extract the results

(vi) What *scale* of audience can you reach with the experiment.

- *Optimization*: As the team starts to run the experiments, some options will stand out and new ideas will surface. Keep refining the channels that work and eliminating those that don't.

Design customer loops. Virality can come from word-of-mouth or be built into your product (instrumental virality).

- *Virality = Payload × Conversion Rate × Frequency*, where (i) payload is the number of people to whom a user will send an invite (e.g. a link/widget) each time, (ii) conversion rate reflects the response rate to the invite, and (iii) frequency is how often people are exposed to the invites.

- Here are some *useful tips* for creating successful viral loops:

  (i) Consider possible *network effects*, i.e. the users' product experience will improve if they bring in other users (e.g. social networks like Facebook or LinkedIn).

  (ii) Offer an *incentive* that's aligned with your product's core value, e.g. Airbnb giving $25 toward your next stay.

KEY QUOTES

"If they don't love it, they're not going to share it. Virality is a balance of how good the packaging is and how good the content is."
—Eli Pariser

"While finding the right words to appeal to people is vital, offering true value is a necessary ingredient for achieving viral growth."

(iii) *Integrate the invitation* into the user experience, e.g. once you join LinkedIn, you're instantly prompted to view your connections and import your contacts.

(iv) Ensure the invitees have a *good experience*, e.g. Airbnb includes the name and picture of the person who invited you, with a personal message and a call-to-action to claim your free credit.

(v) *Keep experimenting* to create a great referral program. After rounds of testing, LinkedIn discovered that the optimal number of invites for their service was 4 (2 invites were too few and 6 were too many).

Hacks for Activating Users/Customers

Having attracted your potential customers, you must now activate them, i.e. get them to use your product.

Use these 3 steps to activate customers effectively:

- *Step 1: Map out the steps* that users must take to get to the aha moment, then calculate the conversion rate for reach step. Consider the channels that brought the customers to you and their journey after they found you.

- *Step 2: Create a funnel report* to show the conversion rates for each step (and how they differ across user segments). Look for the areas with the highest drop-offs, and consider differences between active users, activated users who went cold, and those who were never activated. For example, HubSpot found that users who signed up with their work emails were more active for their new product (compared to those with a personal email), so they started asking for users' work email in the sign-up form.

- *Step 3: Conduct surveys/interviews* to understand why people are dropping off at certain points, then test high-impact ideas based on those insights. Never rely on your own assumptions.

  (i) To avoid irritating users, keep your surveys brief to ideally 1-2 questions. Focus on 2 situations: (a) when they seem confused (e.g. they stay too long on a page

KEY QUOTES

"Improving activation is at its core about increasing the rate at which you get new users to your aha moment. The more visitors who experience what makes your product a musthave, the more of them will stick with you."

"Always remember that there are no silver bullets in growth hacking, and that even what seem like slam-dunk ideas can fail."

or are about to leave the website), or (b) just after they've finished a step that others don't take (e.g. make a purchase). For instance, you can ask why someone didn't complete an order, or what convinced them to complete an order.

(ii) You should also test your mini questionnaires to improve engagement (e.g. the choice of words, images and visuals).

Removing common obstacles to activation. Make sure that the landing page for new users (i) conveys relevance, (ii) shows the value of the product, and (iii) has a clear call to action (CTA).

- Explore *hacks* like allowing users to register with a single click, or letting them enjoy your product before they sign up. You can also improve engagement via questionnaires or gamification.

- *Triggers* (e.g. website CTA buttons, emails or push notifications) are commonly used to improve activation. You can experiment with notification triggers for account creation, purchase, reactivation, new features launches, top user incentives, etc.

(i) As a *rule of thumb*, you should only get in touch with users when there's an opportunity of real value to them.

(ii) When crafting triggers, try to incorporate Robert Cialdini's 6 *persuasion principles*: reciprocity (e.g. give a freebie for signup), authority (e.g. use endorsements from influential people/firms), social proof (e.g. show a large number of users), liking (e.g. use referrals from friends), scarcity (e.g. limit the number of freemiums), and commitment and consistency (e.g. break it down into a series of tiny steps).

Hacks for Retaining Users/Customers

When you retain customers, you can get more repeat purchases (without the corresponding acquisition costs), have more opportunities to understand them and improve your product,

KEY QUOTES

"While we certainly notice the friction in the products we use, we often don't recognize sources of friction in the ones we've been involved in creating or marketing."

"Creating positive friction is a delicate art of putting manageable, ideally engaging steps in the path of visitors that help them understand what the value is and get to the aha moment with greater predictability."

"The longer you retain customers, the more opportunity you have to earn more revenue from them."

and get additional word-of-mouth referrals. A study found that a 5% increase in customer retention rates can improve profits by 25-95%.

A healthy retention rate varies with each product/business, but you can study similar products/services to decide on your metrics. Ideally, you should see a *growing retention rate* over time, like how Instagram becomes more valuable with time as people post more photos and follow more people. You should also do *cohort analyses* to examine why some groups of users are staying longer than others.

Retention can be broken down into 3 phases:

- *Initial retention* is the period when a new user either decides to keep using the product/service or goes dormant. This window varies for different products. Your goal is to identify the minimum level of activity required (e.g. they must return ≥3x in 2 weeks to stay engaged) and focus on getting users to that tipping point. Retention hacks are similar to activation hacks, i.e. you want to get users to the aha moment asap.

- *Medium-term retention* kicks in when the initial novelty fades. Your goal is to help users to form habits so your product is incorporated into their daily routine. According to Nir Eyal, you can design a habit-forming loop in 4 parts: by using a *trigger* to lead to an *action*, which brings a *reward*, which leads to an even greater *investment* by the customer. Focus on testing different rewards to see what works best for different cohorts, e.g.

  (i) *Brand ambassador programs* with a blend of social rewards (e.g. social "likes" or elite status) and tangible ones (e.g. discount tiers or credits).

  (ii) *Recognizing achievements*, e.g. when a customer passes a certain milestone or takes certain actions.

  (iii) *Personalization*, e.g. customizing your email communications and product recommendations.

  (iv) More value "*coming soon*" (e.g. upcoming features or offerings).

KEY QUOTES

"One general rule that holds true across most product types is that improving the perceived value of the rewards leads to greater retention."

- *Long-term retention* requires product improvement—by enhancing existing features and adding new ones. Remember to continually educate your customers about the value they can get, to renew their perception of your product as a must-have.

Resurrection: To win back users who've abandoned your product, you must find out why they left in the first place. When a customer's purchases or activity drops to zero after a designated time period, the team should experiment with resurrection flows (e.g. sending emails or targeted ads) to win them back.

Hacks for Monetizing Users

Ultimately, your goal is to earn more revenue from each customer over time, i.e. to increase your customers lifetime value (LTV).

Refer to the customer journey map to identify *all* the opportunities for monetization from acquisition to retention.

Next, analyze (i) which parts of the customer journey generate the most money, and (ii) where are the pinch points where potential revenue is being lost.

- Once again, compare different *cohorts*, e.g. slice the data by location, gender, age, items purchased, features used, webpage engagement etc. For products sold internationally, you should also consider different payment norms or fees for each country.

- It's useful to develop customer *personas* for groups of customers with similar characteristics, needs and wants. You can run experiments for each persona, get targeted feedback via surveys, or send personalized product recommendations or offers.

- One of the hardest areas to optimize is your *pricing*, which is set based on certain value metrics. Consider if your value metric (i) is aligned with perceived customer value, (ii) scales with product usage and (iii) is easy to understand. Since pricing is closely related to perceived value, lower prices don't always increase sales volume

KEY QUOTES

"Lower prices do often lead to a higher volume of sales—but not necessarily. In some cases, lowering the price can actually hurt sales or at least fail to provide the boost in demand hoped for."

or revenue. The only way to optimize pricing is through continual and careful experimentation.

- You can also apply Cialdini's *6 persuasion principles* to optimize monetization. The key is to use data to measure what works, what customers will pay for, and experiment how best to meet those needs and maximize LTV.

Conclusion and Other Details in the Book

Ultimately, every product and business is different. The only way to uncover the best growth opportunities and hacks is to keep experimenting.

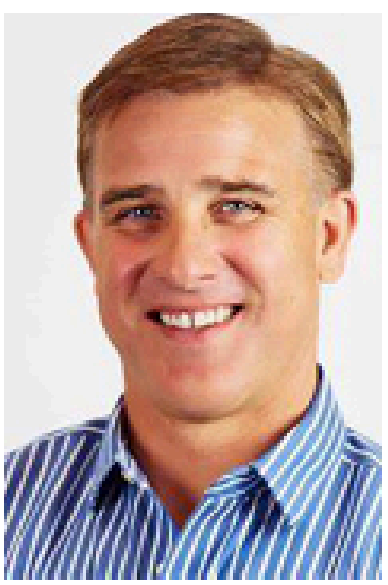
- When a growth team hits upon a *winning idea*, invest to get the most from it (including opportunities for cross-fertilization) instead of simply moving on to new areas.

- The job of growing a business is never finished. Prevent complacency by using growth teams to drive continual data-driven innovation and create a *virtuous cycle of growth*.

This is a detailed guidebook that takes you through the process of hacking growth step-by-step, including specific guidelines, case studies, sample questions and tips to help you grasp the concepts and tailor them to your specific product or business model. For more details and resources, please visit https://growthhackers.com.

About the Authors

Sean Ellis is an entrepreneur, investor, and startup advisor. He is the CEO of Growth Hackers and was previously founder and CEO of Qualaroo. Ellis graduated from the University of California. He was the head of marketing at LogMeIn and Uproar, and was the first marketer at Dropbox, Lookout and Xobni. He is an advisor to KISSmetrics and Eventbrite, a mentor at 500 Startups, a Board Member for Mavenlink and SignNow, and an investor in Bitium. For more details, visit www.seanellis.me.



KEY QUOTES

"Doubling down is a powerful way to stack one growth win on top of another."

"Driving growth is a job that is never truly done. The breakout companies that sustain their success are those who constantly push for more, leveraging their success, capitalizing on new opportunities, and creating a virtuous cycle of growth."

THE FIVE MOST IMPORTANT QUESTIONS

YOU WILL EVER ASK ABOUT YOUR ORGANIZATION

BY PETER F. DRUCKER
with Jim Collins, Philip Kotler, James Kouzes, Judith Rodin,
V. Kasturi Rangan, and Frances Hesselbein

The Big "So What"

For many years, non-profit organizations felt that a good cause alone was enough. However, precisely because they don't have a bottomline like profit organizations, it is even more important that they are well-managed. This book provides a self-assessment process to address crucial fundamentals of what you are doing, why you are doing it, and what you must do to improve your organization's performance.

The Importance of Self-Assessment

Self-assessment is crucial to any individual or organization that's committed to becoming a leader.

It forces the organization to focus on its mission. The self-assessment process will lead to the formation of a plan, and planning is an ongoing process (not a one-off event). It requires that you make the best possible decisions today to achieve results tomorrow, to constantly review what works and what doesn't work, so adjustments can be made in light of ongoing changes.

It requires that you listen to your customers. A non-profit organization cannot support every good cause that it encounters. Instead, it must address what its customers (be it a student, donor, patient) want and value. In assessing your customers' needs, you cannot simply guess what they want. You need to talk to your customers and get their input.

It involves setting higher standards and encouraging constructive dissent. To become a force for positive change, to build future communities and change lives, you'll need to constantly challenge status quo and push for renewal/ improvement while you're successful. Important decisions should never be made when there's rapid consensus, as this means that people are avoiding the difficult discussions and decisions, and/or objections are being hidden. Instead, encourage different views and constructive dissent.

Key Quotes

"Leadership has no choice but to anticipate the future and attempt to mold it."

"The mission inspires; it is what you want your organization to be remembered for."

"You cannot arrive at the right definition of results without significant input from your customers...The danger is in acting on what you believe satisfies the customer."

"True self-assessment is never finished. Leadership requires constant resharpening, refocusing, never really being satisfied."

These ideas are expanded upon in the 5 essential questions for self-assessment outlined below. The 5 questions by Drucker have withstood the test of time, and are presented in the book alongside additional inputs from other thought leaders.

1 "What Is Our Mission?"

The mission captures the purpose of an organization's existence. It has to encapsulate something that you believe in, at a deep and personal level, such that everyone in the organization understands and lives it.

In defining your mission, you must consider:
- Your present mission
- Your challenges
- Your opportunities
- Whether your mission must be revisited

For non-profit organizations, changing lives must be at the core of their missions. An effective mission statement:

Is broad and focuses on shaping the future;

Is so short and focused it can fit on a t-shirt;

Is centred on "why" and not "how"; and

Reflects the point where opportunities, organizational competence and commitment converge.

Preserve the core while progressing dynamically

Jim Collins shares that an organization's mission guides it on what to do and what *not* to do. Great organizations concurrently preserve their core, while stimulating progress. They are crystal-clear and unwavering in their mission or core ideology, but dynamic in how they manifest the mission, including changing the operating practices, tactics, strategies, processes, techniques or cultural norms to keep pace with changing realities.

Key Quotes

"A mission cannot be impersonal; it has to have deep meaning, be something you believe in–something you know is right."

"A fundamental responsibility of leadership is to make sure that everybody knows the mission, understands it, lives it."

"The mission transcends today but guides today, informs today."

"Every mission statement has to reflect three things: opportunities, competence, and commitment."

"(People) have a desperate need for a guiding philosophy, a beacon on the hill to keep in sight during dark and disruptive times."
- Jim Collins

Human beings have a fundamental need for belonging and a deeper sense of purpose. As the world becomes more disruptive and unpredictable, a clear mission helps people to feel that they are standing for something they believe in.

2 "Who is Our Customer?"

Only when you have clearly identified your customers can you focus on satisfying their needs. Yet, leaders are often unsure who exactly their customers are, and / or fail to place their customers as the priority. To identify your customers, ask yourself this question "For my organization to be considered successful, who must be satisfied?"

In defining your customers, consider

- Who your primary customers are
- Who your supporting customers are
- How these customers will change

Primary customers. You should have only *one* primary customer, and this is the customer whose life will be changed due to your organization's work. Drucker gave the example of a non-profit organization that focused on "the person with multiple barriers to employment" – over time, this single definition led them to impact different groups of people, from the physically disabled to single mothers to the chronically ill. Identifying your primary customers gives you great clarity for prioritization and decision making.

Supporting customers. You will have *many* supporting customers - including your employees partners, members, etc. – and you must satisfy all of them. When you change your primary customers, you will also create a different circle of supporting customers.

Know your (ever-changing) customers. Your customers (be it their demographics, numbers, needs etc.) will change over time, as will the opportunities for you to serve them (due to changes in technology, environment etc.). The key is to get to know your customers, and to continuously adapt and learn as they change. You should also examine when to *stop* serving specific groups of customers.

Key Quotes

"You define your customer as one who values your service, who wants what you offer, who feels it's important to them."

"Our business is not to casually please everyone, but to deeply please our target customers."
-Philip Kotler

"Your success ultimately depends on what you have contributed to the success of your customers."
-Philip Kotler

Don't attract Customers; Develop Fans

Philip Kotler adds that, it is no longer enough to try and attract customers. The new paradigm of thinking is about choosing your target customers carefully, and satisfying them so well that they become your fans. To do this, you need to:

- Understand the customer buying process - including who is the initiator, influencer, decider and the purchaser - then seek to reach the most influence people in this decision-making process.
- Go beyond data in the customer relationship management process to actually capture and improve the quality of customer experience.

3 "What Does the Customer Value?"

We must understand our customers' needs, wants and aspirations. Yet, these are complex questions that can be only addressed by the customers themselves.

To address this question, consider these about your primary and supporting customers:

- What assumptions you may have about what they value
- What knowledge you must gather to ascertain what they value
- How you can gather this information

Don't assume or infer. In their own eyes and realities, customers always behave rationally; we can only see the logic of their decisions when we see things from their perspectives. To deliver what our customers value, we need to first become aware of our own assumptions or interpretations of what the customers value.

Plan around your customers. To integrate what customers value into your organizational plan, you need to shift the way your organization thinks. Consider your knowledge gaps, then listen and objectively accept what the customers are telling you about their needs and wants. Ensure their voice is an integral part of all your deliberations and decisions.

Key Quotes

"The first rule is that there are no irrational customers."

"Listen to customers, accept what they value as objective fact, and make sure the customer's voice is part of your discussions and decisions, not just during the self-assessment process, but continually."

"People are so convinced they are doing the right things and are so committed to their cause that they come to see the institution as an end in itself. But that's a bureaucracy."

Dare to change the status quo

Jim Kouzes adds that, creating value for the customers means solving their problems. This requires not just an ability to listen, but also the courage to challenge the norms and change what's familiar and stable in your business, to deliver what customer truly want.

4 "What Are our Results?"

In a profit organization, one of the measurements of success is obviously profits. Without it, business is not sustainable in the long run. However, for non-profit organizations, success must be defined and measured differently.

In addressing this question, consider:

- How you currently define results
- If you are really successful
- How you should define results
- What you must enhance or discard

Use qualitative and quantitative measures. You can measure your process and results in both qualitative and quantitative terms. Qualitative indicators look at how deep and wide your impact goes, and can be collected and presented in the form of stories which capture patterns, observations and intangible benefits like "hope" and "inspiration". Quantitative measures involve "hard data" like number and statistics to access if certain standards or goals are met.

Enhance what works and discard what doesn't. With clearly-defined measures, you can identify what you must strengthen, i.e. where to invest resources such that you will get multiple times the results. However, it is equally important to identify what you must discard, without which your resources cannot be optimally deployed. It is not good enough to put resources in an area due to tradition or need – the only reason to invest resources is if it can produce outstanding results.

Key Quotes

"Organizations of the future are relevant and sustainable with measurable results."

"The results of social sector organizations are always measured outside the organization in changed lives and changed conditions – in people's behaviour, circumstances, health, hopes and above all, in their competence and capacity."

"To abandon anything is always bitterly resisted...Yet, abandonment comes first. Until that has been accomplished, little gets done."

Results are both a goal and a test

Judith Rodin points out that, while our long-term mission is important, measurable results in the short term tells us whether our short-term plans are working, and allow us to make midcourse corrections to get better results toward our long-term goals. In other words, results are both a goal in itself, as well as a test of whether we are ontrack to accomplishing our wider mission.

5 "What is Our Plan?"

The process of self-assessment generates a plan, which articulates where you want to be and how you intend to get there. It includes the organization's mission, goals, action steps, budget and appraisal. Since no one can predict the future, the plan needs to keep evolving. Keep asking "What do we want to be remembered for?"

Board vs Management. The board's role is to focus on the mission, goals, resource allocation, and progress review to keep the organization ontrack. The management, on the other hand, is responsible for objectives, action steps and driving results.

Key Quotes

"Planning is not an event. It is the continuous process of strengthening what works and abandoning what does not, of making risk-taking decisions with the greatest knowledge of their potential effect, of setting objectives, appraising performance and results through systematic feedback, and making ongoing adjustments as conditions change."

Goals, Objectives and Budget. An organization should only have a few, and no more than 5, fundamental goals that are approved by the board. Your goals must be rooted in your mission (and by extension, address what opportunities and strengths you'll leverage and where you are going). Your objectives are specific, measurable achievements that will move you towards your goals, including the effective use of the budget approved by the board.

Getting buy-in. Everyone who has a role in the plan should be given the chance to provide inputs – this creates buy-in and understanding of the plan.

In addressing this question, consider:

- If the mission should be changed
- What your goals are

An effective plan comes with 5 ingredients:

Abandonment. Constantly ask "If we were not already doing this today, would we go into it?". If something doesn't work or no longer works, discard it as soon as possible.

Concentration. Focus on what works, and challenge yourself by asking "Can we set and achieve an even higher standard"?

Innovation. Consider the opportunities, emerging issues and conditions of the future, and ask "What do our customers value and how can we make a difference?"

Risk-Taking. Planning inevitably involves decisions and risks. It's a fine line between being too conservative and taking on too much risk, and unfortunately, there's no one-size-fits-all solution.

Analysis. If you are unsure whether to abandon, focus, innovate or take risk, it means you need to conduct further analysis

Key Quotes

"Goals make it absolutely clear where you will concentrate resources for results – the mark of an organization serious about success."

"With genuine participation, a decision doesn't need to be sold...the decision itself becomes a commitment to action."

The plan as the start and not the end

V. Kasturi Rangan highlights that a plan should not be treated as a perfect blueprint for execution. Rather, it is just a starting point for management to refine, adapt and learn. An effective plan:

- Is goal-focused, helping the organization to measure its progress towards its overarching mission.
- Is unwavering in its strategic direction but flexible in execution, with a strong learning focus and constant exploration of possible paths.
- Has individual ownership and accountability. The plan should be developed with the involvement of those responsibility for its execution and results. First, name the individuals, then give them autonomy and flexibility to develop the plan that they will eventually be accountable for.
- Is monitored for improvement. Not all programs will be equally successful. Close monitoring helps to identify which programs contributed results, which ones didn't, and why, so the lessons can be ploughed back into the design of future programs.

Key Quotes

"While the overarching mission might be broad and inspirational, the operating mission must be narrow enough to allow the organization to measure its progress against goals."

- V. Kasturi Rangan

Transformational Leadership

Frances Hesselbein identified 8 milestones that any organization will cross in the process of becoming a truly effective institution:

Scan the environment to identify and understand major emerging trends that affect the organization;

Review the mission at least every few years, asking the first 3 of the 5 questions to ensure your mission is still on point;

Banish hierarchy, so people are not confined into rigid organizational roles. Use job rotation and other ways to fluidly facilitate the expansion of roles and perspectives;

Challenge "the way things are", to identify sacred cows (e.g. programs, policies, practices etc.) that should be discarded;

Communicate powerfully, by reinforcing a few clear and consistent message to all customers and stakeholders;

Develop organization-wide leadership, such that leadership is a shared responsibility and leaders are developed across all levels of the organization;

Lead by example, with leaders leading from the front as role models of desired behaviours;

Assess performance, using the last 2 of the 5 questions to measure and assess how you are doing.

Other Useful Details in the Book to Look Out For

The book was originally written with social or nonprofit organizations as the focus, though the ideas are applicable to any organization or institution that wishes to achieve excellence.

The 5 questions may appear simple, but are certainly not easy to answer. Drucker encourages you to take time to reflect upon each question and allow yourself to consider them carefully. Proper self-assessment could take weeks, if not months to complete, and the process is never finished as leaders constantly refocus and refine.

To aid you in your thinking process and to facilitate discussions, the book comes with a workbook with additional questions and exercises.

Key Quotes

THE FIFTH AGREEMENT

A Practical Guide to Self-Mastery

Miguel Ruiz & Jose Ruiz

The Big "So What"

This book taps into ancient Toltec wisdom to help you break free from limiting beliefs and social conditioning. It offers powerful insights to help you transform your reality, live authentically, and gain self mastery, thereby enjoy greater clarity, freedom, purpose, and inner peace.

Introduction

Toltec wisdom is a way of living that focuses on self-mastery, love, happiness, and understanding yourself and the world.

- It's not a religion but *a guide to living with inner peace*, drawing on universal truths found in many ancient spiritual teachings.
- Toltec wisdom respects all spiritual leaders but doesn't follow any specific belief system. Instead, it helps you *connect with your true self, find joy, and live authentically*.

Toltec wisdom was preserved by generations of "naguals" (masters). Don Miguel Ruiz is a nagual and spiritual teacher from the Toltec Eagle Knight lineage. In his previous book, *The Four Agreements*, he introduced 4 core principles to help individuals live with greater authenticity and freedom. In this book, he partners with his son Don Jose Ruiz to add a 5th principle along with deeper insights and practical guidance for self-transformation.

KEY QUOTES

"The result of practicing the fifth agreement is the complete acceptance of yourself just the way you are, and the complete acceptance of everybody else just the way they are. The reward is your eternal happiness."

"When we master love, intent, or faith, we master the dream of our life, and when all three masteries are accomplished, we reclaim our divinity and become one with God. This is the goal of the Toltec."

The Power of Symbols

Humans create symbols to help us make sense of the world and relate to each other. Symbols include language, social constructs, signs and concepts that we use to think, understand the world, and express ourselves.

- When we were first born, we perceived the world directly without judgment. We acted according to our DNA programming, or the *biological blueprint* that guides our innate responses and impulses.

- As we grew up, we *became "domesticated" by society*. We learned what's "good" or "bad", and what's "acceptable" or "unacceptable". These shape our beliefs and behaviors, leading us to act in line with social norms, often at the expense of our true selves. We even justify why we should curb our instincts to conform with the "correct" behaviors we've learned to accept.

- Once we master certain *languages and symbols*, we start to think and express ourselves through those symbols, allowing them to further shape our perception.

Symbols have no intrinsic truth; they only have meaning because we collectively agree on them. For instance, the words "table" or "tree" only mean something because of our shared understanding.

- *Symbols cannot reflect the whole truth*. For instance, hearing the word "bird" brings an image to your mind, but that image is influenced by what you've learned and experienced; it doesn't reflect the universal truth about birds.

- In fact, *symbols can hold different meaning* for different people, giving rise to misunderstandings. For example:

  (i) In many Western cultures, the color white is associated with purity and weddings, but in some Eastern cultures like China and India, it's associated with death and funerals.

  (ii) In English-speaking countries, "gift" refers to something given freely while in German it means "poison."

KEY QUOTES

"All of our knowledge, 100 percent of it, is nothing more than symbolism or words that we invent for the need to understand and express what we perceive."

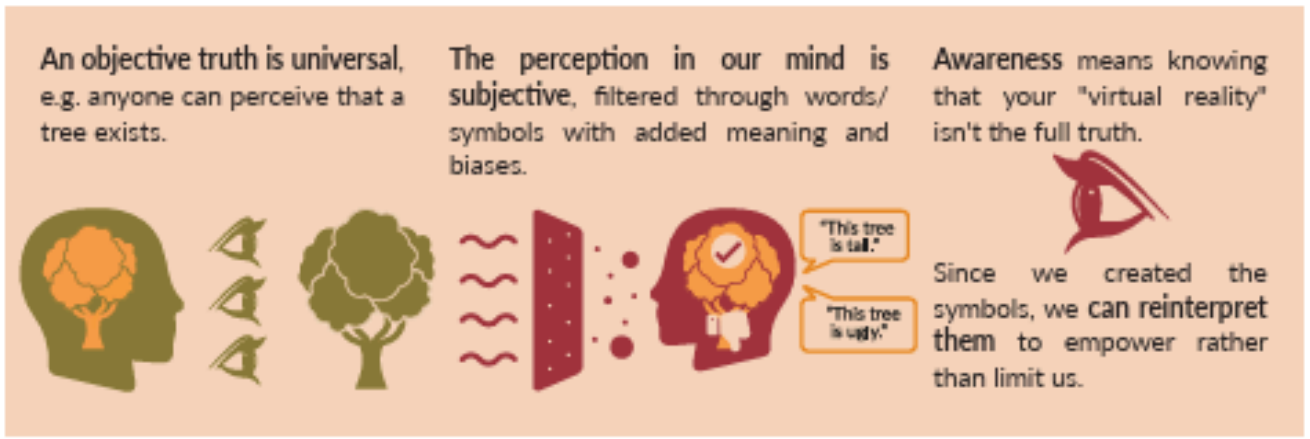
"Symbols only have value because we assign them a value and agree on their meaning. If we don't agree, the symbols are meaningless."

"Everything that exists is true: the earth is true, the stars are true, the entire universe has always been true. But the symbols that we use to construct what we know are only true because we say so."

"To be aware means to open our eyes to see the truth. When we see the truth, we see everything just as it is, not the way we believe it is, not the way we wish it to be."

- There's a real difference between *objective truth and subjective interpretation*. An objective truth is universally visible, like how everyone can perceive that a tree exists. But how we describe it—whether it's "tall" or "beautiful"—is subjective.

- *Awareness* means recognizing that what we perceive isn't the full truth. Once we're aware that symbols and beliefs can distort objective truth, we can consciously separate objective facts from subjective interpretations, allowing us to see life more clearly and to live authentically.



The Five Agreements

These 5 Agreements represent conscious choices or commitments to ourselves. They jointly help us to replace self-limiting patterns with empowering ones, leading to personal freedom, clarity, and mastery.

The First Agreement: Be Impeccable with Your Word

Words are powerful because they shape reality and wield the power to create or destroy.

- Words influence our attitudes, beliefs, emotions, and actions, impacting *how we perceive ourselves and the world*.
  - *Positive words* can uplift and heal us, e.g. if someone told you "You are capable" or "You can achieve anything if you set your mind to it."
  - *Negative words* can crush and destroy, e.g. if someone told you "You are a failure" or "You will never amount to anything."

KEY QUOTES

"Humans are born with the power of creation, and we are constantly creating stories with the words that we learned."

"Awareness opens the door to millions of possibilities, and if we know that we are the artist of our own life, we can make a choice from all those possibilities."

"You were programmed to deliver a message, and the creation of that message is your greatest art. What is the message? Your life."

"You're telling yourself a story, but is it the truth?"

"If you're asking yourself why you're so miserable at times, it's because you're telling yourself a story that isn't true, but you believe it."

We each create a story of ourselves in our minds—a narrative of who we *think* we are, constructed from beliefs, values, and judgments shaped by societal influence. We become deeply invested in this story and see it as our truth, when in reality it's just a reflection of others' opinions, labels, and expectations.

Over time, we absorb many ideas, values, and assumptions from our family, society, and culture. These form a belief system that shapes our "virtual self." The Toltecs call this construct the "human form."

- Our belief system acts like *self-imposed laws*, trapping our "real self" beneath layers of judgments, comparisons, and stories. It disconnects us from our true essence.

- Often, these ideas *contradict each other*, pulling us in opposite directions and diluting the power of our words and actions. When our intentions are free from conflicting beliefs and aligned in one direction, our words and actions become clear and powerful, enabling us to manifest our true desires.

When we invest our power in symbols, beliefs, and judgments, we allow them to control us. But since we're the ones who assigned meaning to these symbols, we can also reclaim our power and choose to use the symbols as neutral tools for communication.

- For instance, as children, many of us believed in Santa Claus and tried to behave to "earn" our rewards. Once we understand that Santa isn't real, it no longer influences our thoughts or actions.

In other words, there are 2 versions of you, and only one version is "real".

- Your *"virtual self"* is a construct of the learned beliefs and knowledge from societal interactions and symbols—it includes all the judgments in your mind about whether you are good or bad, worthy or unworthy, beautiful or ugly. Ultimately, every judgment is just an opinion, and you are free to change that opinion.

- The *"real self"* is the authentic human being (you) that exists independent of both personal opinions and societal expectations.

KEY QUOTES

"The problem is not really knowledge; the problem is believing in a distortion of knowledge—and that is what we call a lie."

"If we are the one who put the power of our faith in every symbol, then we are the only one who can take that power back."

"If we could see our mind in action, we would see... that we are giving life to our creation by giving it the power of our faith, by giving it all of our attention."

"Every judgment is just an opinion — it's just a point of view."

Being impeccable with your words means only using words aligned with truth, and avoiding judgments, criticism, or negativity, whether directed at yourself or others.

- *Speak with integrity*: choose your words carefully, using only words that align with the truth and your real intention. Avoid subjective judgments that distort reality.
- *Lean toward love and truth*. Refrain from using words to judge, reject, criticize, gossip, or spread negativity about yourself or others.

The Second Agreement: Don't Take Anything Personally

Each person's mind is a unique world, constructed from their beliefs, memories, and interpretations.

- Imagine how an ant and a cat might perceive a mouse differently. Likewise, when 2 different people look at the same situation, they experience a *different and unique version of reality*.
- We assume that what we perceive is the truth, when in reality it is just a *distorted version of the truth*, filtered through the beliefs, assumptions, and biases of our own minds.
  - When you see a reflection in a mirror, it looks like the real thing even though it's just a reflection of light.
  - Our mind also reflects reality, but it distorts the image based on beliefs and biases, creating a "virtual reality" that may not align with the actual world.
- We also imagine and daydream frequently when we're awake, and dream when we're asleep. Such mental images continually shape and reshape our stories, *altering our perception over time*.
- In short, *we each live in our own mental world*, unaware that others' experiences and perceptions differ vastly from ours.

Other people's words and actions are less about you, and more a reflection of their own reality, beliefs, and emotional state. This leads to the second agreement: don't take anything personally.

KEY QUOTES

"Be impeccable with your word really means never use the power of the word against yourself. When you're impeccable with your word, you never betray yourself. You never use the word to gossip about yourself or to spread emotional poison by gossiping about other people."

"The world is populated by billions of dreamers who aren't aware that people are living in their own world, dreaming their own dream."

"The world we think we see outside of us is actually inside of us. It's just images in our imagination. It's a dream."

"Even if you try to tell the same story, your story is always changing. At a certain point, you find out that it's nothing but a story. It isn't reality; it's a virtual reality. It's nothing but a dream."

- *You're not responsible for others' actions and opinions*, nor can you control them.
  - We assume we know others well, when in reality we know very little about their inner/virtual world.
  - In fact, we don't even truly know ourselves, since our self image is distorted by our roles, beliefs, and assumptions.
- Instead of *wasting mental energy* on assumptions, use it to focus on understanding the truth instead.
- When we stop taking things personally and *let go of others' judgments*, we free ourselves from unnecessary emotional pain, misunderstandings, and conflict. We stop feeling pressured to defend ourselves, and enjoy greater peace and personal freedom.

The Third Agreement: Don't Make Assumptions

Assumptions are the stories we tell ourselves without knowing the full truth. They distort the truth and are often outright lies.

- These lies are often rooted in *beliefs that don't align with reality*. Imagine a vacant house that looks old and weathered. Someone decides, "This house gives me a strange feeling." Another person agrees, "Yes, I think it's creepy." The superstition grows until everyone agrees the house is cursed.
- Often, 1 lie leads to another, until we spin a *web of lies* that make it hard to see the truth. When each person spins their own story, it clouds reality, leading us away from universal truth.
- What we assume to be "true" often isn't so. At one point, people believed the world was flat, but this is now proven to be wrong. Likewise, much of what we "know" now are also wrong or false.

Lies and assumptions lead to both inner and outer conflicts, which cause pain and unhappiness.

- False assumptions can become *personal or amplified*, escalating pain and conflict. For example:

KEY QUOTES

"The only person who needs to be concerned about the story of you is you. This awareness changes everything."

"To realize that our mind is always dreaming gives us the key to changing our dream if we're not enjoying it."

"All conflict is the result of lies, because the truth has no conflict at all. The truth doesn't need to prove itself; it exists whether we believe in it or not."

"Lies are nothing but superstitions, and I can assure you that we live in a world of superstition. But again, are we aware of it?"

"Making assumptions and then taking them personally is the beginning of hell in this world. Almost all of our conflicts are based on this."

"We only see what we want to see; we only hear what we want to hear. Our belief system is just like a mirror that only shows us what we believe."

(i) We might feel hurt or resentful because we assume someone's delayed response means rejection, when in reality they haven't even seen our message.

(ii) When we overthink or dwell on fears and insecurities, we escalate our mental drama and emotional turmoil.

(iii) When we gossip, we spread distorted versions of events and amplify misunderstandings.

- When we're trapped in lies, we live in a state of *inner "hell"*. When we free ourselves from lies and assumptions, we find peace or a personal "heaven".

- One of the biggest lies today is that "nobody's perfect". Everything in nature—including each human being—is inherently perfect once you stop measuring them against *arbitrary standards*.

  - Consider a flower in a garden. Some might see it as "too short" or "too wild." But who's to say what a "perfect" flower should be like? Likewise, every person is perfect in their own way, even if they have certain disabilities or diseases.

To stop making assumptions, we must cultivate awareness—to actively question our own beliefs and be open to other perspectives.

- See your assumptions as subjective interpretations, not objective truths. *Challenge assumptions* to interrupt automatic judgments, stay open-minded, and reduce unnecessary drama and conflict.

- Stop overthinking and trying to explain or justify everything. Instead, accept that you don't know everything, and *ask good questions* to gain clarity.

The Fourth Agreement: Always Do Your Best

Doing your best means applying the 3 agreements earlier to the best of your ability, based on your current capacity and situation.

KEY QUOTES

"Assumptions are nothing more than lies that we are telling ourselves. This creates a big drama for nothing, because we don't really know if something is true or not."

"If we don't make assumptions, we can focus our attention on the truth, not on what we think is the truth. Then we see life the way it is, not the way we want to see it."

"When we recover all the energy that we invested in making assumptions, we can use that energy to create a new dream: our personal heaven."

"Always do your best is the agreement that everybody can do. Your best is, in fact, the only thing you can do."

- *Don't strive for perfection* or dwell on past failures and future worries.

  (i) Accept that *your "best" will vary* with your energy, mood, and circumstances.

  (ii) Just *focus on what you can do in the moment*, giving it your full effort.

- When you practice the four agreements daily, even if imperfectly, you will progressively internalize them until they *become habitual*.

  (i) You will gradually weaken habits like speaking carelessly, taking things personally, or making assumptions. You will also improve your baseline "best level."

  (ii) Each time you dismantle a limiting belief, you reclaim the personal power you had invested in it, and strengthen the alignment with your true self.

The key is to keep doing your best without self-judgment. In so doing, you commit to the path of self-transformation.

- *If you falter* on any agreement, just renew your commitment without self-reproach.

- The *ultimate goal* is to replace limiting beliefs with the four agreements, aligning yourself with truth and freedom. Transformation occurs when you unlearn old beliefs and conditioned ideas that no longer serve you, and embrace new truths and self-love instead.

The Fifth Agreement: Be Skeptical, but Learn to Listen

The first 3 Agreements guide us toward the truth, the Fourth Agreement helps us to internalize them, while the Fifth Agreement gives us a way to consciously deepen the practice of the original four agreements in real life.

- It uses *doubt as a tool* to question beliefs, separate truth from falsehood, and release agreements that no longer serve us. By challenging ingrained beliefs and internal/external messages, we free ourselves from limiting beliefs that constrain us.

KEY QUOTES

"Eventually the moment will come when all four agreements become a habit. You don't even try. It's automatic. It's effortless. One day you discover that you are ruling your life with the Four Agreements."

"By doing your best, over and over, eventually you are going to master the art of transformation."

"You can relearn how to love yourself by accepting yourself, unconditionally. And you can start by projecting unconditional love to the authentic you."

"If faith is believing without a doubt, and doubt is not believing, be skeptical. Don't believe."

"Instead of doubting yourself, have faith in yourself. Instead of doubting the truth, doubt the lies."

The Fifth Agreement is about balancing skepticism with listening.

- *Be skeptical*: Don't believe anything at face value, since everyone's "truth" is filtered through subjective perceptions, and no single story or symbol reflects the whole truth. However, don't feign skepticism just to appear smart or superior.

- Instead, *listen with openness*. Recognize that people naturally communicate through stories, not out of an intention to deceive.

  (i) Listen respectfully, giving others the space to express their perceived truths without judging, agreeing, or disagreeing.

  (ii) Seek to understand their worldview or perspective without taking their words personally or being affected by them.

  (iii) Once you grasp what they want, it's up to you to choose your response—to agree, disagree, share your views, or ignore the message altogether.

- In the same token, the authors' words in this book are merely a reflection of their own perspectives. Listen to understand, then choose if and how to integrate these insights into your own beliefs. With awareness, *you always have a choice*.

Once we stop trying to label, judge, or explain everything, we uncover a world where things are inherently perfect just as they are, without the need for validation.

- You can *embrace sensory experiences* (like the feel of a sofa or your body's sensations) without labeling them as "good" or "bad." Even emotions or mistakes are neither positive nor negative—they simply exist.

- Although you still think and communicate using symbols, you can choose your words and interpretations to *create a story that brings you peace and joy*, without getting attached to it.

KEY QUOTES

"To be skeptical is not to believe everything you hear."

"The truth doesn't come with words. The truth is silent. It's something that you just know; it's something that you can feel without words, and it's called silent knowledge."

"Once you recover awareness, you become completely responsible for your own evolution—for every choice you make in life."

"Even though you know your story isn't true, you can create the most beautiful story, and you can guide your life through that story. You can create your personal heaven and live in that heaven. And if you can understand other people's stories, and they can understand yours, then together you can create the most beautiful dream."

The Journey to Freedom

According to Toltec wisdom, we progress through 3 stages or "dreams" of attention, each representing a deeper level of awareness and understanding of reality.

In the first stage (the "Dream of the First Attention"), we accept societal "truths" without question, forming our worldview based on the symbols and stories we're taught.

- The authors use the biblical story of *Adam and Eve* to symbolize how we got disconnected from our true essence. When we ate from the Tree of Knowledge (also known as the Tree of Death), we gained "knowledge" of what was right or wrong. In doing so:
  - We "died" spiritually because we stopped seeing ourselves as whole and perfect. We started to experience judgment, guilt, fear and doubt, and our "virtual self" took charge instead of our real, authentic self.
- Awakening from this dream is like a *resurrection of our true self*. It reconnects us to the unity, love, and truth symbolized by the Tree of Life. We return to the state of innocence, inner freedom, and paradise that it represents. It's like a spiritual rebirth that revives our inner essence, so we start to live with authentic awareness and see life without the cloud of judgment and fear.

Once we're aware that our perceptions aren't the full truth, we begin the next phase—the "Dream of the Second Attention". We start to question and dismantle limiting beliefs/agreements to reclaim our personal freedom gradually.

- This stage becomes a mental battleground where we work to *free our authentic self* from layers of false agreements and beliefs.
- In ancient times, people offered sacrifices to gods like Apollo or Zeus. Today, we are still *making sacrifices*.
  - We give up our peace, authenticity, or relationships for modern "gods"—ideals like democracy, justice, or even personal pride.

KEY QUOTES

"You are truth; you are life; you are love."

"The first lie that we believe is 'I am not God.' We see the beauty and perfection of God, and we want to be like God— we want to be that "image of perfection"—and we search and search for perfection."

"You are not who you really are, because you have been possessed by that distorted image of you...And that distorted image of yourself is really your grave, because the real you is not the one who is living your life."

"You have a choice. You can create heaven, or you can create hell. Remember, both are states of mind that exist within you."

"Humans are the only animals on earth who punish themselves a thousand times or more for the same mistake, and who punish everybody else a thousand times or more for the same mistake."

- We also carry baggage from the past, often punishing ourselves and others repeatedly for past mistakes. These open up old wounds, trapping us in emotional turmoil and limiting our ability to live freely in the present.

- Religious teachers like Jesus, Buddha, or Muhammad can provide guidance, but they cannot live our lives for us. *Only you have the power to change your perception*, and by extension, your reality.

- Life operates on *action-reaction*, e.g. self-judgment (action) leads to guilt and shame (reaction). The only way to change the outcome is to change our initial action.

- *The Five Agreements serve as tools* to help us dismantle ingrained, fear-based beliefs, gradually freeing us from the illusions of the "virtual self" so we can live authentically and pursue our true desires. The lies still exist all around us; we simply choose not to invest in them.

The Dream of the Third Attention is the ultimate state of freedom and mastery, where we see life as it truly is, free from personal stories, boundaries, or filters. This stage embodies pure awareness and unity with all of existence.

- The "*Last Judgment*" is commonly interpreted in several religions—like Christianity or Islam—as a final reckoning by God. However, the authors describe it not as an external event, but an internal process where we let go of all judgments about ourselves and others, to find inner peace here and now.

- When we remove all symbols and labels, we come to see that everything—ourselves included—is part of *one unified force*. Just as every drop is part of the ocean, each of us is a unique expression the same universal life force.

  - With this realization, we experience *oneness* with all of creation, including the divine. We realize we're not merely humans experiencing life, but life itself.

KEY QUOTES

"It's not up to God or Jesus or Buddha or Moses or Muhammed or any master, shaman, or guru to save us... No one else can change our world, because that world only lives in our head."

"The Four Agreements are the tools for using your attention a second time to create your personal heaven, and the fifth agreement is the tool to win the war against the tyranny of the symbols."

"Once you have the awareness that almost everything you learned through symbols is not the truth, the only thing left is just to enjoy life, and that's the resurrection."

"Everything in existence is part of the only living being in existence...and you are that being. You are that force that manifests itself in infinite ways throughout all the universes."

"That is what everything is, in billions and billions of different frequencies or manifestations of light. And together, all the different frequencies create only one light."

- All life forms are *unique yet interconnected parts* of one vast, living universe. Every being—be it human, the Earth, or a galaxy—is complete in itself, yet part of a greater whole. Even an atom is like a miniature solar system, with electrons orbiting a nucleus.

- In this state of awareness and communion, *love flows naturally and unconditionally* from you, like sunlight shining on everything. This love isn't based on reasons or stories—it is a part of your being, because you're in harmony with the frequency of love. You can simply exist and enjoy that existence, without the need for judgments, words, or explanations.

The Truth will Set You Free

To see the truth, we must first unlearn what we think we know, letting go of illusions to connect with our genuine nature. The 3 Dreams mirror the 3 worlds found in many spiritual traditions:

- In *Greek and Egyptian* beliefs, they represent the Underworld (unconscious fears and conditioning), the World (our lived experiences), and the Upper World (divine awareness).

- In *Christianity*, these are symbolized as Hell (fear and illusion), Purgatory (the process of inner purification), and Paradise (complete unity with God).

- *Toltec wisdom* presents them as stages of attention, moving from the illusions of the first attention to ultimate clarity in the third.

All 3 worlds coexist within us, and we choose which one we engage with. To master the 3 Dreams, we must exercise deliberate control over our perceptions, and direct our life purposefully, free from external influences.

Other Details in the Book to Look out For

The Five Agreements are practical tools to help you dissolve false beliefs, connect deeply with your authentic self, and master your life.

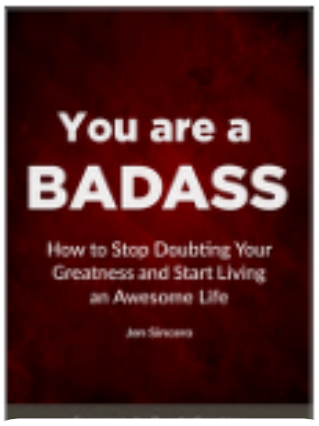
KEY QUOTES

"It doesn't matter if we are a Christian, a Buddhist, a Muslim, a Hindu. We come from the same place, and we're going back to the same place. The infinite creates everything in existence, and when the cycle is over, everything returns to the infinite."

"The truth will set you free, but first you need to see the truth."

"Once you accept yourself just the way you are, you no longer have any judgments about yourself. Once you accept everybody else just the way they are, you no longer have any judgments about them. Then something incredible happens in your world: You find peace. You are not in conflict with yourself, and you are not in conflict with anyone else."

"You are here to enjoy life. You are not here to suffer over your drama or your personal importance."



YOU ARE A BADASS

How to Stop Doubting Your Greatness and Start Living an Awesome Life

Jen Sincero

The Big "So What"

Most people cruise through life. They earn enough to make pay their bills and occasionally dream of a better life. Yet, they don't actually do what it takes to realize their dreams and goals. This book explains how you can embrace your greatness, unlock your potential, and start living the life you've always wanted.

Introduction

The author, Jen Sincero, was broke despite being a published author. She wanted to start living to her full potential, so she embarked on a self-improvement journey and immersed herself in self-help books, courses and programs. This book, written in 27 chapters, captures the best of what Sincero learned, including how she overcame her limiting beliefs, built her confidence, reached for her dreams, and multiplied her income.

- Her main message is this: You are a Badass. You can conquer any challenge and achieve anything you want, if you truly set your heart and mind to it. However, don't just wish for change. Make a *real, non-negotiable decision* to start living your best life.

- To achieve results you've not achieved before, you must be willing to get uncomfortable and do what you've not done before. Sincero asks that you *keep an open mind*, and at least apply the ideas to truly appreciate how they can work for you.

- In *this summary*, we'll examine the factors holding you back from your best life, before looking at how you can unlock your inner Badass.

KEY QUOTES

"You need to go from wanting to change your life to deciding to change your life."

"If you want to live a life you've never lived, you have to do things you've never done."

What's Holding You Back?

Limiting Beliefs and The Subconscious Mind

Our beliefs determine how we perceive and respond to people/events around us. If you believe "I should accept my lot in life" and "I'm not good enough", you will behave very differently from someone who believes "I'm in control of my life" or "I'm learning and growing every single day."

Most of us cling to our beliefs as if they're hard truths. In reality, they're just subjective ideas/beliefs from other people.

- We are born without any preconception of what's good or bad, easy or difficult, possible or impossible. Everything we believe (e.g. what's "scary", "affordable" or "embarrassing") comes from the people around us. They, in turn, learned their beliefs from others around them.

We're free to change our beliefs—to drop the unhelpful beliefs and adopt helpful ones. Unfortunately, we're not always conscious of the underlying beliefs behind our decisions and behaviors.

- Our *conscious mind* is the logical, analytical part of our brain that processes facts, logic, and decisions. We think we consciously control our lives, when in reality our subconscious mind is the one in charge.

- The *subconscious mind* is the intuitive part of our brain. It absorbs and stores stimuli from our environment without our conscious awareness.

  - It doesn't differentiate between what's "true" or "false", and believes anything it sees/hears repeatedly. Since the subconscious brain is fully-developed at birth, we start to absorb sights, sounds, and inputs from the day we are born—long before our conscious brain is developed enough to filter or process the inputs. All these are lodged in our subconscious mind to shape our perceptions.

  - If you saw your parents fighting over money and struggling to make ends meet, you may unknowingly develop

KEY QUOTES

"Most people are living in an illusion based on someone else's beliefs."

"Our conscious mind thinks it's in control, but it isn't. Our subconscious mind doesn't think about anything, but is in control."

beliefs like "money brings pain" or "it's hard to make money". Such subconscious beliefs can work against you, so you struggle to make money no matter how hard you work.

When things are going badly, you can always find self-sabotaging beliefs contributing to the situation. To remove such beliefs, you must first become aware of them.

The Law of Attraction

Everything in this universe is made of energy, all of which is interconnected. You can refer to this infinite pool of energy as God, the Universe, Source Energy, Higher Power, or any term you prefer.

- Molecules vibrate at specific frequencies and attract other molecules vibrating at the same frequency. The *Law of Attraction* says that you attract more of what you think/feel persistently.

  (i) When you focus on problems/complaints and feel overwhelmed, victimized, angry, or helpless, you vibrate at a *low frequency* to attract more of such people/events.

  (ii) When you calm your mind, focus on what you want, and take joyful action with confidence and gratitude, you vibrate at a *higher frequency* to attract more of what you want.

- A key to success is to believe in the Source Energy and concurrently take action to tap on it. Think in terms of *energy, frequency and vibration*, and learn to adjust your frequency like how you tune in to a radio station.

One way to do so is to become fully present in the moment.

- We tend to dwell on the past, worry about the future, and get so caught up with our goals/worries that *we miss what's right in front of us*. We work so hard for our children's future that we neglect to spend time with them now. We complain so much about what we don't want that we lose sight of what we do want.

KEY QUOTES

"The first key to ridding yourself of limiting subconscious beliefs is to become aware of them."

"The Universe will match whatever vibration you put out. And you can't fool The Universe."

- Often, *what we want already exists*. We just can't see it because we're too caught up with the endless chatter in our minds. Consider this: electricity existed long before humans discovered it and invented the light-bulb to tap on the energy. Once you're fully present and connected to the Source, you too can discover new paths to the life you want.

Negative Self-Perceptions

Whenever you try to step out of your comfort zone, your Ego or shadow self will throw up mental, emotional, and physical barriers.

- This is the *inner critic* that restricts you with fears and limiting beliefs. It's the voice in your head that says you can't succeed, you shouldn't take risks, or you're unworthy of love and success. Sincero calls it the "Big Snooze".

- By contrast, your *higher self* embraces new possibilities fearlessly because because it has faith in the Universe's abundance, and in your abilities to grow and overcome any challenge.

It takes as much energy to put yourself down as it does to lift yourself up. Why plague yourself with negative self-perceptions when you can celebrate and develop your strengths, talents and potential?

Embracing your Inner Badass

Love and Accept Yourself

Children don't care about singing off-tune, having bad hair, or dancing awkwardly—until we teach them concepts like shame, fear, and self-doubt. Just imagine what you could achieve if you know that you're loved and lovable just as you are.

- Recognize that *you're special*. There's no one who's exactly like you, with the same talents, experiences, or way of thinking.

KEY QUOTES

"All of those high-frequency things and experiences are already here, just waiting for you to join the party, all you have to do is shut up, show up, and usher them in."

"Wanting to be someone else is a waste of the person you are."
—Kurt Cobain

"It's just as easy to believe we're awesome as it is to believe we're giant sucking things."

- Flood yourself with *positive affirmations* like: "I deserve and receive love every moment everyday" or "My heart is open. Love pours in and out." Display them on post-it notes, play them in your car, and read them to yourself every morning and night.

- *Replace negative thoughts or behaviors* once you notice them, e.g. replace "I'm such a failure", with "I slipped up but I'm learning from it."

- *Drop the self-deprecating jokes*. Your subconscious mind believes anything it sees/hears repeatedly.

- *Accept love and compliments* graciously. Stop comparing with others.

- *Forgive yourself* for any mistakes or perceived shortcomings. If you feel you've wronged someone, then apologize to them.

- Don't focus only on others' needs and demands. Make time for the *things and people you love*, and take care of your body.

KEY QUOTES

"When we're happy and all in love with ourselves, we can't be bothered with the bullshit (our own or other people's)."

"Give yourself the gift of a joyous life while you're still among the living."

Don't Worry About Others' Opinions

When you attempt anything significant in life, you will meet with disapproval, rejection, or even ridicule. Stop living in fear of what others think, and start being true to yourself.

- You can't control others' opinions, but you can take responsibility for *what's true and important for you*. Ask:

  (i) Is this something I want to be, do, or have?

  (ii) Does this take me in the direction I want to go?

  (iii) Will this harm anyone else in the process?

- Accept *constructive inputs* without being defined by them. When you receive a praise or criticism, pause to consider if it's true. If so, use it to improve yourself or help others. If not, just let it go.

- So long as you're *doing your best*, you should be proud of yourself regardless of what others think/say.

"All that matters is what's true for you, and if you can stay connected to that without straying, you will be a mighty superhero."

"What other people think about you has nothing to do with you and everything to do with them."

- Find a *role model* who inspires you. Consider what that person would do, until you're confident to follow your own guidance.

- Don't worry about losing your tribe's approval or acceptance. *You can always find another tribe* that will embrace you as you are.

Discover Your Calling

Figure out what your unique gifts/talents are, then share them bravely with the world. Live on purpose to enjoy a fulfilling, abundant life.

- Look at yourself from a *third-party perspective*. What talents, resources, possibilities, and opportunities would you see?

- Don't overthink. Just *take a first step* and keep moving in the direction that feels right to you. You'll progressively learn about yourself and your calling as you grow and evolve.

- *Get ideas from people around you*. What aspects of their work or lives interest and excite you? Are you excited by the freedom of working alone, or by the joy of collaborating with a team? Do you like doing something physical with your hands, or using all 5 senses to create something new?

- Spend ≥5min per day *connecting with yourself*. Sit quietly with yourself and listen to your inner guidance (on who you are, what you love, and what you truly want).

- Our fantasies—however outrageous—shed some light about our dreams. Occasionally *follow your fantasies* and reach for the stars! What would you do if there were no constraints? What might the best version of yourself be like?

KEY QUOTES

"When we share what we were brought here to give, we are in alignment with our highest, most powerful selves."

"Follow what feels good in the moment, every moment, and it will lead you through a most excellent life."

"Our fantasies are our realities in an excuse-free world."

Tap Into the Source Energy

Practice Meditation

The goal of meditation is to <u>be still and to clear your mind</u>. This allows you to relax, be aware of your inner voice, and connect to the Source Energy. If you're new to meditation, try practicing for just for 5-10 minutes daily, then gradually extend the duration.

- Here are the <u>*basics for meditation*</u>:

  (i) Sit comfortably in a chair, or cross-legged on the floor. Place your hands on your knees or lap.

  (ii) Sit straight and relax your entire face and body.

  (iii) You can close your eyes or gaze softly at a spot 2 feet ahead.

  (iv) Focus on your breathing, noticing how it moves in and out of your body.

  (v) Whenever a thought surfaces, gently release it and clear your mind. Notice any intuitions that surface.

- You can also use these <u>*additional tips*</u>:

  (i) Set a timer so you needn't think about the time.

  (ii) If you need a focal point, let your eyes rest on a candle flame.

  (iii) Instead of focusing on your breathing, imagine a beam of light shining down from the sky, through your head to the rest of your body, and back to the sky again in a full circle.

  (iv) If you can't silence the mental chatter, try using guided meditation or a mantra (e.g. repeating "love" or "om").

  (v) Ideally, do your practice first thing in the morning before other distractions can creep in.

  (vi) You can seek insight/guidance on an issue by asking a question before or after a meditation, then allow the answer to come to you.

KEY QUOTES

"You have all the answers you need, you just need to give them the chance to get through to you."

Change Your Thoughts to Change Your Reality

Everything we create in reality must first exist as a thought. For something to happen, you must first **believe it can happen**. Don't insist on seeing the evidence before you believe in something. It's alright if you don't know how to achieve your dreams and goals yet. Your job is to know what you want, then allow the Universe to guide you on the "how".

- *Quieten your mind*, so you have a clear, uncluttered space to visualize and ask for what you want.
- Create a *vision board* that captures the details of your vision. Place it where you'll see it daily to freeze the image in your mind.
- *Live your vision* as if you've already achieved it. If you want to become a Presidential aide, then imagine yourself working in the White House or attending meetings alongside the President. Gather information and pictures about the role and put yourself in situations where you must act the part and meet with people you'd work with.
- *Upgrade your environment* within your means. If you can't afford to buy a new house, at least tidy up your home or give it a fresh coat of paint.
- Surround yourself with *people who inspire you* and have achieved what you wish to achieve. Stay away from blamers, complainers and whiners.

Reconnect With Your Inner Child

As children, we were full of joy and wonder. Then, we grow up and start to become serious and uptight. Free your inner child to live/dream joyfully, and **have some fun** without constantly worrying about your image or responsibilities.

- Stop fretting over what you mustn't or shouldn't do. Push the boundaries and *see what you can get away with*. Ask "why not?"

KEY QUOTES

"Your job isn't to know the how, it's to know the what and to be open to discovering, and receiving, the how."

"The moment you have the audacity to start believing in the not-yet seen, your reality will begin to shift."

"Being around inspired, visionary, enthusiastic people who are living their truths is one of the fastest ways to massively transform your life."

- Pay attention to the times when you *get in flow*, i.e. you're so absorbed in something that you lose track of time. What were you doing? How can you create more opportunities to do what you love?
- *Be both an Expert and a Beginner*. You can improve yourself, yet laugh at your mistakes and have fun.
- Stop fighting your circumstances and learn to *go with the flow* of life. Find joys in frustrating or unexpected situations.

Give and Receive Freely

The more you give, the more you receive, because you're creating a positive flow of energy. The opposite happens when you cling on to what you have.

- Contribute to 1-2 *meaningful causes* each month.
- *Give away something you love* to someone who'd appreciate it.
- Leave a *bigger tip* than usual.
- When someone is unpleasant, respond with *love and care* instead of retaliation.
- Smile, compliment people, and *make others smile*.
- Accept *invitations and gifts* graciously.

Practice Gratitude

Appreciate the good things and people in your life to attract more of it.

- Greet people politely, say "please" or "thank you", and be thankful for the good things that haven't yet manifested but are on the way to you. This puts you at the *right frequency* to receive what you want more easily.
- By contrast, when you *take things for granted* and complain incessantly, it reduces your frequency and cuts you off from the things you want.

KEY QUOTES

"Take the pressure off and get back in on the adventure."

"Giving is one of our greatest joys. It's also one of the most fearless and powerful gestures there is."

"You cut yourself off from the supply of awesomeness when you are not in a state of gratitude."

Practice gratitude daily:

- In any encounter, *focus on the positives* instead of lamenting on the negatives.
- Each night before going to bed, write down *10 things you're grateful for*.

Practice Forgiveness

Don't protract your emotional pain by clinging to resentment, guilt and self-loathing. Forgive others for yourself, not for them. Let go of your negative feelings to gain a sense of freedom, and stop wasting energy on people/issues that make you feel bad.

- Why hang on to beliefs or attachments that bring you pain? *Choose to be happy*, not to be right. If you must, throw a private tantrum to get it out of your system, then move on.
- Find *compassion*: think of the other person as a child who acted poorly because he/she didn't know how to handle the situation.
- Ask if there could be *other explanations* for what happened, e.g. the other person wasn't ignoring your calls but had lost his phone.
- *Remove the person from the picture*, so you stop wasting energy thinking about them or how they've wronged you. Free yourself to move on without them.

Stop Sabotaging Yourself

Change Your Stories

Often, we create stress and drama unintentionally. We focus on fears/limitations, blow problems out of proportion, then rush around frantically and bump against the walls. If we just calmed

KEY QUOTES

"You cannot exercise much power without gratitude; for it is gratitude that keeps you connected with Power."
—Wallace Wattles

"Holding on to resentment is like taking poison and waiting for your enemies to die."

"Do yourself a favor and use irritating situations and people as opportunities for growth, not pain."

down and studied the situation, we could've found a door and simply walked through it.

Statements like "Nobody cares about me" or "I'm hopeless at this" are not truths. They're just stories that you tell yourself, and you can rewrite your stories:

- *Make a list of your stories and excuses*. They usually begin with words like: "I always", "I never", "I cannot", "I should", "I'm bad at", "I wish", or "Someday".

- *Identify the false benefits* you're getting from each story. For instance, are you saying that you're bad at making money to get someone's attention, or to avoid taking responsibility for your finances?

- Consciously let go of old excuses, attachments, and unhelpful beliefs. Replace each one with *new empowering statements* that help you to imagine a life of joy, power and freedom. For example, replace "I'm bad with money" with "I can handle large sums of money" or "My capacity to earn, hold and grow money expands every day."

- *Build new habits*. Start behaving as if you're already the person living the new stories. Break your old routines, e.g. wear something different, or expose yourself to new places, people, and experiences. You'll realize that the new reality and opportunities existed all along—you just had to start looking in the right places.

Stop Procrastinating

Procrastination is a form of self-sabotage. Why waste energy coming up with excuses, when you can use the energy to just get it done?

- It's better to have a *less-than-perfect interim output*, than to wait indefinitely for a "perfect" solution that's never completed.

- Take note of *where you tend to falter or quit*. Try smoothening the process by hiring someone to handle that task.

- Get someone to hold you *accountable*, e.g. donate $1000 to a charity if you fail to meet your deadline.

KEY QUOTES

"What you choose to focus on becomes your reality."

"Life is an illusion created by your perception, and it can be changed the moment you choose to change it."

"If you're serious about changing your life, you'll find a way. If you're not, you'll find an excuse."

- If you tend to put off your tasks until the last minute because you work better under pressure, then *work with your tendencies*. Know the latest date/time you must start, then allow yourself to enjoy or do other things until the time is up.

Stop Feeling Overwhelmed

When we work ourselves into a frenzy, it only hinders our own performance. Tackle 3 common illusions to regain control of your time/energy.

- *Not enough time*: You can always find time if you want or have to.

  (i) Respect time to have more of it. Turn up for appointments on time, honor your deadlines, and stop wasting others' time.

  (ii) Identify your biggest time-wasters (e.g. social media, emails) and make them as inaccessible as possible.

  (iii) Break down big projects into bite-sized tasks. Work for focused periods of up to 60 minutes, followed by a break.

- *Too much to do*: Do what you can with joy, rather than drown yourself trying to do everything.

  (i) Stop saying how busy you are. Focus on the time you *do* have, and how it feels to do what you enjoy.

  (ii) Focus on the things that must be done *now*, and use your prime hours to tackle the most important tasks first. Then, delegate or reschedule the rest.

- *Too tired*: You can't perform optimally when you're exhausted. Take some time to to rest, recover and recharge to protect your health.

Overcome your Fears

It's normal to be afraid when you're trying something new or challenging. Fear is just a feeling—you can manage it instead of allowing it to rule your life.

KEY QUOTES

"Life is but a dream. Don't turn it into a nightmare."

"Do what you can do in joy, instead of trying to do it all in misery."

"Help is all around us, sometimes receiving it is simply a matter of looking at it differently, or not giving up so easily."

- Recall a past event that you were scared of. Does it still look scary on hindsight? Then, consider if you're in any danger right now. You'd realize that *fear exists purely in your mind* and the imaginary events you fear may never happen.

- *Flip the fear to your advantage*. If you dare not try public speaking because you're afraid of looking silly, consider how silly you'd feel at your deathbed for allowing your fear to rule you.

- *Manage your media diet*. Read, watch, and listen to materials that offer a positive, realistic view of the world, not excessive negativity, fear, or pain.

- Before sleeping, meditate to clear your mind of problems and focus on what you're grateful for. Get a *good night's rest* so you have the energy to face a new day.

See Others As Your Mirrors

The people around us serve as mirrors to reflect back something about ourselves. What we like or dislike about others is always a reflection of what we like or dislike about ourselves.

- Stop projecting onto others, and *start to own your flaws*.

  (i) Pay attention to the things that drive you crazy. If you get triggered by people who break their promises, ask: In what ways do I break my own promises? What fears or insecurities do I have about broken promises?

  (ii) Dig deeper to identify the false benefits you gain from being that way. Then, ask who you must become for this to stop bothering you.

- *Walk away from toxic people*. Don't keep bailing them out or they'll never learn to handle their own problems. If you're truly helping or empowering someone, it should make everyone feel good (not heavy or resentful).

KEY QUOTES

"On the other side of your fear is your freedom."

"If you want to help the world and yourself, keep your frequency high and do your work from a place of power and joy."

"The people you surround yourself with are excellent mirrors for who you are and how much, or how little, you love yourself."

"Never apologize for who you are. It lets the whole world down."

"No one can make you feel inferior without your consent."
—Eleanor Roosevelt

Start Moving Toward Your Best Life

Make a Real Decision Now

You only have 1 life. Don't wait until you have more time, money, or experience to do what you want to do, or to enjoy the people you love. You know you've made a **real, non-negotiable decision** when you feel deep in your gut you'll get it done, no matter what.

- *Crystalize the outcomes you want* badly enough to drive you to take persistent action.
- *Learn to be more decisive* by practicing on smaller decisions. For example, choose where/what to eat within 30 seconds, and choose your grocery items within 10 seconds each.
- Once you've made a decision, *stop negotiating*. Don't give yourself any wiggle room to get out of your commitment.

Make Money Your New Best Friend

Money is more than just a piece of paper. **Money is a form of energy**. How much money you have reflects your frequency and how you see yourself.

Follow these **3 rules of wealth**:

- Have an *abundance mindset*, not a scarcity mindset. Stop playing small, and thinking that you can't afford the things you want. Raise your frequency by playing big and having faith in yourself and the Universe. Use phrases like: "I can" or "There's more than enough".
- Most people wish to have more money but don't believe they can have it. They justify their lack of money by saying they don't need it, or that money is bad. Write down your stories about money and the false benefits you're clinging to.

KEY QUOTES

"Your life is happening right now. Do not snooze and lose."

"So often, we pretend we've made a decision, when what we've really done is signed up to try until it gets too uncomfortable."

"Money is currency and currency is energy."

"Making money isn't only about the money...It's about who you become and what you believe is possible for yourself."

"The more you have, the more you have to share."

Use affirmations to *heal your relationship with money*. Accept that money is good, you deserve lots of money, and can use it to do good. Remember: the more money you have, the more you have to give and share.

- *Know where you want to be*, then take action to make it happen. When our goals are fuzzy, we tend to drag our feet. Once we're clear on what to do and why we want to do it, we move with purpose and urgency.

  (i) Get crystal clear on your ideal lifestyle, how much you want to make, and why. Your vision should be so vivid that you can see it, feel it, and taste it, as if it's already here.

  (ii) Think big: What would you do if you had unlimited wealth? How could you use money in a way that makes you feel good about your wealth? What type of person must you become to be worth 1 million, 10 million or 1 billion?

  (iii) Raise your frequency. Rather than give away your services for free (then struggle to pay your own bills), aim to deliver so much value that others are happy to pay a premium for your services. This way, you can exchange energy at a high level and generate massive wealth to expand your reach/impact.

  (iv) Raise the bar. Set a minimum figure in your bank account, commit 10% of your earnings to charity, and surround yourself with people and ideas that help you to become the person you wish to be.

Surrender and Receive

Once you've crystallized your vision in detail and done your best to move toward it, surrender energetically and let the Universe show you the best way to reach your goals. Allow what you want to come to you, instead of forcing it to happen in a certain way.

- Stop resisting by worrying, doubting, or insisting on control. *Surrender* by taking joyful action with the assurance that what you want is already on the way to you. In short, your role is

KEY QUOTES

"Nothing has any value other than the value we put on it."

"Money is an exchange of energy between people."

"In order to create wealth, you must bring yourself into energetic alignment with the money you desire to manifest."

"Energy needs to flow or else it stagnates. Surrendering puts you in the flow."

"Your faith in The Universe must be stronger than your fear of not getting what you want."

to know and convey your desires in no uncertain terms to the Universe. Then, raise your frequency to that desired future by:

(i) Taking joyful, passionate action toward it;

(ii) Thinking and behaving as if you already have that future;

(iii) Meditating and practicing gratitude to stay connected with Source Energy and your desired future; and

(iv) Loving yourself.

Other Details in the Book to Look out For

The ideas in this book cannot be fully grasped at a logical or conceptual level. You can only *experience* them through real-life application. So, be open-minded enough to just try out the concepts and strategies above. With each epiphany, you'll uncover even more things to learn/grasp in order to move to the next higher level.

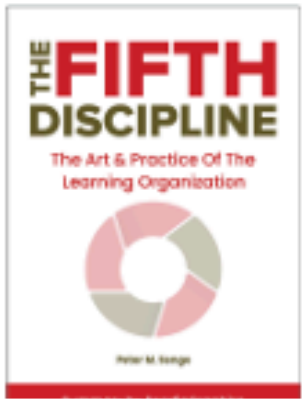
This book is written in an upbeat, "go-get-'em" tone with lots of personal anecdotes, humor, and the occasional curse words. For more tips and resources, please visit https://jensincero.com/.

About the Author

Jen Sincero (born 1965) is an American writer, speaker and success coach. Before becoming a writer and starting her own coaching practice, she worked as a marketer at CBS/Epic Records, and co-founded/played in several rock bands. You Are A Badass is Sincero's 3rd book, which became a bestseller and led to several spinoffs including You Are a Badass at Making Money, You Are a Badass Everyday and Badass Habits.

KEY QUOTES

"When you believe that everything you desire already exists, you are in a natural state of surrender."



THE FIFTH DISCIPLINE

The Art & Practice of The Learning Organization

Peter M. Senge

The Big "So What"

In today's increasingly dynamic and complex world, an organization's ability to learn and renew itself is a sustainable competitive advantage. This book provides the blueprints for the "learning organization", which is a potentially better model for:

- Managing and leading change
- Building adaptive organizations that can cope with an increasingly connected and volatile world
- Improving performance and happiness in the workforce

KEY QUOTES

"In the long run, the only sustainable source of competitive edge is your organisation's ability to learn faster than its competitors."

Introduction

A learning organization is "where people continually expand their capacity to create the results they truly desire, where new and expansive patterns of thinking are nurtured, where collective aspiration is set free, and where people are continually learning how to learn together."

Learning organizations combine adaptive learning (that help us respond and adapt to environmental changes) with generative learning (that enhances our capacity to create). In so doing, they continually expand their capacity to create their future.

As the world becomes more dynamic and connected, organizations that thrive and excel are those that tap on people's ability and commitment to learn, at all levels. This is highly achievable as we are all learners by nature.

"Through learning we extend our capacity to create, to be part of the generative process of life. There is within each of us a deep hunger for this type of learning."

"There are ways of working together that are vastly more satisfying and more productive than the prevailing system of management."

The 5 Learning Disciplines and 7 Learning Disabilities

The 5 Disciplines of the Learning Organization

There are 5 basic disciplines that set learning organizations apart from "traditional organizations". These are elaborated in the subsequent pages.

1. **Systems Thinking**, i.e. seeing underlying systemic structures. This is the "Fifth Discipline" that integrates all the disciplines.
2. **Personal Mastery**: Continually learn, achieve clarity & depth of vision, see reality objectively, & close the reality-vision gap
3. **Mental Models**: Uncover limiting beliefs & flaws in our world view
4. **Shared vision**: Commitment to a shared long-term aspiration
5. **Team learning**: Align & develop the capacity of the team as a whole, building on individual talent & vision

In applying the 5 disciplines, it is important to understand: A discipline is a *path* for developing skills or competencies, and practicing it is a lifelong process.

These disciplines are personal disciplines that determine how we think, interact and learn with one another. Our personal disciplines combine to define the organizational disciplines.

The 7 key learning disabilities

"I am my position": Most people focus on their job title or daily tasks, not the purpose of their enterprise. When people focus on their positions, they don't see their impact on the whole and feel little responsibility for organizational results.

"The enemy is out there": When we focus only on our positions, we don't see how our actions generate consequences that boomerang back to hit us. Instead, we blame others.

The illusion of taking charge: When we take aggressive action to fight the "enemy out there", we are actually being reactive. True proactiveness starts in our way of thinking.

KEY QUOTES

"In building learning organizations there is no ultimate destination or end state, only a lifelong journey."

"Organizations work the way they do because of how we work, how we think and interact; the changes required ahead are not only in our organizations but in ourselves as well."

The fixation on events: Monthly sales, quarterly earnings etc. are all short-term events that distract us from the larger, longer-term patterns and causes that lie behind those events. If we focus on events, we can only predict and react to them; we cannot create.

The parable of the boiled frog: A frog in a pot of water that is slowly brought to boiling point will not try to escape. Likewise, we won't notice the slow, gradual changes around us (which often pose the greatest threats) unless we slow down to observe them.

The delusion of learning from experience: We learn best from direct experience. The problem is, we usually don't directly experience (and learn from) the consequences of important organizational decisions (e.g. R&D, leadership changes) because they have a complex ripple effect over long periods of time.

The myth of the management team: The organization is supposedly led by capable management with diverse expertise. However, most of us are trained *not* to admit that we don't know the answer. The reality is, we often have management teams who are pretending to know, rather than actively learning.

Discipline 1: Systems Thinking

This is the "Fifth Discipline" or the cornerstone of the learning organization that underlies and unifies all 5 principles. Our education (and eventually management) systems have trained us to break down problems into small parts. This makes complex tasks manageable, but we no longer see connections and the big picture.

Systems influence behaviour. To understand a thunderstorm, we need to understand the entire eco-system, not just part of the pattern. When faced with a problem, we also need to understand the true systemic causes, not just "solutions" close by or visible to us. There are 3 progressive levels of thinking: Events (reactive) => Patterns of Behaviour (responsive) => Systematic Structure (generative).

KEY QUOTES

"All too often, proactiveness is reactiveness in disguise... True proactiveness comes from seeing how we contribute to our own problems."

"We would never transform the prevailing system of management without transforming our prevailing system of education. They are the same system."
- Dr. W. Edwards Deming

"When placed in the same system, people, however different, tend to produce similar results."

A Shift of Mind

Using systems thinking as a thinking cornerstone brings a shift from seeing parts to wholes, from reacting to creating. It means organizing multiple variables and details into a coherent story, where problem sources are identified and can be properly remedied. It means concurrently seeing the trees and the forest, the detailed and broad patterns.

We tend to see reality in straight lines, when it is really made up of curves and circles. Language shapes perception. When we get fluent in the language of systems thinking, we start to see circles of causality:

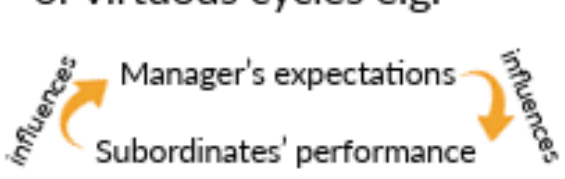
- We see inter-relationships rather than linear cause-effect chains
- We see processes of change rather than static snapshots

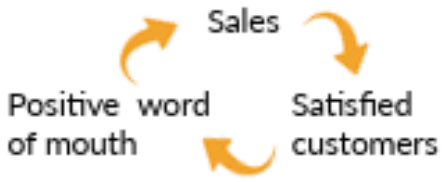
The main shift is to understand what we are part of the feedback process, not outside of it.

Building Blocks of "System Archetypes"

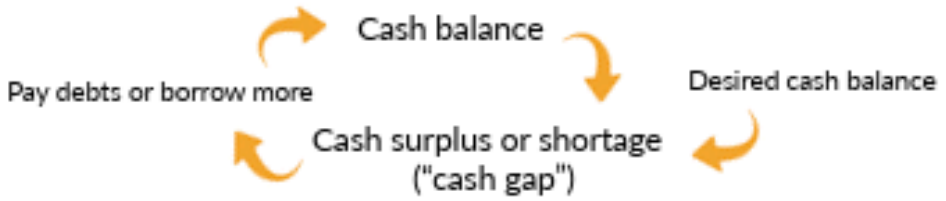
To practice systems thinking, we must learn to see recurring structures or system archetypes. Variables (including our actions) can be organized in loops of cause-effect relationships, where they reinforce or balance one another through a "feedback" process. There are 3 key components that form system archetypes:

Reinforcing (or amplifying) feedback: These are engines of growth that amplify small changes/ actions to form vicious or virtuous cycles e.g.





Balancing (or stabilizing) feedback: These are part of a self-correction process to maintain an implicit/explicit goal/ target. They are sources of both stability and resistance e.g.



Both explicit and implicit balancing processes are constantly at play. Most resistance comes from implicit goals/ assumptions (e.g. ambitions, fears).

KEY QUOTES

"(Systems thinking) means organizing detail complexity into a coherent story that illuminates the causes of problems and how they can be remedied in enduring ways."

"The practice of systems thinking…recognize types of 'structures' that recur again and again."

Delays: There may be systemic delays or "time lags" between actions and visible results (e.g. beer cannot be brewed instantaneously). A lack of awareness may trigger overly-aggressive actions that cause us to "overshoot" our mark.

Generative Learning through Systems Thinking

We cannot address issues that we don't see. Once we see the full structures within which we operate, we can work with or change them, slowly freeing ourselves from previously-unseen forces.

There are only a relatively small number of systems archetypes that underlie most management problems. With practice, we can learn to quickly recognize these archetypes, and know the high and low points of leverage that we can use.

Appendix 2 in the book lays out a list of common system archetypes and the management principles for each situation. Here are 2 of the most common archetypes:

- **Limits to Growth**. Often, we see periods of growth then a slow down, halt or reversal, as the growth hits certain limits (e.g. lack of manpower/supporting processes). The solution is not to push growth, but to identify and remove the factors limiting growth.
- **Shifting the Burden**. It is usually hard to identify the true underlying problem(s), or costly to address them. Hence, managers may prefer to "shift the burden" using symptomatic solutions. These may seem to alleviate the issues, but in reality only move the problems to other parts of the system. The underlying problems usually resurface in a different or worse form.

Using the archetypes, identify strong leverage, where small but well-focused actions can bring huge and enduring improvements.

Discipline 2: Personal Mastery

Learning organizations can only exist through individuals who learn and exhibit high levels of personal mastery, i.e. they live life creatively (rather than reactively), and keep recreating themselves through improvement in competence, skills, spiritual growth etc. Their spirit for learning and growth form that of the organization's. Pursuing personal mastery is a lifelong process...you never "finish" learning.

KEY QUOTES

"Structures of which we are unaware hold us prisoner."

"Being stuck in a system that is not working invariably leads to (us) feeling frustrated and trapped – until we see the larger patterns and our own part in creating these patterns. Once we do, new alternatives become evident."

"To change the behaviour of the system, you must identify and change the limiting factor."

"Individual learning does not guarantee organizational learning. But without it no organizational learning occurs."

Elements of Personal Mastery

Personal Vision: This is a specific picture of your desired future, including areas like health, freedom etc. It includes (but is more than) your life purpose, and has a deep meaning for you.

Holding creative tension: "Creative tension" is the gap between your vision and reality. To resolve this tension, you can either work to bring your reality up towards the vision, or compromise and bring your vision down towards reality. Mastering creative tension means gaining clarity on your vision and your reality, using the gap to generate energy for change, and developing a capacity for perseverance and patience.

Overcoming structural Conflict: Most of us have at least 1 of these beliefs limiting our ability to create what we really want:

- Powerlessness: That we are unable to create the things we want
- Unworthiness: That we do not deserve to get what we want

You can overcome such resistance with strong willpower, though such limiting beliefs can also be changed fundamentally with time.

Commitment to the truth: The best way to start dealing with structural conflict is to be willing to see how we limit or deceive ourselves, to continually challenge our theories of why things are the way they are, and to broaden/ deepen our awareness of structures underlying current events.

Using the subconscious: Deliberately develop rapport with your subconscious or automatic minds, by focusing on your desired results clearly, in a quiet state of mind.

Fostering Personal Mastery in an Organization

You can't force someone to embark on the path of personal growth. As a leader, you can encourage personal mastery by:

Creating a conducive climate e.g. make it safe for people to create visions, inquire & commit to the truth, challenge status quo etc.

Developing all 5 learning disciplines concurrently in the organization, so they can strengthen/ reinforce one another.

Being a role model by committing to your own personal mastery.

KEY QUOTES

"People with high levels of personal mastery are continually expanding their ability to create the results in the life they truly seek. From their quest for continual learning comes the spirit of the learning organization."

"Vision is a specific destination, a picture of the desired future... it is the goal pulling you forward that makes all the work worthwhile."

"Personal mastery...means approaching one's life as a creative work, living life from a creative as opposed to reactive viewpoint."

"There's nothing more powerful you can do to encourage others in their quest for personal mastery than to be serious in your own quest."

Discipline 3: Mental Models

We simplify our world and carry it in our heads as images, assumptions and stories e.g. "People are lazy by nature". Mental models shape how we act because they affect what we see. Two people with different mental models can experience the same event, but see different details and make different interpretations.

There are no right or wrong mental models - the problems arise when they become implicit and we are unaware that they are shaping our thinking and actions. What we are unaware of, we cannot examine, and hence cannot change or improve. The discipline starts with turning the mirror inward to discover our own mental models.

Surfacing and Testing Mental Models

There are 3 facets to develop an organization's capacity to surface and test mental models:

- **Use tools & skills** that promote personal awareness & reflective skills. Specifically, reflective skills involve becoming more aware of how we form our mental models & how they influence our actions. Inquiry skills involve how we interact with others, in dealing with complex and conflictual issues. Some key tools include:

Reflect on gaps between espoused theory (what we say) vs theory-in-use (what we do): When we identify a gap or incongruence, don't judge or criticise. Instead, ask: "Do I really value the espoused theory and is it really a part of my vision?", and make adjustments from there.

Recognize "leaps of abstraction", i.e. our jumps from concrete observations to generalization. Such untested generalizations (e.g. "customers don't care about speed") can easily lead to further generalizations. To spot leaps of abstraction, ask yourself:

1. What do I believe about the way the world works, and upon what "data" is this generalization based on?
2. Am I willing to consider that this generalization may be inaccurate or misleading?

KEY QUOTES

"Structures of which we are unaware hold us prisoner. Once we can see them and name them, they no longer have the same hold on us. This is as much true for individuals as it is for organizations."

"Our theories determine what we measure."
- Albert Einstein

"Generative learning…requires people at all levels who can surface and challenge their mental models before external circumstances compel them to do so."

"Because we remain unaware of our mental models, the models remain unexamined. Because they are unexamined, the models remain unchanged. As the world changes, the gap widens between our mental models and reality, leading to increasingly counter productive actions."

Expose the "left-hand column" (express what we normally don't say): Record a conversation by writing down what's being said on the right hand column. Then, write down what you were thinking/feeling (that led to your spoken response) on the left hand column. Once you can see your assumptions (and why you said or chose to say/not say certain things), you can choose to more openly articulate your views.

Balancing inquiry and advocacy. For effective collaborative learning, we need both advocacy (taking a stand or a point of view) and inquiry (asking questions and inviting alternative views). An example of a balanced approach is: "This is my point of view and how I arrived at it. How does it sound to you?"

- **Develop "infrastructures"** that institutionalize regular use of tools and skills for the discipline of mental models, and
- **Build a culture** that promotes inquiry & challenges our thinking

Discipline 4: Shared Vision

A vision is truly shared when each person in the organization has a similar picture, cares deeply about it because it reflects their personal vision, and is connected to others by this common aspiration.

Shared vision is crucial for the learning organization because it provides the energy and focus for learning, and links people's work to a larger purpose embodied in the organization's products and services. It creates alignment between people and organization, creates trust and courage to do what is needed for the vision, and fosters a naturally long-term view in people.

Building Shared Vision

- **Encouraging personal vision**: Shared visions derive their energy and commitment from personal visions, and the relentless pursuit of the vision and growth that comes with personal mastery.
- **Personal vision => Shared vision**: The relationship between personal vision and shared vision is best illustrated using a hologram. When you divide a hologram, each small piece still shows the whole image intact. When people share a vision, each of them shares responsibility for the whole vision (not just for his

KEY QUOTES

"Practicing inquiry and advocacy means being willing to expose the limitations in your own thinking – the willingness to be wrong. Nothing else will make it safe for others to do likewise."

"Few, if any, forces in human affairs are as powerful as shared vision."

"A shared vision is a vision that many people are truly committed to, because it reflects their own personal vision."

"A vision is truly shared when you and I have a similar picture…when people truly share a vision they are connected, bound together by a common aspiration."

"Visions are exhilarating. They create the spark, the excitement that lifts an organization out of the mundane."

piece), each represents the image from a different point of view, enriching the vision without changing it. Visions that are truly shared don't emerge overnight; they grow out of expression, listening and interaction of individual visions.

- **Spreading visions: commitment vs compliance**. People who are genuinely compliant accept the vision and play by the rules of the game. However, a committed person takes it further – he truly wants the vision, brings additional energy, passion and excitement, and takes responsible for the game. In fact, he will try to change the rules of the game, if necessary, to achieve the vision.

Getting Enrolment and Commitment to the Vision

As a leader, you can use these guidelines:

- Be enrolled yourself
- Describe the vision simply & honestly
- Let the other person choose

The vision cannot stand alone. It works together with an organization's purpose and core values to answer the question: What do we believe in? This is then translated into concrete day-to-day behaviours.

- Vision = "What" is the picture of the future we seek to create
- Purpose = "Why" our organization exists
- Core Values = "How" the company and its people lives on a day-today basis while pursuing the vision

Discipline 5: Team Learning

Alignment is a pre-requisite to individual empowerment. Empowering individuals when there is no or low alignment only brings chaos and wastes energy. Team learning aligns and develops the capacity of the team as a whole, building on individual talent and vision to achieve results that members can't achieve on their own.

In organizations, team learning involves 3 key dimensions:

Insightful thinking about complex issues by tapping the minds of many people.

KEY QUOTES

"This is the art of visionary leadership – how shared visions are built from personal visions."

"People who are enrolled or committed truly want the vision. Genuinely compliant people accept the vision."

"A group of people truly committed to a common vision is an awesome force"

"There is really nothing you can do to get another person to enrol or commit. Enrolment and commitment require freedom of choice."

"When a team becomes more aligned, a commonality of direction emerges. There is less wasted energy. In fact, a resonance or synergy develops."

Innovative and coordinated action, with operational trust in how members can depend on one another to complement their actions

Learning across teams. Team members usually interact and work with other teams too, hence spreading the learning across teams

The Discipline of Team Learning

Team learning involves :

Dialogue and discussions: Dialogue lets a group explore complex or difficult issues from many points of view, hence going beyond individual understanding and uncovering insight that isn't achievable individually. For a dialogue to work, all parties must:

- Suspend assumptions: be aware of assumptions and hold them up for examination
- See each other as colleagues (putting aside hierarchy and roles)
- Balance dialogue & discussion: Dialogues are diverging, with different views being presented and complex issues explored. Discussions are converging, with views being defended, analysis and decisions made. Learning teams switch between dialogue and discussion to identify and decide on new courses of action.

Dealing with conflict and defensiveness. Great teams do not avoid conflict. Instead, they develop skills to see and deal with current reality, and overcome defensiveness. That is why the disciplines of personal mastery and mental models are essential at an individual level before they can be amplified and leveraged at a team level.

Learning through practice. Learning teams need to learn how to learn together. Like team sports, they need "practice fields" to become more effective learning units, to form team skills and team IQ that exceed individual skills and IQ.

INTEGRATION AND APPLICATION

Integrating the 5 Disciplines

Organizations are living systems; they are not static – they have huge capacities to learn, evolve and heal themselves, by how its people live and work day to day.

KEY QUOTES

"The purpose of dialogue is to go beyond any one individual's understanding."

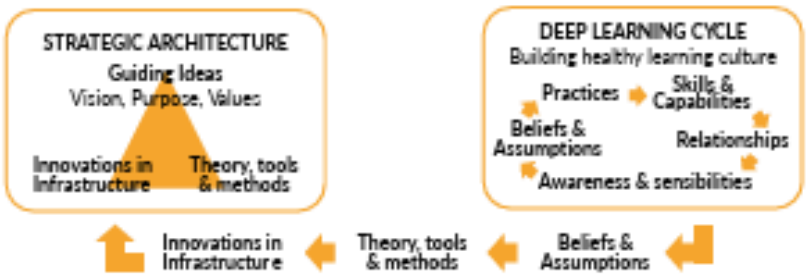
"Unless the team also builds the skills for seeing rather than obscuring current reality, their capacity for learning will be unreliable."

"Perhaps when we rediscover organizations as living systems, we will also rediscover what it actually means to us as human beings to work together for a purpose that really matters."

The 5 disciplines reinforce and support one another, integrated by Systems Thinking. As people practice the discipline of personal mastery, they experience gradual changes, e.g. integration of reason and intuition, greater connectedness to the world, greater compassion and commitment to the whole. The discipline of mental models help people to examine their own assumptions, become more open to and identify new ways of thinking. Shared vision helps people see how their actions contribute to changing and shaping their future. All 3 disciplines set the foundation for team learning, which helps team members to create results they desire, at a level beyond their individual capability. Systems thinking underlies all 4 other disciplines to help us see the big picture and our roles in it, restructure assumptions, and reveal causes and leverage in complex situations.

STRATEGIES

You can build deep learning cycles to reinforce current or emerging learning cultures. There are also many possible intervention strategies, but they should include the 3 elements of the strategic architecture to be most effective:



Strategies for building the learning organization

Integrate learning & working: Learning as an "add-on" to people's existing work only creates more fragmentation. Instead, (a) create opportunities to apply the tools to daily work and (b) create an environment that is conducive to reflecting, thinking and building shared visions. Simple tools like After-Action-Reviews can help to connect action and reflection.

Start where you are, with whoever is there: Strategic thinking need not begin at the top. Any leader, at any level, can/should think strategically. You can start by focusing on the "impossibles", i.e. problems that people have given up on. First, take time to figure it out, then enrol people who are willing to work with you voluntarily, and gradually build from there. To succeed, you'll have to believe in and focus on tapping people's talents and deepest aspirations.

KEY QUOTES

"Successful learning practitioners intent upon having a large-scale impact learn how to connect with the core of the organization –at the deepest levels of individual and collective identify–and how the organization most naturally creates value."

Become Bicultural: Stay in touch with the wider organizational environment, as you need to work with the political forces in the organization. Start with stealth transformation. There's no need to hide your efforts, but don't make a big deal at the early stages until you have enough results to garner support. Be sensitive to and use the language of the incumbent, so you relate to deep values that people can understand.

Create Practice Fields, where people can try something new and make mistakes before deploying the ideas in the real-world. Examples include "camp and hierarchy" ("camps" where people play and address issues away from formal management systems), and "the swirl and wall of fire" (let ideas get tossed around until they get enough organization-wide support).

Connect with the Core of the Business, i.e. where the organization creates value most naturally. First, you must identify who the organization is at the core and what it stands for. Then, do the "fieldwork" to identify the emerging leaders/people in the organization who want to step up and run with the new ideas.

Build learning communities, i.e. groups who gravitate together to address questions they care about. These groups can't be controlled nor manipulated. Use conversations with heart and meaning, and a mix of dialogue and implementation.

Embrace diversity. Work with people/ organizations who are very different, to see varying perspectives and continually challenge our thinking. Consider connecting to new partners across sectors.

Develop Learning Infrastructures (e.g. training and formal education, practice, research and doctrine) that embed learning & insights deep into the fabric of the organization.

The Leader's New Work

Leaders in learning organizations are fundamentally designers, teachers and stewards.

Leaders as Designers: A leader is often considered the captain or navigator of a ship. However, the most impactful and oft-neglected role of the leader is as the designer of the

KEY QUOTES

"The new view of leadership in learning organizations centers on subtler and more important tasks. In a learning organization, leaders are designers, teachers and stewards."

ship. Anyone from any position can be a leader. Appreciating the organization as a living system, a good leader designs the ship with:

- A strong foundation of governing ideas (vision, purpose and values) that connect, mobilize and focus its people.
- Iterative design and learning infrastructures that evolve over time, (e.g. policies, strategies, structures that translate the ideas into daily decisions)
- IT infrastructures that are designed by the teams responsible for learning implementation, not by technical designers focusing on the technology itself.

Leaders as Teachers: As teachers, leaders help people achieve more accurate, insightful and empowering views of reality. To do so, they:

- See gaps in organizational capacity, through engaging personally in dialogues
- Balance short and long term solutions: They help people to apply systems thinking to solve complex problems, while recognizing that such solutions take time and resources. They tackle this dilemma by responding to short-term opportunities in ways that concurrently build longer-term capacity.
- Become learners first. They inspire their students through their commitment as practitioners, not as preachers or "advocates".

Leaders as Stewards: Stewardship is about the desire to serve those we lead, as well as serve a larger purpose. Leaders who demonstrate stewardship are:

- Committed without blind certainty: Someone who is certain about his purpose may be fanatical or close-minded; someone who is committed to his vision recognizes his uncertainties but chooses to stay committed to his path.
- Focus on the larger goal: Learning-oriented leaders don't make decisions to preserve their own power, ambition/status. They focus on the longer-term results, depends on their clarity, commitment & openness to win over their followers

Other Useful Details in the Book to Look Out For

The book was first written in 1990. What seemed radical then is now increasingly accepted and practiced. This revised edition was written some 16 years later, with updates based on global changes and insights from practical application.

This summary only outlines the key ideas of the 423-page book. There are many other details included in the book, such as:

KEY QUOTES

"It is fruitless to be the leader in an organization that is poorly designed."

"(Artful designers) see visions and other guiding ideas as tools for mobilizing and focusing energy. They judge the ideas by their impact, not by how they sound. And they never forget that guiding ideas are always works in progress."

"Genuine commitment…always co- exists with some element of questioning and uncertainty. In this sense, commitment is truly a choice rather than a compulsion."

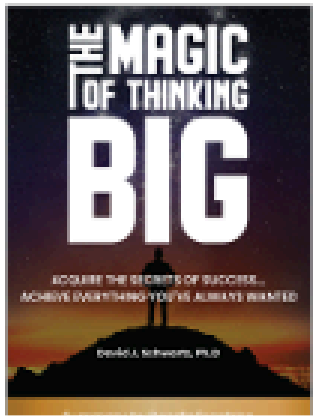
- 11 Laws of the Fifth Discipline
- Details of "The Beer Game" (a laboratory experiment that shows the learning disabilities at work in real organizations and systems)
- Real-life case studies to illustrate the 5 disciplines at work
- Snippets and takeaways from Senge's conversations with leaders and organizational learning practitioners.
- How the fifth discipline can be used to address many of the social and environmental problems that we face today, from climate changes to entrenched poverty cycles.

About the Author

Peter Michael Senge (born 1947) is an American systems scientist. He is also the founding chairperson of the Society for Organizational Learning, a senior lecturer at the MIT Sloan School of Management, and co-faculty at the New England Complex Systems Institute.

Senge lives in Cambridge, Massachusetts. Besides authoring the book *The Fifth Discipline*: *The Art and Practice of the Learning Organization* (1990, rev. 2006), he also co-authored *The Fifth Discipline Fieldbook*, *The Dance of Change*, and *Schools That Learn*.

KEY QUOTES



THE MAGIC OF THINKING BIG

Acquire the Secrets of Success...Achieve Everything You've Always Wanted

DAVID J. SCHWARTZ, PH.D

Introduction

The secret to success doesn't lie in superior talent or intellect. It lies in your thinking. This book explains how you can think big to motivate yourself, improve your results, earn more money, and get more happiness and fulfillment out of life.

Unlocking the True Secrets of Success

Harness the Power of Belief

The first step to success is to believe that you *can* succeed. Your brain is a "thought factory": what you focus on determines what type of thoughts you produce.

- If you *believe you can do something*, your mind will seek out ways to make it happen (e.g. how to acquire the necessary skills or resources). You'll feel energized and motivated to take action, and others can sense your confidence and conviction.
- If you don't believe in yourself, no one else will. If you *think something is impossible*, you won't even try and others can sense your doubts or disbelief.

To develop the power of belief, you need 3 things:

- *Focus on success, not failure*. If you focus on why/how you'll fail, your mind will come up with all sorts of problems and obstacles. If you focus on why/how you'll succeed, your mind will look for opportunities and solutions. Stay away from thoughts like "I can't do this" or "I will fail". Instead, focus on thoughts like "I can do this" and "I will succeed."

KEY QUOTES

"Think Big and you'll live big. You'll live big in happiness. You'll live big in accomplishment. Big in income. Big in friends. Big in respect."

"There is nothing either good or bad except that thinking makes it so."
—William Shakespeare

"Believe in yourself, and good things do start happening."

"Think doubt and fail. Think victory and succeed."

"You can move a mountain with belief. You can win success by believing you can succeed."

- *Don't short-change yourself*. Remember: successful people are just ordinary people who believe in themselves and what they do. You don't need special powers or talents to succeed.

- Your level of success is proportionate to the size of your belief. So, *think big and believe big*!

Enlarge your Thinking

The size of your achievements will never outgrow the size of your thinking. To increase your success, you must upsize your thinking.

Start by seeing yourself in a positive light. Identify your 5 top assets (e.g. education, attitude, connections). Get feedback from friends, family and colleagues if necessary. For each asset, list down 3 people who've done well even though they lack your strengths. Realize that you're actually better than you think.

Our brains think visually using images. Use positive, expansive vocabulary that create empowering mental images and possibilities.

- Words like "It's hopeless. We're completely boxed in." can make you feel stuck and powerless. You can paint a totally different picture by changing your vocabulary to "Let's look at things from a fresh angle to see what new possibilities emerge."

- Use strong, positive and energizing words to describe your *emotions and plans*. Saying "I feel wonderful!" makes you feel much better than "I'm fine" or "I'm ok". Saying "this is a really exciting opportunity" moves people more than "the numbers look positive".

- Describe other people using positive words and phrases, and avoid putting others down. *Compliment others* wherever possible (e.g. compliment their appearance, actions, or achievements).

Enlarge your vision. Look beyond how things are at present, to see how things can be in the future.

KEY QUOTES

"The size of your success is determined by the size of your belief."

"The price tag the world puts on us is just about identical to the one we put on ourselves."

- Ask questions like, "How can I double the value of this house?" or "How can I increase our customers' average expenditure by 10x?" This triggers your brain to *explore possibilities*.

- Focus on how you can *add value* to things (e.g. a house or business), people (e.g. your colleagues or family), and yourself (i.e. to realize your potential).

- Don't get so lost in the trivialities that you lose sight of the *big picture*. Remind yourself of the overall objective, and ask yourself "Is this important enough for me to get worked up?" or "Am I focusing on what truly matters?" For example:

  (i) Great public speaking is less about perfecting your choice of words or delivery. It's more about sharing something meaningful that you're passionate about.

  (ii) Before you lash out at someone for a petty mistake/ flaw, consider if it's really important or if it'll just create unnecessary conflict, waste your time/energy and hurt your relationships.

KEY QUOTES

"Look at things not as they are, but as they can be."

"How big we think determines the size of our accomplishments."

"To eliminate quarrels, eliminate petty thinking."

Eliminate your Excuses

Many people suffer from "excusitis". They make excuses to explain why they can't or won't do something. The more they repeat the excuses, the more they reinforce their negative beliefs.

Cure yourself of these 4 common excuses:

- *Health*: For every person who uses health as an excuse (e.g. a weak heart, an old injury), you can find a successful person who achieves his goals/dreams *in spite of* the same issues, diseases or handicaps.

  (i) Stop talking or fretting about your health. If you have genuine health problems, take steps to improve your health or seek professional help.

  (ii) Feel grateful for your condition. There are others who suffer from worse aches, pains and ailments than you.

  (iii) Make a conscious decision to live fully while you can.

"Thoughts, positive or negative, grow stronger when fertilized with constant repetition."

- *Intelligence*: You don't need a high IQ to succeed.

  (i) Don't underestimate your intelligence and overestimate others'. What truly matters isn't how smart you are, but how you *use* your abilities.

  (ii) Your attitude matters more than your intelligence. With a "can-do" attitude, you can learn and achieve anything.

  (iii) Don't rely on rote learning. Use your brain to think, evaluate/develop ideas, and find better ways to do things.

- *Age*: Stop thinking that you're too old or too young to succeed.

  (i) If you think you're *too old*, stop to consider this: an average person has about 50 productive years from 20-70 years old. How many productive years have you used and how many more do you have? If you work on something meaningful and tell yourself "I'm still young", it rejuvenates you and further extends your productive life.

  (ii) If you think you're *too young*, remember that youth isn't a constraint unless you allow it to be. You can succeed in most roles (and lead people who're older than you) so long as you understand people, know your job and are mature enough to handle the responsibility.

- *Bad luck*: Unsuccessful people attribute their failures to bad luck and attribute others' successes to good luck. In reality, successful people do well because they prepare, plan, take action and learn from mistakes. Create your own fortune: develop the right attitudes/skills and master success principles and tools.

Conquer your Fears

Fear is a real obstacle to success: it can stop you from taking action, speaking up, grasping an opportunity, and can even hurt your health. Telling yourself that "There's nothing to be afraid of" or "It'll be ok" won't remove the underlying anxiety. The best way to address your fear is to confront it.

KEY QUOTES

"What really matters is not how much intelligence you have but how you use what you do have."

"Stickability is 95 percent of ability."

"We don't become successful simply through luck. Success comes from doing those things and mastering those principles that produce success."

"We can cure a mental infection the same way we cure a body infection-with specific, proved treatments."

Most of our fears come from a lack of confidence. Use these 5 ways to build your confidence.

- Dwelling on a fear will only amplify it. The best way to overcome fear is simply to *take constructive action*: Identify what you're afraid of, then take steps to address it. If you're afraid you'll fail an exam, study harder or find a tutor. If you're afraid to speak in public, attend a public-speaking course or join Toastmasters.

- The more you dwell on your mistakes and painful memories, the worse you'll feel. *Manage your memory bank* by depositing and withdrawing only positive memories. Focus on positive experiences that boost your confidence, and let the bad memories fade over time.

- *See people in perspective*. Realize that successful people with money, status and power are also human beings with needs, problems and desires. When people seem rude or aggressive, don't treat it as a personal attack—tell yourself that they're actually nice people who're just having a bad day.

- Never act against your *conscience or values*. The guilt will eat away at you and cause you to lose confidence in yourself.

- Your physical state affects your mental-emotional state and vice versa. When you *behave confidently*, you'll also feel confident.

  (i) Sit at the front row during meetings and assemblies;

  (ii) Make eye contact and give a big smile to others;

  (iii) Speak up: volunteer your comments, ideas or questions; and

  (iv) Walk fast with your shoulders back and your head held high.

Think Creatively

Creative thinking is about finding new and better ways to do things. You can apply it to *any* issue or context, e.g. a

KEY QUOTES

"Action cures fear. Indecision, postponement, on the other hand, fertilize fear."

"There is within each of us a desire to be right, think right, and act right. When we go against that desire, we put a cancer in our conscience."

"To think confidently, act confidently."

"Creative thinking is simply finding new, improved ways to do anything."

low-income family finding a way to send their son overseas to study, or an accountant designing a simpler process for book-keeping.

Use these tools/tips to improve your creative thinking:

- Remove the word "impossible" from your vocabulary. If you believe something's possible, your mind will seek out the solutions. *Focus on why something can be done*.

- There's always more than 1 way to achieve a goal. *Free yourself* from old ways of thinking. Be open to new ideas, experiment with new approaches and look forward (not backward). Continually improve yourself, e.g. have a weekly improvement plan to target specific skills/ attitudes, or to test new solutions.

- Your capacity is a reflection of your inner beliefs. To *expand your capacity*, welcome new opportunities and responsibilities, and ask yourself "How can I do even more?" or "What can I do to increase my output?"

- Get better insights by *asking questions and listening*:

  (i) Test an idea by asking "What do you think of this idea?"

  (ii) Invite others to talk (ask "What do you think we can do about this?" or "Can you tell me more about your experience?")

  (iii) Listen actively and process what the other person is saying.

- *Inject mental stimulation* by:

  (i) Joining ≥ 1 professional group where you can interact with people *within* your field of work, and ≥ 1 group to meet people *outside* your field of work.

  (ii) Expanding your depth and range of ideas: Write down your ideas as they surface → Review them regularly → Keep the ideas with value/potential and throw out the rest → Develop your ideas (e.g. think/ research about them, and connect them to other related ideas) → At the right time, flesh out an idea on paper → Try to "sell" it to someone to test if it has real value.

KEY QUOTES

"When you believe, your mind finds ways to do."

"Capacity is a state of mind. How much we can do depends on how much we think we can do."

"Somebody must 'buy' the idea; else it has no value."

See Yourself in a Better Light

Why do some people emit confidence and command respect, while others don't? The answer lies in their self-image and appearance.

- How you see yourself affects how you look and behave. This shapes *others' impression of you* and how they respond to you.

- Your appearance also affects *how you think and feel*. When you're dressed up for a party, you'll be in a "party mood" When you're dressed up as a soldier you start to think and act like one.

- *Pay attention to your appearance*. You can use the same amount of money to buy half the amount of clothes at double the price, i.e. go for quality over quantity.

Take pride in your work. Three brick-layers were asked about their job. One said that he was laying bricks. The second said he was making money. The third said that he was building the world's greatest cathedral. How would *you* define what you do?

- When you believe that your work is *meaningful and important*, you'll put in your best effort, which leads to better results, more money, promotions, status, and fulfillment.

- If you're a leader or manager, your attitudes and behaviors will directly affect your team. *Lead by example*: demonstrate the type of enthusiasm, can-do attitude and positive behavior that you'd like to see in your team members.

Try giving yourself a pep-talk at the start of each day or just before a challenging task.

- Learn to *sell yourself to yourself*.

  (i) List down your best qualities.

KEY QUOTES

"Others see in us what we see in ourselves. We receive the kind of treatment we think we deserve."

(ii) Write a self-promotion commercial, e.g. "David, I'd like you to meet David, who's a really important person. David is..."

(iii) Say this out loud daily with conviction, ideally in front of a mirror. In addition, read this silently whenever you need a confidence-booster.

Upgrade your thinking in all aspects of life. When you get worried or angry, stop to think if this is what an important person would get worried or angry about. Evaluate your appearance, attitude, language, and actions by considering what successful people would do in your shoes.

Create a First-Class Environment

Our physical health is affected by the food we consume. Likewise, our mental health is affected by our environment and mental diet. Our beliefs and habits—from the clothes we wear to the way we greet one another—are shaped by our environment. You'll be a different person today if you had grown up in a different country and culture. Your current environment will in turn shape the person you become in the future.

Improve your social environment: spend time only with people who provide positive mental stimulation.

- *Enlarge your social circle* by joining new groups or organizations to meet people with different background and experiences. Don't just hang out with friends who share your views, religious or political beliefs. Get to know successful people (or people with potential) and learn how/why they see and do things differently.

- Choose friends who're *positive, big-thinkers*, and want you to succeed. Stay away from people who constantly gossip, complain about petty issues, speak negatively about others or spread rumors/scandals.

Consciously manage the negative forces around you. We're constantly bombarded by suppressive forces that tell us what we cannot or should not do. Many people simply give up and accept their lot in life. Others may achieve some

KEY QUOTES

"Go first class when you have questions. Seeking advice from a failure is like consulting a quack on how to cure cancer."

success but hold back due to their fear of failure, loss or uncertainty. Only 2-3% of people keep making progress year on year because they refuse to surrender or listen to the naysayers.

Only take advice from the best in class. Seek out people who've achieved the results you wish to achieve and ask for their advice.

Improve your Attitude to Improve your Results

Your attitudes affect how you think, feel and act, to affect your outcomes. If you hold negative attitudes toward something or someone, others can sense it from your body language.

Become activated, so you can infect others with your passion and enthusiasm:

- *Dig deeper* to learn more about something/someone. You can always uncover interesting facts that spark your interest.
- *Inject life* into everything you do, be it a handshake, a smile, or a speech. When you put in vigor, feelings and conviction, you'll feel more alive and invigorate others around you.
- Spread *good news and positive experiences* that uplift everyone (including yourself). Each time you interact with someone, aim to leave him/her feeling better than before they met you.

Every human being wants to feel recognized. Treat everyone like they're important, regardless of their status/role or whether they can do anything for you.

- When you make others feel important, they'll notice you and be *more receptive* toward you, which makes you feel more important too.
- *Visualize people at their best* and treat them accordingly.
- *Show your appreciation*: smile, let people know how you depend on them, and give your sincere compliments.

KEY QUOTES

"Attitudes are mirrors of the mind. They reflect thinking."

"Dig in deeper and you dig up interest."

- Always *address people by their name*, making sure that you spell and pronounce it correctly.

- *Share the credit* instead of hogging it. If you receive a praise from your boss, pass it down to your team.

- Give *planned attention* to your loved ones. Ask yourself daily what you can do to make them happy, and set aside time where you can give them your undivided attention.

The best way to make more money is to put service first. If you give more than what people expect, they'll keep coming back.

Treat People Right

No one can succeed without others' support. Work on being likeable. Remember people's names, be courteous, make others comfortable around you, and use every opportunity to add value or give strength to others.

Take the initiative to make friends. Say nice things to everyone you meet, including strangers. At every possible opportunity, introduce yourself to others. Make sure you get their name right. Pronounce it the way they do, and write it down with the correct spelling. Where possible, get their contact details, and follow up with those whom you want to get to know better.

Accept others' limitations and imperfections. Respect individual differences and resist the urge to correct/reform others.

- When you *assume the worst* in others, you'll subconsciously dismiss their inputs, and react suspiciously to everything they say and do. Not surprisingly, they'll respond unfavorably to you too.

- Focus on the *positive qualities* in others. When you see the best in people, they'll also respond positively to you.

It always pays to listen to people, regardless of whether you're trying to understand a customer, solve a problem or win a friend. Encourage others to talk about themselves

KEY QUOTES

"Put service first, and money takes care of itself."

"A person is not pulled up to a higher level job. Rather, he is lifted up."

"Don't be a conversation hog. Listen, win friends, and learn."

(instead of hogging the conversation) and truly listen to what they're saying.

When things go wrong, don't blame others or berate yourself. Focus on how you can do better in future, and make it happen. Set aside your ego to mend any cracks in your relationships.

Take Action Proactively

Ideas alone are useless without action. Don't wait for the perfect plan or conditions before you act.

- You can't avoid risks or challenges. It's better to take the first steps, *allow the situation to unfold*, and work out the solutions along the way.
- As you take action, you'll *overcome your original fears* and add value to your ideas. On the other hand, procrastination will only leave you feeling guilty and frustrated.

Don't wait for inspiration before you act. Instead, take action to *generate* inspiration and momentum. Think of your brain like a mechanical system—by turning a few cogs, you can start your mental engine:

- Break down a task into *smaller steps* and start going through them mechanically. If you need inspiration for a project, start writing or doodling to get your creative juices flowing. If you're struggling to make your sales calls, start by driving out, parking your car, taking your samples, walking to a door, and ringing the bell. Before long, you'll get start to build momentum.
- *Practice* this approach on unpleasant chores or tasks, then apply it to more intense work, e.g. solving a challenging problem.
- The key is to identify what you can do and *take action now*.

Take the initiative to do what's right or meaningful, without being told to do so. If you believe something ought to be done, then do it instead of waiting for others. If you're

KEY QUOTES

"Action feeds and strengthens confidence; inaction in all forms feeds fear."

"Action must precede action. That's a law of nature."

interested in a project, then volunteer for it. Don't let your fear of rejection or failure hold you back.

Turn Defeat into Triumph

Successful people don't cruise through life. They too face opposition, setbacks and defeat. However, instead of complaining about their bad fortune, they learn from the experience, overcome the obstacles, and bounce back stronger than before. To bounce back from a defeat:

- See every setback as an opportunity to learn. Do a *post-mortem* to identify the mistakes, gaps or flaws, and address them without condemning yourself or blaming others.
- *Believe there's a solution*, then set your mind to find it. However, don't bang yourself against the wall by doing the same thing over and over. Experiment with new solutions and approaches.
- If you're stuck, *take a break* (e.g. go for a walk, take a nap or a short vacation) and return to the problem with fresh eyes.

Make Progress with Clear, Meaningful Goals

Every major breakthrough started with a vision. A goal is a clear objective that you're working toward. To take purposeful action, you must first get clear on where you want to go:

- Start by visualizing *where you want to be in 10 years*:
  - (i) *Work*: What level of income, responsibility, authority and status do you wish to achieve?
  - (ii) *Home*: What lifestyle do you want to have, and what financial support do you want to give your children or parents?
  - (iii) *Social*: What type of friends and social groups do you invest your time in, and what causes would you champion?

KEY QUOTES

"Defeat is only a state of mind, and nothing more."

"Before you start out, know where you want to go."

- Define *what you want to achieve in life*, who you wish to be and what would fulfill you.

Have the courage to follow your desires. When you're doing something you love and believe in, you'll feel energized and inspired, thus increasing your chances of success.

- Beware of these *5 goal-killers*: undervaluing your potential, choosing "security" over passion, avoiding a career because it seems too competitive, doing what your parents want you to do, or using family responsibilities as an excuse not to change.

Set big goals, break them down into smaller milestones, then conquer them one step at a time.

- Set goals for *30-day periods*, broken down by daily activities. For example, a 30-day self-improvement plan could look like this:

  (i) Break bad habits (e.g. stop gossiping and using negative language) and build positive habits (e.g. compliment people and set aside time daily to plan your work for the next day).

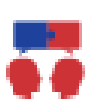
  (ii) Increase your value to your employer (e.g. develop your team members and improve work efficiency) and your family (e.g. show appreciation to your spouse/kids).

  (iii) Build your mental capacity (e.g. read useful books/ materials, do quiet reflection daily).

- Be prepared to *make detours* or take a different route to arrive at your goal.

Be an Effective Leader

No leader can rise or succeed without the support of his/her followers. Master the 4 rules of leadership to become an effective leader.



To influence people, you must first see things from their perspective. Put yourself in their shoes to consider how they

KEY QUOTES

"To get others to do what you want them to do, you must see things through their eyes."

may see things given their background, interests and circumstances. Ask yourself: what would make them *want* to do what you'd like them to do? For example, what would make a customer want to buy your product? What would make a 5 year old kid want to eat his vegetables?

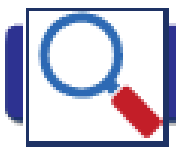
Respect others as fellow human beings. In every decision:

- Ask yourself, "What's the human way to address this?" For example, during a layoff, an executive took time to explain the situation to each employee and even helped them to set up interviews with potential employers.

- Show that you're putting their interests first. The best way to win goodwill and loyalty is to be genuinely interested in others' needs, well-being, and success.

Be progressive in all aspects of your life. Set high standards and seek continual improvement for yourself and others. Treat others the way you'd like to be treated.

Set aside quiet time for solitude, deep thinking and reflection. Commit 1 hour daily to think deeply in a distraction-free space. You can choose to focus on a specific issue or just contemplate whatever issue comes to mind. After a couple of weeks, you may be amazed at how clear and focused your thinking has become.



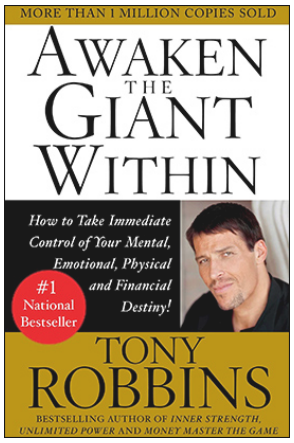
Conclusion and Other Details in the Book

No matter what challenge you're facing—whether you're feeling stuck, discouraged, struggling with a project or relationship—you can conquer it by thinking bigger and becoming a bigger person. However, thinking big is not the same as wishful thinking. Take action *now* to apply the principles above, and observe how successful and unsuccessful people around you embrace or ignore these principles. In the book, Schwartz also shares many personal anecdotes and observations behind the principles in this summary. If you've enjoyed the ideas in this summary, do get a copy of the book for more details.

KEY QUOTES

"Rub people the right way. Be human."

"Think progress, believe in progress, push for progress."



AWAKEN THE GIANT WITHIN

How to Take Immediate Control of Your Mental, Emotional, Physical and Financial Destiny!

BY TONY ROBBINS

The Big "So What"

We all have unlimited potential in us. Through self-mastery, we can take control of our lives, to have and achieve anything we want in life. This book is a detailed action guide to show how you can make fundamental and lasting changes to transform your quality of life.

Introduction

Everyone is born with talents and opportunities. This book aims to awaken us to our true potential. With deliberate focus, we can master and achieve anything.

In the book, Robbins acts as your personal coach, sharing his ideas, experiences, and distinctions, with examples, exercises, and tips to help you take action. This summary distils the key ideas into 3 parts:

- Raising your standards;
- Changing your limiting beliefs; and
- Changing your strategy.

Part 1: Raising your Standards

It Starts with a Decision

Your future doesn't depend on your circumstances; it depends on your decisions. Many people know what they must do to be successful, yet they don't do it. If you don't decide how you'll live 10 years from now, you'd have, by default, decided to let circumstances dictate your life.

Every successful person (e.g. Mahatma Ghandi, John F. Kennedy) had, at some point in their lives, made a major decision. For Robbins,

KEY QUOTES

"This book - and my entire life – is dedicated to producing a measurable increase in the quality of our lives."

"The resources we need to turn our dreams into reality are within us, merely waiting for the day when we decide to wake up and claim our birthright."

"Controlled focus is like a laser beam that can cut through anything that seems to be stopping you."

"Changing an organization, a company, a country—or a world—begins with the simple step of changing yourself."

"In life, lots of people know what to do, but few people actually do what they know."

"True decisions are the catalyst for turning our dreams into reality."

the turning point came 8 years before he wrote this book – he was fat, broke, and decided he had to change his life, and *never* be less than his best again.

- A true decision like this comes with such **complete commitment** that you cut off other alternatives, and persist until you somehow find the way to your goals. The test of a real decision is *consistent action.*

- Each failure is a **learning opportunity**; the more decisions you make, the better and more confident you get. Robbins improved his public speaking manifold through sheer practice - while others did 48 speaking events a year, he clocked the same number in just 2 weeks.

- Make a **long-term commitment** to your decision, but stay **flexible** in your approach. Act on the best available option, and keep your mind open to new options.

Opportunities are everywhere, but you can only harness them if you are taking action. Robbins' decision to do a seminar in Denver brought him to Becky, who later became his wife. His problems with a partner (which cost his company half a million dollars and a $758,000 debt) helped him to build his company bigger and stronger.

Pain and Pleasure: The Forces that Drive Us

Everything we do is to avoid pain, or to gain pleasure. Thus, what we associate with pain and pleasure dictate our choices and our life.

- Even if we logically believe that something is good for us in the long term, we may not take action if we believe it'll bring us **short-term pain**. That's why it's hard to stick to a diet, or to quit smoking.

- We also fear potential loss much more than we desire potential gain, e.g. we'd be more motivated to avoid losing $100,000 than to make an additional $100,000.

- Still, all of us have a **pain threshold**, where the level of pain is so high that we vow never to face it again. The secret is to link massive pain to the behavior/ pattern that we want to avoid, so we'll stay away from it. As a kid, Robbins saw his dad drinking beer and wanted to try it. His mum agreed, on the condition he drank 6 packs at a go, the way his dad did. After forcing down 6 cans of beer and vomiting all over, Robbins never wanted to drink beer again.

KEY QUOTES

"Know that it's your decisions, and not your conditions, that determine your destiny."

"Repetition is the mother of skill."

"The moment one definitely commits oneself, then Providence moves, too."
-Johann Wolfgang von Goethe

"Man is not the creature of circumstances; circumstances are the creatures of men."
-Benjamin Disraeli

"If we associate enough pain to anything, we'll change."

The key is to learn to *use* pain and pleasure to drive our decisions and actions, rather than be controlled by them. We'll address this in Part 2.

Part 2: Changing your Limiting Beliefs

Understanding Belief Systems

Our beliefs shape our perception of reality, which shapes our life:

- Research shows that people literally start to transform their bodies (including diseases, personalities, and even appearance) the moment they believe they are a different person.

- For thousands of years, people believed it was impossible to run a mile in less than 4 minutes. Yet, once Roger Bannister broke this record in 1954, 37 other runners broke it in the same year.

- The book includes many other examples of how people with similar circumstances (e.g. dysfunctional family, crippling accident) can have totally different lives

Building & Changing our Beliefs

An idea is like a table-top - it can't stand on its own. It develops legs when we find references or experiences that support it. A belief is basically an idea that we feel very certain about.

The **strength of a belief** depends on (a) the number of references and (b) their level of emotional intensity.

- *Opinions* are built on a few references and are easily changed.

- *Beliefs* are built on more references, with strong emotional links. We feel so sure about them that we may be closed to new input.

- *Convictions* are obsessions that seem to vital our very existence. We feel intensely about them, get defensive if they're challenged, and are willing to take risks (e.g. failures, rejection) for them. Convictions can spur us to take massive and persistent action, but can also blind us to other views. For instance, zealots believe so deeply in their view of God, they're willing to kill to protect that belief.

KEY QUOTES

"We're not driven by the reality, but by our perception of reality."

"Things do not change; we change."
-Henry David Thoreau

"We can develop beliefs about anything if we just find enough legs - enough reference experiences - to build it up."

"If you question anything enough, eventually you'll begin to doubt it."

Beliefs are built on **references**, which are all the conscious and unconscious experiences we've accumulated. Our character and beliefs are often shaped by references from major events (e.g. near-deaths, huge victories). With more and higher-quality references, we get bigger perspectives and see more choices.

- We can *expand our references* in 3 ways, via (a) our own experiences, (b) external sources (e.g. role-models, books/ biographies, movies/ audios/ seminars), and/ or (c) our imagination (the brain can't differentiate between real and imaginary experiences).

- References are basically *raw materials* that we can organize and interpret any way we like. We can weaken beliefs by planting doubt (using new references or counter-examples), or we can strengthen beliefs (by finding more emotionally-intense references). The key is to consciously seek references that *expand and empower us*.

In short, **it doesn't matter if a belief is "true"**, since humans can rationalize anything we wish to believe. In fact many of our existing beliefs are built on flawed information or assumptions that we didn't validate or scrutinize. What's more important is if the belief *empowers* us. Evaluate inputs independently, instead of relying on social proof or expert opinion. Study role models who've achieved your desired results, and model their empowering beliefs.

Neuro-Associative Conditioning™ (NAC)

When we do something, our brains create a **neural-connection** to the associated feeling or behaviour, whenever:

- There's something *unique* about the situation;

- The behaviour and sensation are happening *simultaneously*; and

- The association happens *consistently*.

The more we do it, the more we reinforce the connection. Eventually, it forms a "neural super-highway", and we continue to do / avoid the behaviour, even when the sensation stops.

KEY QUOTES

"Expand your references, and you'll immediately expand your life."

"Imagination is more important than knowledge."
-Albert Einstein

"Empowering beliefs - this sense of certainty - is the force behind any great success throughout history."

"Using social proof is a great way to limit your life—to make it just like everybody else's."

"Nothing in life has any meaning except the meaning you give it."

Such links are **often flawed**. Our brain often assigns the wrong causes (*"false neuro-association"*). Or, it may feel confused when we link both pain and pleasure with something ("*mixed neuro-association"*), e.g. we want more money, yet don't want to be greedy - this weakens our resolve, and we sabotage our own goals.

The good news is, our habitual mental patterns can be changed quickly and permanently. The **NAC** is a 6-step system designed by Robbins to disrupt your disempowering patterns, and establish new, empowering ones that run without constant effort and willpower.

Define: what you want & what's stopping you from getting it. Usually, we're unclear what we want, and we've linked more pain to changing than to maintaining the status quo. In Part 3, we'll address how to give clarity and power to your goals.

Leverage: Create a sense of urgency, by linking massive pain to not-changing, vs massive pleasure to changing.

- We must bring ourselves to the *pain threshold*, so we know with absolute certainty that we must change *now*. Remove any *mixed feelings* about a change, so our brain is singularly focused on the desired outcome.

- A man at Robbins' seminar wanted to fix his chocolate addiction, but was quietly proud of being a "chocolate champion". Tony made him agree to eat nothing but chocolate for 9 days. By the 3rd day, he couldn't bear to have more chocolate. He had shifted to his pain threshold, removed any mixed neuro-associations about quitting, and was now truly ready to make the change.

- To achieve lasting change, we need *3 core beliefs*: (a) Things *must* change (not should or could, but must), (b) *I* must change it (full personal ownership); and (c) I *can* change it (confidence).

Disrupt: Break the old pattern by disrupting it.

- Do something totally *unexpected and different*, e.g. if you're overeating in a restaurant, jump up, point to your own seat and shout "WHAT A PIG!". After a few times, you will stop overeating as the humiliation is too painful.

- Interrupt the pattern, by *jumbling the memory beyond*

KEY QUOTES

"When you give your brain mixed messages, you're going to get mixed results."

"Change is usually not a question of capability; it's almost always a question of motivation."

"Some men see things as they are, and say, 'Why?' I dream of things that never were, and say, 'Why not?'"
-George Bernard Shaw

recognition. Play the negative memory in your mind like a movie. Then, replay it in fast-forward mode, scrambling and changing the components so it becomes a comedy, e.g. reverse the movie, give someone a pig's nose, add silly music… have fun and repeat until the old feelings no longer surface when you think of the situation.

Replace the old pattern with a new empowering alternative. This is crucial so you won't return to the old habits. Studies in drug rehabilitation found that, those who quit on their own and substituted drugs with relationships, career etc. stayed off drugs much more successfully than those without replacements.

Condition: Reinforce the new pattern until it is consistent.

- Give a reward (e.g. praise, gift, new freedom) with every *small improvement* (e.g. once you reject a snack, or stay away from cigarettes for a few hours). Give a negative reinforcement (e.g. frown, remove freedom) for every *undesired behaviour*. It's crucial to do this immediately, so you link the sensations of the reward or punishment to the pattern.
- You can also *rehearse* it repeatedly in your mind, with emotional intensity.
- Once a reward is linked to a certain behaviour, you can *vary the reward* to keep it effective.

Test the programming by imagining a situation which caused frustration in the past. If you've taken the steps correctly, you should now feel differently about it. If not, revisit steps 1 to 5 again. You can also use the "ecology checklist" in the book to identify potential gaps, and model someone who has achieved what you desire.

Part 3: Changing your Strategies

If you've made a firm decision and are ready to change your limiting beliefs, we can now look at the specific strategies and action steps you can take.

KEY QUOTES

"Any pattern of emotion or behaviour that is continually reinforced will become an automatic and conditioned response. Anything we fail to reinforce will eventually dissipate."

"The way to expand our lives is to model the lives of those people who are already succeeding."

"Often people die emotional and spiritual deaths long before they ever leave their physical bodies."

Getting What We Really Want

Everything we've ever wanted in life (e.g. goals about money, family, career) is to allow us to *feel what we want to feel* (e.g. loved, respected, happy etc.)

The Power of State

Our **emotional states** are our internal (typically unconscious) reaction to what's happening around us. They determine how we feel, and how we act. The same person can behave very differently when he's in a "blur" state versus an "alert" state. It's like a TV being tuned to different channels.

You can **change your emotional states** in 2 ways:

Changing your Physiology: How you use your body affects your feelings. Frowning and dropping your shoulders can make you feel tired, while sitting upright, breathing deeply and smiling can make you feel refreshed. For example, musician and songwriter, John Denver, found that he was most inspired after adrenaline-pumping activities in nature, like skiing or flying his jet.

- Expand your range of experiences, by *expanding your range of emotions*.
- Besides "common" emotions like happy or sad, explore what it's like to feel fascinated, sensual, enchanted, bold, gentle…
- Strengthen your neuropaths for *laughter and happiness*. Try laughing for no reason, grinning in front of the mirror, or even going for a skip instead of a jog!

Changing your Focus: You can change how you feel by shifting *what* you focus on, and *how* you focus.

- *What you focus on*: Our perception works like camera lenses. We can zoom in to make something look bigger than reality, minimize it, or blur it. If you focus on something bad long enough, you'll feel bad; it's the opposite if you focus on something good. Hence, focus on solutions and where you want to go, and ask good questions (e.g. "how can I turn this around?") to focus your brain. We'll expand on this later in the summary.

KEY QUOTES

"Stagnation comes from lack of movement."

"Just by changing our physiology, we can change our level of performance."

"Drivers know that you go where you look; you travel in the direction of your focus."

"Ask and you will receive. Seek and you will find; knock, and it will be opened to you."
-Matthew 7:7

- *How you focus:* We all have our primary experiential modes- *visual* (e.g. colour, brightness, size, distance, movement), *audio* (e.g. volume, pitch, tone, tempo) or *sensory* (e.g. texture, feelings, smells). Identify the experiential modes and sub-modals that bring you most intense emotions (e.g. if you are primarily visual, are you most moved by colour or movement?).

  Use these modes to focus on something with intense emotions, or push something undesirable into the background. In the book, Robbins explains this in detail, with exercises to help you identify and craft your experiences.

Combine the ideas above to list down at least 15 empowering things that you can do to feel good instantly (e.g. swimming, hugging your kids, having a hot bath). Use this to do things that build positive neuro pathways, and avoid destructive sources of pleasure (e.g. drugs).

The Power of Questions

Successful people ask better quality questions that empower and lead them to good answers. Questions can:

- **Instantly shift your focus and feelings:** Instead of asking "why am I so upset?", ask "how can I find joy at the moment?". Instead of affirmations like "I'm happy", ask questions like "what can I be happy about now?" When disaster strikes, rather than ask questions like, "why me?", ask "how can I use this?" and "what do I still have?".

- **Help us to prioritize:** Our minds only focus on a few things, and delete what's unimportant. If you focus on what's making you upset, you naturally shut out what's making you happy. If someone asks you, "how would you feel about losing the game?", your brain starts to focus on the possibility of losing. Answering the wrong questions can weaken your empowering beliefs and create new ones.

- **Uncover resources and solutions:** When you ask questions like "how can I get 10x better results?" your mind seeks out new options you may not otherwise consider. The answers may not come instantly; keep asking the questions with faith until the answers surface.

KEY QUOTES

"As the fletcher whittles and makes straight his arrows, so the master directs his straying thoughts."
-Buddha

"If we want to change the quality of our lives, we should change our habitual questions.... (they) direct our focus, and therefore how we think and how we feel."

"The question is not whether you're going to have problems, but how you're going to deal with them when they come up."

"It's not only the questions you ask, but the questions you fail to ask, that shape your destiny."

"The important thing is not to stop questioning. Curiosity has its own reason for existing."
- Albert Einstein

Learn to ask great questions as part of your success habits. The book also includes a list of problem solving questions, and "power questions" to focus your mind every morning and evening.

The Power of Vocabulary and Metaphors

Language is a crucial part of culture, and it shapes how we perceive, think, feel, and act.

Words: Help our minds to interpret/ translate our experiences, and have an instant biochemical effect on our state, e.g. you'd react differently if you were called an "idiot" vs an "angel". Just by changing the labels you put on your emotions, you can change how you feel. Robbins terms this "**Transformational Vocabulary**".

- You can reduce the emotional intensity of **negative feelings** using words. Try asking yourself, "am I furious, or just feeling a bit annoyed"? Instead of saying "I'm depressed", try "I'm feeling a little down", or "I'm recovering from a slight bump". You can also use fun/ novel words to break your pattern, e.g. "oh, poops" may make you laugh and snap out of your anger.
- You can heighten **positive sensations** with words like: unstoppable, amazing, outrageous, smashing, dynamite (vs words like okay, good, alright, cool).
- Words can also soften your **approach with others**. Instead of saying, "This is really screwed up, we must fix it", you can say, "I'm a little concerned about this, can we talk about it?"
- In the book, Robbins provides a range of vocab you can use. The goal is not to deny your negative feelings, but to be able to consciously reduce pain and increase pleasure in your life.

Metaphors: are very powerful because they bring up strong emotions, imagery and associated frames/ rules.

- A simple **shift in metaphor** changes your perceptions and associated frames/ rules. For example, "life is an ongoing battle" brings up different frames of reference compared to "life is a game" or "life is sacred". Choose empowering metaphors e.g. "climbing the success ladder" instead of "trudging through the battlefield." If someone says "I've hit a brick wall", you can suggest they drill through it, or open a door and walk through.

KEY QUOTES

"Words form the thread on which we string our experiences."
- Aldous Huxley

"Words shape our beliefs and impact our actions".

"Words are the fabric from which all questions are cut."

"Words can injure our egos or inflame our hearts."

"We've got to be precise in the words we use because they carry meaning not only to ourselves about our own experience, but also to others."

"Take control of your metaphors now and create a new world for yourself: a world of possibility, of richness, of wonder, and of joy."

- Some metaphors may be appropriate in one **context** but not another. Be careful of the **limiting beliefs** that can come with a metaphor, e.g. a pond brings to mind different associations from an ocean. Your choice of labels or metaphors can also shape your **relationships**, e.g. calling your spouse "the old man" vs "my lover" or "life-partner".

Emotional Mastery

In our **garden of life**, weeds (like negative emotions) will always appear. We shouldn't ignore them, nor get upset over them. Simply remove the weeds and plant your positive emotions daily so your garden will be healthy and vibrant.

Our emotions are our internal compass – they tell us if we need to change our course. You can use the **NAC** to master your negative emotions in 6 steps:

Identify the feeling and use transformational vocab to reduce the intensity, e.g. "Am I feeling betrayed, or just a little hurt?"

Accept your emotions as a call-to-action; don't avoid or fight them.

Shift your emotional state to *curiosity*. Consider the message behind the feeling, and shift to solutions mode.

Focus on *turning things around*. Model past successes and build confidence to break your current state.

List 3-4 options to handle similar situations in future. *Rehearse* them mentally to build your neuro-pathway and confidence.

Take *action*, giving yourself time to get used to these 6 steps.

The book details **10 "action signals"** or negative emotions, and their underlying messages (discomfort, fear, hurt, anger, frustration, disappointment, guilt, inadequacy, overwhelm, loneliness), as well as 10 "**emotions of power**" or positive emotions (love & warmth, appreciation & gratitude, curiosity, excitement & passion, determination, flexibility, confidence, cheerfulness, vitality, contribution).

- Most of the 10 emotions of power are **antidotes** to the 10 action signals e.g. gratitude can overcome fear, curiosity can shift the sense of hurt, anger can be redirected into excitement and passion, etc.

KEY QUOTES

"You don't need any special reason to feel good—you can just decide to feel good right now, simply because you're alive, simply because you want to."

"Cultivate curiosity, and life becomes an unending study of joy."

"If you could only love enough, you could be the most powerful person in the world."
- Emmet Fox

"The consistent expression of love seems to be able to melt almost any negative emotions it comes in contact with."

- As you practice the 6 steps of emotional mastery, learn to recognize the various emotions and discover their underlying meaning for you.

- Always tackle negative emotions early, before they build up.

Defining your Goals

Often, people don't set goals for fear of failure. Yet, it's vital to have a crystal-clear focus that you commit to. In the book, Robbins walks you through a **detailed goal-setting exercise** in 4 areas: (a) Personal Growth, (b) Career/ Business/ Financial, (c) Things to Own/ Do, and (d) Contribution.

- For each area, **brainstorm** a list of every goal you'd want to achieve. Add a **timeline** to each item (don't worry how you'll achieve it yet).

- Decide on your **top 1-year goal** for each of the 4 areas. Get clear on your **"why"**, by writing down why each goal is vital and why you're committed to it.

- Over the next 10 days, build **momentum and emotional links**:

  - Break down the top 4 goals into *small daily actions*, and do them.
  - Twice a day (morning and night), *rehearse* how it feels like to achieve your top 4 goals.

- Surround yourself with **role models** and people who can help to bring your goals to life. **Review** your list regularly to ensure you're still committed to them.

Unleashing your Inner Giant

Your goals are a means to an end, a tool to direct your focus and growth. The ultimate goal is to **unleash your potential** – who you become, and the people you touch along the way. With clarity on your goals, you can now answer this question: "To achieve all that I want, what kind of person must I become?"cross-cultural.

Your Hierarchy of Values: Our life values shape our decisions. Since many of us don't know who we want to be, or what our values are, we can't make the "right" decisions, and this brings us pain.

KEY QUOTES

"My philosophy is, 'Kill the monster while it's little'."

"There's nothing quite so compelling as a feeling of sincere contribution."

"Remember that goals are dreams with a deadline."

"Achieving goals by themselves will never make us happy in the long term; it's who you become, as you overcome the obstacles necessary to achieve your goals, that can give you the deepest and most long lasting sense of fulfillment."

- We all have pleasurable emotions that we gravitate towards (e.g. love, success, freedom) and those that we avoid at all costs (e.g. rejection, loneliness, failure). Sometimes, our values *conflict* with one another, e.g. if you value both freedom and security almost equally, you may feel torn between the two. Or, someone who seeks success but fears rejection will find it hard to move ahead.

- Our current values are shaped by many external influences – e.g. parents, teachers, friends, colleagues - they don't usually represent who we really are, or can be. The key is to (a) know your current values and (b) set them up so they're "aligned" with your top goals and who you want to be.

- In the book, Robbins takes you through several exercises to identify your current values, potential sources of conflict, and to recreate a prioritized list of values that are *aligned* with your desired destiny. Some questions to consider are: "To achieve my desired destiny, what set of values must I live by?", "What would it cost me if this value was at the top of my list?"

Remember: your past is not your future, and you are free to choose values that support you.

Changing the Rules: We have many spoken and unspoken rules that we use to evaluate people and things around us, e.g. what's a good boss, lover, parent…

- When your rules are *distorted or conflicting*, you feel like a perpetual loser no matter what you accomplish. If "love" is your top value, and one of your rules is "If you get too close to someone, you'll get hurt", you're setting yourself up for pain.

- Each time you're upset with someone (including yourself), it's because your rule(s) or expectations have been violated. Since rules are set by you, you are free to re-create them. Relook at your "must" rules (those you abide by strictly) to see if they should be relaxed or removed. Set *empowering rules* that move you in your desired direction, and fulfil 3 criteria: (a) achievable, (b) within your control and (c) make it easier for you to feel good than bad.

Identity: We act consistently with who we think we are (even

KEY QUOTES

Every decision is guided by (our) values, and in most cases, we didn't set them up."

"We are not our values. We are much more than our values."

"How can you ever hope to win a game if you don't even know the rules?"

if it's inaccurate). If you keep failing to make a change, it's probably due to a clash with an underlying identity belief (e.g. "I'm conservative", "I've got fat genes"). We're free to evolve and shape our own identity, and Robbins shares several exercises to help you do so. Here's an example:

- When you are in a calm and resourceful state, ask yourself, *"Who am I?"*. Write down whatever comes up, and keep adding on to your list, until you feel certain about the description.

- List down all *components* of this identity (e.g. how you look, walk, think). Identify the role models who have these characteristics, and keep expanding your list in detail. Create an *action plan*, including a list of people you should/ should not associate.

- *Commit* to your new identity – share it with everyone, and use the new label to describe yourself daily.

Taking Control of the Master System

Successful people stand out in their field because they've gotten enough distinctions to make great evaluations (e.g. Warren Buffett and Peter Lynch in investments). The effectiveness of your evaluations hinge on **5 key building blocks:**

- **Your mental /emotional state:** Make vital decisions only when you are in a resourceful state (rather than negative state).

- **Your habitual questions:** Ask the right questions to shape your focus and results.

- **Your hierarchy of values:** Choose your values carefully, aligning them with your highest goals and who you want to become.

- **Your beliefs:** Build empowering beliefs and convictions that energize you to take consistent action.

- **Your references:** Gather new references to expand your views. Organize and interpret them in ways that empower you.

KEY QUOTES

"We can't control the wind or the rain or the other vagaries of weather, but we can tack our sails in a way that allows us to shape the direction of our lives."

"When we focus consistently on improvement in any area, we develop unique distinctions on how to make that area better."

"It's not what we do once in a while that shapes our lives, but what we do consistently."

Changes to any of these 5 building blocks can change your life, and we've covered many tools to help you do so. Take action!

The 10-Day Mental Challenge

For the next 10 consecutive days, focus *all your energy on possible solutions, not problems*. Commit not to dwell on any unsupportive thoughts or emotions. Whenever negative thoughts emerge, *catch yourself quickly* within 2mins and use the techniques you've learned to *shift to a better state* (e.g. ask good questions, change your vocab/ metaphors). If you slip up, just make a shift asap. Use this challenge to become aware of your mental patterns, train your mind to find empowering options, boost your confidence, and build new habits, standards and expectations.

Other Details in the Book to Look out For

This book is packed with more than 500 pages of insights, examples, tips, exercises and distinctions, such as:

- Many of Robbins' personal references and examples, as well as famous personalities like Donald Trump, Mother Theresa, Bill Gates, Mahatma Ghandi, Walt Disney, Warren Buffet, and Soichiro Honda;
- References to real-life economic/ social issues and scientific research; and
- A complete 7-Day success program to integrate all the components.

Robbins reinforces the ideas using different perspectives, details and analogies, all of help to bring the "aha" moment, and to inspire us to action. To get the most from the book, you'll need to examine the details, and take consistent action. Do get a copy of the book, or download the recent gift edition "Re-awaken the Giant Within".

KEY QUOTES

"Success is processional. It's the result of a series of small disciplines that lead us into habitual patterns of success that no longer require consistent will or effort."

"The mark of a champion is consistency - and true consistency is established by our habits."

"I wrote this book to be an action guide—a textbook for increasing the quality of your life and the amount of enjoyment that you can pull from it."

"The capability for greatness in anything is within you even now."

THE MIRACLE MORNING

The Not-So-Obvious Secret Guaranteed to Transform Your Life Before 8am

HAL ELROD

The Big "So What"

Many people dream of an extraordinary life, but end up settling for a mediocre one. No matter where you are in life—whether you're struggling to overcome a major setback or ready to move to new heights—this book provides you with a proven method to improve your life and achieve all your dreams and goals.

Introduction

When we look at newborn babies, we believe that they can grow up to be whoever and whatever they want to be. Yet, when we grow up, we settle for less than what we want.

- Many people are unhappy with their lives—from their jobs to their weight, finances and relationships. Or, they may excel in 1 area of their life (e.g. career) and *settle for mediocrity* in other areas. Take a minute to rate each aspect of your life, e.g. love, money, success, health, happiness, and freedom. Are *you* living at Level 10 in every area of your life?

- *Living to your full potential* means thriving in *every* aspect of your life and fulfilling *all* of your goals and dreams. In this book, Elrod shares how he bounced back from death, crippling injuries and career setbacks, and how he used The Miracle Morning (TMM) to unlock his full potential. This approach has been used by thousands of people from all walks of life. No matter how bad your circumstances are, the tips in this book will help you enjoy more energy, vitality, joy, motivation, and productivity. Use them to turn around any area of your life.

KEY QUOTES

"You can become one of the few people that actually live the extraordinary life all of us deserve. Happiness. Health. Money. Freedom. Success. Love. You really can have it all."

"Know that wherever you are in your life right now is both temporary, and exactly where you are supposed to be."

In this summary, we'll share about:

- Elrod's personal journey;
- His insights on what it takes to live to your full potential; and
- How to design your Miracle Mornings with the 6 Life S.A.V.E.R.S.

Waking up to your True Potential

You can overcome any obstacle in your life

In 1999, at the age of 20, Elrod had a serious car accident and was clinically dead for several minutes. When he woke up after 6 days in a coma, he was told that he had broken 11 bones, suffered permanent head damage, and may never walk again.

- Elrod was devastated. But he eventually realized that lamenting his tragedy wouldn't change anything. He decided to embrace his new reality and make the best of his situation instead.
- As he recuperated, Elrod returned to his sales job. By 2005, he had moved up into a managerial role and was leading a top sales team. Yet, he was still far from realizing his full potential. That year, he made a firm commitment to double his sales and finish writing the book that he had been putting off. He achieved both his goals. The book made it to Amazon's bestseller list, but unfortunately, his publisher ran away with the royalties. Still, Elrod remained unfrazzled, believing he could turn any trial into triumph.

Yet, when the US economy crashed in 2007, Elrod finally fell into despair. By then, he had successfully made the leap into professional coaching (something he truly loved). His business collapsed during the crisis and he was laden with $425,000 debt. Unlike the car accident (when he was surrounded by love and support), this time he was on his own since

KEY QUOTES

"Even when life is difficult or challenging—especially when life is difficult and challenging—the present is always an opportunity for us to learn, grow, and become better than we've ever been before."

"Everything happens for a reason…it is our responsibility to choose the most empowering reasons for the challenges, events and circumstances of our lives."

"Anything is possible when you're committed."

everyone was struggling with their own problems. After 9 years of rebuilding his life and successes, he had fallen once again into mental, emotional and financial ruin. Elrod lost all hope. He struggled to get out of bed each morning and even contemplated suicide.

His turning point came in 2008, when he took his friend's advice to go for a morning run.

- As he ran, he listened to a personal development audio by Jim Rohn, and a message clicked home. Elrod realized that he wanted Level 10 successes, but had been unable to achieve them because his own personal development was only at Level 3 or 4. There was a huge *potential gap* between where he was and where he could be.

- He decided to devote an hour each morning to develop himself, and the results were so amazing that he coined it *The Miracle Morning (TMM)*. Soon, he was sharing TMM with his coaching clients, who in turn shared it with their friends. TMM has since become a global movement as people awakened to its life-changing impact.

KEY QUOTES

"There is no point in dwelling on or feeling bad about the aspects of our lives that we can't change. By focusing on what we can learn from our challenges and how we use them to add value to the lives of others, we can turn any adversity into an advantage."

Getting to the top 5%

One of the hardest things to do is to overcome our own excuses. This is why only 5% of people gain financial success and freedom, while the large majority struggle their entire lives.

95% of people will stay average. Every one of us is worthy of phenomenal success. Yet, the average person isn't willing to take responsibility for his life and consistently do the things he knows he should. Sadly, this 95% will include most of your friends and family. But when you live to your full potential, you'll naturally create positive ripple effects on those around you.

Know what it takes to overcome mediocrity:

- We wrongly assume that our past defines who we are and what we can achieve in the future. We set artificial limits by telling ourselves "I can't do this", "I've never tried that", or "I'm not that kind of person". Elrod calls this the

"Being average means to settle for less than you truly want and are capable of, and to struggle for your entire life."

"We all know what we need to do; we just don't consistently do what we know."

"Where you are is a result of who you were, but where you go depends entirely on who you choose to be, from this moment on."

"*Rearview Mirror Syndrome*" (RMS). Remember: your past doesn't define your future. You can achieve *anything* if you truly commit to it.

- Most people lack a *higher purpose in life*. They're simply surviving each day, doing whatever gives them the most short-term pleasure or the least pain. If you don't know your purpose yet, just start by picking any purpose (e.g. to help 5 people daily, or to become the best version of yourself). As you grow and change, your purpose will likewise evolve.

- Don't dismiss your daily actions and decisions as *isolated one-off events*. In reality, everything you do (or don't do) matters. When you skip a workout, take a shortcut, or press the snooze button, it all adds up to define who you become, which in turn decides the life you'll have.

- *Accountability* is about making yourself responsible to someone, so you'll take action even if you don't feel like it. Every successful person practices accountability. Without it, you'll simply end up on the path of least resistance. Get an accountability partner, e.g. a friend, colleague, family member or someone from The Miracle Morning Community (MyTMMCommunity.com).

- You become the average of the 5 people you spend the most time with. If you're surrounded by positive, motivated achievers, it'll rub off on you. The same happens if you're surrounded by negative, lazy people. Keep elevating your *circle of influence*. Proactively seek out people who bring out the best in you and can help you to achieve your goals. Add value back to them in return.

- According to Jim Rohn, your level of success can never exceed your *level of personal development*. Who you are on the inside (including your beliefs, perspectives and attitudes) decides how you think and act, and thus the results you achieve. In short, your outer world is a reflection of your inner world. Define what your Level 10 life—be it physical, intellectual, emotional and spiritual—should look like, then keep working toward it.

- Don't procrastinate. Inject a *sense of urgency* and start now.

KEY QUOTES

"Focus on growing and being the best you can be, pursuing your dreams and inspiring others to do the same. That's your purpose."

"Who you're becoming is far more important than what you're doing, and yet it is what you're doing that is determining who you're becoming."

"It is often said that 'misery loves company', but so does mediocrity. Don't let the fears, insecurities, and limiting beliefs of others limit what's possible for you."

"Our levels of success will rarely exceed our level of personal development, because success is something we attract by who we become."

Make a firm decision to live your life differently. Ultimately, the difference between excellence and mediocrity is what you do each day to improve yourself.

- Stop settling for less and start devoting time daily to make things happen. *Make that commitment today*.

- Like most people, you may be thinking, "I have no time". Well, your life is much more than your current circumstances. If you continue in survival mode, you'll just keep struggling. Alternatively, you can decide to *create time*: commit to wake up 1 hour earlier and devote that time to develop yourself for success.

The Power of Waking Up Right

How you wake up and start your day has a disproportionate impact on how the rest of your day unfolds. To wake up right:

- *Don't snooze your alarm*. That sends the signal that you don't want to wake up, and you begin your day with resistance. When you wake up purposefully with a bounce in your step, it'll set an entirely different tone for your day.

- *Manage your energy levels, not your sleep hours*. Elrod found that the number of hours he slept mattered less than his expectations of how he'd feel. If he went to bed thinking he'd be tired in the morning, he'd feel tired even with 8-9 hours of sleep. But, if he told himself he'd wake up feeling energized, he'd feel revitalized even if he slept just 5 hours.

Use this 5-step strategy to wake up without snoozing:

- Set the *right intentions before you sleep*. Often, your last thought at night is the first thing you remember in the morning. Use the free Bedtime Affirmation from TMMBook.com to condition your mind, so you'll wake up feeling fresh and energized.

- *Place your alarm clock* far from the bed, so you're forced to get up and move. This generates energy to wake you up.

KEY QUOTES

"Today you can draw your line in the sand. You can decide that mediocrity is no longer acceptable for you…You can choose to become the person you need to be to create the extraordinary life that you truly want."

"The tone of our morning has a powerful impact on the tone of the rest of our day."

"Waking up early, especially when done with purpose, always starts you off feeling empowered for your day."

- Once you've turned off your alarm, go straight to the bathroom and *brush your teeth*. Splash some water on your face.

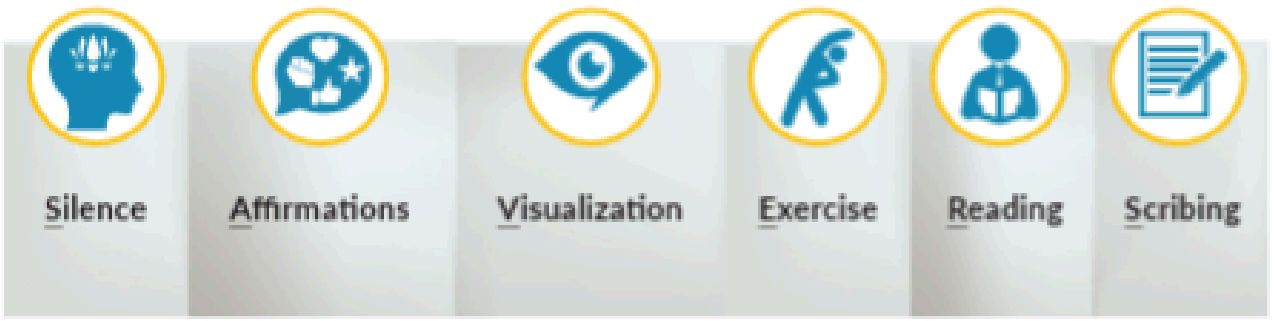
- Drink a *full glass of water* to hydrate and energize yourself.

- *Take a shower or get dressed*.

The Miracle Morning: 6 Life S.A.V.E.R.S. Practices

The Miracle Morning is simply about waking up an hour earlier and devoting that time to develop yourself. Use the 6 Life S.A.V.E.R.S. to transform your inner world, and you'll automatically transform your external circumstances. This approach works for everyone, regardless of your schedule or whether you're a "morning person". You can set aside 10mins for each component, or customize the routine according to your lifestyle and goals.

THE 6 LIFE S.A.V.E.R.S



Practice #1: Silence

Start your morning with purposeful Silence: center yourself and create an optimum frame of mind to face the rest of your day. When you deliberately silence your mind, it creates many health and performance benefits, from stress reduction to better concentration and metabolism. It also improves self-awareness and clarity. Instead of feeling hectic, stressed or lethargic, you'll find yourself feeling calm, peaceful and rejuvenated.

KEY QUOTES

"Our outer world will always be a reflection of our inner world. Our level of success is always going to parallel our level of personal development."

"You can learn more in an hour of silence than you can in a year from books."
—Matthew Kelly

- Elrod personally combines *several components* for this practice: meditation, prayer, reflection, deep breathing and gratitude. You can mix and match them as you wish.

- There are *2 types of meditations*: (i) guided meditations (where you direct your focus by listening to someone's instructions) and (ii) self meditations (where you do it alone without assistance).

Here are the suggested steps for your Miracle Morning meditation:

- *Prepare yourself mentally*. Be fully present in the now, letting go of your worries of the past or future. Allow yourself to just "be", without the compulsive need to think or do something.

- Find a *quiet and comfortable location*. Don't do this in bed. Ideally, have a place outside your bedroom (e.g. your living room sofa) that you can use every morning.

- *Sit upright and cross-legged*. You can use a chair or pillow for extra comfort. Close your eyes or focus on the ground 2ft ahead.

- *Focus on your breathing*. Breathe slowly and deeply into your belly (not your chest). Inhale from your nose for 3 seconds, hold it for 3 seconds, then exhale from your mouth for 3 seconds. If any thoughts pop up, just acknowledge them, let them go, and refocus on your breathing.

- *Enjoy this time with yourself*. You can imagine inhaling soothing, positive energy, and exhaling stressful, negative energy. You can also incorporate words of what you'd like to receive from or give to the world e.g. "I breathe in love... I breathe out peace."

Practice #2: Affirmations

All of us have certain sub-conscious programming that shapes what we believe, think, feel and act. This is often reflected in the non-stop chatter in your head. Your self-talk—both

KEY QUOTES

"Think of daily meditation as a temporary vacation from your problems. While your problems will still be there... you'll find that you are much more centered and better equipped to solve them."

positive and negative—has a huge impact on your state of mind, performance and results.

- Successful people make a conscious effort to manage that inner voice. They use affirmations to *shape their mindset*. When you tell yourself "There's nothing I can do" or "This is beyond me", you feel and act differently from when you tell yourself "I am in control of my destiny!" or "I'm committed to do whatever it takes to make things happen!"

- For years after his car accident, Elrod told himself that his memory was bad due to his brain damage. Yet, after a period of *daily affirmations*, his memory actually improved. His affirmation went like this: "I am letting go of the limiting belief that I have a horrible memory. My brain is a miraculous organism capable of healing itself, and my memory can improve, but only in proportion to how much I believe it can improve. So, from this moment on, I am maintaining the unwavering belief that I have an excellent memory, and it's continuing to get better every day."

You can use affirmations to re-program yourself to become who you want to be—to be healthier, wealthier, be great with people etc. Design your affirmations according to your goals. Write them out explicitly and read them daily, ideally out loud. You must repeat it until your subconscious mind starts to believe it and triggers action to make it a reality.

Create your affirmations with these 5 steps:

- Get clear on *what you truly want*. Start by writing down your ideal vision for every aspect of your life, including your relationships, finances, physical, mental and emotional health.

- Understand why you want what you want, i.e. *what's driving you*. A clear life purpose helps you to rise above petty daily issues.

- Define *the kind of person you must become* in order to achieve your goals (e.g. determined, confident, teachable).

- Define *what you're committed to do* to achieve your goals. Be specific: indicate the frequency, quantity, and duration of your actions, e.g. "I am 100% committed to run for

KEY QUOTES

"It's the repetition of affirmations that leads to belief. Once that belief becomes a deep conviction, things begin to happen."
—Muhammad Ali

"Your life gets better only after you get better....Being (who you need to be) and doing (what you need to do) are prerequisites for having what you want to have."

20 min in the park 2 days a week". Start small, so you'll feel good about completing the actions, then gradually increase them over time.

- Write down *inspiring quotes or ideas* so you can progressively integrate them into your affirmations.

Here are some additional tips on affirmations:

- Affirmations are the most effective when you connect them with your *emotions and physiology*, i.e. you connect your mind, heart and body. Tune in to feelings of hope, love, or excitement. Shout out loud or even dance around.

- Read your affirmations daily and *update them* as you evolve.

Practice #3: Visualizations

Visualizations are about imagining certain activities or outcomes in your mind, and mentally rehearsing them until you can create those results in the real world. They're regularly used by athletes and successful people, including Tiger Woods, Tony Robbins, Will Smith, and Bill Gates. Daily visualizations align your thoughts and feelings with your vision, help you to overcome self-limiting beliefs and habits, and thus increase your likelihood of taking the actions to make the vision a reality.

You can apply this 3-step process for your Miracle Morning visualization, straight after reading your affirmations.

- *Prepare* by sitting upright and comfortably. You can play soft background music if you wish. Take slow/deep breaths, close your eyes and still your mind.

- *Visualize what success looks and feels like to you*. Create a crystal-clear picture of exactly what you want. What would life be like if you could truly have anything you wanted? Use all your senses to see, hear, feel, smell and sense every tiny detail in your vision—experience what it's like to have achieved your goals.

KEY QUOTES

"See things as you would have them be instead of as they are."
—Robert Collier

- *Visualize the person you must become and what you must do*. Imagine yourself taking the necessary actions to achieve your vision. See yourself doing those things with ease, passion and confidence, smiling and enjoying what you do. Visualize positive responses from your family, friends and colleagues.

Here are some additional tips on visualization:

- The more *viscerally* you can see what you want, the more effective your visualizations will be.

- You can also create a *vision board* with pictures of your ideal life. But remember: there can be no results without action.

Practice #4: Exercise

Exercise is crucial for your health, well-being and productivity. Even a few minutes of exercise each morning can significantly improve your energy levels, health and concentration.

Choose the form of exercise that works for you, be it walking, running, doing jumping jacks etc. Elrod recommends yoga, which combines cardio with strength, flexibility and focused breathing.

Practice #5: Reading

Reading is one of the fastest ways to learn from people who've already achieved what you aspire to achieve. No matter what aspect of your life you wish to improve—be it wealth, relationships or career—there are great books that can teach you exactly how to achieve results.

Fill your mind with positive inputs. Elrod recommends reading a minimum of 10-15 minutes a day (or about 10 pages). You can also use your Miracle Morning to read your religious texts.

KEY QUOTES

"Vision boards are for dreaming, action boards are for achieving."
—Neil Farber

"The fastest way to achieve everything you want is to model successful people who have already achieved it."

"Reading is to the mind what exercise is to the body and prayer is to the soul. We become the books we read."
—Matthew Kelly

If you don't like reading, remind yourself *why* you're reading that book. Highlight, underline, circle and make notes as you read. Make it a point to re-read, apply and master good strategies that you've learned.

Practice #6: Scribing

Make it a daily habit to document your ideas, insights, achievements, breakthroughs or opportunities. Journaling helps you direct your thoughts consciously and put them in writing. This creates several benefits:

- Often, the very act of writing down something forces you gain *clarity* and think differently about a problem;
- It allows you to capture and expand on your *ideas*; and
- When you review your progress and lessons learned, it helps to accelerate your *personal growth*.

Use these 3 steps to journal more effectively:

- Choose between a *digital format* (typing digitally) or *traditional format* (writing by hand), based on your personal preferences.
- *Get your journal*. You can download digital apps, including the TMM Journal. For traditional journals, go for something that's lined and dated, so you have space to write for 365 days.
- *Decide what to write*, e.g. your goals, plans, gratitude entries, accomplishments, areas of improvement, commitments, and reflections.

Review your journal at least once per year. It helps you to revisit your thoughts and actions for the past year so you can see how much you have grown and accomplished.

- To *gain the most from your reviews*, list down:

  (i) People, events and lessons that you're grateful for;

KEY QUOTES

"Ideas can come from anywhere and at any time. The problem with making mental notes is that the ink fades very rapidly."
—Rolf Smith

"By getting your thoughts out of your head and putting them in writing, you gain valuable insights you'd otherwise never see."

(ii) Key lessons you've learned; and

(iii) New commitments you'd make to apply those lessons.

- To stay motivated, adopt a balanced perspective of your *potential gap*:

(i) Celebrate your progress, accomplishments, and the things you're grateful for; and

(ii) Identify the key lessons learned and commit to apply them so you can steepen your learning curve.

Installing your Miracle Morning Habit

Customize your routine

You're free to tailor and optimize your routine any way you like:

- Adjust your *start-time* according to your work schedule. If you're on shift-work, just wake up 30-60 min earlier than usual each day.

- Ideally, drink a full glass of water first thing in the morning, then eat *after* your Miracle Morning. Go for *living foods* (e.g. fresh vegetables and fruits) if possible.

- *Align your routine with your goals and dreams*. If your priority is to finish writing your book, then link your affirmations and visualizations to the ease, enjoyment and satisfaction of writing and finishing your book. Always do the hardest things first to get them out of the way.

- *Test different variations* to see what works best for you. Try doing the Miracle Morning daily vs taking the weekend off to rest. You can also allocate more time for certain practices (e.g. reading/exercise) relative to others. Modify your routine to keep things fresh or as your goals evolve.

KEY QUOTES

"Whether you realize it or not, your life has been, and will continue to be, created by your habits. If you don't control your habits, your habits will control you."

The key is to be consistent. Even on days when you're very busy, you can still do a compressed 6-minute Miracle Morning, with 1 minute for each Life S.A.V.E.R.S. practice.

Build Life-Transforming Habits in 30 Days

Human beings are creatures of habit, and old habits are hard to break. According to different experts, habits-formation can happen any time between 1 day (via hypnosis) to 21 or 90 days. Based on Elrod's experience with his clients, 30 days is a good duration for develop your Miracle Morning habit. The key is to have a proper strategy for installing the habit:

- *Phase 1 (Days 1-10): Intolerable*. The initial period will feel unbearable, but it's temporary and will pass.
- *Phase 2 (Days 11-20): Uncomfortable*. The next 10 days will be easier, but you'll still need discipline to push past the discomfort.
- *Phase 3 (Days 21-30): Unstoppable*. These last 10 days are vital for reinforcing and sustaining the new habit. This is when you start to associate positive feelings (pride, satisfaction) with the habit, and shift from hating it to enjoying it. The real transformation happens when you see the habit as a part of your identity or who you're becoming.

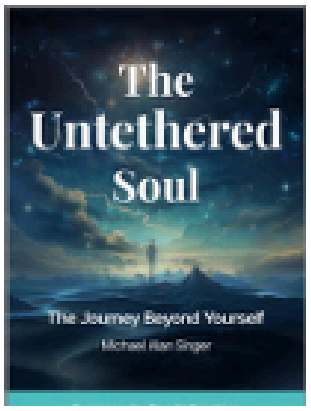
Use The Miracle Morning 30-Day Life Transformation Challenge (LTC) to install your new habit. Download the free LTC Fast Start Kit from TMMbook.com and follow the instructions there.

Thousands of people have transformed their lives with TMM, and so can you. The key is to start ***now***. Don't wait. Get an accountability partner *immediately* to ensure you follow up on your commitment.

KEY QUOTES

"In the next 30 days you'll find yourself quickly becoming the person you need to be to create the extraordinary levels of personal, professional, and financial success you truly desire."

"Everything is difficult before it's easy. Every new experience is uncomfortable before it's comfortable."



THE UNTETHERED SOUL

The Journey Beyond Yourself

Michael Alan Singer

The Big "So What"

In this book, Michael Singer takes us on a journey inward to discover our true selves. It's an essential read for anyone seeking self-awareness, inner peace, and spiritual awakening.

Introduction: Discovering Your True Self

To be true to yourself, you must first define what "self" means.

- Our concept of self is complex and often muddled. Sigmund Freud suggested that the human psyche can be divided into 3 parts: (i) the ID (the primal part of us), (ii) the superego (the logical part conditioned by society), and (iii) the ego (which balances the other 2 parts and selectively presents a part of ourselves to the outside world).

- The book serves as a mirror to help you look inward, sort through the confusion and distractions, and find your true self. Once you've connected with your real self, it's up to you to decide what to with that knowledge.

In this summary, we'll present the key concepts, insights and practices in 5 parts.

KEY QUOTES

"This above all: to thine own self be true."
—William Shakespeare

"Once refocused, you will realize that you not only have the ability to find yourself, you have the ability to free yourself. Whether you choose to do so or not is entirely up to you."

1. Awaken Your Consciousness

Separate your Self from your Mental Noise

We talk to ourselves all the time. You are constantly sharing observations, judgments, and even arguing with yourself ("Can you shut up, I'm trying to sleep!")

- Yet, if you listen carefully, you'll notice that *most of the words are pointless*. Thinking about the weather or traffic doesn't change anything; it only makes you feel better or worse about stuff.

- Don't get tangled up with what the voice is saying, nor try to dissect what's good or bad about it. *Just observe that it's there*, like noise in the background.

Singer suggests that this voice is your mind's way of protecting you and giving you a sense of control.

- You can't directly control the outside world, so you control your inner narrative by saying things like "It's freezing out here, but I'll be warm once I get home."

- You don't experience the world directly. All external stimuli are filtered through your mind and presented in a way that fits your past experiences and future expectations. In other words, *you're living in your mental version of reality*.

A key to personal growth is to separate yourself from the mental noise. Get to know the real "you"—which is the person watching and listening to the voice in your head.

- *You're not the voice; you're the one listening to it*. None of the mental chatter—be it the good or bad stuff—defines you.

- Seek to observe the world without filtering it through your narrative. You'll start to *see things as they are*, and realize that the problem isn't with life but the fuss we make about it.

KEY QUOTES

"Billions of things are going on in this world. You can think about it all you want, but life is still going to keep on happening."

"Reality is just too real for most of us, so we temper it with the mind."

"There is nothing more important to true growth than realizing that you are not the voice of the mind—you are the one who hears it."

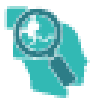
"The real cause of problems is not life itself. It's the commotion the mind makes about life that really causes problems."

Ignore your Neurotic Roommate

To distance yourself from your inner dialogue, imagine the voice as a separate person, like a roommate living in your head.

- *Personify this voice* and imagine what it's like to have this person living with you—someone who's endlessly judging, criticizing, nitpicking, making demands, and can never be satisfied. Most of what this person says is also wrong or unhelpful.

- Right now, you're trapped in your mind with this neurotic person. To *regain control of your mind and life*, you must free yourself from your roommate's melodrama.



When something bugs you, don't rush to fix the problem. Instead, ask yourself, "Which part of me is bothered by this?" Often, the solution lies in changing your perspective, not fixing things in the outside world.

- Imagine you're feeling angry with a co-worker who keeps interrupting you during meetings. Instead of assuming she's at fault, ask yourself, "Why does the interruption bother me so much?" You might find that your anger comes from a deeper sense of being undervalued, which could've stemmed from being disregarded in the past.

A "worldly person" tries to solve problems by fixing things in the outside world. A "spiritual person" understands that real peace comes from within. By engaging in yoga—in its traditional role as a spiritual discipline rather than a form of physical exercise—you can free yourself from your inner voice and move toward spiritual awakening.

Discover Who You Truly Are

Yogi and philosopher Ramana Maharshi said that the key to attaining inner freedom is to deliberately and continuously ask yourself, "Who am I?"

- You're not your *name, job, or life story*. Those are just labels, so who is the person experiencing those things?

KEY QUOTES

"The very fact that you can see the disturbance means that you are not it. The process of seeing something requires a subject-object relationship."

"As it is right now, your life is not your own; it belongs to your inner roommate, the psyche. You have to take it back."

"Maintaining objective awareness of the inner problem is always better than losing yourself in the outer situation."

"Your will is stronger than the habit of listening to that voice. There is nothing you can't do. Your will is supreme over all of this."

"There is nothing higher or deeper than consciousness. Consciousness is pure awareness."

- You're also not your *physical traits* (e.g. height or weight), since those traits keep changing. So who is the unchanging "you" experiencing all those physical traits?

- Whether you're *dreaming or awake*, there's a continuity in your consciousness. It's the same "you" who dreams, moves, and reads these words. Who is that "you"?

- You're also not your *thoughts or emotions*, which change constantly in response to internal/external factors. In the absence of thoughts (e.g. when you're in deep meditation), you're still aware of what's going on. So who is behind those thoughts and emotions?

To find the answer, you must reflect deeply on questions like, "Who sees when I see? Who hears when I hear? Who knows what I know?" As you peel away each layer, what eventually remains is your conscious awareness—the part of you that notices everything.

- Without your awareness, "you" wouldn't exist. Your true self is *the unchanging observer* who sees every internal thought and emotion, and every external object and event.

- When you look around a room, you take in everything instantly, without conscious thought. That's the part of you that is *effortlessly aware*. You can't describe everything you perceive in words, just like how you can't describe your existence. You simply exist.

Become Conscious of your Consciousness

In a lucid dream, you're aware that you're dreaming. In daily life, you can also observe yourself experiencing various events, thoughts, or emotions, instead of being totally immersed or lost in them. This is what it means to be "conscious".

Consciousness can focus on anything, from external objects to your own thoughts. For example, you can get so absorbed in a book that you forget everything else. After you close the book, you zoom out and notice the rest of the room again. All the while, you're in your "seat of consciousness", watching the layers of experiences unfold.

KEY QUOTES

"Just as the sun does not leave its position in the sky to illuminate objects with its radiating light, so consciousness does not leave its center to project awareness onto the objects of form, thoughts, and emotions."

- Your inner world is like a personal TV show with familiar thought and emotional patterns. You get so used to this *internal drama* that you forget you're just there as an observer.

- On a larger scale, life is like a movie that draws you in through various senses (e.g. sights, sounds, smells). You get so immersed in the experiences that you start to identify with them, *forgetting your true self*.

- To *reconnect with your true self*, repeatedly say "hello" internally until you're aware of it. This brings you back to the core of inner awareness.

Real meditation isn't just about focusing on an object or thought. It's about contemplating your consciousness itself, so you become aware of your awareness.

- When you focus on consciousness instead of personal experiences, *you move from finite to infinite*. You're not just a human being experiencing life; you're consciousness observing a human experience. Worldly problems cease to be problems, since they're just phenomena that you observe.

- You're no longer limited to the thoughts/emotions of 1 person, and can perceive the vastness of everything. At this point, when you return to the question of "Who am I?" you'll realize that there's no intellectual answer. Instead, *you are the answer*.

2. Unblock your Flow of Energy

You Have Infinite Internal Energy

Each of us has a huge, but often untapped, source of internal energy flowing within us.

- Imagine you're a teenager and your girlfriend just broke up with you. You feel so drained that you can barely get out of bed, and no amount of food seems to help. Then, your girlfriend says she wants you back, and suddenly you're back on your feet filled with energy. *Where did all that energy come from*?

KEY QUOTES

"What differentiates a conscious, centered being from a person who is not so conscious is simply the focus of their awareness."

"[Consciousness is] just there, aware that it's aware."

"There is a source of energy you can draw upon from inside. It is distinct from the outer energy source."

- This energy doesn't come from sleep or calories, but from a *deeper internal source*, fueling every thought, emotion, and action. You use this energy whenever you resist distractions or suppress your emotions.

- Your internal energy is known by many names, such as *Chi, Shakti, or Spirit*. It's the surge you feel when your heart is filled with love, or when excitement bubbles up inside you. It has healing properties, explaining why love can be so healing.

- The energy is channeled through your heart and other centers known as "*chakras*". When your channels are open, energy flows freely and you feel unstoppable. When they're closed, you feel disturbed or lethargic.

This energy is boundless, and it's available to everyone regardless of age or background. It thrives on openness and receptivity. But, we often block the energy by shutting our hearts or minds.

- Our tendency to open or close is *programmed from past experiences*. For example, a certain color, smell, or image may trigger a negative memory that causes us to close up. We open up when we "like" something, and close up when we "dislike" something.

- Once you're aware of this, you can *choose to stay open and receptive* to all of life's experiences. When you feel yourself resisting something, deliberately pause, relax, and respond with an open heart and mind. The more you stay open, the stronger the energy flow becomes. Eventually, it overflows and radiates from you to positively impact others around you.

Keep Your Heart Open

Your heart is more than just a physical organ; it's a powerful conduit that can resonate with complex emotions and experiences.

- Your heart is a major energy center or a chakra. It can *open or close like a valve* to regulate the flow of emotional energy, bringing feelings of love, hurt, emptiness, and so on.

- We take in external experiences in the form of energy patterns, such as light and sound waves received through our

KEY QUOTES

"You have a phenomenal amount of energy inside of you…It gushes up spontaneously from deep inside and restores, replenishes, and recharges you."

"You have a wellspring of beautiful energy inside of you. When you are open you feel it; when you are closed you don't."

"What it means to live life is to experience the moment that is passing through you, and then experience the next moment, and then the next."

eyes and eyes. Energy must remain in motion, and such experiences should ideally *flow through us* without leaving lasting impressions, like the trees and buildings we notice daily.

Blockages occur when we fixate on certain experiences, causing them to linger and disrupt our emotional state.

- Unresolved energy patterns from past experiences get stored as *Samskaras or energy blockages* in the heart. When enough impressions build up, the heart and mind get so blocked that everything seems dark, and depression sets in. We also cling to positive memories from the past, repeatedly playing them in our minds.

- Samskaras can *resurface later*, triggering old emotions and thoughts. Imagine you're walking through a park when you hear a song that was playing during a major argument many years ago. The song is just background noise to other people, but for you it triggers a rush of vivid feelings and images.

To let go of these blockages, you must process and release old energies as they resurface.

- As old feelings or memories come up, don't resist or avoid them. Just *stay open*, allow the heart to release the stored patterns and cleanse itself. Smile, relax, accept the stored pain (instead of resisting it), and let it go.

- When your heart *neither resists nor clings to the past*, it can continuously experience love, inspiration, and openness in the moment. This is the heart's natural, optimal condition.

Choose Not To Close Up

In modern societies, most people don't lack basic necessities like food and water, nor do we face regular life-threatening dangers. So, we focus our survival instincts on defending our psychological selves.

- In face of uncomfortable situations, we escape by *withdrawing internally*, closing off our energy centers to protect our ego or self-concept. In so doing, we trap the insecurities and fears within us, blocking personal growth and creating stagnation.

KEY QUOTES

"You have to decide if you want to continue to walk around with stored pain blocking your heart and limiting your life."

Personal growth and fulfillment comes from accepting and unifying all parts of yourself, including the parts you don't like.

- Observe your responses to people and events. Whenever you feel defensive, you'll notice a *sense of tightening* within.
- Don't follow the pull of these energies, nor try to fight them. Just *relax and release*. Turn it into a game, where the goal is to stay unbothered by life's small annoyances.
- Imagine that a colleague dismisses your idea at a meeting, and you feel embarrassed. Instead of dwelling on your feelings or mentally defending your idea, notice the shift in your energy and *consciously let it go*. Practice this until it becomes your natural state, and you're truly free to experience life.

3. Free Yourself to Live and Grow

Let Go to Rise Up

When you try to avoid or control something out of fear or insecurity, you get pulled into those negative energies. You fall from your seat of consciousness, and no longer see things with calm detachment.

- From the perspective of fear, everything seems darker and more threatening. You're more likely to respond defensively and trigger negative reactions in a *downward spiral*.

To break the cycle and elevate yourself spiritually, you must recognize and work through the blockages that cause fear.

- Seek to *let go of fears and disturbances* the moment you notice them. Stay centered in your awareness, observe the disturbances without getting entangled in them, then release them.
- The more you delay the release, the harder it becomes. Once you realize that you've fallen into fear or negativity, just *get up, let go, and learn* from the experience. Don't blame yourself or try to rationalize things as it will drag you back down.

KEY QUOTES

"Real spiritual growth happens when there is only one of you inside...All parts are unified. Because there is no part of you that you're not willing to see, the mind is no longer divided into the conscious and subconscious."

"If you don't really want it, then don't protect it. The reward for not protecting your psyche is liberation."

"Life is actually trying to help you. Life is surrounding you with people and situations that stimulate growth."

"Getting involved in the darkness does not dispel darkness; it feeds it."

"That which is holding you down can become a powerful force that raises you up. You just have to be willing to take the ascent."

Remove the Internal Thorns

Imagine a thorn in your arm that causes a sharp pain when it's touched. You have 2 choices:

- You can avoid anything that might touch the thorn, such as staying away from crowded places or wearing a protective device on your arm. In your effort to *avoid the pain*, you end up building your life around the problem.

- Or, you can simply *remove* the thorn so it no longer bothers you.

Our internal thorns (painful thoughts and emotions) are merely old, blocked energies. Instead of avoiding or suppressing them (thus pushing the thorns deeper), acknowledge and release them.

- You're not your pain or stress; you're Awareness observing it. Once you can *notice yourself observing those painful feelings*, you'll be free from them. You'll realize that feelings are just another "thing" in the universe, like cars or trees.

- The more time you spend in self-awareness, the more you start to experience a new positive energy—Shakti or Spirit—flowing from within. This is the essence of *becoming a free and transcendent being*.

Choose to Stop Suffering

To free yourself from suffering, you must first choose not to suffer. The harder you try to avoid/control fears, insecurities, or inner pain, the more they weigh you down.

- The root cause of our suffering lies in our *sense of inadequacy*, which manifests as insecurity, anxiety, and self-consciousness. We want everything to fit our expectations, for everyone to like us, and to never get hurt. Our mind races non-stop to find ways to fulfill these wishes, but it's impossible.

KEY QUOTES

"In the deepest sense, you free yourself by finding yourself."

"Awareness does not fight; awareness releases...That's how you become a free being—you transcend."

"The prerequisite to true freedom is to decide that you do not want to suffer anymore."

Things become ok the moment you center yourself, stop fighting reality, and decide to be ok with everything. It's that simple.

- To stop being controlled by your psyche (the neurotic roommate in your mind), stop listening to it. Simply *observe your thoughts quietly* without getting involved. Realize that the mind's melodramas serve no purpose at all, choose to distance yourself from the mental noise, and let go of whatever's disturbing you.

- Designate moments in your regular day (e.g. as you enter and exit your car) to pause, center yourself, and become aware of your internal/external state. With practice, you'll find it easier maintain a state of *centered consciousness*.

Accept Momentary Pain to Attain Freedom

Change is uncomfortable as it pushes us beyond our comfort zones and our habitual need for safety and control. Yet, there can be no growth without change.

- If you look deeply, you'll find a *core of pain* in your heart. We create layers of "protection", such as external appearances or social acceptance, to distance ourselves from the pain. But, the more you try to hide from the pain, the more easily you're unsettled by the smallest triggers.

- Our efforts to avoid pain often end up *creating even more pain*. For example, if you approach someone with a fear of rejection, you're likely to over-react to every perceived slight, increasing the chance of rejection. Avoiding pain also limits our ability to explore and grow beyond our current self.

True growth comes from facing and dealing with inner pain, so you free yourself from the shackles of fear and anxiety. See any inner pain or disturbance as a temporary shift in energy. As you relax and allow it to pass through you, you might feel an intense, burning sensation. Embrace it as part of the transformative process.

KEY QUOTES

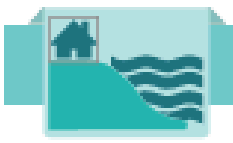
"That's how you get out. You just let it go."

"Just watch the mind talk, and keep relaxing and releasing. Fall behind the noise."

"Life is continuously changing, and if you're trying to control it, you'll never be able to fully live it."

"Real growth takes place when you finally decide to deal with the pain. Because the pain is at the core of the heart, it radiates out and affects everything you do."

4. Go Far Beyond Yourself



Dismantle the Self-Made Walls

As you grow spiritually and take a deeper seat within yourself, it becomes easier to observe your stream of thoughts, emotions, and sensory experiences. You realize that you're separate from the mental-emotional turmoil you used to identify with, and are now ready to break your psyche's grip on your consciousness.

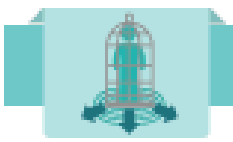
- *Imagine your psyche as a house* that you built and furnished with your past experiences, beliefs, opinions, fears, hopes, and dreams. Over time, you become so comfortable in this house that you can't imagine stepping outside.

- You defend this house (your psyche) vigorously, patching up its walls against any perceived threat. To enjoy freedom and the fullness of life outside, you must *let go of the walls* you've constructed and expose yourself to the broader reality.

Enlightenment isn't a distant, mythical state. It's attained by breaking down the mental-emotional walls instead of reinforcing them in your daily life.

- Choose to stop maintaining or defending the *psychological fortress* that's keeping you in the dark.

- Picture your mind as a house amidst an ocean of light. Let the walls of limiting thoughts and experiences crumble away, so your consciousness can *expand and merge with the vast reality* that has always been there. This is how you reach enlightenment.



Keep Moving Beyond Existing Limits

Our perceived limits come from our mental boundaries.

- Our logical mind finds it hard to grapple with the vastness of the infinite universe, so it *creates a sense of control* by

KEY QUOTES

"True freedom is very close; it's just on the other side of your walls."

"The soul is infinite. It is free to expand everywhere. It is free to experience all of life. This can only happen when you are willing to face reality without mental boundaries."

breaking the world into manageable pieces, including our views and beliefs.

- To transcend existing limits, you must *let go of existing mental constructs*. Accept reality as it is, not as you wish or expect it to be.

When you're spiritually awakened, you realize that you've been caged by your fears and comfort zone.

- Each time you approach your limits, you feel uncomfortable. It's like *bumping against the bars* of a cage charged with electricity, so you pull back and retreat to "safety."

- Your psychological boundaries can't truly hurt you, and it's possible to push beyond the bars. Just relax, resist the urge to pull back, and *move past the discomfort*.

- Spiritual growth comes from a *lifelong commitment* to keep facing your discomfort and pushing past those limits.

KEY QUOTES

"A cage by any other name is still a cage. You must be willing to go beyond."

Let Go of your Self-Concept and Mental Models

In face of fear and uncertainty, we often cling to our thoughts and feelings as if they're life rafts, giving us something firm to hold on to. These get anchored in our psyche, gradually forming an "island" of self-identity in the ocean of our consciousness.

- Our *self-concept* is basically a complex structure of beliefs and thoughts that we cling to, e.g. our gender identity, opinions, and experiences.

"Your self-concept is just a collection of thoughts about yourself."

We suffer when we try to maintain perfect order and control in a world that's complex and dynamic. Keep challenging and letting go of your self-concept or internal model.

- When your internal model clashes with reality, don't justify or defend your views. Use such disturbances to *challenge your existing mental model* and bring yourself closer to reality.

"You just decide, once and for all, to take the journey by constantly letting go."

- Each time you feel disturbed, stop and focus on the part of you that notices the disturbance. This brings you back to Awareness and the knowledge that *you're separate from*

"You are consciousness, and you can free yourself from all of this by relaxing behind it."

what you observe. Eventually, this becomes habitual and you can just allow the process to happen without taking deliberate action.

5. Choose to Live Life Fully

Choose to Live with Unconditional Happiness

The most critical choice you can make in life isn't about your career or relationships, but whether you choose to be happy.

- Often, we add conditions to our happiness ("I'll be happy if..."), only to limit our happiness. *Choose to be unconditionally happy*, i.e. have fun no matter what life throws at you.
- You have a *finite amount of time* on this Earth. Your suffering helps no one, so why not enjoy yourself while you can?
- It's easy to be happy when things go well. The true test comes when you face losses or difficulties. The key is to *keep your heart open* and experience everything fully.
  - (i) Instead of complaining or feeling down, find joy and wonder in the experience.
  - (ii) If you realize that you've shut down, just pick yourself up and re-commit to staying open. Keep letting go of the parts of you that find reasons to be unhappy.
- When you embrace unconditional happiness, you start to experience *higher states* of ecstasy, bliss, and even a connection with the divine.

Choose To Embrace Life, Not Resist It

Most of our struggles are with past events or future anxieties, which stem from our fixed ideas of how things should be.

- *If something has already happened*, it's pointless to resist it. You're just wasting energy fighting with yourself and causing more internal turmoil.

KEY QUOTES

"You really only have one choice in this life... Do you want to be happy, or do you not want to be happy? It's really that simple. Once you make that choice, your path through life becomes totally clear."

"You were not put on Earth to suffer. You're not helping anybody by being miserable."

"Events don't determine whether or not you're going to be happy. They're just events. You determine whether or not you're going to be happy."

"Since the event has already passed, you are actually struggling with yourself, not with the event."

- We also waste energy *worrying about future events* that may never happen. Such resistance creates tension to close up the heart, blocking energy flow and reducing your vibrancy.

If you can embrace life events as they are, you'll live without stress, problems, or fear.

- Let go of preconceived notions and *allow life to unfold in the present moment*. Imagine being stuck in traffic. Instead of succumbing to stress and frustration, choose to accept the situation. You can relax, listen to music, or simply observe the world around you.

- Redirect your energy from resisting life to experiencing it. *See your time on Earth as a gift*, filled with exciting and challenging events to help you grow. Choose acceptance and openness over resistance and control.

Embrace the Inevitability of Death

Death is the ultimate teacher of life. It shows the insignificance of our worldly attachments, and the truth that we are not our bodies.

- Ask yourself: If you only had 1 week left to live, *how would you spend your final days?*

  (i) For example, if you're jealous that your wife is out meeting her friends, consider what happens when you're no longer around—do you want her to be supported by friends then?

  (ii) Realize that everything is impermanent, and your worldly concerns won't matter when you're dead.

Once you accept the inevitability of death, you can overcome the fear of living.

- Recognize that each breath could be your last, and *make each moment count*—even the mundane ones like walking in the rain. Once you're truly fulfilled, you can embrace death with no regret.

KEY QUOTES

"It is not life's events that are causing problems or stress. It is your resistance to life's events that is causing this experience."

"Life is giving you a gift, and that gift is the flow of events that takes place between your birth and your death."

"Death is not a morbid thought. Death is the greatest teacher in all of life."

"Life is not something you get; it's something you experience."

"This is how to live your life. You live it as though you were on the verge of death, because you are."

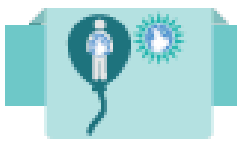
Find the Natural Equilibrium in Everything

In the Tao Te Ching, Lao-Tzu describes the Tao (or "the Way"). It's about finding natural balance in life's dualities.

- Life is full of *opposing forces*, like yin and yang, light and dark. Excess in any form—be it eating too much or too little, being too close or too distant in a relationship—leads to imbalance.
- The laws of physics say that when a pendulum is released from 1 end, it will swing to the other end. When you keep moving between extremes, you waste much more energy than if you take a *middle, direct path*.

The Tao teaches us to find the point of equilibrium in anything—including yourself—where there is no push in either direction. This natural center is where you find harmony, clarity, and vitality.

- This point of equilibrium is *not static, but dynamic*. Like sailing, it requires constant adjustment and adaptation to maintain balance amidst changing conditions. Constantly assess if you are living in balance or getting lost in the extremes. Find your sweet spot in every aspect of life, from work to personal relationships.
- Centered living means flowing harmoniously with the rhythms of the universe, and not taking life personally. *Your actions become effortless* as you move as one with the forces of life instead of striving against the currents.



Embrace the Divine In You

Singer argues that you cannot understand God from religious texts, which are written by humans and thus colored by cultural influences. The best way to know God is through your own spiritual ascent.

- As you release lower vibrations like anger and fear, you experience an "*upward drift*" in your spirit. There's a sense of elevation, spaciousness, and distance from reactive emotions.
- This is not about grasping for the spiritual, but *releasing the non-spiritual*. The more you let go of physical, emotional, and

KEY QUOTES

"Everything has its yin and yang. The Way is the place in which these forces balance quietly."

"The extremes create their opposites; the wise avoid them. Find the balance in the center and you will live in harmony."

"Effortless action is what happens when you come into the Tao…The forces take care of themselves as you sit in the center."

"The drop of consciousness, which is individual Spirit, is like a ray of light emanating from the sun. The individual ray is really no different from the sun."

mental attachments, the more you identify with your spiritual essence rather than your physical form. You experience less judgment and negativity, feel a deeper love for all things/people, and start to radiate unconditional love and openness.

Eventually, you reach a point where individual consciousness merges with universal consciousness.

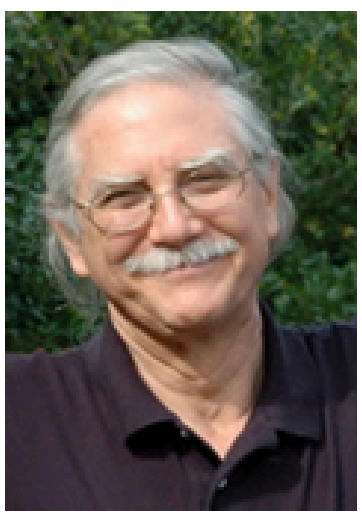
- This is described in various religious texts, where individuality dissolves into a *collective, divine essence*. In this state, you see beauty and perfection in all, perceiving everything/everyone with pure love. Singer believes this is a mirror of how God might view His creation.

- *Divine love* is unconditional and compassionate; it shines on everyone, just like how the sun shines on one and all, regardless of our actions. Let go of any fear, guilt, or shame in your relationship with God, as this only closes off your heart and Spirit. Instead, trust in God's constant, unwavering love.

Other Details in the Book to Look out For

In the book, Singer explores the nuances and practical applications for each of the concepts above, taking us on an exploration of our inner world and a journey of personal growth and spiritual awakening. For more details, please visit https://untetheredsoul.com.

About the Author

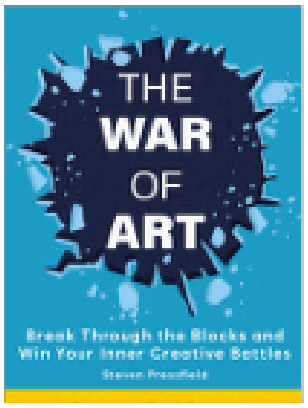


Michael Alan Singer (born 1947) is an American author, journalist, motivational speaker, and former software developer. He is best known for his writings on spirituality, meditation, and New Age philosophy. Singer earned his masters degree in economics at the University of Florida. While working on a doctorate program, he reportedly had a spiritual awakening and went into seclusion. This eventually led to his first book, The Search for Truth.

KEY QUOTES

"You can't offend the Divine One; its very nature is light, love, compassion, protection, and giving."

"Let go of the idea of a judgmental God. You have a loving God. In truth, you have love itself for a God."



THE WAR OF ART

Break Through the Blocks and
Win Your Inner Creative Battles

Steven Pressfield

The Big "So What"

In this book, Steven Pressfield explores how to overcome creative blocks to unlock your full potential, and achieve what you were born to do. The ideas are valuable for artists, entrepreneurs, athletes, and anyone trying to break through their internal barriers to success.

Introduction

In the context of this book, being "creative" refers using your intrinsic talents, insights, or passions to create or produce something new.

- This goes beyond the traditional definition of "artistic endeavors" like painting, writing, or music. It includes any endeavor where *innovation and self-expression* are key, such as entrepreneurship, scientific research, and product development. It's about bringing forth something that's deeply unique and authentic.

- To do that, you must overcome *strong internal resistance* including fear and self-doubt.

This book describes the invisible enemy to creativity, which Pressfield names "Resistance", and how to win the battle against it.

- This summary addresses the struggle against Resistance in *3 parts*:

  (i) What is Resistance?

KEY QUOTES

"When inspiration touches talent, she gives birth to truth and beauty."
—Robert McKee

"The most important thing about art is to work. Nothing else matters except sitting down every day and trying."

(ii) Winning the war against Resistance

(iii) Living your creative potential

Part 1: What is Resistance?

Pressfield depicts Resistance as the arch-nemesis of creativity. It is an omnipresent force actively working against you, preventing you from doing what you're meant to do. To successfully fight Resistance, you must first recognize and understand it.

Recognizing and Understanding Resistance

Resistance is an internal, unseen enemy. You can't see, hear, touch, or smell Resistance. However, you can feel it, like an energy field repelling you from your work, or pushing back against your creative efforts.

- Resistance exists to thwart creativity. It *affects everyone*, and it's not personal.

It's powered by fear—if you can conquer your fear, you can conquer Resistance.

- The more important the task at hand, the greater the Resistance. So, you can use the level of Resistance as a compass to *point toward what you should do*.

Resistance manifests in various forms, including procrastination, self-doubt, and self-destructive behaviors.

- We *procrastinate* by putting off a task till later. The more you procrastinate, the more it becomes a habit.
- We might also seek out *instant gratification* through sex, drugs, sweet/fatty foods, or mindless entertainment.
- Resistance could also appear as a *voice in your head*, telling you all the reasons you can't/shouldn't do what you want to do.
- Resistance can even lead to *self-dramatization and victimization*. Doctors estimate that 70-80% of patients aren't

KEY QUOTES

"Every sun casts a shadow, and genius's shadow is Resistance."

"Rule of thumb: The more important a call or action is to our soul's evolution, the more Resistance we will feel toward pursuing it."

"It's not the writing part that's hard. What's hard is sitting down to write. What keeps us from sitting down is Resistance."

"Casting yourself as a victim is the antithesis of doing your work. Don't do it."

truly sick; they're just dramatizing their condition to get attention or to get out of a situation.

Resistance can also sabotage us through the actions and needs of others close to us. It manifests as external distractions, when it actually comes from deep inside us.

- When you decide to tackle an important task, or are at the verge of a breakthrough, Resistance ensures that *something urgent suddenly pops up*. This could be anything from family emergencies to an unexpected illness, keeping you from your desired path.

- Resistance makes you *criticize others*. You project your fears and inaction onto others instead of tackling your own challenges.

Resistance doesn't just act through our action/inaction. It also acts through feelings of restlessness, unhappiness, and self-doubt, pushing us to abandon our true callings.

- The more *fear and resistance* you feel toward something, the more important it is likely to be. Otherwise you will simply feel indifferent toward it.

Resistance is also associated with fundamentalism. Both artists and fundamentalists deal with existential questions like "Who am I?" and "Why am I here?" However, they respond differently.

- *Artists* emerged from more modern, affluent and stable societies. They embrace freedom, and use their creativity to explore and express their individual identities. They believe in progress and seek to contribute to a better world through artistic expression.

- *Fundamentalists* arise from societies facing defeat or despair. They reject modernization and attempt to restore order based on rigid, traditional values. This is a form of Resistance that blocks the freedom of progress and personal expression.

Part 2: Winning the War Against Resistance

The best way to fight Resistance is to become a professional.

KEY QUOTES

"Individuals who are realized in their own lives almost never criticize others."

"The more scared we are of a work or calling, the more sure we can be that we have to do it."

"The opposite of love isn't hate; it's indifference."

- In the context of this book, being "professional" is about *embracing a mindset*, not a role like a lawyer or a doctor.

- Professionals treat their work with the *seriousness and dedication* it deserves. They show up consistently to do their work, continually hone their skills and self-mastery, and remain committed to their craft over the long haul.

Professionals vs Amateurs

There are several differences between a pro and an amateur.

Dedication: Amateurs treat their craft like a hobby, engaging in their pursuits part-time or when it's convenient. Pros are fully committed to their craft—they treat it as a full-time, long-term vocation. They integrate their work into their daily lives, working consistently on their craft 7 days a week.

Love and passion: Amateurs treat their work as something they enjoy or pursue "for fun". Pros love their craft so much that they dedicate their lives to it, making it their life's work.

Money and motivation: Amateurs see their craft as a sideline, not something they do for "serious money". Pros get paid for their work, though there are important distinctions to note:

- Pros *work for money but not for the love of money*. Their main motivation is still their passion for the craft.

- However, monetary compensation offers *extra rewards and validation*, allowing them to devote their lives to the craft, and further motivating them to excel at it.

Pros have a professional detachment that's crucial for combatting Resistance.

- They don't over-identify with their work or instruments (e.g. their voice or acting skills). For example, Madonna's cone bras and sexy clothes are just tools to shape her public persona; they don't define who she is at the core.

- This allows them to take pride in their work without becoming prideful, and to *receive criticism constructively*. Amateurs, on the other hand, take criticisms personally and can get paralyzed by the fear of failure or rejection.

KEY QUOTES

"A pro views her work as craft, not art."

"Technically, the pro plays for pay. But in the end, he does it for love."

"Playing the game for money produces the proper professional attitude."

"To the gods the supreme sin is not rape or murder, but pride. To think of yourself as a mercenary, a gun for hire, implants the proper humility. It purges pride and preciousness."

- Many professionals (such as screenwriters in Hollywood) even *incorporate themselves as businesses* to:

  (i) Gain tax and financial benefits; and

  (ii) Manage their work effectively, successfully wearing 2 hats—as the artist who does the work, and the businessperson who hires the artist.

- Similarly, Pressfield *treats his writing like a business*, holding weekly status meetings with himself to outline/assign tasks for the week, and keeping separate financial accounts for himself and his business entity.

Pros' workmanlike attitude helps them to maintain a **practical, steady approach**, so they can sustain the work over the long haul, instead of burning out too quickly.

- Unlike amateurs, who are impatient for quick rewards and results, pros accept that success and mastery take time. They're *patient* enough to wait for delayed gratification.

Pros **embrace hardship and challenges**. Pressfield's experience in the Marine Corps taught him the importance of taking pride in one's struggles to cultivate perseverance and resilience.

- Amateurs avoid new ventures or creative work due to the *fear of failure, rejection, or solitude*. They are afraid to express themselves and risk being ridiculed, and are fearful that success will alienate them from the people/things they're familiar with.

- Pros act in spite of fear, not in the absence of it. In the process, they uncover *new levels of support, understanding and fulfilment*.

  (i) Even when they work in solitude, they're never truly alone. They're always accompanied by their "Muse" or creative spirit, surrounded by the characters in their creations, and/or connected with the audience they're creating for.

  (ii) When they're deeply in flow or immersed in their work, they feel a profound level of support and inspiration.

Amateurs rely on external sources of validation, whereas pros **focus on self-mastery and expressing their creative vision**.

KEY QUOTES

"You-the-writer may get a swelled head, but you-the-boss remember how to take yourself down a peg."

"If we think of ourselves as a corporation, it gives us a healthy distance on ourselves."

"The professional arms himself with patience, not only to give the stars time to align in his career, but to keep himself from flaming out in each individual work."

"He has to know how to be miserable...Because this is war, baby. And war is hell."

"These characters [are] absolutely fascinating to us. They are us. Meaner, smarter, sexier versions of ourselves."

- Pressfield advises against relying on *external sources of support or inspiration* for creative challenges. Forget about external workshops or support groups, as these can end up distracting you from your real work. Instead, devote time for solitary work, looking inward to cultivate self-awareness, self-belief, and to discover and express your inner voice.

- *Don't wait for the perfect time or circumstances* to start. The more you give in to Resistance, the stronger it becomes.

  (i) Personal challenges cannot hinder you unless you allow them to. Tolstoy wrote "War and Peace" even though he had 13 kids, and Lance Armstrong won the Tour de France while he had cancer. Recognize your justifications for what they truly are—excuses.

  (ii) Once you start taking action, you'll find the justifications and excuses fading away. In fact, the process of engaging deeply in creative work can be healing and transformative.

- Amateurs dream/talk of grandeur, while pros focus on doing the work. Instead of waiting for inspiration before they start to work, pros focus on *techniques and tangibles* to keep moving forward. They know that if they persist, inspiration will come eventually.

- Pros recognize that real victory isn't about the end-results, but the *process of conquering themselves*.

  (i) They give themselves fully to their work regardless of the outcomes, maintaining their self-belief and commitment.

  (ii) They fight their war against Resistance regardless of internal/external challenges, injustice or bad luck.

  (iii) They realize that the real battle is in their own minds, and seek to continually improve and reinvent themselves.

During the 2001 Masters, Tiger Woods had to halt mid-swing when he was unexpectedly interrupted by a spectator's camera click. Instead of reacting impulsively, he recomposed himself and successfully continued his game—like a real pro.

Despite their successes, pros remain grounded and respectful of their craft.

- They might develop a *distinct, authentic style*, but they don't flaunt it nor impose it on others. They recognize that their

KEY QUOTES

"The professional cannot allow the actions of others to define his reality. Tomorrow morning the critic will be gone, but the writer will still be there facing the blank page."

"It's one thing to lie to ourselves. It's another thing to believe it."

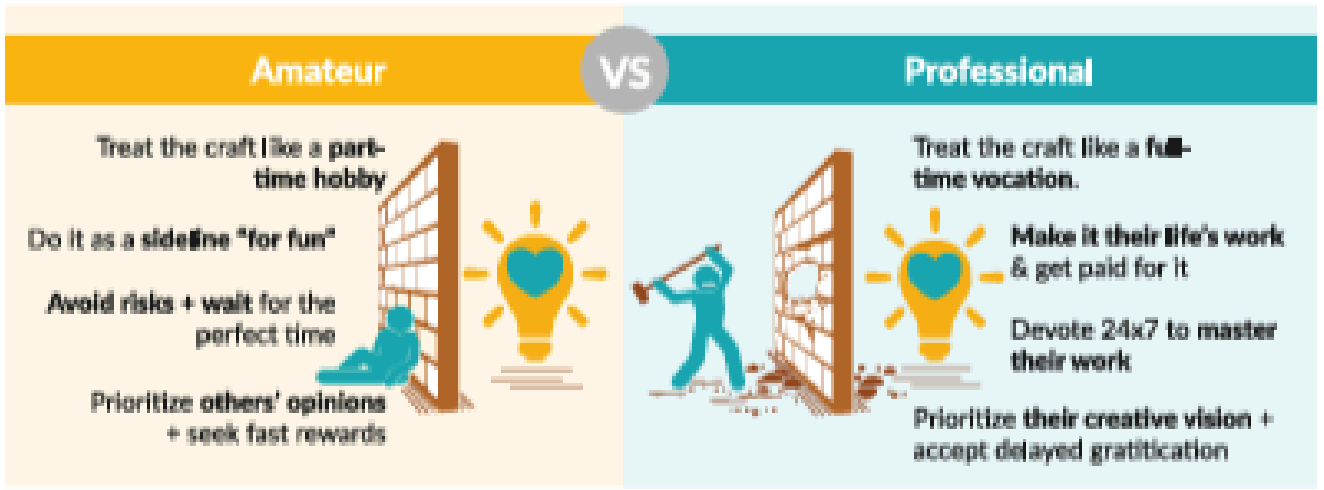
"A professional schools herself to stand apart from her performance, even as she gives herself to it heart and soul."

"The professional keeps his eye on the doughnut and not on the hole."

"The professional respects his craft. He does not consider himself superior to it."

craft is built upon the contributions of many people before them, keeping any snobbery in check.

- They *ask for help*, humbly acknowledging that they don't know everything. There are always people they can learn from, and people who can complement their skills (e.g. specialists like lawyers or accountants).



Turning Pro

In short, Resistance is persistent, but the pro wins by being even more relentless.

To become a pro, you just have to make a firm decision to make the shift.

- In his late 20s, Pressfield was at a low point. He had failed to finish any of his writing projects, and even his marriage had broken down. Resistance was winning the war. He finally *made a real decision* to buckle down and finish his book, shutting out all external distractions.

- Even though Pressfield never found a buyer for his first book, the act of finishing the book was in itself *major personal victory*. It took another 20 years before he made a break-through with *The Legend of Bagger Vance*, but he attributed the turning point in his career to that moment when he turned pro.

Most of us are already professionals in our jobs.

- We *show up daily*, and keep working until the time is up.

- We might change jobs/companies, but we're *committed* to working and building our careers for the long-term.

KEY QUOTES

"The counterfeit innovator is wildly self-confident. The real one is scared to death."

"There never was a moment, and never will be, when we are without the power to alter our destiny. This second, we can turn the tables on Resistance."

"There's no mystery to turning pro. It's a decision brought about by an act of will. We make up our mind to view ourselves as pros and we do it."

"I can state absolutely that the term of my life can be divided into two parts: before turning pro, and after."

"The professional tackles the project that will make him stretch. He takes on the assignment that will bear him into uncharted waters, compel him to explore unconscious parts of himself."

- We do this because the *stakes are high*, e.g. we need the income, or we don't want to let down our family/colleagues.
- We *get paid* for our work, so we treat it seriously and seek to become more effective at it.
- We take pride in our work, but it *doesn't define our identity*.

It's time to apply the same level of dedication to the creative work we were born to do.

Part 3: Living Your Creative Potential

Collaborating with Higher Forces

Although Resistance is formidable, it can be countered by an opposing force, which Pressfield calls "the Muse".

- Pressfield believes that there are *higher forces* at work—whether you call it God, spirit, consciousness, or infinite intelligence. These forces are ethereal and timeless, and they work through mortals like us to translate intangible potential into tangible creations.
- In classical mythology, Muses were goddesses that inspired the arts and sciences. Pressfield depicts the Muse as a *guiding presence* for artists. The Muse whispers seeds of inspiration into human ears, leading to monumental works like Shakespeare's "Hamlet" or Beethoven's "Fifth Symphony".

The creative process involves not just techniques, but a collaboration with higher powers. Pressfield starts each work day with a personal prayer to invoke the Muse, asking for inspiration to create multi-dimensional stories that can last the test of time.

- The mirrors how ancient leaders and creators sought divine support to guide their endeavors. This ritual opens Pressfield to a *flow of creative ideas and energies*. It also reminds him to stay humble and connected, to sustain and complete his work.

In other words, you can see an artistic endeavor as both (i) a battle against Resistance and (ii) a communion with higher

KEY QUOTES

"As Resistance works to keep us from becoming who we were born to be, equal and opposite powers are counterpoised against it. These are our allies and angels."

"Things that you think are nothing, as weightless as air, are actually powerful substantial forces, as real and as solid as earth."

"More than make it great, make it live. And not from one angle only, but in all its many bearings."

"Whatever you can do, or dream you can, begin it. Boldness has genius, magic, and power in it. Begin it now."
— W.H. Murray

forces. The best way to leverage such intangible forces is to commit to the creative process—get started, and keep doing the work.

- When you truly *commit to start* on a creative project, something transformative happens. Unseen forces around you are mobilized, bringing helpful coincidences and resources to aid your creative journey.

- During the process of creation, *moments of insights* might also surface unexpectedly, such as new ideas/solutions or insights on what to correct or improve. This often occurs when your mind is free from the immediate task at hand, such as during a walk. These subconscious cognitive processes are available to everyone, not just "creative" people.

KEY QUOTES

"When we sit down day after day and keep grinding, something mysterious starts to happen. A process is set into motion by which, inevitably and infallibly, heaven comes to our aid."

Embracing Your Calling

Ego vs Self. There's a distinction between the Ego (which focuses on material existence and survival) and the Self (which sees the broader, interconnected, and spiritual aspects of life. The creative battle often lies between these two, with the Ego resisting change and the Self seeking to create and evolve.

"The Ego produces Resistance and attacks the awakening artist."

Resistance is fueled by fear, especially the fear of success.

- We're afraid of facing the unknown, losing our familiar comforts or our loved ones. Pressfield assures us that such fears are unfounded—as you embrace your potential, it will only open up new levels of understanding and fulfilment.

"We know that if we embrace our ideals, we must prove worthy of them. And that scares the hell out of us."

We are not born as empty shells to be shaped by society. Each of us is born with a distinct identity and intrinsic purpose.

- Our goal in life is to *discover and realize our inherent potential*, be it artistic creation, nurturing a family, or challenging societal injustices.

"None of us are born as passive generic blobs waiting for the world to stamp its imprint on us. Instead we show up possessing already a highly refined and individuated soul."

- Often, people's life priorities change drastically once they're faced with their *mortality*, e.g. a terminal illness. Don't wait for a crisis to start focusing on what matters. Start cultivating your self-awareness and proactively resolve any internal conflicts—Pressfield believes that this will help to prevent unfulfilled potential from manifesting as mental or physical ailments.

"Our job in this lifetime is not to shape ourselves into some ideal we imagine we ought to be, but to find out who we already are and become it."

Artists thrive when they focus on their skills and passions, instead of competing for external recognition or status.

- All human beings derive psychological security either *hierarchically or territorially*.

  (i) A *territorial approach* means deriving your motivation and fulfillment from your work/domain, without the influence of rivals or the need for external validation.

  (ii) A *hierarchical approach* means focusing on social or professional rank, or how you stack up against others.

- *Artists thrive within a territorial framework*. By staying true to their vision, they can produce work that's genuine and original. It shifts the focus from trying to surpass others, toward mastering their craft and expressing themselves authentically and innovatively. When you're working in your territory:

  (i) You feel energized and motivated with a deep sense of intrinsic enjoyment;

  (ii) You'd still do the work even if no one else was around; and

  (iii) For every ounce of love and effort you put in, the territory gives back in kind so you feel rejuvenated (not drained).

- For example, a painter finds *true fulfillment* when she's absorbed in the colors and strokes that bring her vision to life, regardless of whether anyone sees or critiques the final product. A writer feels energized when he's writing about a topic he cares deeply about, regardless of whether it becomes a bestseller.

- By contrast, *hacks* work solely for commercial success or public approval. They prioritize market demand over personal vision, delivering what they think people want to see/hear instead of following their inner compass.

Ultimately, artists are intermediaries between higher realms and the tangible world, channeling unseen energies into their creations.

- They are humble before their craft. They recognize that their work is *created through them, not by them*.

KEY QUOTES

"In the hierarchy, the artist looks up and looks down. The one place he can't look is that place he must: within."

"The artist cannot look to others to validate his efforts for his calling...The artist must operate territorially. He must do his work for its own sake."

"A territory is a closed feedback loop. Our role is to put in effort and love; the territory absorbs this and gives it back to us in the form of well-being."

"As the mother-to-be bears her child within her, so the artist or innovator contains her new life. No one can help her give it birth. But neither does she need any help."

- Look inward to see/feel *what's growing in you*, and explore how you can best bring it forth into the world.

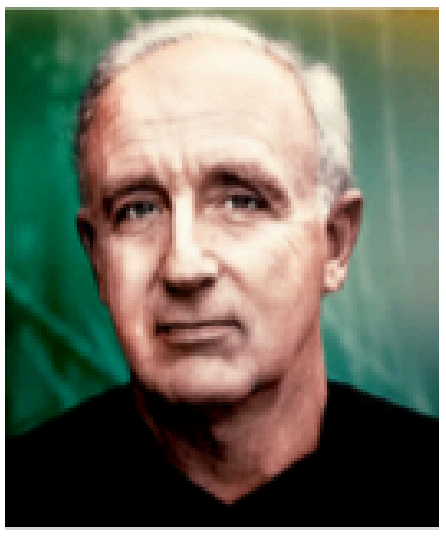
To actualize your creative potential, see your craft as a vital contribution to the world, not a means to personal glory.

- Focus on the process of creation, *without attachment to the outcomes*.
- Treat your artistic endeavor as an *offering to a higher power*. In so doing, you deepen your spiritual connection and contribute to the collective human progress towards enlightenment.

Other Details in the Book to Look out For

To realize your potential and do what you were born to do, it's crucial to overcome Resistance and connect with your higher Calling. The real battle is internal—to master yourself and persist with your creative endeavors, not to gain external recognition or status. In the book, Pressfield shares his personal struggles, experiences and perspectives to motivate readers in their creative pursuits. For more details, please visit https://stevenpressfield.com.

About the Author



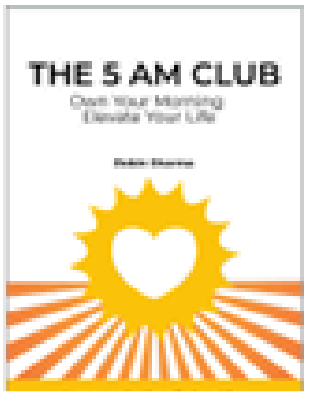
Steven Pressfield (born 1943) is an American author, known for his historical fiction, nonfiction, and screenplays. He spent 27 years writing—taking on a variety of jobs to support himself—before achieving significant literary success. He has worked as an advertising copywriter, schoolteacher, tractor-trailer driver, bartender, oilfield roustabout, attendant in a mental hospital, and fruit-picker.

His breakout novel, The Legend of Bagger Vance, was later adapted into a major motion picture.

KEY QUOTES

"I trusted what I wanted, not what I thought would work. I did what I myself thought was interesting, and left its reception to the gods."

"Creative work is not a selfish act or a bid for attention on the part of the actor. It's a gift to the world and every being in it. Don't cheat us of your contribution. Give us what you've got."



THE 5AM CLUB

Own your Morning. Elevate your Life.

ROBIN SHARMA

The Big "So What"

In this book, Robin Sharma invites you to join the 5AM Club and the ranks of the top 5% of performers. Using a parable, he explains various productivity principles and tactics built on research and brain sciences, to help you transform your results, health, and happiness.

The Parable

The parable is about 2 people who managed to transform their lives with the help of a guru and a tycoon.

- The *story* began with an Entrepreneur whose life was falling apart, and an Artist who wanted to unlock his creativity and potential. They met at a seminar by the Spellbinder, a famous guru known for his teachings on peak performance, neurobiology and human potential. At the seminar, the Entrepreneur and Artist ran into an eccentric multi-billionaire who'd been personally mentored by the Spellbinder. The Billionaire invited them to his private island, where he imparted the principles and insights that had transformed his life (and would now transform theirs).

- *The 5 AM Club* is the cornerstone of achieving world-class performance and living a splendid life. It involves the habit of waking up at 5am daily, starting your day on a right note, and adopting a range of positive habits to multiply your results.

Throughout the story, the Billionaire and Spellbinder share quotes from famous people, findings from scientific

KEY QUOTES

"Every professional was once an amateur, and every master started as a beginner. Ordinary people can accomplish extraordinary feats, once they've routinized the right habits."

research, frameworks, principles and tactics for achieving peak performance, inner peace and joy. We've distilled and organized the key insights into 2 parts in this summary:

- The ingredients for top performance; and
- How to become a member of the 5 AM Club.

Part 1: The Ingredients for Top Performance

The 3-Step Success Formula

To be in the top 5% and gain a "Gargantuan Competitive Advantage" (GCA), you must be willing to do what 95% of people don't or won't do. This starts with choosing how to lead your life.

- *Leadership* isn't about your title or position; it's about what you stand for, focus on and commit to on a daily basis.
- To become a master in any field, you need *rigor and persistence*. Masters spend years to learn, experiment and improve their expertise and insight. Every wildly-successful person has had his/her share of struggles. For example, Stephen King faced so many rejections that he actually threw away the manuscript for "Carrie" in frustration. Fortunately, his wife recovered the manuscript from the thrash and this became King's first published novel.
- Masters also demand the highest standards down to the *granular details*. Instead of churning out hundreds of mediocre pieces, they spend years to perfect the details of a single masterpiece. F1 crews adopt fastidious standards in their checks, calibration and cleanliness because they know that a loose screw or a speck of dirt can mean the difference between winning and losing, or life and death. Indeed, the Challenger space shuttle exploded due to the failure of a single, seemingly-inconsequential O-ring seal.

In short, there're 3 steps to achieving phenomenal success:

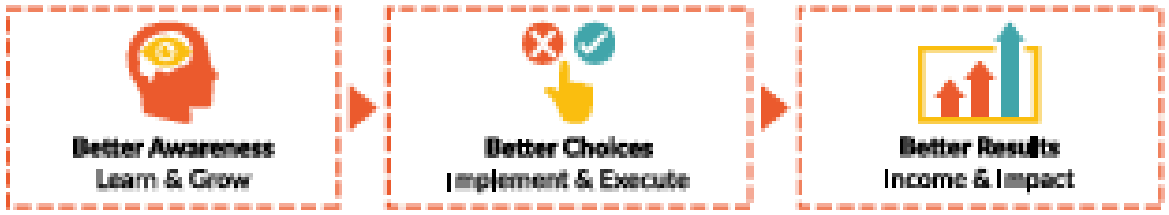
KEY QUOTES

"Each of you has a call on your lives. Every one of you carries an instinct for excellence within your spirits."

"Leadership is a lot less about having a formal title, a large office and money in the bank. And a lot more about committing to mastery over all you do—and in who you are."

"Consistency is the key to mastery."

"Geniuses understand that it's smarter to create one masterwork than one thousand ordinary pieces."



- Be *aware* of your values, why you do what you do, and how you want to be remembered.

- Use this consciousness to guide your daily *choices*, so that every action you take contributes to your goal.

- Applied rigorously and consistently, the 3 steps will dramatically improve your *results* and impact.

The most outstanding people commit to becoming the best version of themselves and living an original life. They demand high standards in all aspects of their attitudes, actions, and output.

By contrast, 95% of people only achieve mediocre results because they lack the clarity, focus and discipline of the top performers.

- Most people follow the same *mindless routine* daily. They spend their time checking emails/messages, surfing the internet, watching TV and doing menial chores. They find *excuses* for not pushing themselves beyond their comfort zone. Instead of maximizing their potential or impact, they pursue bigger salaries, titles and houses to *impress others*.

- Geniuses are often treated like *weirdos or misfits* because of their crazy visions and maniacal standards. Ironically, these visions and standards are what make them top achievers in the first place.

To become a master of your life and craft, you must be willing to pay the price.

- Be prepared to *persist* in face of ridicule/criticism and stick to your vision and standards even when you don't feel like it.

- Realize that *true power* doesn't come from your riches or status, but your inner state—how far you tap into your talents, and live with self-discipline, integrity, honesty, and empathy. By all means enjoy the money and status

KEY QUOTES

"World-class is a process, not an event."

"The majority is stuck in vague, imprecise thinking. And vague, imprecise thinking yields vague, imprecise results."

"You can fit in. Or you can change the world. You don't get to do both."

that comes with success, but do so without becoming attached to them or allowing them to define who you are.

4 Areas of Focus for Top Performance

Top performers focus on four things: leveraging their talents, working without distractions, gaining personal mastery, and consistently stacking small wins. Sharma calls these the "four focuses of history makers."

Top achievers aren't born with superior talent; they simply actualize more of their potential. "Capitalization IQ" is the ability to put your inborn gifts to use.

- To attain mastery or world-class standards, you need to work at something for a long period of time. This in turn requires the *right beliefs and self-identity*. If you don't believe you have what it takes, you won't persist long enough to succeed. Build your self-belief and confidence, then get to work on unleashing your inner giant and genius.

Free yourself from distractions. You can't deliver exceptional results if your mental capacity is diluted across too many things.

- One of the biggest sources of distractions comes from *addiction to technology*. If you spend the entire day on your devices, you'll find yourself overwhelmed by endless emails, messages and social media updates, leaving you with no time or energy for meaningful work.

- We also tend to *self-sabotage*. As part of our survival instinct, the "primitive" part of our brain (the limbic brain) is always looking for threats or danger. The prefrontal cortex (in charge of higher-level thinking) seeks growth and progress. When you're working on something challenging, you may suddenly feel the urge to jump on a new idea/opportunity, take a break, or work on something else. This is your primitive brain trying to distract you from the difficult task (due to its fear of failure and uncertainty). Be aware of this tendency, so you can resist the impulse and deliberate persist onward.

KEY QUOTES

"Stop managing your time and start managing your focus."

"There's a staggering difference between being busy and being productive."

- Don't confuse busyness with productivity. *Simplify your life* and concentrate on just a few high-value items at any point in time. Focus on a few projects that you can deliver with stellar results, instead of jumping from task to task. Invest your time and energy on a few deep, meaningful relationships instead of many shallow ones. Work on a 1 important activity at a time instead of multitasking.

Your external results are a reflection of your inner state (your mindset, creativity, abilities, confidence etc.). Continually improve your personal mastery and abilities to multiply your results.

- In particular, use the 5 AM Club to build *4 "interior empires"*:

  (i) *Mindset* (psychology): Work on your deepest beliefs, self-talk and outlook, which jointly define how you think and act.

  (ii) *Heartset* (emotionality): You can't produce amazing work if you're weighed down by resentment, sadness or fear. Improve your emotional health by releasing toxic emotions and opening your heart to gratitude and joy.

  (iii) *Healthset* (physicality): Build your physical fitness to increase your energy levels, operate at an optimal cognitive state, and improve your longevity.

  (iv) *Soulset* (spirituality): Spend some quiet time to remember who you truly are, connect with yourself and rediscover your compassion, conviction, and courage.

If you consistently improve by 1% a day, you'll minimally elevate yourself by 365% each year. Sharma calls this "day stacking." Focus on what you can do today to build an exceptional life. Live fully and unapologetically, dare to love and express yourself, and feel truly alive in the moment.

KEY QUOTES

"An intense concentration only on what matters most is how the pros realize victory. Simplify. Simplify. Simplify."

"The only devils in the world are those running in our own hearts. That is where the battle should be fought."
– Mahatma Gandhi

"Small, daily, seemingly insignificant improvements, when done consistently over time, yield staggering results."

Part 2: Joining the 5 AM Club

The 5 AM Club (waking up at 5am and using the 20/20/20 Formula below) gives you a headstart in cultivating the clarity, discipline, rigor, and habits for top performance.

How It Works

The 5 AM Club is built on various scientific truths about the brain, willpower and habits.

When we're awake, our prefrontal cortex is usually in a state of hyper-activity, analyzing and worrying about everything. When you wake up at 5am, the peace and quiet allows your prefrontal cortex to switch off temporarily so you enter a state of "transient hypofrontality".

- In this state, your brain waves slow down from beta to alpha (or even theta). The peace and silence also trigger the release of hormones like dopamine and serotonin, all of which put your brain in the ideal condition to enter a *Flow state*—a state of joyful peak performance where you're absorbed in a challenging task and operating at the edge of your abilities.

- Many famous people—including John Grisham, Wolfgang Amadeus Mozart, Georgia O'Keeffe, Frank Lloyd Wright and Ernest Hemingway—have the *habit of waking before daybreak*.

Neuroplasticity refers to our brain's ability to change throughout our lives. When we do something repeatedly, it causes certain neural circuits to fire together and eventually wire together, making the task easier to perform. After years of navigating the complex streets of London, the cabbies there were found to have a larger-than-usual hippocampus (which handles spatial reasoning). People who're constantly learning and challenging themselves will develop different brains from those who don't.

Willpower isn't an inborn trait. It's actually a skill that can be developed through practice, like how we build muscles.

KEY QUOTES

"Anyone can be great for a minute. The sport of icons is sustaining genius-grade performance over a lifetime."

"You don't have the brain you want, you have the brain you've earned."

- *Increasing our self-control* in 1 aspect of our life also increases self-control in other areas.

- However, willpower gets depleted with use and *weakens when we're tired*. That's why we find it harder to exert self-control or make good decisions at the end of a long day.

- Top producers outperform others because they've built the *habit of performing high-value activities*. Initially, they had to force themselves to persist each time they felt like quitting. Over time, they strengthen their willpower, self-mastery and discipline, until it's habitual to operate at a higher level.

- You can also build your willpower by regularly putting yourself in *uncomfortable situations*, e.g. sleeping on the floor once a week, taking cold morning showers, or fasting a few times a month.

You need to exert willpower to build a new habit. However, once you've installed the habit, it becomes automatic and effortless. There are 4 steps involved in habits formation:

- The process begins with a *trigger*, e.g. an alarm ringing at 5am.

- Once that happens, it's important to establish the right *ritual* by jumping out of bed and moving into your Victory Hour (elaborated below). Going back to bed will only create an undesirable habit.

- Make sure you *reward* yourself each time you complete the desired ritual, e.g. treat yourself to some dark chocolate or an afternoon nap.

- Each time you *repeat* the cycle, you're rewiring your brain and locking in the new habit.

It takes about 66 days to form a new habit over 3 phases.

KEY QUOTES

"To regularly do that which is hard but important when it feels most uncomfortable is how warriors are born."

"Legendary performers practice being spectacular for so long that they no longer remember how to behave in non-spectacular ways."

"The soreness of growth is so much less expensive than the devastating costs of regret."

"All change is hard at first, messy in the middle and gorgeous at the end."

- *Destruction (22 days)*. Starting a new habit is always tough, as your brain struggles to break old patterns and rewire new ones. Each time you hit a wall, push through it no matter what. Remind yourself that the hardest parts are also the most valuable.

- *Installation (22 Days)*. This phase is akin to being in the middle of a renovation. The old structures have been torn down, and you're about to install the new ones. You're in unfamiliar territory, things feel chaotic and frustrating, and you may be tired after struggling for a few weeks. Resist the urge to return to old habits. Keep persevering.

- *Integration (22 Days)*. At this phase, the new habit starts to feel familiar, and you start to experience the benefits of your new rewiring.

- If you stick to the same routine consistently for at least 66 days, you'll hit the "*Automaticity Point*". When the alarm goes off at 5am, it's now second nature for you to jump out of bed and start your ritual without exerting willpower. Don't stop there—direct your willpower to start building another new positive habit!

KEY QUOTES

"Persistency sits at the threshold of mastery."

"For the A-Player, the top of one mountain is the bottom of the next. The installation of one great new habit brings on the outstanding opportunity to begin the next."

The 20/20/20 Formula

Your willpower is strongest at the start of your day, and weakens as you get tired. So, the first hour of your day (5-6am) is crucial. Sharma calls this your Victory Hour. He recommends splitting this hour into 3 x 20-minute blocks where you focus on building your Mindset, Heartset, Healthset and Soulset.

- *Move* (0500-0520): Start your day with intense exercise that makes you sweat. This triggers a host of biochemical reactions in your brain and body to put you in an optimal cognitive state.

  (i) Specifically, intense exercise reduces your cortisol levels, and releases BNDF (brain-derived neurotropic factor) which repairs brain cells, promotes new brain cell growth, and speeds up neural connections so you'll think faster/better. Exercise also increases your

"Take excellent care of the front end of the day, and the rest of your day will pretty much take care of itself. Own your morning. Elevate your life."

levels of dopamine (a neurotransmitter) and serotonin (which regulates happiness).

(ii) Sharma recommends that you use an old-school alarm clock instead of using your phone. Adjust the clock 30 minutes ahead of the actual time, then set your alarm for 5:30 am to give the illusion that you're waking up later.

(iii) You can even sleep in your workout clothes to make it easier to start your Victory Hour.

- *Reflect* (0520-0540): Use the next 20 minutes for quiet reflection, meditation, prayer, journaling or planning. This provides focus and "residual wisdom" to guide your day.

(i) Be still and give yourself the gift of serenity and quietude. Contemplate your life, how you wish to express your values, and how you wish to grow.

(ii) Think of the day ahead of you. Try listing down 5 mini goals that, if accomplished, will make this a great day.

(iii) Download your thoughts and feelings in a journal. Don't overthink it; just write down whatever comes to mind—both the good and the bad. Consider what you're grateful for, and release any hurts or resentments that're weighing you down. When you give voice to your repressed emotions, it lightens your burdens and starts the healing process.

- *Grow* (0540-0600): Use the final 20 minutes to learn and grow. Consider how you can increase your capacity/ impact and become more valuable to your industry and society. Use the time to read a book, listen to podcasts, watch an educational video, or study the lives of successful people.

The 20/20/20 formula is a keystone habit, i.e. a set of behaviors that multiplies other helpful behaviors. You can adjust or tailor it to suit your needs and preferences.

KEY QUOTES

"The real purpose of commerce is not only to make your personal fortune. The true reason to be in the game is to be helpful to society."

Beyond the Victory Hour and 20/20/20 Formula

You can use these strategies, tactics and insights to amplify your productivity for the rest of your day.

For optimal productivity, creativity, health and longevity, you need 5 x 90-minute sleep cycles, or 7.5 hours of quality sleep each night.

- Your *evening routine* is as important as your morning routine.

  (i) Finish your last meal by 8pm and turn off all digital devices. Research found that blue light from digital devices can disrupt sleep and impair cognitive functions.

  (ii) Use the time before bed to connect with loved ones, meditate, take a relaxing bath, or read/listen to educational materials.

  (iii) Sleep in a cool, dark room without electronic gadgets.

Learn to conserve and manage your willpower supply:

- *Recharge* yourself throughout the day so you won't be too exhausted to exercise your willpower or make sound decisions.

- Keep your *surroundings* neat and tidy, since a messy environment creates distractions that deplete your mental capacity.

- Remove unnecessary decisions to *prevent decision-fatigue*, e.g. wear the same type of clothes daily or have a fixed routine. Keep your mental capacity for truly important decisions.

Use the "Tight Bubble of Total Focus (TBTF)" to protect your mental focus, physical energy, willpower, time and talent. This is a metaphorical bubble to keep out unwanted distractions, negativity and energy-vampires, so you can operate in a space of solitude and creativity similar to the Victory Hour. Carry this bubble with you, and deliberately choose which people, activities or influences you allow into your life.

KEY QUOTES

"To find your best self you must lose your weak self."

Apply the 90/90/1 Rule to focus on real work. For the next 90 days, set aside the first 90 minutes of your workday (after your Victory Hour) to focus on the 1 top project that'll give you the greatest payoff once it's completed.

Professional athletes routinely push their muscles to breaking point, then rest for 1-2 days during which their bodies can recover and grow new muscles. Likewise, we must alternate between intense work and complete rest/recovery. Push yourself to the max, then take time to play and recuperate.

- After your 90/90/1 session, use the *60/10 Method* to alternate between 60-minute bursts of intense work and 10-minute renewal periods. During the 60 minutes, enter a TBTF so you can work productively in a distraction-free zone. Then, recover fully with a quick walk, music, meditation, etc. for 10 minutes before starting the next 60/10 cycle.

- Occasionally, take longer periods to rest or play, e.g. go on a vacation. When paired with periods of intense work, our play/rest time also doubles up as an *incubation window* for new ideas and insights.

Schedule a "Second Wind Workout" at the end of your workday, to give yourself a boost of energy and willpower for the evening. You can also consider a 1-hour nature walk for reflection.

Schedule 2 weekly sessions of 90-minute deep-tissue massages. This is a good way to reduce stress, improve brain performance and general wellness.

Study for ≥60 minutes daily, e.g. read a book, take an online course or speak with a mentor. Convert your commute time into learning time. Keep raising your standards in all areas of life, e.g. hone your business skills, people skills, and learn to appreciate fine arts and culinary.

Delegate the tasks that drain you or things you're weak at, so you can focus on the things that you're great at and love to do.

Every Sunday, set aside 30 minutes to design a gameplan for the coming week. In your journal, record the highlights

KEY QUOTES

of your past week (including the key lessons learned and new areas for optimization). Then, list down your commitments for the coming week, schedule the slots for your Victory Hour, 90/90/1 sessions, 60/10 cycles, and second wind workouts, and set aside time for your loved ones and key priorities.

Other Insights for a Splendid Life

We tend to live as if we have all the time in the world, when life is actually fragile and unpredictable. Make each day count—be true to yourself, pay attention to miracles around you, and don't wait to express your inner genius.

Let your joy be your personal GPS: Focus on people, pursuits, and places that make you feel joyful, blissful and alive. Even if your life seems be crumbling around you, know that the setbacks are only temporary. Once you shift your focus, you'll start to notice new options and opportunities that you may have missed.

The more you give to others, the more you receive. The same dollar flows through the economy to benefit many people, whereas hoarding cash stops it from flowing. True wealth is built on generosity, not scarcity:

- *Give generously*—from tips to donations, love, compliments and positive thoughts—without expecting anything in return.
- *Forgive* those who've hurt you. Realize that they do so because they're suffering or in pain themselves. When you forgive, you also release the resentment and toxic emotions in you.

Other Details in the Book to Look out For

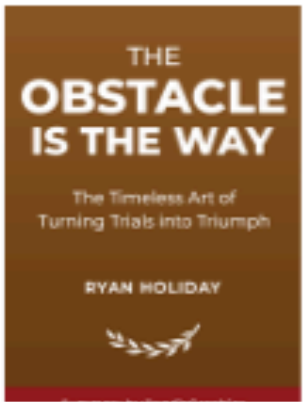
The book presents many overlapping ideas and success frameworks without specifying how they're interlinked. Examples include: "The 5-3-1 Creed of The Willpower Warrior", "Twin Cycles of Elite Performance", "10 tactics of lifelong genius",

KEY QUOTES

"Nothing works for those who don't do the work."

"Tomorrow is a bonus, not a right."

"The flow of life rewards positive action and punishes hesitation."



THE OBSTACLE IS THE WAY

The Timeless Art of Turning Trials into Triumph

RYAN HOLIDAY

The Big "So What"

To live to your full potential, you must overcome all sorts of obstacles and convert them to opportunities and strengths. In this book, Ryan Holiday explains how to go about doing that with 3 key disciplines.

Introduction

All of us face obstacles. Such obstacles can be physical (e.g. size or ability), mental (e.g. knowledge or experience), or emotional (e.g. fear or frustration). Obstacles can also be real or perceived. Today, we face more internal obstacles than external ones. Faced with an abundance of options and progress, we've grown comfortable, soft and entitled.

Roman emperor Marcus Aurelius once wrote: "The impediment to action advances action. What stands in the way becomes the way." Successful organizations and individuals aren't crushed by obstacles. They turn adversity to strength to end up even better than before they encountered the obstacles.

In this book, Holiday consolidates his analysis of ancient philosophers' works on Stoicism into practical insights and tips to overcome obstacles. These are broken down into 3 disciplines:

- *Perception*: how you look at your problems;
- *Action*: how to tackle problems in actionable parts; and
- *Will*: how to cultivate your inner being to conquer difficulties.

KEY QUOTES

"Great times are great softeners. Abundance can be its own obstacle, as many people can attest."

"Great individuals, like great companies, find a way to transform weakness into strength."

"Whatever we face, we have a choice: Will we be blocked by obstacles, or will we advance through and over them?"

Part 1: Perception

Your perception is how you interpret what's happening around you. Two people may see and respond differently to the same situation because of varying perceptions. To turn adversity to strength, the first step is to manage your perceptions.

Manage your perceptions: calmly observe what's happening, then identify ways to turn things around.

- During the financial crisis of 1857, John D. Rockefeller was still a small-time investor. Despite the mass panic, Rockefeller didn't exit the market. Instead, he calmly saved up, used the opportunity to observe what was going on, and gained critical insights about the financial markets. Thereafter, Rockefeller applied the same composure, discipline and objectivity to invest in oil. Over the next 20 years, he gained control of 90% of the oil in the United States while his competitors languished.

- Don't allow emotional impulses to cloud your judgment. Realize that what others think is bad may not always be so. Look beyond outward appearances to objectively assess what's happening, and identify opportunities others may have overlooked. See the big picture, but focus on areas within your immediate control.

Be Objective

In any event, there are 2 types of stories:

- The *objective facts* about what actually happened (e.g. you lost money in an investment); and

- Your *subjective story* (e.g. deciding whether it's "good" or "bad", "fair" or "unfair").

To be objective in your perception, you must remove yourself from the equation. You can pretend that you're giving an advice to a friend, or that the issue isn't important to you.

KEY QUOTES

"Perception precedes action. Right action follows the right perspective."

"We can see opportunity in every disaster, and transform that negative situation into an education, a skill set, or a fortune."

"What matters most is not what these obstacles are but how we see them, how we react to them, and whether we keep our composure."

"Give yourself clarity, not sympathy—there'll be plenty of time for that later."

Acknowledge your Power

In any situation, you *always* have the power to choose your thoughts and responses. You are never powerless or without options.

- In the 1960s, champion boxer Rubin "Hurricane" Carter was convicted of three life sentences for a triple homicide that he didn't commit. Yet, he didn't give up. He dedicated his time in prison to work on his legal case, successfully freeing himself 19 years later. Even then, he chose to resume his life rather than seek redress for his unjust prison sentence.

- Despite his limited options, Carter was not powerless, and he chose to use that power to make the best of his situation.

So long as you focus on your options, you can find ways to turn things around. But once you give up, your obstacles would truly have beaten you.

Control your Nerves

Our emotions can get the better of us, especially when we seem to be surrounded by problems, enemies and uncertainty. If you give in to your nerves, you'll only feel more stressed and overwhelmed. Control yourself: refuse to be intimidated, realize there's *always* something you can do about the situation, and accept that *you* must be the one to take control.

Your interpretation affects your perspective. When you react calmly as if something is not a big deal, then it'll truly *not* be a big deal.

Don't Panic

When you panic, you make mistakes, deviate from plans/procedures, and act irrationally. Take control of your emotions; don't let them control you. Ask yourself: Can this

KEY QUOTES

"Our perceptions are the thing that we're in complete control of. They can throw us in jail, label us, deprive us of our possessions, but they'll never control our thoughts, our beliefs, our reactions."

"There is no good or bad without us, there is only perception. There is the event itself and the story we tell ourselves about what it means."

"There is always a countermove, always an escape or a way through, so there is no reason to get worked up."

"Can you fight the urge to panic and instead focus only on what you can change?"

emotion help you to change the situation or issue? If not, don't let it drive you. Instead, use logical questions and statements to identify the root causes so you can make real progress.

Things that're unfamiliar tend to seem more fearful. By repeatedly practicing your responses to specific challenges, you can train yourself to overcome your fears, and become less likely to panic in similar situations. NASA trains its astronauts by simulating the space environment and likely events, then getting the astronauts to practice the details over and over until they can handle them calmly and intuitively.

Modify your Perspective

You're free to change your perspective, since you are the one who decides what it should be. Shift your perspective by (i) changing the *context* to see the bigger picture and/or (ii) *reframing* how you choose to interpret an event. In his early years in Hollywood, actor George Clooney faced numerous rejections and blamed the system for not recognizing his talent. Things changed after he realized that *he* was responsible for showing that he was perfect for a role. Thereafter, he made it a point to prove himself in auditions, preproduction, filming etc., and transformed his results.

Minor shifts in viewpoints can make a huge difference. For example, if you think "I am bad at writing", you make yourself the problem instead of the task at hand, which is to finish your writing.

Focus on What You Can Do

There're many things in life that're out of our control, e.g. the weather, other people's reactions, or the economy. You can choose to complain and feel helpless, or you can choose to find ways to overcome your obstacles and gain power in the process. In 1974, legendary baseball player Tommy John suffered a major injury to his pitching arm that should've ended his baseball career. Yet, he refused to give up.

KEY QUOTES

"With enough exposure, you can adapt out those perfectly ordinary, even innate, fears that are bred mostly from unfamiliarity."

"The right perspective has a strange way of cutting obstacles—and adversity—down to size."

"When you can break apart something, or look at it from some new angle, it loses its power over you."

"To argue, to complain, or worse, to just give up, these are choices. Choices that more often than not, do nothing to get us across the finish line."

He discovered that he had a 1 in 100 chance of recovery if he underwent an experimental surgery and rehab. He took that chance, recovered, and won 164 more games over the next 13 seasons.

Don't waste energy and effort resisting what has happened or complaining about things you can't change. Focus 100% on the things you *can* change. Even if it offers just a 1% chance of success, use it to make a difference.

Focus on the Now

Don't overthink an issue by dwelling on the past, worrying about the future, or trying to find the meaning behind everything that exists or happens. The reasons you *think* are behind your obstacles are just your unproven theories. For instance, disadvantages don't necessarily set you back, since half of all Fortune 500 companies were actually started during a recession or bear market.

Focus on the present moment and how to make the most of your time *now*. Remove distracting thoughts from your mind through meditation, exercise or other methods. Focus on what you can do in the present, and move forward one step at a time.

Think Outside the Box

When someone gives us a seemingly-impossible task, we tend to argue and complain. The truth is, you can get *anything* done if you truly set your mind to it. A week before the launch of the first Macintosh computer, the engineers at Apple told Steve Jobs that they needed an extra week to finish the project. Jobs calmly told them that if they could do something in 2 weeks, they could very well do it in 1 week. The engineers pushed ahead and completed the Mac in time.

Don't settle for mediocracy or let others define what's "possible" for you. Dare to stand out from the crowd and challenge yourself to aim high. In fact, you're likely to be the

KEY QUOTES

"Focusing exclusively on what is in our power magnifies and enhances our power."

"Those who survive...survive because they took things day by day—that's the real secret."

"Focus on what is in front of you, right now."

"Our perceptions determine, to an incredibly large degree, what we are and are not capable of."

"Our best ideas come... where obstacles illuminate new options."

most creative when you're *forced* to come up with a novel solution against the odds.

Look for the Opportunity in the Problem

In any situation or problem, there'll *always* be opportunities. Once you're in control of your emotions, you can find ways to flip something seemingly-negative into something positive.

- During WWII, the Germans used the Blitzkrieg maneuver to send large, concentrated numbers of troops tearing into the Allied formations like the tip of a spear. Each time, the incoming German troops seemed so overwhelming that the Allied forces panicked and scattered.

- American general Dwight Eisenhower stayed calm in face of the disaster and found an opportunity in the obstacle. In the subsequent battles, the Allied troops deliberately allowed the German army wedge to enter their formation, then encircled them from the rear to attack them from all sides. This became the turning point of the war.

Obstacles are always opportunities for growth. A bad boss could push you to find a better job elsewhere. A rival could motivate you to up your game. A business mistake teaches you that your hypothesis is wrong. In fact, many athletes who suffered a major injury or adversity ended up improving in those very areas—a phenomenon known as adversarial or post-traumatic growth. Learn to turn adversity into opportunity.

Part 2: Action

Once you have your perceptions and emotions under control, you're ready to take real action.

In face of a tough challenge, you can procrastinate, avoid the problem, feel sorry for yourself or make the most of the situation. In the end, a problem will only be as bad as you make it out to be.

KEY QUOTES

"Seeing through the negative, past its underside, and into its corollary: the positive."

"There is good in everything, if only we look for it"
- Laura Ingalls Wilder

"A clearer head makes for steadier hands"

- Famous Greek orator, Demosthenes, was a sickly child with a serious speech impediment. He lost his father at the age of 7 and his inheritance was stolen by his guardians. Instead of wallowing in self-pity, Demosthenes took extreme measures to conquer his obstacles. To overcome his speech impediment and strengthen his voice, he practiced speaking with his mouth full of pebbles or while running up steep slopes. Instead of going out to play, he locked himself underground to self-study.

- Demosthenes eventually won a suit against his guardians, got back what was left of his inheritance, and went on to become a great orator. He was dealt a bad hand in life, but chose to take action and turn his challenges into strengths.

Stay in Motion

To achieve a goal and overcome obstacles, you must grasp any opportunity to get started, then keep moving. Don't wait for the perfect opportunity, nor allow fear or self-doubt to stop you from taking the first steps.

- Amelia Earhart dreamed of becoming a pilot—a seemingly impossible goal in the 1920s when gender discrimination was rife. Her first piloting opportunity was far from ideal: she had to be supervised by male chaperones and wouldn't even be paid. Still, she grabbed the chance. This crucial first step led to many other opportunities and each time, Amelia said "yes".

- Five years later, Amelia became the first woman to fly solo across the Atlantic. This was only possible because she made the most of every opportunity to move forward and build momentum.

Any opportunity is a good starting point, as it can lead to new options down the road. Keep saying yes, and stay in motion until you reach your goal.

KEY QUOTES

"The proper perception—objective, rational, ambitious, clean—isolates the obstacle and exposes it for what it is."

"It matters what you do with what happens and what you've been given."

"You've got to start, to go anywhere."

Persist till you find a Solution

Innovation requires persistence. Often, you must exhaust all obvious options before you'll discover a new solution. During the United States Civil War, General Ulysses Grant tried without success to penetrate Vicksburg's defences. After trying almost every known military strategy for close to a year, he finally decided to try the unknown—his troops left most of their supplies behind, crossed the river and lived off the enemy lands as they conquered them. Eventually, they broke the enemy's will and succeeded.

Know that there's always a solution that works—all you need to do is persist long enough to find it.

Fail Forward

There's nothing shameful about failing. Failure is actually an asset if you use it to learn what doesn't work and how to improve. Failure is only bad when you don't learn from it.

In Silicon Valley, start-ups launch with Minimum Viable Products (MVPs) instead of finished products. They use the MVPs (with only 1-2 core features) to test customers' responses, so they can fail cheaply, make adjustments quickly and move on to test the next iterations. Use the same approach in your life—turn every failure into an opportunity by using the lessons to reflect, re-evaluate, and recreate, over and over again. Iterate your way to success.

Take One Step at a Time

Every goal is achieved via a series of steps. To realize your goal, you need to define and focus on the process required to get there. Don't worry about the end-results, e.g. winning a championship. Instead, focus on the task at hand, e.g. finishing a drill or workout.

KEY QUOTES

"Genius often really is just persistence in disguise."

"The one way to guarantee we don't benefit from failure—to ensure it is a bad thing—is to not learn from it."

"Failure shows us the way—by showing us what isn't the way."

"Follow the process and not the prize."

Break down a complex goal into small steps. Instead of an overwhelming feat, you now have small, manageable tasks that you can accomplish, one at a time. Instead of wasting energy fretting and struggling, channel your energy to what you must do now, and focus on finishing it well.

Do Every Job Well

Approach every task with pride, dedication and respect. No matter how big or small a task, be guided by these 3 principles: do your best, be honest, and create the best possible impact.

- There is no shame in any job unless you don't do it well. Don't get so preoccupied with the future that you lose sight of your present task. Never cut corners just because no one is watching, if there's no direct gain or if you think it's a menial task.

- President James Garfield paid for his college tuition by working as a janitor. He did his job with a smile and absolutely no shame. He was equally committed to excellence as a janitor and in his studies, quickly becoming a professor within a year and the dean by the age of 26.

Everything you do matters. Each task and action adds up to define who you are and what your life means.

The "Right" Approach is What Works

There is no one "right" approach to solving a problem. Go for the approach that works instead of rigidly following others' rules. In 1915, two companies wanted to buy land in South America, which 2 tribes claimed to own. The larger corporation devoted its resources to researching the true owner, while the smaller company cleverly paid *both* tribes for the property. In the end, they paid double for the land, but beat the larger company to achieve their goal.

Be pragmatic. Do what you can with what you have. Focus on getting results rather than on idealistic or perfect methods.

KEY QUOTES

"The process is about doing the right things, right now."

"Wherever we are, whatever we're doing and wherever we are going, we owe it to ourselves, to our art, to the world to do it well."

"Forget the rule book, settle the issue."

"Pragmatism is not so much realism as flexibility."

Choose Strategy over Brute Force

The best solution is seldom the grandest nor the most direct. In fact, it's usually ineffective to fight something head-on. When George Washington was a general, he kept the upper hand by using unconventional tactics, e.g. ambushing enemies when they were drunk, withdrawing his troops unexpectedly, or attacking from the flanks.

When you find yourself struggling and straining to reach a goal, step back to explore alternatives. Rather than butt heads with your obstacle, devise a plan: use your strengths, find leverage and go around the obstacle. Fight smart, not hard.

Let Obstacles Eliminate Themselves

When there's no way to confront or even go around a problem, it may be best to let the problem work against itself. Alexander the Great succeeded in taming his horse Bucephalus where no one else could—instead of trying to force him with whips and ropes, he simply mounted and hung on while the horse tired himself out.

When you push too hard for a goal (e.g. securing a new client or a pay raise), it can backfire. It takes humility and patience to recognize your limitations, change your course or bide your time. Sometimes, inaction is in itself an action; the best way forward may be to stand still, move sideways or even backwards.

Put your Frustration to Work

Rules, limits and obstacles can be frustrating. We can complain about them, react impulsively, or channel the energy into productive action. Like any tennis player, Arthur Ashe experienced his share of pressure and frustration. However, instead of throwing tantrums, he remained outwardly calm and redirected the energy into bursts of speed and power in his tennis moves.

KEY QUOTES

"The way that works isn't always the most impressive."

"Instead of fighting obstacles, find a means of making them defeat themselves."

"Adversity can harden you. Or it can loosen you up and make you better—if you let it."

When things go wrong, don't act recklessly from anger and frustration. Stay in control and deploy that energy to achieve your goals in constructive ways.

Use Adversity to your Advantage

Crises are often great opportunities to turn things around. Instead of cowering or giving up, look for unique openings to catapult yourself forward. In 2008, Barack Obama almost lost the presidential primary elections after controversial comments from his childhood pastor. He seized the opportunity to address the delicate issue of racial inequalities in his speech "A More Perfect Union". This became a pivotal point in his campaign—Obama went on to win the election and serve two terms as president.

Reframe your problems and use adversity as a springboard for action. If you're bedridden, consider writing that novel you've always wanted to. If you're retrenched, why not use the chance to launch your own business? Find and seize the opportunity in adversity.

Part 3: Will

Even with Perception and Action, you will still encounter unexpected trials in life. To endure and prevail, you must cultivate the will (or inner power) to confront obstacles over and over again.

Strong willpower isn't about forcing your way through something. It's about knowing that you can/will fail, yet taking the right, consistent actions regardless.

- Abraham Lincoln, the 16th president of the United States, faced countless obstacles in his life. He had to struggle with poverty, the loss of both his mother and the woman he loved, educate himself, manage politics, depression, civil war and the fight against slavery.

- Through it all, he shouldered his burdens, found meaning in his struggles, and willed himself to keep going. In fact,

KEY QUOTES

"[A] crisis provides the opportunity for us to do things that you could not do before."
—Rahm Emanuel

"It's at the seemingly bad moments, when people least expect it, that we can act swiftly and unexpectedly to pull off a big victory."

"Will is our internal power, which can never be affected by the outside world."

"We can think, act, and finally adjust to a world that is inherently unpredictable. The will is what prepares us for this, protects us against it, and allows us to thrive and be happy in spite of it."

Lincoln's own suffering made him a more compassionate person. His favorite line was, "This too shall pass".

Use Good Times to Prepare for Bad Times

You'll face adversity no matter what you do. Prepare yourself mentally ahead of time, so you can withstand future obstacles. As a child, Theodore Roosevelt suffered from life-threatening asthma, but cured himself after years of rigorous, daily workouts in the gym. This early training provided the mental strength and foundation to help him endure numerous challenges later in life, including the death of loved ones, political woes and even assassination attempts.

The Stoics used the term "Inner Citadel" to describe an inner fortress that can't be breached by outside forces. Build your mind and body during good times so you can withstand the blows during bad times.

Plan for your Failures

Things *will* go wrong, but you don't have to be caught off guard when they do. Don't just do post-mortems to evaluate past failures. Use pre-mortems (a concept by psychologist Gary Klein) to identify possible failures *before* you start a project.

Anticipate failure before it happens, so you're prepared for specific obstacles, or can at least manage your expectations so you won't be stumped by unforeseen events.

Accept your Problems

When you face challenges beyond your control, don't give up. Accept them and move on. Thomas Jefferson accepted his speech impediment, but didn't allow it to hold him back from his dream of being a politician. Instead of trying to become a great orator, he focused on cultivating his strength in writing, and became one of the most prolific writers of his time.

KEY QUOTES

"Nobody is born with a steel backbone. We have to forge that ourselves."

"When the cause of our problem lies outside of us, we are better for accepting it and moving on."

Constraints can be blessings in disguise as they push us to explore new skills and solutions. Accept your weaknesses so you can address them and forge new paths which you may not otherwise have considered.

Love Everything, including your Obstacles

Be grateful for your problems and the opportunities they bring. The Romans dubbed this *amor fati*, a "love of fate". When Thomas Edison was told that his house and labs (along with his years of research and prototypes) were on fire, he didn't despair. Knowing he couldn't reverse the event, he called his family to enjoy the beautiful, colourful fire being produced from the lab chemicals. Then, he rebuilt everything with vigor. Within 1 year, he made back 10x of what was lost.

Accepting something is better than feeling bitter and frustrated. But, the *best* response is to embrace the situation and take action cheerfully to create the biggest possible impact.

Persevere Till the End

Persistence is about sticking it out till you overcome an obstacle. Perseverance is about confronting obstacle after obstacle, never giving up no matter how many rounds of problems you face. After 10 years at war, legendary Greek hero Odysseus was blown away from his homeland just before reaching its shores. He persevered through another 10 years of life-threatening trials before he eventually made it home.

Know that you are capable of overcoming anything with unassailable will and purpose. Be prepared to play the long game.

KEY QUOTES

"We don't get to choose what happens to us, but we can always choose how we feel about it."

"Perseverance is something larger. It's the long game. It's about what happens not just in round one but in round two and every round after...until the end."

Focus on Helping Others

When you're facing a huge challenge, focusing on yourself will only make you feel all alone, leading to despair and hopelessness. However, when you focus on a wider purpose or how your actions will impact others, it distracts you from your own fears/pain and gives you strength to go on. When Commander James Stockdale was captured during the Vietnam War, he knew that he'd inevitably be tortured for information. Instead of worrying about his own survival, he focused on his mission and role as a leader. He used his energy to create a support network amongst his fellow prisoners, gave them a purpose and helped them (and himself) to survive the dire situation.

Strength is more easily found in service to others. Fortify your will by focusing on something bigger than yourself.

Contemplate Death

Every human being will die. In fact, you could die at any moment without warning. Contemplate mortality by asking yourself: what would you do if you only had a short period left to live? Then, live your life as if that were the case. After nearly dying in a horse-riding accident, French nobleman Michel de Montaigne stopped fearing death. He embraced life and went on to become a famous writer, mayor, dignitary, and royal confidante.

Use your mortality to create urgency. Seize the day and live intentionally. When you can embrace death—the biggest possible obstacle in your life—all other challenges will seem small in comparison.

Embrace the Cycle of Life

Life will never stop throwing you challenges. In fact, the more you achieve, the bigger the challengers you'll face. Don't delude yourself into thinking that you'll ever be problem-free. Instead, pace yourself, keep things in perspective, continuously take action and grow

KEY QUOTES

"Lend a hand to others. Be strong for them, and it will make you stronger."

"Shared purpose gives us strength."

"Death doesn't make life pointless, but rather purposeful."

"See things for what they are. Do what we can. Endure and bear what we must."

stronger with every obstacle you conquer. Combine Perception, Action and Will, and let the obstacles lead the way.

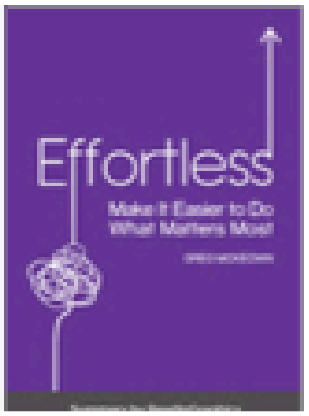
Other Details in the Book to Look out For

In this book, Holiday presents a series of stories and citations to show you how to perceive, take action and persevere in face of obstacles. In this summary, we've only outlined the key ideas and selected examples. For more details, please visit https://ryanholiday.net/.

About the Author

Ryan Holiday (born 1987) is an American author, marketer, entrepreneur and founder of Brass Check (a creative advisory firm). He began his professional career at the age of 19, and is a media strategist, a former director of marketing for American Apparel and a media columnist and editorat-large for the New York Observer. Holiday has been credited by the New York Times with the increasing popularity of stoicism.

KEY QUOTES



EFFORTLESS

Make It Easier to Do What Matters Most

GREG MCKEOWN

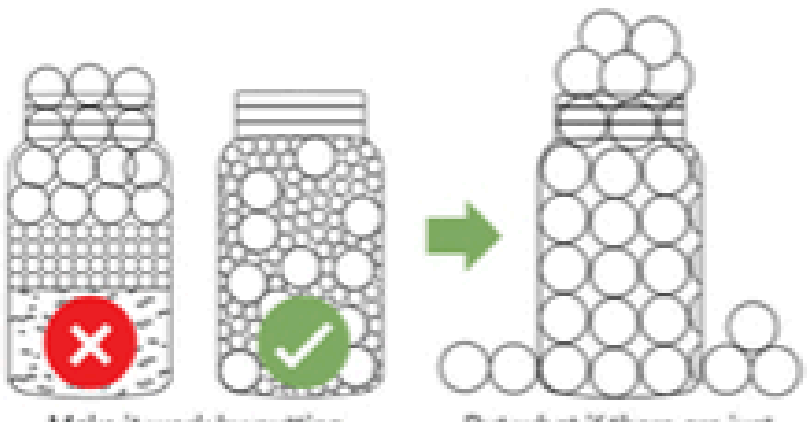
The Big "So What"

Do you sometimes feel like you're not making progress despite your best efforts? Or, do you feel so exhausted that you can't find the energy for your important tasks, or to even enjoy your successes? In his previous book, *Essentialism*, McKeown explained how to define the most essential things to focus on. In this book, he explains how to structure your work to make those essential activities also the easiest ones to achieve.

Introduction

When we feel overwhelmed, we tend to work harder. Yet, all of us have a finite amount of time and energy. You can only push yourself so far before you eventually burn out.

- This is like trying to fit a mix of rocks, pebbles and sand into a jar. The best approach is to start with the rocks (your biggest priorities), followed by the pebbles, then the sand. But, what happens if there are just too many rocks to fit into the jar? If you've already distilled down to the most essential stuff and there's still not enough time, then you need a different approach.



Make it work by putting the rocks first.

But what if there are just too many rocks?

KEY QUOTES

"Essentialism was about doing the right things; Effortless is about doing them in the right way."

"This book may not make every hard thing easy to approach and carry, but I believe it can make many hard things easier."

"What does one do when they've stripped life down to the essentials and it's still too much?"

"Effortless" is about fundamentally changing how you work.

- *Make the most essential activities the easiest to do*, so you needn't push so hard to get your desired outcomes.
- In the next sections, we'll explain the *3-part Effortless approach*:

  (i) Get into the *Effortless State*, where you're relaxed and performing optimally;

  (ii) Take *Effortless Action* to get better results with less effort; and

  (iii) Enjoy *Effortless Results* with repeated benefits from the same effort.

Part 1: Get into The Effortless State

The brain is like a computer. It has huge computing abilities, but slows down when its capacity is maxed out. When you're tired or distracted, you cannot operate optimally and any activity seems harder and more effortful. However, after a meal and a good night's rest, you feel refreshed and everything seems easier.

The Effortless State is where you're functioning at an optimal mental, emotional, and physical condition. You feel well-rested, light, clear-headed, energized, and focused. You can operate at peak performance to finish your most essential tasks with minimal effort.

Invert: Make it Easy

When something feels impossibly difficult, look for an easier or simpler way to achieve the same outcome.

"This is so hard."

"Is there an easier way?"

KEY QUOTES

"What could happen in your life if the easy but pointless things became harder and the essential things became easier?"

"The Effortless State is one in which you are physically rested, emotionally unburdened, and mentally energized...You are able to do what matters most with ease."

Do not overcomplicate things and overwhelm yourself unnecessarily.

- *Effort ≠ Value*. We've been conditioned to believe that anything worthwhile requires effort, and anything effortless is bad (e.g. "taking the easy way out" or "making easy money"). That's untrue.

- In fact, our brain is designed to take the *path of least effort*, and we naturally resist things that seem hard. The more you overthink an issue, the more you procrastinate.

Invert your thinking to see problems from an opposite viewpoint:

- *Ask if the contrary could be true*. Instead of thinking "this is so hard", ask "Is there an easier way?" or "What's the simplest way to achieve this outcome?"

- *Challenge the "right" way to do things*. For example, Southwest Airlines was debating whether to invest in a $2mil ticketing system to print, issue and check airline tickets. They challenged their assumptions of what an airline ticket must look like, and found a drastically cheaper and simpler solution—to just print their tickets on normal paper.

  (i) How can you *eliminate or reduce the complexities* so a tiny effort can bring massive results?

  (ii) Instead of fighting something head-on, can you find an *indirect approach*?

Enjoy: Make it Fun

Work and play aren't mutually exclusive. Combine or pair your most essential activities with your most enjoyable ones.

The more you enjoy something, the more you'll do it consistently or look forward to it. On the other hand, if you dread something, you'll find excuses to put it off. So ask yourself, "How can I make this more fun/enjoyable?"

KEY QUOTES

"What if the biggest thing keeping us from doing what matters is the false assumption that it has to take tremendous effort?"

"When we remove the complexity, even the slightest effort can move what matters forward."

- For example, Comic Relief combines fund-raising with comedy to make it both desirable and fun for people to give to charity. During the annual *Red Nose Day*, people can enjoy themselves by donning red clown noses, contributing to, and participating in fundraising activities with celebrities/ comedians.

Pair or combine essential activities with immediate rewards or something you love.

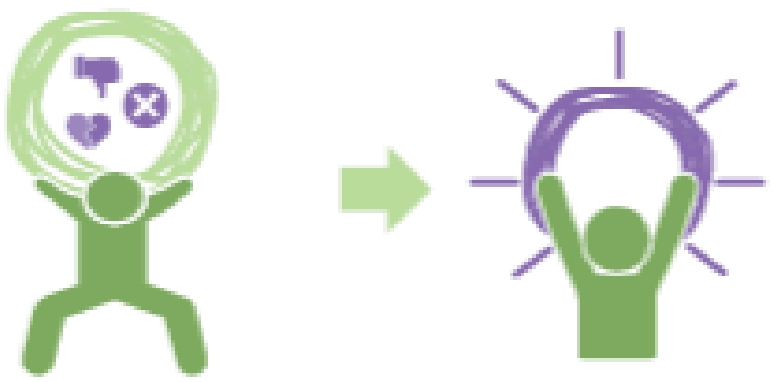
- For example, try listening to your favorite audiobook only when you're at the gym. This creates an *instant reward* to make exercising enjoyable in itself, rather than having to wait for months to see the results.

- Combine your essential activities with the *things you love*. For example, everyone in McKeown's family used to dread cleaning up after dinner—until they turned the chore into a singalong session with Disney classics blasting in the background.

Convert essential tasks into meaningful rituals. For example, Marie Kondo advocates designating a spot for each item in your house, so you can return them home lovingly after each use, thus making tidying up a form of ritual. Form your rituals with formulas like "After I do X, I'll do Y" or "As I do X, I'll do Y."

Release: Lighten your Load

Let go of emotional burdens that weigh you down and blind you to possibilities.



Often, we unknowingly carry emotional burdens, such as old grudges and regrets, or outdated goals and principles. These take up mental-emotional space and weigh us down.

- When you encounter a setback or tragedy, it doesn't help to lament your loss or blame others. *Set yourself free* by

KEY QUOTES

"By pairing essential activities with enjoyable ones, we can make tackling even the most tedious and overwhelming tasks more effortless."

"Our rituals are habits we have put our thumbprint on. Our rituals are habits with a soul."

"Grudges cost us resources but don't deliver a satisfying return on our investment. So we must relieve a grudge of its duties."

"When we let go of our need to punish those who've hurt us, it's not the culprit who is freed. We are freed."

accepting what has happened, forgiving others and yourself, and letting go of your pain and grudges.

Focus on what you have, not what you lack. The more you complain about your circumstances and dwell on what you lack, the more drained you feel, which leads to a negative spiral. The more you focus on gratitude and what you have, the more you see new possibilities to start a positive spiral.

Consciously turn negativity to gratitude.

- Each time you *complain*, make sure you follow by saying something you're grateful for. For instance, if you hear yourself saying, "Traffic was terrible", add on "I'm grateful I made it here safely!" With time, you start to notice your complaints, reframe your perspectives habitually, and may even catch a complaint before you finish the thought or sentence.

- Use the same approach to *counter negativity from others*. For example, if a teammate complains about her workload for a major project, remind yourself that you're glad to be working on such a meaningful project.

Rest: Recover Fully

Tap on your body's natural rhythms and cycles by alternating between periods of exertion and renewal.

If you keep pushing yourself to work longer and harder, your performance will eventually decline, and you may burn out or hurt your health. The best-performing professionals take periodic breaks to recover on a daily, weekly and monthly basis.

Alternate between periods of exertion vs renewal.

- Tap on your body's natural *90-minute cycles*. For example:

KEY QUOTES

"When you focus on what you lack, you lose what you have. When you focus on what you have, you get what you lack."

"There is an ebb and flow to life. Rhythms are in everything we do. There are times to push hard and times to rest and recuperate."

(i) Devote your mornings to the most essential work; and

(ii) Break down each morning into 3 x 90 minute sessions, with a 10-15 minute break between each session.

- If you're already struggling, it's counterproductive to push harder. Take a *short break* (even for 1 minute) to recover and resume at a higher level of performance.

Sleep is absolutely essential for peak performance and health.

- Aim for 8 hours' sleep every night. You body needs *enough quality sleep* to fully restore itself. Research found that people who regularly sleep <7 hours a night are more prone to a host of health issues, such as cardiovascular diseases, strokes, diabetes and arthritis. A lack of sleep also negatively affects your creativity, alertness, and social interactions.

- You can partially offset a sleep debt by *napping*.

(i) If you feel too tired to focus, take a short nap to refresh yourself. A 90-minute nap can deliver similar learning benefits to 8 hours of sleep.

(ii) We often get creative ideas while we dream. Place a pencil and notepad next to you when you nap, so you can quickly capture the ideas when you wake up.

Notice: See Things Clearly

Train your mind to focus and tune out distractions, so you can be fully present to the details and information around you.

Often, we're so distracted by the noise around us that we fail to notice what's truly important. In the Effortless State, you are operating with heightened awareness, which allows you to notice complex, fast-moving details/information, zoom in on what's important, and process the information effectively.

KEY QUOTES

"Do not do more today than you can completely recover from today. Do not do more this week than you can completely recover from this week."

"Getting more sleep may be the single greatest gift we can give our bodies, our minds, and even, it turns out, our bottom lines."

"It's not the noticing itself that's hard. It's ignoring all the noise in our environment that is hard."

When you're fully present in your interactions, you can also help others to gain clarity. Listen, ask clarifying questions, and reflect back what you've heard. Don't jump in with your views or judgments, as it may put the other person on the defensive or crowd out his/her ability to see and think clearly.

Train your mind to focus with this daily practice:

- Prepare your *space* (2 min): Find a quiet, decluttered area, turn off your phone, and ensure you won't be disturbed for 10 min.
- Relax your *body* (2 min): Sit comfortably with your back straight and your eyes closed. Breathe naturally and gradually relax all parts of your body.
- Clear your *mind* (2 min): Notice your thoughts as they surface and allow them to pass without dwelling on them.
- Free your *heart* (2 min): Think of someone who wronged you, say "I forgive you," and imagine cutting the chain between you.
- Relive a moment you're grateful for. Imagine yourself breathing in the *gratitude* (2 min).

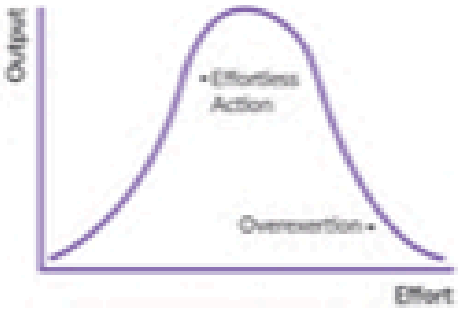
KEY QUOTES

"When we are fully present with another person, we see them more clearly. And we help them see themselves more clearly as well."

Part 2: Take Effortless Action

When we put in extra effort, it usually yields results to some extent before diminishing returns set in. This is when you start to get less output for the same amount of effort.

- Eventually, you may even get *negative returns*, e.g. if you get so tired that you make costly mistakes or get burned out.



Effortless Action is about achieving more results with less effort. It occurs when you get in flow and operate "in the zone". You take action with clarity, instinctively know what to do, and deliver great results with minimal effort.

"Past a certain point, more effort doesn't produce better performance. It sabotages our performance."

"The goal is to accomplish what matters by trying less, not more."

Define What "Done" Looks Like

Define your end-goals clearly to channel your time and effort effectively. Stop when you reach the finish line.

Often, we procrastinate because we don't know what to do. Once you have a crystal-clear idea of what the finish line looks like, you feel motivated to start taking action.

- Close your eyes and take 1 minute to *clearly visualize the finish line* or what "done" looks like. Then, describe it in concrete terms. For example, "getting fit" could mean "I can fit into my Puma sports attire and run 5km without stopping."

Define "done" for all aspects of your life:

- Only start on an *essential task/project* after defining the end-goal.
- Create a "*Done for the Day List*" daily. Limit this to tasks that contribute to your essential goals. You should feel satisfied if you finish all the items on the list at the end of the day.
- Define the things that to be done *while you're still alive*.

Start with the Obvious First Step

Identify the "minimum viable action" and take the first baby step.

To avoid getting overwhelmed, focus on identifying the "minimum viable action" toward your goal.

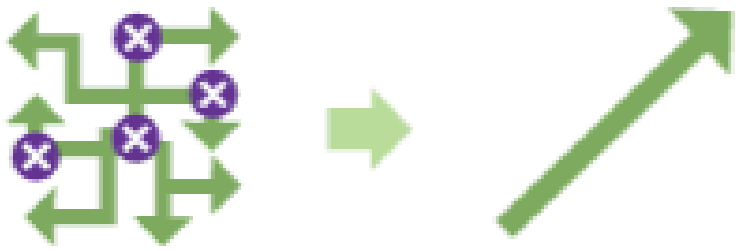
KEY QUOTES

- This is similar to a *minimum viable product* in business, i.e. building a prototype to test a product idea. For instance, Airbnb founders started by posting a few pictures of their apartment on a webpage, just to see if anyone would pay to stay at the apartment while they were away.

After you identify the first obvious action, break it down into the tiniest concrete step, then do 10 minutes of focused activity. For example, if you need to finish an article, the first obvious action is to get a pen/paper (or turn on your computer). Then, take 10 minutes to draft an outline. This mini burst of activity generates energy, motivation, and confidence to propel your next steps.

Simplify: Start From Zero

Start from a blank slate to define the minimum steps required for your desired results.



Don't start with a complex process then try to reduce it. Start from scratch by asking "what are the minimum steps needed to get the desired results?" Then, focus on those steps and remove all others.

- In 1998, online shopping was still very complex, and users had to fill in many fields before they could make a purchase. Amazon drastically changed the experience by creating the one-click ordering process.

Keep it simple. Don't try to go the extra mile just for the sake of doing so. For example, you don't need 50 slides to present an idea. In fact, you may not need any slides at all. It's better to complete your first step, then to aim for 10 steps and take none.

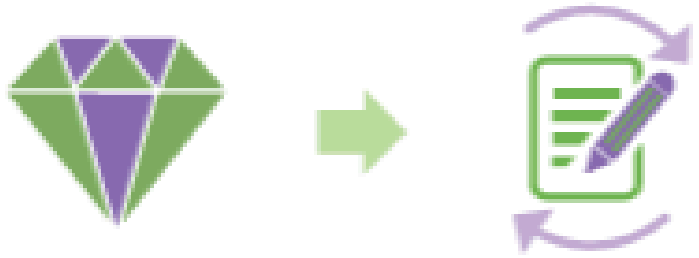
Progress: Do a Thrashy Draft

Start with an ugly first draft, then quickly learn and improve it.

KEY QUOTES

"The simplest steps are the ones you don't take."

"There is rarely a need to go that second mile beyond what's essential. It's better to go just the first mile than to not go anywhere at all."



Don't try to perfect everything from the onset. Start with a raw and ugly first draft, so you can learn quickly and advance from there.

- In 1959, industrialist Henry Kremer offered a prize for the design of the first human-powered aircraft that could fly in a figure-eight around 2 markers half-a-mile apart. Many of the well-funded teams focused on developing an elegant design. The winning team (led by Paul MacCready) focused on building an aircraft they could fly and maneuver. Their design was ugly and basic, but it allowed them to run hundreds of test flights, and to rapidly repair and redesign their aircraft each time it crashed.

- The same concept applies to any new endeavor. If you're learning a new language, keep practicing with people no matter how silly you sound. If you're writing a book, just put down your first words on paper no matter how bad they seem.

At the same time, minimize the cost of your failures so you can keep experimenting. Think of yourself like a toddler learning to walk—if you fall, just get up and try again until you succeed.

Pace: Move Faster at a Steady Pace

In the long run, it's faster to set a smooth, steady pace than to start and stop repeatedly.

Many people get caught in a boom-and-bust cycle. They sprint as fast as they can toward an important goal, then stop when they run out of steam. After some time, they feel guilty and dash forward again. The start-and-stop process ends up wearing them down.

KEY QUOTES

"There is no mastery without mistakes. And there is no learning later without the courage to be rubbish."

"To make effortless progress on what matters, learning-sized mistakes must be encouraged."

"Going too fast at the beginning will almost always slow us down the rest of the way."

It's much better to set a consistent pace that you can sustain.

- In 1911, 2 groups of mountaineers set out to scale the South Pole. One group covered 15 miles a day regardless of the weather. The other group pushed hard during good weather and hunkered down on bad days. In the end, the group with the steady pace succeeded, while the other group perished.

- The key is to *set an ideal range*, e.g. read between 5-30 pages a day, or walk 500-10000 steps a day.

  (i) The *lower limit* should be high enough to motivate you, but low enough to achieve even if you face unexpected obstacles.

  (ii) The *upper limit* should be high enough to challenge you, but not so high that it exhausts you.

Part 3: Achieve Effortless Results

Linear results give you one-time benefits with a 1:1 effort-to-output ratio. For example, you get paid for each hour you work, or must remind your kids to do the same chore daily. Your results are tied to the amount of effort you put in.

Residual results deliver repeated benefits with little or no additional effort. For example, you can write a book once and earn royalties for years, or make a chore so fun that your kids do it automatically.

- Residual results allow you to achieve exponential growth. They come from applying Effortless Action to *high-leverage activities*.

Learn: Tap on Others' Knowledge

Residual results can come from learning universal principles that you can apply over and over again.

- Good *methods or techniques* can be helpful in specific situations, but you must find new methods for different situations.

KEY QUOTES

"Producing a great result is good. Producing a great result with ease is better. Producing a great result with ease again and again is best."

"With residual results you exert effort once and reap the benefits again and again."

"A method may be useful once, to solve one specific type of problem. Principles, however, can be applied broadly and repeatedly."

- Look for *universal principles* that cut across different fields or scenarios. Once you grasp why something happens or how it works, you can apply the knowledge repeatedly, or even develop your own methods and strategies for different scenarios.

- For example, you might delight your spouse by cooking her favorite meatball spaghetti for dinner, but she'd get sick of it within a few days. However, if you can identify the *underlying principle* (to do thoughtful things that show how well you know her and how much you love her), you can delight her consistently.

The good news is, there are already established principles in many domains, from science to economics and business. The most powerful insights often come from combining existing knowledge across different fields.

- *Reading* is one of the best ways to learn. Prioritize books that have lasted the test of time (e.g. classics), read with the goal to understand the contents, and summarize what you've learned to internalize the ideas.

- Absorb what others already know, then combine the knowledge in your own way to *create a unique breakthrough*.

Lift: Leverage a Network

One of the best ways to reach the masses is to teach others to teach. For example, early in the Covid pandemic, *ProjectProtect* created 5 mil masks in 5 weeks to help address the severe mask shortage. They achieved this by recording a 5-minute video to teach people how to make masks, then called for volunteers to use the video and materials to teach/help others to create masks.

- When you teach others, you tend to pay more attention to details, and must understand the concepts enough to explain them in your own words. This *accelerates your own learning*.

Make your messages simple to understand, remember, and repeat. Create great stories that are easy to recall and share, like Aesop's Fables which have been passed on for centuries.

KEY QUOTES

"Stand on the shoulders of giants and leverage the best of what they know."

"Knowledge may open the door to an opportunity, but unique knowledge produces perpetual opportunities."

"Make the most essential things the easiest ones to teach and the easiest ones to learn."

"There is no better way to teach than through the power of stories."

Automate: Do It Just Once

Our brains have a finite capacity, and we're prone to mistakes when we're tired or overwhelmed. So, never rely on your memory for essential tasks. Create checklists for your most important and complex tasks, to minimize the risks of over-taxing your brains or making avoidable errors. Once you've created your checklists or cheat sheets, you can use them repeatedly.

Automate repeatable decisions or processes, e.g. automating bill payments, pre-scheduling your annual health checkups, or setting alerts when supplies fall below a certain threshold. Make the essentials high-tech and low-effort, and the non-essentials low-tech and high-effort.

Leverage the Power of Trust

Trust is like the lubricant that keeps your interactions and relationships running smoothly with minimal friction.

- You work more *quickly and effortlessly* with people you trust. You can easily exchange information, discuss issues, assign tasks, and focus on getting the essential work done instead of second-guessing one another and navigating politics.

- In 2003, Warren Buffett's Berkshire Hathaway bought McLane Distribution from Wal-Mart for >$1bil. This huge deal was closed in a 2-hour meeting, and the purchase completed in another 29 days without any due diligence. This was possible only because Buffett's past experience told him he could trust the other party. That's the *power of trust*.

Surround yourself with trustworthy people who can deliver the desired results reliably without constant supervision.

- Invest the time/effort to *hire the right people* from the onset. The wrong hires can be extremely costly as they may underperform, engage in unethical actions, and influence future hires and cultural norms.

- Build *high-trust structures* by setting clear goals and expectations, defining who to do what, and designing

KEY QUOTES

"As the world gets more complex, we all need tools to help us remember what's important."

"You can't have a high-performing team without high levels of trust."

"Taking a little time to build a foundation of trust is a valuable investment in any relationship."

incentives that align individual actions with the broader team/organizational goals.

Prevent Problems in Advance

Often, we're so busy fighting fires that we don't stop to find a more lasting solution.

- Don't just manage the symptoms. *Find and tackle the root cause* to resolve the issue once and for all. For example, instead of using medication to control your heart condition, fundamentally improve your health by changing your lifestyle and diet. Focus on problems that (i) generate the highest cumulative cost or irritation, and (ii) can be resolved quickly. For instance, it only takes a few minutes to lubricate the rails of your drawer so it doesn't get stuck each time you open it.

- You can also *take preventive measures*, e.g. setting up an alarm system to flag out warning signs. The earlier you identify the problem, the more likely you can resolve it successfully. For example, hospitals use machines to track patients' vital signs, with a list of triggers and warning signals to look out for.

Check your assumptions and data to avoid costly, preventable mistakes. For example, France's state-owned railway company SNCF purchased 2000 new trains, only to realize that they couldn't fit into a quarter of the train stations. It turned out they had used the dimensions for France's newer railway stations, not realizing that the older stations were designed with wider platforms.

Conclusion and Other Details in the Book

No matter what challenges or hardships you've encountered, how you choose to respond now will decide what happens down the road. Go for the lighter and more effortless path, not the heavier and more effortful one. Don't make life harder than it has to be.

This is a clear, easy-to-read book with many examples from McKeown's own experiences, references to other books and lessons from various thought leaders. The book also includes illustrations to bring the ideas to life. For more details, please visit https://gregmckeown.com/.

KEY QUOTES

"Don't just manage the problem. Solve it before it happens."

"Rather than simply hacking at the branches, try striking at the root."

"Mistakes are dominoes: they have a cascading effect."

"If you take away just one message from this book, I hope it is this: life doesn't have to be as hard and complicated as we make it."

UNSHAKEABLE

Your Financial Freedom Playbook

TONY ROBBINS
(WITH PETER MALLOUK)

The Big "So What"

How do financial masters like Warren Buffett, Alan Greenspan and David Swensen win in financial markets, and what can we learn from them? Based on insights from 50 financial masters, this book explains the rules of the financial game, the key players and their agenda, and how you can ride the financial storm to arrive safely at your desired destination.

Introduction

Today's financial markets seem more volatile and uncertain than ever. Since the last financial crisis of 2008, the American stock market has been on a bull run, and people are anticipating an impending crash.

Over 7 years, Robbins interviewed some 50 financial masters, including self-made billionaires, legendary investors and the top financial minds, like Warren Buffett, Alan Greenspan, David Swensen, Ray Dalio, Jack Bogle, Mary Callahan Erdoes, T. Boone Pickens, Carl Icahn and John Paulson. This culminated in his earlier book "*Money: Master the Game*". This book, published in 2017, zooms in on the current market fears and realities, and what the average person can do to build your financial freedom. While the book is US-centric, the ideas are applicable to anyone interested to improve your financial future and retirement plans.

Being Unshakeable

What if you knew that no matter what happens to the economy, you'll be financially secure, and have more than enough for yourself, your loved ones and your contributions? That deep sense of peace and freedom is what being "unshakeable" means. It gives you control and puts you in the driver seat.

KEY QUOTES

"The decisions you will be equipped to make after reading this short book can bring you a whole new level of inner peace, fulfilment, comfort, and financial freedom that most humans only dream of achieving."

"What most people really want, regardless of how much money they have today, is freedom."

"Money is only a tool. It will take you wherever you wish, but it will not replace you as the driver."
- Ayn Rand

"It's not just a matter of money. It's a state of mind. When you're truly unshakeable, you have unwavering confidence even amidst the storm."

In this book, Tony coaches you to make sense of the financial markets, and develop an action plan to get you to your goals. This summary is presented in 3 parts:

- Know the Rules
- Your Unshakeable Playbook
- Mastering the Psychology of Wealth

Part 1: Know the Rules

To win the game, you must know the rules. In this segment, we'll look at several important financial concepts and facts.

Financial Markets 101

Compounding is a powerful force to leverage for your financial goals. Let's look at 2 scenarios:

Person A	Person B
Invests $300 a month for 8 years (19 to 27 y.o.) at 10% compound returns per year.	Invests $300 a month for 38 years (27 to 65 y.o.) at 10% compound returns per year.
Total capital invested: $28,800 Amount at 65 y.o.: $1.86 mil	Total capital invested: $140,000 Amount at 65 y.o.: $1.59 mil

- Simply by *starting earlier*, you can harness the power of compounding to build a larger nest egg with a fraction of the capital. You can retire comfortably even with a small income.

- The key is to *pay yourself first*. Set aside, say, 10% of your monthly income for your financial freedom fund, before you pay for other expenses. Even if you're struggling financially, you can start with 3%, then gradually increase it to 10% or even 15% over time.

- As a *rule of thumb*, to be financially secure, you should aim to retire with 20x of your current income, i.e. if you earn $100,000 a year, you should aim for $2mil retirement funds.

KEY QUOTES

"You can't win this game unless you have the emotional fortitude to get in it and stay in it for the long term."

"You're never going to earn your way to financial freedom. The real route to riches is to set aside a portion of your money and invest it so that it compounds over many year."

Here are several basic **terms/ concepts** to know:

- *Terms*: If a market falls by ≥10% from its peak, it's called a "correction". If it falls by ≥20% from the peak, it's called a "bear market".

- There are 3 main *types of funds*:

  - *Hedge funds* are private funds for high networth clients. Fund managers usually charge 2% management fees and a profit share (of say, 20%).

  - *Mutual funds* are portfolios of stocks, bonds or assets, that are available to anyone. They form the majority of funds in the market. Such funds are actively managed by professionals, who charge fees for their services, supposedly to deliver better-than-market returns. However, we'll show later how 96% of such funds are actually underperforming.

  - *Index funds* are public funds with no "active" managers. They simply buy and hold all the stocks in an index, e.g. all 500 stocks in the S&P 500 index.

Know the 7 "Freedom Facts"

These 7 facts will help to free you from much of the irrational fear and anxiety about financial markets.

Corrections happen annually on average. Since 1900, there has been about 1 correction per year, lasting 54 days each, on average. The average correction was 13.5% (over the last 100 years) or 14.2% (from 1980-2015).

Less than 20% of corrections become bear markets, i.e. 80% do not become bear markets. Thus, corrections are a routine part of the financial markets, and are generally no cause for alarm.

Despite short-term dips, the stock market always rises in the long term. Despite an average 14.2% annual correction and major events (like the Gulf wars and 9/11), the US market showed positive returns for 27 out of the last 36 years. It's hard to be sure any stock or company will do well in the

KEY QUOTES

"The biggest danger isn't a correction or a bear market, it's being out of the market."

"The problem is, most funds do a terrific job of charging high fees but a terrible job of picking successful investments."

"The last thing you and I want is to make fear-based financial decisions."

"Once you recognize the patterns in the financial markets, you can adapt to them, utilize them, and profit from them."

"Prediction is very difficult, especially about the future."
- Niels Boh

long term, but it's safe to assume the stock market will increase in the long run so long as the economy continues to grow and expand.

No one can steadily predict if the market will rise or fall. For example, Dr. Roubini was famous for predicting the 2008 financial meltdown. But, he also incorrectly predicted a recession every year from 2004 to 2007! In the book, Robbins lists many examples of the market going in the opposite direction of "expert forecasts." The good news is, you don't need to predict the market to win. You just need to capture the natural market growth.

Historically, Bear Markets occurred every 3-5 years. There were 34 bear markets in 115 years (from 1900-2015). In less than a third of these bear markets, the index fell by more than 40%.

Bear markets become bull markets. Every bear market in US history has been followed by a bull market, including the 2008 financial crash. Since stock markets look at tomorrow (not today), the lowest point of consumer confidence is always a sign that the market will pick up. However, this may not hold true for all countries—Japan, for instance, never fully recovered to the Nikkei peak after nearly 3 decades since the 1989 crash.

The greatest risk is to be out of the market. JPMorgan found that 60% of the best US market days over the last 20 years happened within 2 weeks of the 10 worst days. In the book, Robbins illustrates how your returns could be greatly reduced just by missing the top trading days. Since you can't predict the market and get in/out successfully, you're better off staying in the market, and tapping on the power of compounding.

Know Your Costs

In the book, Robbins explains why you may be losing huge amounts of your investment to funds that overcharge and underperform.

Fees can destroy 2/3 of your gains. Most actively-managed funds charge about 2% p.a.—these add up to massively erode your gains. At 7% compounded returns, $1 should become $30 in 50 years. But, with 2% lost each year, there's less to compound, and you end up with only $10. In short, you lose

KEY QUOTES

"One of the greatest lessons I've learned from all these money masters is that you don't have to predict the future to win this game."

"The market generally rises over the long run—even though we hit a huge number of potholes along the way."

"Financial winter is always followed by spring."

"One of the most fundamental rules for achieving long-term financial success is that you need to get in the market and stay in it, so you can capture all of its gains."

"If you stay in the market long enough, compounding works its magic, and you end up with a healthy return—even if your timing was hopelessly unlucky."

"When it comes to your finances, ignorance is not bliss."

2/3 of your gains, despite bearing 100% of the capital and risks.

In fact, funds can cost more than 2% p.a. due to **taxes and other hidden costs.**

- Unless the fund is in a tax-deferred account, it's taxed every time the fund managers sell stocks at a profit. The *taxes* could be as high as 30%; that's why most funds show their pre-tax returns (rather than the lower post-tax returns).

- The 401(k) plans in the USA also come with many other *hidden fees and charges* (which we'll touch on later). A Forbes article showed that the true cost of a mutual fund could be 3.17% a year (for a non-taxable account) and 4.17% (for a taxable account).

A study of 203 funds (each with ≥$100mil in assets) revealed that, from 1984-1998, **only 4% of the funds actually beat the S&P 500 index.** In short, 96% of the fund managers didn't add value, despite charging high fees. Why is that?

- Fund managers aren't really better at *predicting* the markets than the layman. Instead, each time they trade a stock, the brokerage firms charge a *commission* for the transaction, and profits may be taxed.

- Fund managers tend to keep some cash on hand in case good opportunities surface, but this means *opportunity cost*.

Robbins recommends that you **buy index funds instead.** Such funds include every stock on the index, thus they are diversified, conduct fewer trades, don't require costly fund managers, and the cash is almost fully invested at all times.

- Index funds typically cost only 0.05%, which is 60x less expensive than an actively-managed fund with 3% fee p.a. At the same compounded returns over 30 years, $100,000 will grow to $865,000 in an index fund, but only $548,000 in an actively-managed fund.

- Even Warren Buffett himself has instructed that the trust money for his wife is to be invested in low-cost index funds after his death. So why not you and I?

KEY QUOTES

"We can't control what the markets will do, but we can control how much we pay for our investments."
-John C. Bogle

"It turns out that the professionals aren't really any better at predicting the future than the rest of us."

Rescuing our Retirement Plans

The US' 401(k) plan was created in 1984 to allow tax-deductible contributions to a retirement account. Unfortunately, this has been exploited by financial firms, at Americans' expense.

Until 2012, financial firms weren't required to disclose how much they charged clients. Even today, disclosure documents are still so complex that it's **hard to decipher the details**. 71% of Americans think they aren't paying any fees for their 401(k) plan, while 92% don't know how much they are paying.

A senior policy analyst at Demos examined 20 funds in his 401(k) plan and found that, in addition to the 3.17% fees mentioned by Forbes, there were **17 other fees and costs**. He estimated that an average worker who earned $30,000 a year and saved 5% of his income would lose more than $154,000 in lifetime fees.

- Most funds listed in the 401(k) plan are actively-managed funds that charge *recurring fees*, or even "*front-end loads*" of up to 3%. These erode your invested capital.

- Low-cost index funds aren't typically included, or are included with a huge *mark-up* (e.g. charges of 1.68% p.a. when the cost is only 0.05%, and/or with additional sales loads).

During the Obama administration, the Congress tried to force the 401(k) providers to act in their clients' best interests, but the **regulations** had nominal impact, and may be reversed under the Trump administration. Teachers, nurses, and non-profit employees could be even worse off, as their 403(b) plans aren't protected by the ERISA (Employee Retirement Income Security Act of 1974).

Robbins found that his own company's 401(k) plan cost 2.17% in annual fees. He switched to Abk, which only charged 0.65% a year, saving 70% of the original annual expenses. Robbins recommends that you **analyse your plan** at www.ShowMeTheFees.com, and switch (or encourage your employer to switch) to better options if need be.

KEY QUOTES

Who can you really trust?

Financial advisors (FAs) can offer great value in your investments, taxes, insurance etc. The challenge is to identify the ones you can trust. Learn to distinguish between 3 types of advisors:

Brokers: 90% of all FAs in America are brokers, i.e. they are paid commissions to sell products. They have to ensure their recommendations are "suitable" for the clients, but need not act in the clients' best interest. Hence, it's common for brokers to recommend products with higher commissions.

Registered Investment Advisors (RIAs). Out of more than 300,000 FAs in the US, only 10% are RIAs. RIAs have a fiduciary duty and legal obligation to act in their clients' best interests at all times. They don't earn a commission, but charge a flat fee for financial advice, or a percentage of the clients' assets under management.

Dually Registered Advisors. Unfortunately, most RIAs are registered both as brokers and fiduciaries. This means they can still make commissions while charging an advisory fee. In fact, some advisory firms have 2 arms—an RIA service and a sister company (under a different brand) that offers mutual funds. In such cases, the RIA tends to be biased toward the sister company funds.

The best option is an RIA who's a true fiduciary—someone who'll put your interest first, and has the necessary skills/experience. Use these 7 questions to filter your FAs:

- Are you a **Registered Investment Advisor**? [If "no", walk away.]
- Are you/your firm affiliated with a **broker-dealer**? [If "yes", walk away.]
- Does your firm offer **proprietary mutual funds or separately managed accounts**? [If "yes", be extra-cautious.]
- Do you/your firm get **third-party compensation** for recommending specific investments? [If "yes", be extra-cautious.]
- What's your **philosophy** on investing? [Make sure your philosophies are aligned (e.g. if they believe in stock-picking vs

KEY QUOTES

diversification), and find someone you can relate to on a personal level.]

- What **financial planning services** do you offer beyond investment strategy and portfolio management? [Ideally, the FA can also help you to save money on mortgage, insurance, taxes etc. as your wealth grows. Check their *credentials* to ensure they have the right skills, e.g. certified financial planners, or estate planning attorneys.]

- Where will my money be held? [An RIA should use a **third-party custodian** to hold your funds. Look for a *strong track record* for other clients like you.]

Robbins recommends Creative Planning (which is run by co-author, Peter Mallouk, and for which Robbins is a board member and Chief of Investor Psychology) as a good FA option to consider.

Part 2: Your Unshakeable Playbook

The Core Four

Success leaves clues. By modelling the patterns of successful people, you can shorten your learning curve. From his interviews, Robbins found 4 key principles that all great investors use to guide their investment decisions. He calls them the "Core Four".

The principles may seem simple, but the challenge is to actually apply them, and enter an investment only if it meets all 4 criteria.

Don't Lose. It's much harder to make back what you've lost than to protect your investments. The best solution is to *diversify your asset allocation*, such that you're ok even if the market moves in an unexpected way. Only consider an investment if you can minimize the downside.

Asymmetric Risk/Reward. "High-risk, high-return" is an investment myth. The smartest investors look for opportunities where the *rewards greatly outweigh the risks*. For instance, Richard Branson started Virgin Atlantic Airways by negotiating a deal that allowed him to return the planes if the business didn't work out—this minimized his downside

KEY QUOTES

"The key is to recognize these consistently successful patterns and to model them... These patterns provide the playbook for your success."

"The more money you lose, the harder it is to get back to where you started."

"These winning investors always seek to risk as little as possible to make as much as possible. That's the investor's equivalent of nirvana."

while preserving his upside. You can apply this principle by investing in undervalued assets during times of extreme gloom and pessimism. That's one of Warren Buffett's strategies, though he typically restructures his investments to further improve the asymmetry.

Tax Efficiency. Taxes can easily wipe out 30% or more of your investment returns. Rather than look at pretax returns, you should maximize your *net returns*. As a rule of thumb, stay away from actively-managed funds that trade a lot.

Diversification. Don't put all your eggs in one basket. You can diversify *across asset classes* (e.g. real estate vs stocks), *within asset classes* (e.g. different types of stock), and *across markets, countries, currencies, or time*.

Prepare for the Bear Market

Surviving a bear market is 90% preparation and 10% staying calm during the storm. Co-author Peter Mallouk shares how Creative Planning handled the 2008 crisis, and grew the firm's assets-under-management from $500mil in 2008 to more than $1.8mil in 2010, and $22 bil in early 2017. You can use the same approach and principles to prepare for and survive the next bear market.

Customize your asset allocation to meet your goals, based on your unique financial situation, and to minimize your tax liabilities. Your portfolio could include these components:

- *Stocks* are basically partial ownership of businesses. In the short run, stocks are completely unpredictable. But in the long-run, economic growth always drives up stock prices. Thus, the key is to live within your means, so you won't be forced to sell your stocks during a bear market to free up cash.

- *Bonds* are money that you loan to a government, company or other entity. Your returns will depend on the risk and duration of the loan. Bonds are less risky, but the yields are also generally low. During the 2008 crisis, Creative Planning sold some of the clients' bonds to buy stocks.

KEY QUOTES

"It's not what they earn that counts. It's what they keep. That's real money."

"You can never know what the stock market will do. But that uncertainty isn't an excuse for inaction."

"Bear markets are either the best of times or the worst of times, depending on your decisions."
- Peter Mallouk

"A simple rule dictates my buying: be fearful when others are greedy, and be greedy when others are fearful."
- Warren Buffett

- *Alternative investments* are anything other than cash, stocks or bonds, and can include: Real Estate Investment Trusts (REITs), Private Equity Funds, Master Limited Partnerships, Gold, Hedge Funds.

Creative Planning uses these "**Core and Explore**" principles:

- *Asset allocation drives returns*. Work with a qualified advisor to customize your mix of stocks, bonds, and alternatives. Diversify your portfolio by investing in different asset classes, so you balance out the risk characteristics and rates of return, to get your overall desired returns at an acceptable risk level.

- Always have a *financial cushion*, so you won't be forced to sell your stocks at the wrong price. Creative Planning uses the "rule of seven", i.e. ideally have 7 years of income set aside in income-producing investments (e.g. bonds and MLPs), so you can use these assets in the short term if the stock market crashes.

- Use *index funds* for the core of your portfolio, and explore other stocks and alternatives at the margins.

- *Rebalance* your portfolio (say, annually) to keep it to your original asset allocation.

Putting the above in place will allay some of your fears and prepare yourself to weather a bear market.

Part 3: Mastering the Psychology of Wealth

Neuroscientists found that the parts of our brain that process financial losses are the same ones that deal with mortal threats. During a financial crisis, our fight-freeze-flee instinct kicks in and we sabotage our own financial goals. The solution is to establish systems to neutralize our natural human tendencies, e.g. Paul Tudor Jones sets up checklists and systems to ensure he sticks to his success formula: only go for hard trades with asymmetric rewards/risk of 5:1, and stick to his target entry/exit prices.

KEY QUOTES

"The short-term outlook may look dire, but the stock market always rebounds."

"The single biggest threat to your financial well-being is your own brain."

"Psychology either makes you or breaks you, so it's imperative to have a robust system that enables you to stay on target."

Mastering your Mind: Overcoming 6 Common Mistakes

Positive Biases. Humans find evidence to support what we already believe (confirmation bias) and place more value on what we already own (endowment effect). To avoid biases toward stocks/funds that we like/own, *seek differing opinions* from qualified people. Ask questions like: What am I missing? What's the downside? Who else can offer a deeper perspective?

Recency Bias. Investors tend to assume the recent trends will continue into the future. Thus, they tend to buy high during a bull market and sell low during a bear market. To avoid poor, emotional choices, *create a list of simple rules*, so you can rebalance and stay on target when you're emotional.

Overconfidence. We tend to overestimate ourselves, including our ability to predict the future or pick the right stocks. Be honest with yourself—acknowledge that you're unlikely to outwit the top investors or beat the market. Instead seek to *capture the market returns* and invest in index funds instead.

Greed & impatience. We've explained why long-term compounding is the smartest way to invest. Yet, we fall for media hype and take gambles in hope of quick gains. Short-term speculations always lose out to *long-term investing*. Guy Spier recommends that you stop watching the market and financial news daily; instead, check your portfolio only once a year, so you'll maintain a long-term focus.

Home bias. We tend to invest more in what we're familiar with, e.g. our own country or industry. *Diversify broadly* into different asset classes and countries. Write down why you own what you own, as a *reminder* to yourself when things look less rosy.

Negative Biases. Humans tend to recall negative experiences more vividly than positive ones (negativity bias), and we feel twice as much pain from losses than pleasure from gains (loss aversion). During market turmoil, we're flooded by fear of potential losses. To overcome this, *be prepared*—put the above measures in place, and have a seasoned FA who'll keep you on-track during tough times.

KEY QUOTES

"Investors project out into the future what they have most recently been seeing."
- Warren Buffett

"By admitting to yourself that you have no special advantage, you give yourself an enormous advantage!"

"The best way to win the game of investing is to achieve sustainable long term returns."

"The single best way to handle market turmoil—and the fears it can trigger—is to be prepared for it."

Real Wealth

Money is just the means to an end. Fundamentally, all of us desire an amazing life; we want to be rich not for money per se, but for the *emotions* associated with money, e.g. freedom, respect, security. Robbins ends the book by sharing how we can achieve both financial and emotional wealth, by mastering 2 additional skills:

Achievement (mastering your external world):

- When you *focus* fully on something, your brain will find a way to help you achieve it.
- *Take massive action*, and refine your approach to find an effective strategy. Studying role models speeds up your learning.
- The more you're grateful for *Grace* (or luck/God) in your life, the more it flows to you.

Fulfilment (mastering your internal world):

- *Progress*: To be happy, you must keep growing.
- *Give*: The key to fulfilment is to satisfy our inherent desire to contribute.

In fact, there's one decision that you can make to start transforming your life this instant: choose to be in a Beautiful State of mind (where you're alive, in harmony with yourself and feel positive emotions like love, joy, gratitude, ease, and fun), rather than a Suffering State (where you're stressed, worried, frustrated, fearful etc.).

- Our **suffering** is triggered by thoughts of *loss* (or potential loss), having *less* of something we value, or believing we can *never* have something we want (e.g. love, respect).
- You can choose a beautiful state of mind, simply by **shifting the focus** of your thoughts.
  - *90-second rule*: Once you catch yourself having negative thoughts and tension, take a breath, step away from the situation, and focus instead on something (anything) that you appreciate. Don't allow the negative thoughts to fester.

KEY QUOTES

"Real wealth is emotional, psychological, and spiritual."

"Wherever your focus goes, your energy flows."

"The more you acknowledge grace in your life, the more you seem to have it!"

"Everything in life either grows or dies."

"I can tell you the secret to happiness in one word: progress."

"If you make the decision to master your own mind, you'll be mentally equipped to handle whatever challenges come your way."

"Take all your negative thoughts and all of your negative emotions, trade them for appreciation, and your whole life changes in an instant."

- Use the *2-minute gratitude meditation* to transfer your negative charges to positive charges. A guided recording of the 7-step meditation is available at www.unshakeable.com.

Other Details in the Book to Look out For

In the book, Robbins offers many illustrations and examples to reinforce his message. He also recommends additional resources such as:

- Get free podcasts and videos at www.unshakeable.com, including a free mobile app to help you work out how much you need to save and invest to reach your financial goals;
- Analyze your 401(k) plans and fees at Abk's website www.ShowMeTheFees.com; and
- Get a non-obligatory assessment from one of Creative Planning's wealth managers at www.getasecondopinion.com, to see if your current advisor is indeed working in your best interest.

About the Authors

Anthony ("Tony") Robbins (born 1960) is an American businessman, best-selling author, and philanthropist. He's an authority on the psychology of leadership, negotiations and organizational turnaround, and has served as an advisor to leaders around the world for more than 38 years. He has also created the #1 personal and professional development program of all time, and more than 4 million people have attended his live seminars.

He has been honored by Accenture as one of the "Top 50 Business Intellectuals in the World"; by Harvard Business Press as one of the "Top 200 Business Gurus", and he was recently named in the top 50 of Worth Magazine's 100 most powerful people in global finance. For more details, visit www.tonyrobbins.com.

KEY QUOTES

"I truly believe that success without fulfilment is the ultimate failure."

"Remember: money doesn't change people. It just magnifies who they already are."

"If you fail to master your own psychology, you may ultimately become the victim of a costly form of financial self-sabotage."

THE ONE THING

The Surprisingly Simple Truth behind Extraordinary Results

Gary Keller (with Jay Papasan)

The Big "So What"

Keller identified that there's ONE Thing that's behind every successful person or organization. He shows how we can concurrently have less and more, to get extra-ordinary results and lead an extra-ordinary life:

- Less distractions and things to do
- More productivity, income, satisfaction, time etc.

The ONE Thing

The key idea in the book is to focus on this question: What's the ONE Thing you can do, such that by doing it, everything else will be easier or unnecessary?

Going Small

Those who truly succeed understand what it means to go small:

- Ignore all the things you could do. Just do what you should do.
- Not all things matter equally. Find the things that matter most.
- Extraordinary results are directly determined by how narrow you can make your focus.

The Domino Effect: Harness the Power of Geometric Progression

If you started with a 2-inch domino, and increased the size of each subsequent domino by 50%, the 57th domino would practically bridge the distance between the earth and the moon. That's the power of geometric progression.

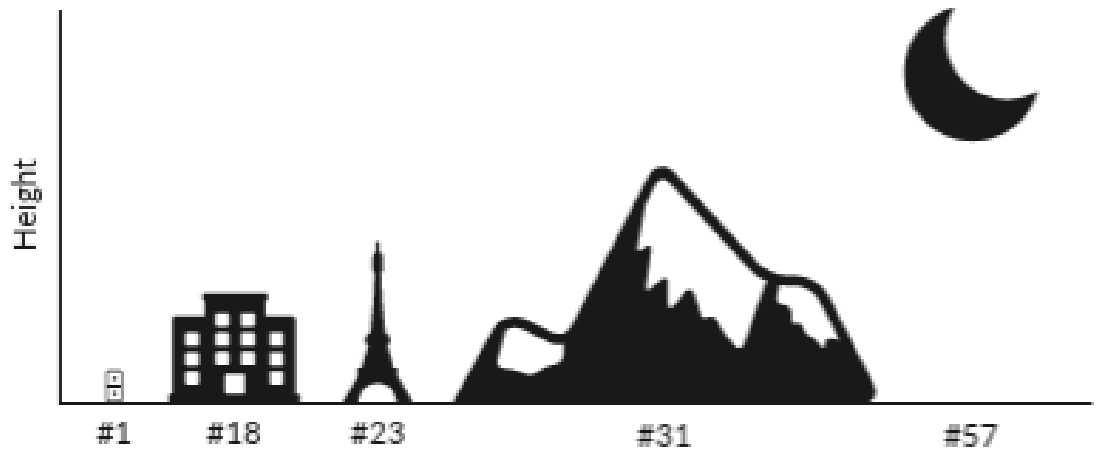
KEY QUOTES

"If you try to do just ONE Thing, the right ONE Thing, you could wind up with everything you ever wanted."

"Be like a postage stamp – stick to one thing until you get there."
- Josh Billings -

"When you go as small as possible, you'll be staring at one thing. And that's the point."

"You need to be doing fewer things for more effect instead of doing more things with side effects."



To create the same geometric effect in your life, you need to find the lead domino. Keep working at it. When you finally knock it over, the dominoes behind it would be ready to fall or have already fallen down.

Success Leaves Clues

The One Thing applies to success in all aspects of business and life:

One Product/ Service: Companies that are extraordinarily successful always have 1 signature product or service e.g. KFC's secret chicken recipe, Google's search.

One Person: No one is self-made. Every successful person (e.g. Walt Disney, Albert Einstein, Oprah Winfrey) has that 1 person who made all the difference, be it guiding him/her in the right direction or lending a helping hand at a pivotal point.

One Passion/ Skill: Extraordinarily successful people have one intense passion or ability that stands out, defines and drives them.

Banishing the 6 Lies of Success

Today, we have access to more information than ever before, but much of these information are not necessarily true or accurate. However, when myths and mistruths are repeated often enough, they start to feel familiar, we start to believe them and base important decisions on them. According to Keller, there are **6 lies of success that need to be banished** before we can embrace success.

KEY QUOTES

"Getting extraordinary results is all about creating a domino effect in your life."

"The key is over time. Success is built sequentially. It's one thing at a time."

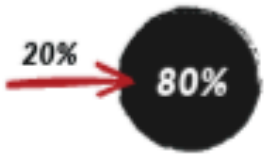
"If today your company doesn't know what its ONE Thing is, then the company's ONE Thing is to find out."

"Applying the ONE Thing to your work – and in your life – is the simplest and smartest thing you can do to propel yourself toward the success you want."

"It ain't what you don't know that gets you into trouble. It's what you know for sure that just ain't so."
- Mark Twain -

"Buying into the ONE Thing becomes difficult because we've unfortunately bought into too many others – and more often than not those "other things" muddle our thinking, misguide our actions, and sidetrack our success.

1. Everything Matters Equally



Most of us face complex problems without a clear formula for good decision-making. When we feel overwhelmed, we tend to fall back on familiar and comfortable (but ineffective) ways of making decisions. The Pareto Principle (or 80/20 rule) says that the minority of your efforts generates the majority of your results. Keller recommends applying the Extreme Pareto principle:

Go small. Don't get trapped trying to finish everything on your to-do list. Take time out to prioritize and do what really matters - convert your to-do-list to a success list, by prioritizing the "should do" over "could do" items.

Go extreme. Take the Pareto Principle to the extreme. Keep zooming in on the top 20% until you end up with the essential ONE thing.

Say no to everything else until your most important work is done.

2. Multitasking Gets More Done

Many people have the false impression that multi-tasking helps them to accomplish more in less time. The opposite is true. Research shows that multitasking leads to more mistakes, poorer choices, and greater stress:

Task-switching costs you. A juggler doesn't really multi-task – he catches and throws the balls individually in rapid succession, i.e. he is task-switching. Likewise, when we are "multitasking", we are usually only task-switching. Our brain can only focus on one thing at a time. Each time we switch tasks, we need to re-orientate to the "rules" for the new task, losing time and energy in the process.

Multi-tasking divides our attention over the various tasks. It reduces our effectiveness for each task.

We expect professionals like pilots and surgeons to focus fully on their tasks. We should likewise **give our most important work our undivided attention.**

KEY QUOTES

"Activity is often unrelated to productivity, and busyness rarely takes care of business."

"To-do lists tend to be long; success lists are short. One pulls you in all directions; the other aims you in a specific direction."

"Many things may be important, but only one can be the most important."
- Ross Garber -

"The truth is multitasking is neither efficient nor effective... When you try to do two things at once, you either can't or won't do either well."

"It's not that we have too little time to do all the things we need to do, it's that we feel the need to do too many things in the time we have."

3. We Need To Live A Disciplined Life

Disciplining yourself means training yourself to act in a specific way, or to form a habit. Hence, **we don't need to be disciplined all the time. We just need selected discipline to form the right habits:**

Don't be a disciplined person. Be a person of powerful habits. You just need to identify the right habit to cultivate, and have enough discipline to do it long enough to build that desired habit. Michael Phelps, for example, developed the winning habit of spending at least 6 hours a day in water, swimming 365 days a year.

Build 1 habit at a time. Over time, you can acquire more habits.

Give the habit enough time to form. On average, it takes 66 days to acquire a new habit (many self-help sources recommend 21 days, but modern science suggests it takes longer). The good news is, once a new behaviour becomes a habit, it takes less discipline to maintain.

4. Willpower Can Be Summoned Whenever Needed

Most of us have heard of the proverb "where there's a will, there's a way." While willpower is an important ingredient for success, it isn't something we can summon as and when we want.

Don't spread your willpower too thin. Willpower is like a battery – it has limited life and gets depleted with use. However, it can be recharged, when given downtime to recover. Use of willpower also consumes actual calories - Foods like complex carbohydrates and proteins that elevate blood sugar levels evenly are hence ideal for high-achievers.

Monitor your fuel gauge: When our willpower runs out, we will revert to our default settings, which typically means average results.

Hence, recognize that willpower is a resource that gets used up, reserve it for what's most important, and replenish it when it's low.

KEY QUOTES

"Success is about doing the right thing, not about doing everything right...The trick to success is to choose the right habit and bring just enough discipline to establish it."

"Success is actually a short race – a sprint fueled by discipline just long enough for habit to kick in and take over."

"Those with the right habits seem to do better than others. They're doing the most important thing regularly and, as a result, everything else is easier."

"Willpower is like a fast-twitch muscle that gets tired and needs rest. It's incredibly powerful, but it has no endurance."

"When you use (your willpower) first on what matters most, you can always count on it."

Time your task: Willpower gets sapped throughout the day when we focus our attention, suppress our feelings and impulses, or modify our behaviours to achieve goals. To get the most out of your day, do your most important work early.

5. We should live a Balanced Life

The idea of having enough time for everything sounds appealing. However, **when we give time and focus to what matters, it takes time away from lesser priorities, and we automatically go out of balance.** Trying to take a middle position means we make extraordinary commitments to nothing, hence achieve mediocre results on all fronts.

The solution is hence not to live a balanced life, but to apply counterbalance, i.e. never go so far that you cannot find your way back.

Identify the extraordinary result that matters most to you, and give it all the time it requires. Allow yourself to get out of balance, and use infrequent counterbalancing to address other priorities. Different goals and approaches are required to counter-balance work vs. your personal life:

For work, identify the ONE Thing that must be mastered. Make it ok to prioritize that one thing above other work priorities (i.e. be out of balance) for long periods of time.

For personal life, there are multiple areas that require a minimum level of attention for you to feel that you "have a life". Develop self-awareness and don't allow yourself to go out of balance for too long in any area without counterbalancing.

6. Big is bad

People tend to associate big results with complicated, difficult, complex processes, and feel overwhelmed and intimidated before they even embark on the journey. To avoid failure, they settle on what is comfortable and within reach.

KEY QUOTES

"Purpose, meaning, significance – these are what make a successful life. Seek them out and you will most certainly live your life out of balance."

"In your effort to attend to all things, everything gets short-changed and nothing gets its due."

"The reason we shouldn't pursue balance is that the magic never happens in the middle; magic happens at the extremes."

"Whether or not to go out of balance isn't really the question. The question is: 'Do you go short or long?'"

"When you're supposed to be working, work, and when you're supposed to be playing, play. It's a weird tightrope you're walking, but it's only when you get your priorities mixed up that things fall apart."

"No one knows their ultimate ceiling for achievement, so worrying about it is a waste of time."

Think Big. Our thinking drives our actions. When we build our lives based on small thinking, we can actually create an artificial ceiling which is hard to break through. Think big, so that your actions will add up to empower rather than restrict you in the future.

Don't order from the menu. Since none of us know our true limits, we don't know what is really impossible or unrealistic. Dare to imagine outcomes that others don't see, so you can make your own creations. To trigger your imagination, try studying people who have achieved what you want, and start from there.

Act bold. Don't just think big. Take bold actions to bring the thoughts to life.

Don't fear failure. Adopt a growth mindset to make failure a part of your learning process, helping to take you to your true potential.

The Truth: The Simple Path to Productivity

1. The Focusing Question

The quality of our questions determine the quality of our answers. By asking the Focusing Question, you drive yourself to make the best possible decisions. You'll need to ask this question over and over again - it will lead to your first domino, then the next, and the next.

- **Ask the Focusing Question: "What's the ONE Thing I can do such that by doing it, everything else will be easier or unnecessary?"**
  - *ONE Thing:* Pick only 1 (not 2 or 3) most important thing.
  - *Can do:* take that possible action. It's not "should do", "could do ", or "would do".
  - *By doing it, everything else is easier or unnecessary:* Focus on leveraged action (the first domino) and avoid distractions.
- **Ask this question to define both:**
  - *The big picture:* Define the direction for your life and what the basket of your life should look like.

KEY QUOTES

"Success requires action, and action requires thought... the only actions that become springboards to succeeding are those informed by big thinking to begin with."

"On the journey to achieving big, you get bigger... What seemed an insurmountable mountain from a distance is just a small hill when you arrive – at least in proportion to the person you've become."

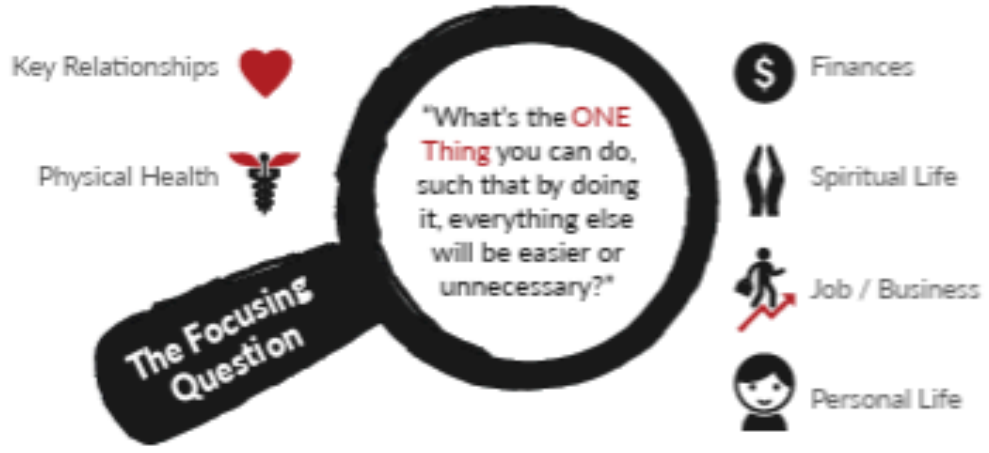
"The Focusing Question is a big-picture map and small-focus compass."

"The Focusing Question asks you to find the first domino and focus on it exclusively until you knock it over. Once you've done that, you'll discover a line of dominoes behind it either ready to fall or already down."

The small focus: Identify the smallest next move you should take immediately.

2. The Success Habit

Asking the Focusing Question is the most powerful foundational habit that you can use to lead an extraordinary life. Apply it only to important areas of your life, and use it to create the greatest impact in each of those areas.



To make it a part of your daily routine:

- Understand and believe it: You must buy into the concept to use it.
- Use it: Start each day with the Focusing Question.
- Make it a habit: Keep doing it until it becomes a part of your routine.
- Leverage reminders: Set up ways to remind yourself that until your ONE Thing is one, everything else is a distraction.
- Use it: Get others around you to practice the Success Habit daily with you.

3. The Path to Great Answers

Think Big & Specific: When asking the Focusing Question, use a Big and Specific placeholder (e.g. big goal with concrete numbers and timeframe) of where you want to be.

Think Possibilities: The answers to your questions come in 3 categories:

- Doable: What you know and can achieve.
- Stretch: At the limits of your current ability.
- Possibility: Beyond what is already known & being done.

A Great Answer explores the 3rd category - what is possible.

KEY QUOTES

"Whether you seek answers big or small, asking the Focusing Question is the ultimate success habit for your life."

"If you're not serious about learning the Success Habit, you're not serious about getting extraordinary results."

"A Great Answer is essentially a new answer. It is a leap across all current answers in search of the next one."

Benchmark and trend for the best answer: To find a Great Answer, your ONE Thing is to search for clues and role models by researching and studying high achievers. You need to do both benchmarking (for today's successes) and trending (for tomorrow's successes). Be prepared to reinvent yourself to create the new possibilities you envisage.

Achieving Extraordinary Results

Live with Purpose, to get Extraordinary Results

Productivity (and profits in business) are driven by 2 areas:

- Your Big ONE Thing = your purpose.
- Your Small ONE Thing = your priority (that you take action on).

Tap into your purpose and allow it to direct your priorities. With clear priorities, you can get to work on what matters. **When where you want to go is aligned with what you do today, extraordinary results will happen.** When you have a bigger purpose and you are fulfilling it through what you do daily, you will also achieve lasting happiness. **Use the ONE Thing to identify your Big Why, and what you can do now to start fulfilling it.** If you don't have an answer yet, simply pick a direction, start on the path, and refine it over time as you get more clarity.

Live by Priority

- **Have only ONE priority now.**
- **Goal-set to the Now,** by connecting your goal and priority today to your weekly, monthly, one-year, five-year and someday goals. Research shows that the farther away a reward is in the future, the smaller the immediate motivation to achieve it. To improve your motivation, start by defining your "Someday Goal", then apply the Focusing Question

KEY QUOTES

"Connecting purpose, priority and productivity determines how high above the rest successful individuals and profitable businesses rise."

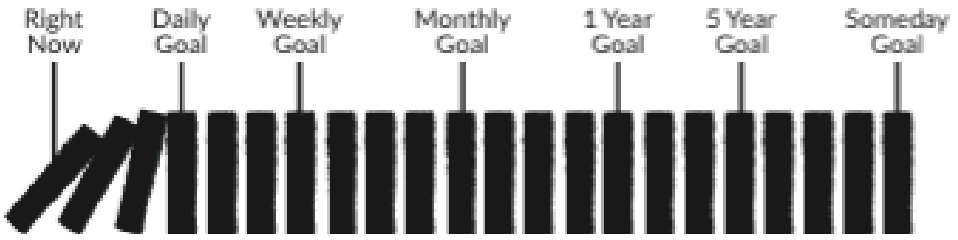
"Who we are and where we want to go determine what we do and what we accomplish."

"Happiness happens on the way to fulfillment...When our daily actions fulfill a bigger purpose, the most powerful and enduring happiness can happen"

"At any moment in time there can only be ONE Thing, and when that ONE Thing is in line with your purpose and sits atop your priorities, it will be the most productive thing you can do to launch you towards the best you can be."

"Connect today to all your tomorrows. It matters."

backward progressively to the ONE Thing you need to do, right now.



- **Put these goals down on paper,** and keep them close.

Live for Productivity

Time Blocking

Time blocking helps us to ensure what has to get done actually gets done. There are 3 things to Time-Block for (in this order):

Time off. Resting is as important as working. Block out time for vacations and rest, because you know you need and can afford it.

1 **Your ONE Thing.** Set aside regular time as early in the day as possible to get your ONE Thing done. Keller recommends that you:

- Set aside 30min-1 hour to take care of your morning priorities, then block *4 hours a day* for your ONE Thing.
- Separate "maker time" (chunks of time to develop ideas, write, recruit people etc.) from "manager time" (e.g. cluster meetings together to avoid fragmented activities).

Once you have finished your ONE Thing for the day, you can devote the rest of your time to everything else.

Planning Time. Block *an hour each week* to review your annual and monthly goals (using the Focusing Question to identify what matters most).

The key is to get an unbroken chain of productivity going (by *acting on your ONE Thing daily)* and allow momentum and motivation to take over from there.

Once you have blocked your time, protect it at all costs. Don't allow anything/ anyone to move them. To protect your time blocks:

KEY QUOTES

"Even if you're on the right track, you'll get run over if you just sit there."
- Will Rogers -

"Great success shows up when time is devoted every day to becoming great."

"If you don't time block each day to do your ONE Thing, your ONE Thing won't become a done thing."

- *Build a bunker:* Have a physical place where you can work with a "Do Not Disturb" sign.
- *Store provisions:* Have all necessary supplies and materials handy so you don't need to leave your bunker .
- *Give 100% attention:* Switch off your phone, shut down your emails and internet browser etc. so you can focus fully on your ONE Thing.
- *Enlist support:* Inform those who may seek you out during the time block, so they know when they can access you.

The Three Commitments

Time-blocking alone is not enough. You need 3 key commitments:

Follow the Path of Mastery. Mastery is a commitment to becoming your best. It is a never-ending journey - see it as a path to embark on, rather than a destination to arrive at. As you gain mastery, your self-confidence and success competence will grow, and you find each successive domino easier to conquer.

Move from "E" to "P". Don't just do the best you can (the "Entrepreneurial approach"). Do the best way it can be done (the "Productive approach"). Using the "P" approach means constantly narrowing down your choices to what you should do, and focusing on those choices, even if feels unnatural. That way, you get the most results out of your effort.

Hold yourself accountable for achieving your ONE Thing. Take complete ownership for your outcomes. This involves seeking and acknowledging reality, then taking ownership to find and execute the best solution. Don't fight reality nor be a victim of circumstances. To accelerate the process, find an "accountability partner" e.g. a mentor or coach.

Manage the 4 Thieves of Productivity

Start saying "no": It's not possible to please everyone. Say "yes" to your ONE Thing (and consider requests related to that priority). Say "no" to everything else.

KEY QUOTES

"Mastery actually means you're a master of what you know and an apprentice of what you don't."

"Focus is a matter of deciding what things you're not going to do."
- John Carmack -

"If you can't say no a lot, you'll never truly be able to say yes to achieving your ONE Thing."

"When you strive for greatness, chaos is guaranteed to show up."

Accept chaos: When you focus on your ONE Thing, other stuff will inevitably pile up. Don't fight the mess or chaos. Trust that commitment to your main priority will, over time, yield the results that will prove you made the right decisions.

Manage your energy: Good personal energy management is foundational to productivity. This includes spiritual, physical, emotional, mental and business energies. The secret is to spend the early hours of your day energizing yourself, so you have what you need for the day.

Take ownership of your environment. Your environment includes who you see (people) and what you experience (place). Make sure these are aligned with and support your ONE Thing.

Conclusion

Extraordinary results don't happen overnight. They are built sequentially, one step at a time. By using the Focusing Question to survey and narrow down your options, line up your priorities and do what matters most, you are setting yourself up for success and a life with no regrets. Your ONE Thing now is to identify the ONE Thing you can do to get started on this journey – and do it.

Other details to look out for in the book

The book comes with several practical examples and illustrations to help readers understand the concept of the ONE Thing and how to apply it. You can visit *www.the1thing.com* for additional resources.

About the Author & Co-Author of The One Thing

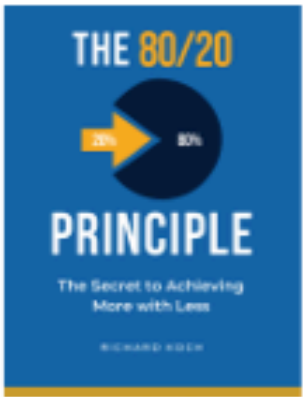
Gary Keller is an American author and a real estate entrepreneur. He has been working in real estate for over 30 years, and is the founder and chairman of the board for Keller Williams Realty, the largest real estate franchise in

KEY QUOTES

"When you clear the path to success – that's when you consistently get there."

"Your journey toward extraordinary results will be built above all else on faith... Faith ultimately leads to action."

"Actions build on action. Habits build on habit. Success builds on success. The right domino knocks down another and another and another. So whenever you want extraordinary results, look for the levered action that will start a domino run for you."



THE 80/20 PRINCIPLE

The Secret to Achieving More with Less

RICHARD KOCH

The Big "So What"

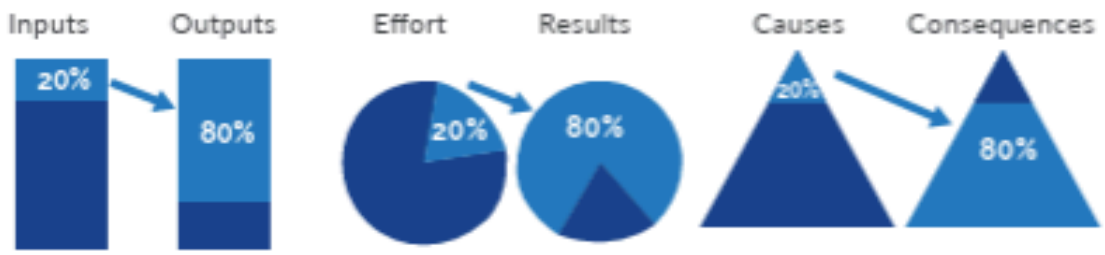
In all aspects of life, 80% of outputs, results and consequences come from 20% of inputs, efforts and causes. Koch was the first to write a book to present how individuals and groups can apply the 80/20 Principle to achieve much more results with much less effort.

What's the 80/20 Principle?

The 80/20 Principle says that the majority of your results or outputs will come from a minority of causes or inputs.

- The principle was discovered in 1897 by economist *Vilfredo Pareto* and became popular after WWII. Today, it's also known as the Pareto Principle, the 80/20 Rule, the Principle of Least Effort, the Principle of Imbalance, the Pareto Law, the Law of the Vital Few, and the Principle of Factor Sparsity.

- The ratio may not always be exactly 80/20, i.e. it could be more imbalanced at 99.9/0.01 or less imbalanced at 60/40. The key idea is this: there's typically a *non-linear relationship* between input and output, between effort and results, and between causes and consequences.



The 80/20 Principle is always at work whether you realize it or not.

- In business, 20% of our products/customers tend to contribute to 80% of our revenues/profits. In society, 20%

KEY QUOTES

"The 80/20 Principle can and should be used by every intelligent person in their daily life, by every organization, and by every social grouping and form of society."

"The 80/20 Principle states that there is an inbuilt imbalance between causes and results, inputs and outputs, and effort and reward."

of people own 80% of the wealth. At home, we'll wear 20% of our clothes 80% of the time.

- The principle means that (i) 4/5th of what you do is wasted or has minimal impact and (ii) you can multiply your output by focusing on the 1/5th that truly matters. By understanding and applying the principle, you can become a lot happier and more effective.

Fundamentally, the universe doesn't move in a straight line. Small inputs can create **disproportionate results**.

- *Feedback loops* can amplify the impact of positive vs negative relations. If you start with 2 populations of goldfish—with 1 group being only slightly bigger—the larger group will grow significantly bigger over time. Each generation of fish eats more, grows bigger and the impact is multiplied with each cycle. Likewise, the rich get richer because they can re-invest and multiply their ever-increasing assets.

- Initially, any change will face resistance. However, once it reaches a *tipping point*, it takes on a life of its own. That's why a flu bug can create a health crisis once a critical number of people have been infected and can now infect many others.

- Something small can also have a disproportionate *rippling effect* on future events. Many norms/standards were set by a small group of people adopting a specific practice, e.g. all clock-hands move in the clockwise direction due a convention set by early clock-makers.

Applying the 80/20 Principle

The 80/20 Principle means that there's great inefficiency all around us, but it also means there's a huge potential to improve our current results. In this section, we explain how to apply the principle in general, in business and in life.

General Approach and Tips

Identify your top 20% vs bottom 80% using 2 possible approaches:

KEY QUOTES

"Most of the time, we do not realize the extent to which some resources, but only a small minority, are superproductive."

"The world is full of small causes that, when combined, can have momentous consequences."

"Waste can be wonderful news...there is enormous scope for improvement."

- *80/20 Analysis*: Develop a hypothesis about an 80/20 relationship and test it by collecting and comparing 2 sets of data. For example, ask 100 friends how much beer they drank the previous week, then rank the data in decreasing order to find out what percentage of your friends consumed the majority of the beer. You may find that 15% of your friends drank 90% of the beer.

- *80/20 Thinking*: Think deeply about an important question, form your 80/20 hypothesis intuitively, then take action to apply it.

Then, allocate your time/resources using these 2 approaches:

- *Allocate more resources to the top 20%* by moving time/resources away from the unproductive 80%. Do more of what's working well.

- *Address the underperforming 80%*: Find ways to make the unproductive activities more productive or effective.

Remember these vital points when applying the 80/20 Principle:

- *Be selective*. Working harder in every area won't bring results. Seek to excel in the few things that matter the most. Remove or outsource the rest.

- Keep moving your resources from low-value to *high-value uses*.

- Don't make simple/linear conclusions or jump into action. *Think deeply* to look for non-linear relationships that can bring you exponential results. Dig deep to understand why you're getting surprisingly good or bad results in certain areas.

- There's no such thing as luck in success. When things go unexpectedly well or badly, look for the *hidden causes* at work. Most people notice something only after it has become big and has slowed down in growth. Watch for small things that are growing rapidly—these are where the biggest opportunities lie.

KEY QUOTES

"The implication of the 80/20 Principle is that output can be... multiplied, if we can make the low-productivity inputs nearly as productive as the high-productivity inputs."

"80/20 Thinking requires, and with practice enables, us to spot the few really important things that are happening and ignore the mass of unimportant things. It teaches us to see the wood for the trees."

- Your 80/20 analysis gives a *snapshot* of the input-output relationship at a point in time—this will change with time.

The 80/20 Principle in Business

In any market, 20% of the players will make 80% of the surpluses or profits. 80% of these surpluses will be generated by 20% of market segments, 20% of customers, 20% of products and 20% of employees. 80% of the value from the employees will also come from 20% of their activities. On the other hand, 80% of problems and costs will come from 20% of causes or issues. By using this principle, businesses can generate the most money with the least effort and resources.

Strategy. A successful firm is one that generates more surpluses than its competitors with less cost. Identify and optimize the top 20% of every business area—from products to employees and offices—that generate 80% of your surpluses.

- *Analyze your business areas*. Do an 80/20 analysis by (i) product type/group, (ii) customer type/group, and (iii) other splits (e.g. geographical area or distribution channels). Calculate the amount of sales, profits and return on sales. Identify the few places where you're making unusually high surpluses or losses, then dig deep to find out why.

- Combine ≥1 of the analyses above (e.g. product and customer analyses) and list down every *competitive segment* where you face a different competitor or have a different competitive position. Then, do an 80/20 analysis for each competitive segment.

- From the analysis, *classify your businesses into 3 groups*: Priority A (the most profitable), Priority B (average or below-average performers) and Priority X (loss-makers). Focus on growing Priority A businesses most aggressively. Decide what to do with Priority B and Priority X businesses based on (a) how attractive the market segment is and (b) how well positioned your firm is in that segment.

- Use the 80/20 Principle to *brainstorm ideas* for the top 20% vs bottom 80% of your business. Use questions like: "What 20% of our offerings deliver 80% of customers' perceived value and how can we increase it to >20%?" or "Which 80%

KEY QUOTES

"The principles of unequal effort and return...operate at all levels of business: markets, market segments, products, customers, departments, and employees."

"Unless you have used the 80/20 Principle to redirect your strategy, you can be pretty sure that the strategy is badly flawed."

"The best way to examine the profitability of your business is to break it down into competitive segments."

"The best way to start making money is to stop losing money."

of our features deliver only 20% of benefits and how can we remove, replace or simplify them?". Carpet supplier Interface realized that 20% of clients' carpets were getting 80% of the wear and tear; so they came up with a leasing scheme where clients could replace worn/damaged carpet tiles rather than change the whole carpet.

Reduce costs. As a rule of thumb, keep your business simple even as you grow bigger. Examine every aspect of your business, from your marketing messages to your delivery channels, product design and customer service. Focus on the most essential 20% and simplify it as far as possible. Seek to sell a narrower range of products to fewer customers, have fewer suppliers or outsource non-core activities.

- *Simplify* or remove unprofitable activities.
- *Focus on a few key drivers* for improvement. Zoom in on the 20% of your business with the greatest potential for cost-reduction and invest 80% of your efforts there.
- *Continuously improve* the performance of the top 20% of your business and simplify/improve the bottom 80%.

Marketing. 20% of your products/customers will bring 80% of your profits. Don't try to cater to *all* customers and products; be marketing-led and customer-centric *only* for your core products and customers.

- Know which 20% of your *product line* brings 80% of your profits—focus on outstanding delivery in those areas.
- Know which 20% of *customers* bring 80% of your profits—focus on delighting, retaining and increasing sales from them.
- Ensure that the entire company (not just the marketing team) is obsessed with your top 20% customers. *Retain and increase your market share of core customers* by (i) knowing who they are, (ii) delivering unbelievable service to them, (iii) tailoring new products/services specifically for them, and (iv) retaining them.

KEY QUOTES

"The problem is not extra scale, but extra complexity…Big is only ugly and expensive because it is complex."

"Whenever something has become complex, simplify it; if you cannot, eliminate it."

"Identify, treasure, and multiply the few productive costs, and get rid of the rest."

"Successful marketing is all about a focus on the relatively small number of customers who are the most active in consuming your product or service."

"Your core customers are money in the bank. If any of them drops out, your profitability will suffer."

Sales. To improve your company's sales, focus on 2 key areas:

- *Improve salespeople's performance*. 20% of your salespeople will bring in 80% of your sales.

  (i) Seek to retain the high performers;

  (ii) Figure out what makes them tick (e.g. skills, attitude) and hire more of such people;

  (iii) Identify what top performers do differently and teach those methods to others; and

  (iv) Use the 80/20 rule for training: (a) train people who're likely to stay, (b) get the top salespeople to train others and incentivise them for their trainees' performance, and (c) invest more to train those who show the most improvements.

- Set up your *structure* to help people to focus on the right areas.

  (i) Insist that your salespeople focus on the top 20% of customers and products even if it means neglecting others.

  (ii) Consolidate accounts with the highest sales/profits under 1 salesperson or team. Don't split them by geographical offices.

  (iii) Instead of dropping less profitable accounts; consider centralizing them or using lower-cost options (e.g. telephone ordering and self-servicing).

  (iv) Revisit great customers who're no longer with you.

Decision-making. Use these tips to make better decisions:

- Most decisions aren't truly important. *Focus on the few truly vital decisions* and delegate the rest if possible.

- Something important is always happening under the radar and many key decisions are being made without your realization. If you're losing your top staff or customers, it means that bad decisions have already been made. Step back and *look for things that you may be missing*, e.g. what's working surprisingly well.

KEY QUOTES

"If it ain't broke, make damn sure it doesn't break."

"Making use of these 80/20 structural influences can turn mediocre salespeople into good ones and good ones into superstars."

"Business requires decisions: frequent, fast, and often without much idea whether they are right or wrong."

"Don't be afraid to experiment and don't persevere with losing solutions. Do not fight the market."

- For vital decisions, *use the first 20% of available time* to do 80% of the data gathering and analysis, then make your decision.

- The best way to validate a market decision is to *test it out in the market*. If a decision is obviously not working, change it early. If it's working well, double your investments.

Inventory management. 20% of your stocks will account for 80% of your revenues.

- Drastically *cut stocks* for your unprofitable products.

- Have *fewer variants* for each product.

- Where possible, *hold minimal inventory*—pass them on to other parts of the supply chain (e.g. suppliers or customers), use technology or virtual inventory.

- For your *remaining inventory*, use the 80/20 Principle to reduce costs and increase the speed of movement.

Project management. To be effective, a project manager must:

- *Simplify the objective/task*. Get clear on 1 key goal and focus on 20% of activities that will deliver 80% of the project value.

- *Set stretch targets and timelines* to force the team to work on the truly critical items.

- *Plan/design first*. Identify no more than 7 top issues to be resolved, allocate the work and review/adjust your plan regularly. For design projects, get the design right before implementing it.

Negotiations are important in any business.

Know the few points that truly matter but play up the trivialities.

- Build up a list of requests and concerns that seem important to you, so you can concede on the unimportant points to *get concessions on the important points*.

- 80% of the concessions will happen in the last 20% of the time. *Pace yourself* and negotiate hard closer to the deadline.

KEY QUOTES

"Focus on the most important customers, focus on a simple product line, simply tracked and simply delivered."

"Impatient people don't make good negotiators."

The 80/20 Principle In Life

80% of your achievement comes from 20% of your efforts, 80% of your happiness comes from 20% of your life experiences, and so on. To use the 80/20 Principle, you must transform the way you think and act, so you become extremely selective and focus only on what matters.

Get clear on what you want. Most people spend the bulk of their time with people they don't like, doing things they don't enjoy, and waste energy pursuing things that don't matter. To have everything you want—including your ideal job, relationships and lifestyle—you must first *know* what you want. For example:

- *Lifestyle*: What lifestyle would you genuinely want and thrive in? Consider where/with whom you'd want to live, what you desire for your work, family or social life, how you'd fulfill your potential and make your desired contributions.

- *Career*: It's possible to align your work with other things you enjoy outside of work. Consider your ideal career options against 2 key dimensions: (i) ambition i.e. how driven you are by achievement and career success and (ii) autonomy i.e. how far you'd like to work for/with others.

Time Revolution. It's a myth that you're short of time and must squeeze more into every available minute. You're likely to achieve much more when you're calm and collected than when you're acting in a mad rush.

KEY QUOTES

"The key is not effort, but finding the right thing to achieve."

"Be clear about the optimum point you are trying to reach and view it within your life's total context."

"We don't need time management—we need a time revolution."

- Resist the urge to rush into action. Set aside time for deep *thinking and reflection*, so you gain deep insights into the actions that will bring massive results with minimal inputs.

- Stop feeling guilty about working less or doing things you enjoy. If you double the time spent on your top 20%, you could work for 2 days in a week and still achieve 60% more than your current results. Systematically identify the 20% that will give you 80% in every area of your life, and keep doubling the time/effort for the top 20%. That way, you can *multiply your wealth, happiness and knowledge*.

- Don't feel bad about reducing or removing the 80% *low-value activities*—these activities produce so little results that no one may even notice if you drop them.

- *Dare to be different*. To get breakthrough results with 20% of your time, be prepared to do things that seem weird or unusual.

Achievement and career. To succeed, choose the right goals and playing fields. Direct your efforts toward areas where you have a comparative advantage, i.e. you do exceptionally well and deliver high value with minimal effort.

- *Specialize in a niche*. It's much better to know 1 thing really well than to know many things superficially. Pick a niche that you enjoy, excel in and can become an undisputed leader. Develop a core skill until you're the best (or one of the best), such that you do things better, faster and can command a premium. Focus on the market/customer segments that'll value your services and whom you can serve especially well.

- *Multiply your achievements* by repeating, upgrading or expanding on what you excel in. Identify what you do exceptionally well and find unusually easy. Ask questions like: When did I get the most positive feedback? What approaches have worked best for me? What do I enjoy more and do better than 95% of my peers?

- *Learn from the best* people/firms who're already using the 80/20 Principle in your niche. Find ways to work with and learn from them, to learn what they're doing differently.

KEY QUOTES

"Achievement is driven by insight and selective action."

"Be unconventional and eccentric in how you use your time. Do not follow the herd."

"You are more likely to win when you are selective about the races you enter."

"You will not create anything of enduring value unless you love creating it."

"The 80/20 Principle is clear. Pursue those few things where you are amazingly better than others and that you enjoy most."

- *Leverage time/resources*. In the early stages of your career, focus on applying the 80/20 rule to create as much value as possible. Then, seek to capture most/all the value for yourself by becoming self-employed as early as possible. Finally, leverage others time/talent by (i) hiring value creators who add much more value than they cost, (ii) outsourcing non-core areas and (iii) using money to gain surplus value e.g. by buying cost-effective tools/machines.

Money. It's easier to make money than what most people think.

- You have the best chance of *earning lots of money* if (i) it's an area you enjoy and (ii) there's a large job market. Explore related vocations until you find one that you like and pays well, e.g. there are many similarities between an actor and a politician.

- 80% of the wealth are made by *self-employed professionals and business owners*. Once you're in the right profession, get really good at it, then aim to become self-employed and eventually employ others if you're comfortable with it.

- *Multiply your money* by saving, investing and practicing sound money management. The earlier you start investing, the faster you can enjoy the effects of compounding. Here are a few of Koch's investment tips:

  (i) Choose an investment strategy that reflects your personality, e.g. aggressive vs conservative.

  (ii) Put 80% of your capital in 20% of the investments that give you the best returns. Focus on and become really good at your core areas of investments, e.g. the industry you're working in, your hobby or geographical area.

  (iii) Invest for the long term. Avoid switching portfolios or moving in and out of the market regularly.

Relationships. All of us need personal and professional relationships. Yet, we tend to neglect our most important relationships. Choose your allies carefully (including your life partner) and nurture these key relationships with care. Be selective with the people you spend time with and the obligations you agree to.

KEY QUOTES

"The key to earning more and working less is to pick the right thing to do and to do only those things that add the highest value."

"Conventional wisdom is not to put all your eggs in one basket. 80/20 wisdom is to choose a basket carefully, load all your eggs into it, and then watch it like a hawk."

"There is a trade-off between quality and quantity and we consistently undercultivate what is most important."

- *Make 2 lists of* (i) your top 20 friends and loved ones and (ii) your top 20 business relationships or allies.

- *Rank* the people on each list and *allocate 100 points* between them. For your personal relationships, assign the 100 points based on how deep/close you are and the extent to which the relationship enhances your life. For your business relationships, rank them in terms of how far they've helped you and allocate the 100 points amongst the top 10 allies based on their future ability to help you.

  (i) Identify the personal relationships that are disproportionately important to you, and devote quality time and energy to strengthen and deepen them.

  (ii) Aim to cultivate 6-7 top business allies including 1-2 mentors, 2-3 peer relationships and 1-2 mentees.

  (iii) Ensure that your core relationships satisfy these 5 key attributes: mutual enjoyment of each other's company, respect, shared experience, reciprocity and trust.

Happiness. Generally, 20% of our life experiences give us 80% of our happiness. Expand the 20% as much as possible, minimise the times/experiences when you're least happy or find ways to enjoy them more.

- Develop *emotional intelligence* to become more aware of your feelings and how to manage them. When something unpleasant happens, catch your negative thoughts and find new ways to interpret events. Learn to think of yourself in more positive ways.

- *Take control of your life* by taking steps to prevent the same mistakes from occurring, avoiding people/events that make you unhappy, and spending more time around people who make you happier.

- Maximize your satisfaction and happiness in the moment. *Build happiness habits*, e.g. exercising, helping others, enjoying a break with a friend, giving yourself a pat on the back, meditating or stimulating yourself mentally.

KEY QUOTES

"For both personal and professional relationships, fewer and deeper is better than more and less deep... Choose with care. Then build with commitment."

"None of us can ever have complete control over events but we can have much more control than we think."

"Money not spent can be saved and invested and...multiplied. But happiness not spent today does not lead to happiness tomorrow."

Conclusion and Other Details in the Book

In a nutshell, keep applying 80/20 thinking until it becomes an integral part of how you think and act. Always remind yourself to focus on the vital few and step back regularly to avoid becoming lost in trivialities.

Besides the key ideas outlined in this summary, the book also includes details of how the 80/20 Principle has been conceptualized and applied over the decades. Koch provides examples of how various companies have used the principle, with additional insights and contributions from readers who have applied the principle. For more details, please visit www.the8020principle.com.

About the Author

Richard Koch (born 1950) is an entrepreneur, investor, author and speaker best known for his books on how to apply the Pareto Principle. Using these concepts, he has made a fortune from several private equity investments. Koch was formerly a consultant at the Boston Consulting Group and a partner at Bain and Company, before co-founding L.E.K. Consulting. For more details, please visit www.richardkoch.net.

KEY QUOTES

"By using little bets and the law of remarkability, you greatly increase your chances of finding ways to transform your mission from a compelling idea into a compelling career."

Constraints can be blessings in disguise as they push us to explore new skills and solutions. Accept your weaknesses so you can address them and forge new paths which you may not otherwise have considered.

Love Everything, including your Obstacles

Be grateful for your problems and the opportunities they bring. The Romans dubbed this *amor fati*, a "love of fate". When Thomas Edison was told that his house and labs (along with his years of research and prototypes) were on fire, he didn't despair. Knowing he couldn't reverse the event, he called his family to enjoy the beautiful, colourful fire being produced from the lab chemicals. Then, he rebuilt everything with vigor. Within 1 year, he made back 10x of what was lost.

Accepting something is better than feeling bitter and frustrated. But, the *best* response is to embrace the situation and take action cheerfully to create the biggest possible impact.

Persevere Till the End

Persistence is about sticking it out till you overcome an obstacle. Perseverance is about confronting obstacle after obstacle, never giving up no matter how many rounds of problems you face. After 10 years at war, legendary Greek hero Odysseus was blown away from his homeland just before reaching its shores. He persevered through another 10 years of life-threatening trials before he eventually made it home.

Know that you are capable of overcoming anything with unassailable will and purpose. Be prepared to play the long game.

KEY QUOTES

"We don't get to choose what happens to us, but we can always choose how we feel about it."

"Perseverance is something larger. It's the long game. It's about what happens not just in round one but in round two and every round after...until the end."

Focus on Helping Others

When you're facing a huge challenge, focusing on yourself will only make you feel all alone, leading to despair and hopelessness. However, when you focus on a wider purpose or how your actions will impact others, it distracts you from your own fears/pain and gives you strength to go on. When Commander James Stockdale was captured during the Vietnam War, he knew that he'd inevitably be tortured for information. Instead of worrying about his own survival, he focused on his mission and role as a leader. He used his energy to create a support network amongst his fellow prisoners, gave them a purpose and helped them (and himself) to survive the dire situation.

Strength is more easily found in service to others. Fortify your will by focusing on something bigger than yourself.

Contemplate Death

Every human being will die. In fact, you could die at any moment without warning. Contemplate mortality by asking yourself: what would you do if you only had a short period left to live? Then, live your life as if that were the case. After nearly dying in a horse-riding accident, French nobleman Michel de Montaigne stopped fearing death. He embraced life and went on to become a famous writer, mayor, dignitary, and royal confidante.

Use your mortality to create urgency. Seize the day and live intentionally. When you can embrace death—the biggest possible obstacle in your life—all other challenges will seem small in comparison.

Embrace the Cycle of Life

Life will never stop throwing you challenges. In fact, the more you achieve, the bigger the challengers you'll face. Don't delude yourself into thinking that you'll ever be problem-free. Instead, pace yourself, keep things in perspective, continuously take action and grow

KEY QUOTES

"Lend a hand to others. Be strong for them, and it will make you stronger."

"Shared purpose gives us strength."

"Death doesn't make life pointless, but rather purposeful."

"See things for what they are. Do what we can. Endure and bear what we must."

stronger with every obstacle you conquer. Combine Perception, Action and Will, and let the obstacles lead the way.

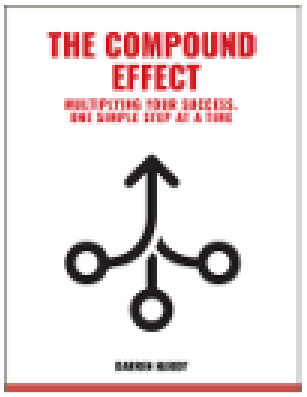
Other Details in the Book to Look out For

In this book, Holiday presents a series of stories and citations to show you how to perceive, take action and persevere in face of obstacles. In this summary, we've only outlined the key ideas and selected examples. For more details, please visit https://ryanholiday.net/.

About the Author

Ryan Holiday (born 1987) is an American author, marketer, entrepreneur and founder of Brass Check (a creative advisory firm). He began his professional career at the age of 19, and is a media strategist, a former director of marketing for American Apparel and a media columnist and editorat-large for the New York Observer. Holiday has been credited by the New York Times with the increasing popularity of stoicism.

KEY QUOTES



THE COMPOUND EFFECT

Multiplying your Success.
One Simple Step at a Time.

Darren Hardy

The Big "So What"

We're constantly surrounded by media and marketing messages that tell us we can buy secret formulas and shortcuts to overnight success. This book debunks those myths, and focuses on a simple but profound truth -Success comes from the small things that we do consistently, everyday, compounded over time. Hardy breaks down how the Compound Effect works, and presents an action plan to harness it for truly exponential success.

Introduction

Hardy's parents were divorced when he was very young, and he grew up with his dad as a role model - someone who lived a life of discipline and personal ownership. Hardy was trained to be an achiever from young, making a 6-figure income by the age of 18. Through his own experience and working with numerous successful people, Hardy found the Compound Effect to be the true magic behind massive success. Specifically:

- By 27 years old, Hardy had grown his own company to more than $50million;
- As the ex-publisher of SUCCESS magazine, he had interviewed many thought leaders, business magnates and leaders, and reviewed huge amounts of success material; and
- As a speaker and trainer, he had personally trained thousands of entrepreneurs and seen their real-life case studies.

Old School Success, not Microwave Mentality

Most of us are constantly bombarded by sensational stories and promises of secret formulas that deliver

KEY QUOTES

"This book is about success and what it really takes to earn it."

"I'm going to teach you to harness the power of the Compound Effect, the operating system that has been running your life, for better or worse."

"It's time someone told it to you straight….There is no magic bullet secret formula, or quick fix."

"I'm a true believer in the Compound Effect because Dad made sure that I lived it, each and every day, until I couldn't live any other way if I tried."

"As a society, we have been deceived. We've been hypnotized by commercial marketing, which convinces you of problems you don't have and sells you on the idea of insta-fixes to 'cure' them. We have been socialized to believe in the fairy-tale endings found in movies and novels. We've lost sight of the good, old-fashioned value of hard and consistent work."

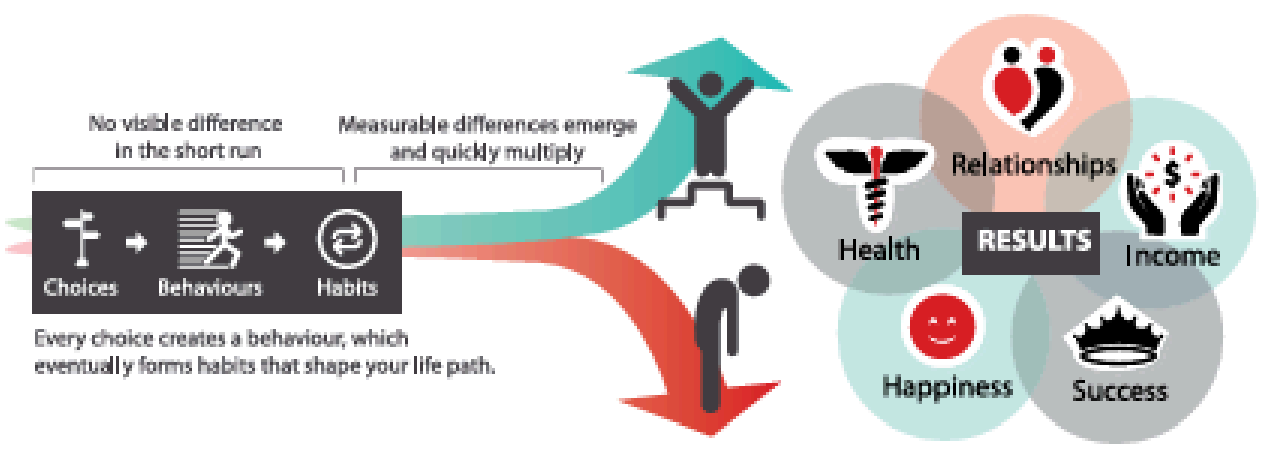
overnight riches, health, youth etc...so much so that we've lost sight of the simple fundamentals of success.

Success comes through boring, seemingly-inconsequential and sometimes-difficult daily disciplines, compounded over time. It doesn't just appear like our microwave meal, overnight mail, or 30min lenses (contrary to what we've been sold). That's why success usually skips a generation - when we experience long periods of prosperity, we tend to get complacent and stop doing what we used to do. So, it's time to rid ourselves of the insta-results mentality, and go back to what really works–the old-school work ethics that our grandparents valued and lived.

Understanding the Compound Effect

The Compound Effect is the "principle of reaping huge rewards from a series of small, smart choices". In a nutshell:

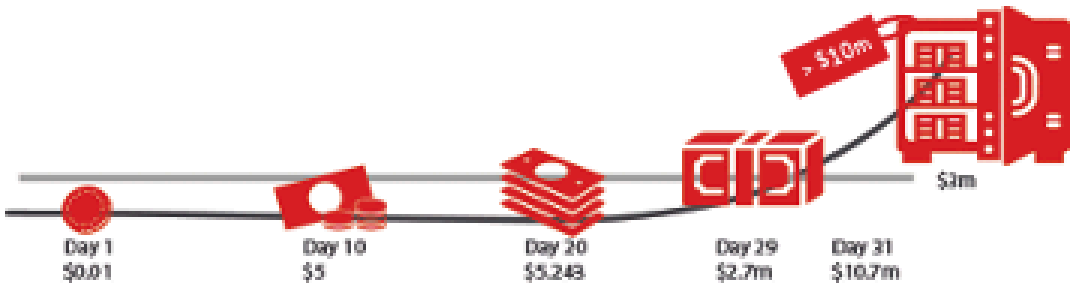
"Small, smart choices + Consistency + Time = RADICAL DIFFERENCE"



The Compound Effect in Action

Hardy presents 2 simple but powerful stories to illustrate this:

- The Magic Penny. Which is better - taking $3 million in cash now, or a single magic penny that will double in value every day, for 31 days? Most people will choose the $3m cash immediately. Indeed, if you took the penny, you'll have only about $5,000 in 20 days. But, in the remaining 31 days, this amount will compound to $10,737,418.24, way more than the $3m cash.



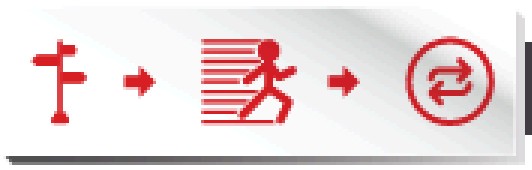
KEY QUOTES

"I want you to know in your bones that your only path to success is through a continuum of mundane, unsexy, unexciting, and sometimes difficult daily disciplines compounded over time."

- **Three Friends.** Let's assume they share similar circumstances.
  - Larry keeps doing what he has always done.
  - Scott makes some small, positive changes daily e.g. reading 10 pages, cutting 125 calories by replacing soda with water, walking an extra 1,000 steps.
  - Brad makes a few poor choices e.g. buying a big TV (to enjoy his favourite shows), eating more dessert and adding 1 drink per week to his new bar .

At month 10, there are no perceivable differences. By month 25, measurable differences can be seen and by month 31, the differences quickly become stark. Scott loses 33.5lbs, gets a promotion and raise, and his marriage is thriving. Larry is exactly in the same space and feeling bitter about it. Brad, on the other hand, puts on 33.5lbs (weighing 67lbs more than Scott). He has been feeling sluggish and less confident about himself, became less productive at work and more withdrawn from his marriage, leading to unhappiness both at work and at home.

Such is the nature of The Compound Effect. There're no perceivable differences in the short run. But, once the visible and measurable differences emerge, they multiply quickly .



Choices → Behaviours → Habits

Every choice generates a behaviour, which eventually forms habits that reinforce our future choices. Hence, every decision affects your life path (e.g. deciding to eat that cookie, marrying your spouse).

Small Choices and Actions Matter

Our small, regular choices and actions may seem insignificant, but they compound over time:

Small steps, big outcomes. When we decide to watch an extra hour of mindless TV, or eat that extra packet of potato chips, we're actually starting the Compound Effect, in the negative direction.

Your small actions are practically invisible in the early stages,

KEY QUOTES

"The Compound Effect is always working. You can choose to make it work for you, or you can ignore it and experience the negative effects of this powerful principle."

"Each choice starts a behaviour that over time becomes a habit"

"You make your choices, and then your choices make you. Every decision, no matter how slight, alters the trajectory of your life."

"You've been sleepwalking through your choices...the decisions you think don't make any difference at all."

"The magic is not in the complexity of the task; (it) is in the doing of simple things repeatedly and long enough to ignite the miracle of the Compound Effect."

and no one will notice or celebrate them. But eventually, there'll be a huge payoff that's out of proportion relative to the small individual actions. For example, the #1 golf player may be only 1.9 strokes better than the #10 golf player, but earns 5 times the prize money.

Ripple effects & Future-value. Every $1 you spend today is probably equivalent to $5 or more in the future, because that same dollar could've been invested for compounded returns. Each decision also has ripple effects, like how Brad's extra desserts and sodas affected his energy levels, self-esteem, work and marriage. So, the next time you see a $50 bargain item, ask yourself if it is worth $250. Use this future-value perspective for all areas of your life.

Take Full Control

100% ownership. Once you take full responsibility for everything that happens to you (including your responses, actions or inactions), you'll be free from victimhood and regain total control of your life.

Get "lucky". Being lucky or unlucky is merely a matter of perspective. If you look carefully, there will always be something "lucky" about your circumstances (e.g. living in a free society, having a roof over your head). Here are 4 ingredients to get lucky:

- Preparation, or your personal growth, which determine if you're ready to take advantage of the opportunities when they come;
- Attitude, or your beliefs and mindset, which determine if you can see the "luck" and opportunities around you;
- Opportunity, or something good that's happening; and
- Action, i.e. actually doing something to leverage it.

Luck = Preparation + Attitude + Opportunity + Action

Gratitude & Positives. When you notice and recognize the positives, you respond differently and trigger more positive responses.

- As a surprise Thanksgiving gift for his wife, Hardy spent a year journaling 1 thing a day that he appreciated about his wife. When he focused on her good points, he himself showed up differently in the marriage, triggering more positive responses from her.

KEY QUOTES

"Your life is the product of your moment-to-moment choices."

"You alone are responsible for what you do, don't do, or how you respond to what's done to you."

"Embrace the fact that you are freed by your choices, as long as you assume personal responsibility for them."

"We are all lucky... The difference is when luck came my way, I took advantage of it."
- Richard Branson

"We are what we repeatedly do."
- Aristotle

- If you are in a management or leadership role, take an hour each week to walk around, notice small things that people are doing right, and give your recognition or appreciation.

Habits Stick

Our conditioned responses from childhood form habits and routines which we do automatically without thinking. Habits are like saplings that grow into trees-the older they get, the harder they are to uproot. However, they can be conditioned, and you can compensate for a lack of innate ability by cultivating the right habits.

Putting the Compound Effect to Work

Start tracking

You can't change what you're unaware of. Tracking forces you to become conscious of your decisions and habits. Hardy challenges you to immediately pick the area that you want most to succeed in, then track everything you do relating to this area. This process is extremely tedious, but Hardy insists that if you want to see results, you must do it. What you learn about your own habits will transform your life.

Find your "why" and motivation.

The Compound Effect is a very simple concept, and most of us know what we should or could do. Yet, we don't do it because:

- The steps that we're taking now are so small that they don't feel significant, so we stop them assuming they don't matter;
- It takes time to see the payoffs, and we give up mid-way; and
- The instant gratification from a poor choice (e.g. eating that sugar-laden doughnut) is much greater than the intangible, rational long -term impact.

One of the solutions is to find your "why-power", i.e. the reason that will move and compel you to keep going, even when it's boring or difficult. This seldom comes from material goals, but from someplace deeper inside you.

KEY QUOTES

"Habits can be helpful–as long as they're good habits."

"(It) is about choosing to make up for what you lack in innate ability with discipline, hard work, and good habits."

"Step by step, day by day, your choices will shape your actions until they become habits, where practice makes them permanent."

"Tracking is my go-to transformation model for everything that ails me."

"This one action isn't easy, but it's simple and doable. So do it."

"Here's the bottom line: You already know all that you need to succeed...New or more information is not what you need–a new plan of action is."

Core values. These are what you stand for and act as your inner compass. Once you've clearly defined your values, it's much easier to choose between conflicting options, and you feel happy and congruent about your decisions.

Find your "enemy". Identifying an "enemy" (e.g. injustice, dishonesty) can give you the resolve to face up to your challenges. It's okay if your reason is not a noble one; what's most important is that it motivates you.

Goal-setting. To create the Compound Effect you want, you must first know where you wish to go.

- Goal-setting is really about activating the Law of Attraction–your mind filters out 99.9% of the sensory information you receive, so you can focus on what's perceived to be important. When you clearly define your goals, you open your mind and eyes to ideas, people, opportunities etc. that you may otherwise not see.
- Rather than focus on what you must do, focus on the person you must become, so you can attract the success you desire.

Shaping your Habits

It is as important to cultivate good habits as it is to stop habits that are hindering your goals.

5 Strategies to Eradicate Bad Habits

List down your top 3 goals, and then list down every single bad habit that could be sabotaging your progress. For each of these habits:

Identify your triggers. List down the who, what, where and when that are most associated with these bad behaviours;

Clean the house. Remove all cues and items in the house that are linked with these habits (e.g. throw out the junk food if you want to eat healthy, cancel the deals catalogue subscription if you want to cut spending);

Swap it. It's ideal if you can drop the habit altogether. Otherwise, you can replace them with something not

KEY QUOTES

"Forget about willpower. It's time for why-power....when the reason is big enough, you will be willing to perform almost any how."

"Your core values are your internal compass, your guiding beacon, your personal GPS."

"Something almost magical happens when you organize and focus your creative power on a well-defined target."

"Success is something you attract by the person you become."
- Jim Rohn

"What stands between you and your goal is your behaviour....what habits and behaviours do you need to subtract from and add to your life?"

"Habits and behaviours never lie. If there's a discrepancy between what you say and what you do, I'm going to believe what you do every time."

as harmful, or even good (e.g. swapping large chocolate bars for bite-size pieces, swapping potato chips for carrot sticks);

Ease in gradually. Some people prefer to take baby steps and ramp up over time (e.g. gradually reducing your alcohol intake);

Or **dive right in**. Others prefer to bite the bullet, go cold turkey and get it done once and for all (e.g. just stop alcohol immediately).

You can also **do a "vice check"**. Take anything that you're doing in moderation, but know isn't good for you (e.g. ice-cream, fried food, junk TV programs). Try to abstain from it for 30 days–if you find yourself struggling to abstain, then it is probably a habit worth kicking.

6 Ways to Cultivate Good Habits

Installing positive habits are like planting trees–it requires time, effort and nurturing.

Set yourself up for success. A new habit must be something you do daily, which means it has to work within your lifestyle. Make it easy for yourself e.g. pick a nearby gym, stock healthy food at home.

Add, not subtract. Rather than think of what you have to sacrifice or subtract (e.g. your ice cream or burger), think of what you can have or add in (e.g. your healthy salad and whole grains).

Be publicly accountable. Make your goals public, so you feel more committed and accountable to deliver them.

Have a Success Buddy, so you can hold each other accountable, work on new habits together, exchange learning points etc.

Use **friendly competition** to create additional motivation and inject some fun into the process.

Celebrate. Make time to celebrate and reward yourself for the small victories.

KEY QUOTES

"You will never change your life until you change something you do daily. The secret of your success is found in your daily routine."
- John C. Maxwell

Routines and Rhythm

Change is difficult, but necessary, if you want exceptional results that others don't get. The process will take time, effort, and you will certainly stumble. To help yourself, build routines (the things you'll do daily without fail) and rhythms that support your new and habits goals.

Identify the behaviour and habits you need to support your goals

Bookend your day, so you start and finish strong.

- Starting your day. Hardy shares his morning routine, which starts with a gratitude exercise, "sending love" or blessings virtually to others, thinking of his #1 goal, stretching for 10min, reading something positive and constructive for 30 min, focused work for 1 hour, calibration (review of key short and long term goals, before deciding on his 3 Most Valuable Priorities for the day).
- Ending your day. Hardy typically reviews his day, journals his new ideas or insights, read at least 10 pages of an inspirational book before going to sleep.

Keep things fresh, e.g. shake up your routine every week, month or year, to do something different and exciting. If you find that something no longer energizes you or delivers results, swap it.

Get into a rhythm. Besides your daily rhythms (built through your daily disciplines and routines), Hardy recommends that you design a weekly, monthly and quarterly rhythm schedule, i.e. items which you put into your schedule and honour with full commitment, like a date night with your spouse, a family day, new adventures or holidays. In the book, Hardy also demonstrates how he consolidates all the points above into a "rhythm register" so he can keep track of his new behaviours.

Be Consistent. Most people are pumped up at the start of an exciting new project or goal, dash too fast, burn out, and have to start the process all over again. Repeated start-stop cycles drain time and energy, breaks whatever momentum you may have built, and you may find yourself giving up after some time. Instead, take small, manageable steps that you can maintain consistently.

KEY QUOTES

"Change is hard. That's why people don't transform their bad habits....Ordinary is easy. Extra-ordinary is what will separate you from the crowd."

"The greater the challenge, the more rigorous our routines need to be."

"Developing a routine of predictable, daily disciplines prepares you to be victorious on the battlefield of life."

"Jim Rohn taught me that life is simply a collection of experiences; our goal should be to increase the frequency and intensity of the good experiences."

"Once all this is scheduled you no longer have to think about what you need to be doing... We've created a rhythm that gives us momentum.

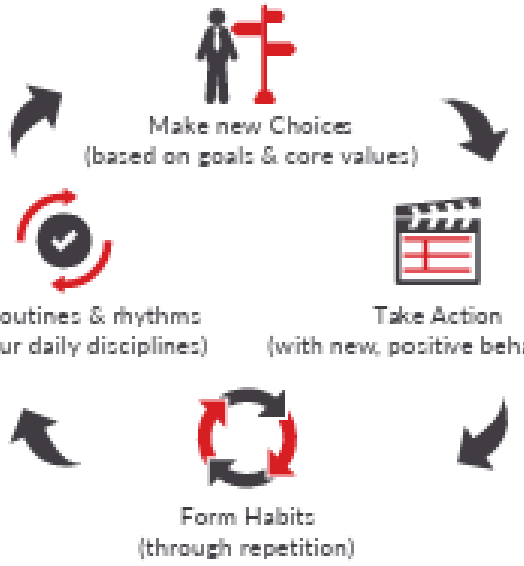
"Remember, consistency is a critical component of success."

Momentum

Momentum, or "Big Mo" is one of the most powerful components behind success. Most of us have learned in Physics that objects at rest stay at rest (unless impacted by an outside force), while objects in motion tend to stay in motion (unless stopped by an outside force).

Overcoming the initial inertia is always the hardest, but once you have momentum, you'll be hard to stop even if you put in less effort. But remember–momentum works both for and against you. Your bad habits, if left unchecked, can also spin out of control.

We've covered the key components to get the Compound Effect in motion. The key is to keep doing them consistently, until Big Mo kicks in.



Influences

Our thoughts and feelings, and eventually our choices, behaviours and habits are all affected by 3 key sources of influence:

Input (what we feed our minds). We need to protect our minds and be deliberate with what we put in them.

Rather than watch or listen to negative inputs and bad news (e.g. murders, conspiracies, economic downturns), feed your minds with information of what's good, right or possible with the world (e.g. stories of success, innovation, love). Hardy shares how he maintains a strict media diet:

- Filter the junk. Hardy doesn't listen nor watch any news. He only subscribes to selected RSS feeds with updates that are relevant to his interests and goals;

KEY QUOTES

"The most challenging aspect of the Compound Effect is that we have to keep working away for a while, consistently and efficiently, before we can begin to see the payoff."

"Big Mo can catapult you into the stratosphere of success. And once you've got Mo on your side, there's almost no way anyone can catch you."

"Miss only a couple weeks of anything…and you don't jut lose the results those two weeks would have produced…. By slacking off for even a short time, you killed Mo."

"Your choices, behaviours, and habits are influenced by very powerful external forces… you'll need to understand and govern these influences so they will support rather than derail your journey towards success."

- Use travel time wisely. Most of us spend hundreds of hours on the roads. Simply by listening to instructional CDs or audios while on the go, you can effectively gain knowledge in practically any field of your choosing.

Associations. We become the average of the 5 people we spend the most time with (Jim Rohn), though we are often unaware of their influences. The best way to improve our potential is to spend the bulk of our time with people who possess the traits we seek to acquire. Start by listing down the people you spend the most time with, then the people you most admire-ask yourself if you need to change your associations.

You can take 3 steps to change your associations. First, *disassociate* with people who constantly drag you down or pull you away from your goal. Second, *limit your associations* e.g. don't spend 3 hours with someone you should only be spending 3 minutes with. Third, *expand your associations* by reaching out to people who have the qualities that you wish to grow in; join the organizations, clubs or networking groups where these people gather.

To push yourself forward, you can also explore these options:

- Peak Performance Partner. This is someone you trust to give you honest, objective feedback, including how you are showing up, what your strengths and areas of improvements are. You can also make yourself accountable to share your goals, corrective measures, insights with your partner .
- Mentor. The most successful people realize they are never good too good to have a mentor, and they invest in mentorship and coaching. Effective mentorship requires that you are open to be guided and moulded.
- Create your Personal Board of Advisors. Find positive people who have achieved the success you want, reach out to them, and ask for feedback and input.

Environment. Your environment is more than where you live–it includes your physical, mental and emotional space. Clutter, things that don't work, incomplete tasks/ promises etc. all drain us and deplete our capacity

KEY QUOTES

"The great danger of the media is that it gives us a very perverted view of the world. Because the focus and the repetition of messaging is on the negative, that's what our minds start believing."

"You cannot hang out with negative people and expect to live a positive life."

"Determine the quality of life you want to have, and then surround yourself with the people who represent and support that vision."

"I have always found it interesting that the most successful people, the truly top performers, are the ones wiling to hire and pay for the best coaches and trainers there are. It pays to invest in your improved performance."

"The dream in your heart may be bigger than the environment in which you find yourself. Sometimes you have to get out of that environment to see that dream fulfilled."

to reach our goals. Create a positive environment that supports your goals and growth, and do not tolerate anything that takes you away from them (e.g. disrespect, sloppiness).

Acceleration

It is inevitable that we will hit roadblocks on our way to success. However, these challenges are actually opportunities to break free from our old selves and old limits.

The key is to do your best, and then give *even more*. When you've hit your max or your wall, keep going just a little longer. That little bit more expands your limits exponentially –much like the last few days of the magic penny .

Go beyond expectations, by doing the unexpected, and doing *better* than expected. Your ultimate breakthroughs come from beating yourself, and/or others' expectations of you. That little extra multiplies your results manifold and delivers the "wow" .

Start NOW

The Compound Effect only works if you take action. Time is the essence, so start now:

The earlier you take action, the bigger the results will be. It's never too late to start, and no action is too small. A 0.5% improvement a week will compound to 2% each month, 26% a year and 1,000% in 10 years.

Start small, start slow. There's no need to take massive leaps:

- Start by *tracking just 1 category or habit for 1 week*. Then, extend to tracking 1 habit for 3 weeks. For example, if you want to save 10% of your earnings, but are struggling to make ends meet, start by tracking everything you spend. You'll definitely find items you can cut, reduce or substitute without a perceivable lifestyle loss.
- Start with *one small, easy task* that doesn't even stretch you–the key is to start the process, and let

KEY QUOTES

"You will get in life what you accept and expect you are worthy of."

"There's a point in every race when a rider encounters his real opponent and understands that it's himself."
- Lance Armstrong

"It's not getting to the wall that counts...The real growth happens with what you do after you're at the wall."

"It's the extra effort after you have done your best that is the difference maker."

"When you hit the wall in your disciplines, routines, rhythms, and consistency, realize that's when you are separating yourself from your old self, scaling that wall, and finding your new powerful, triumphant, and victorious self.

"You can do more than expected in every expect of your life."

"The key is to start NOW. Every great act, every fantastic adventure, starts with small steps. The first step always looks harder than it actually is.."

the *Compound Effect* kick in. For example, if you want to lose weight and become fit enough for a marathon, start by walking a few rounds daily for 1 week, then do a slow comfortable jog and gradually ramp up.

Other details to look out for in the book

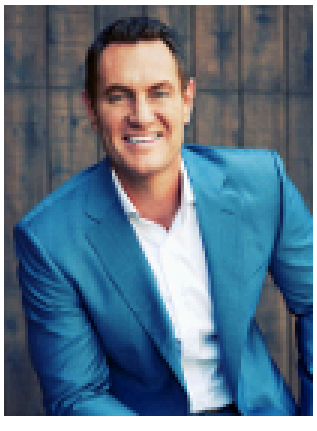
This is a compact, easy-to-read book that's full of interesting examples to help you understand the *Compound Effect*, as well as inspiring stories of people who delivered exceptional results using the principles in the book (e.g. Steve Jobs, Lance ArmStrong, Oprah etc.).

Hardy urges you to take *immediate* action, and the book comes with a range of resources and tips for that purpose:

- Each chapter ends with "Action Summary Steps" that you could apply; and
- A set of useful tools are appended in the "Resource Guide", including worksheets for gratitude assessment, core values assessment, goals assessment, habits assessment, weekly rhythm planning, self-improvement, influence assessment etc.

You can also download these resources at the The Compound Effect website (www.thecompoundeffect.com).

About the Author



Darren Hardy is an American author, keynote speaker, advisor, and former publisher of SUCCESS magazine, with more than 20 years of experience in the personal growth and success industry . He has led three success television networks producing over 1,000 TV shows with famous thought leaders.

In December 2015, Hardy announced his decision to leave Success magazine as publisher to focus on new opportunities including speaking engagements, media appearances and private mentoring. Find out more about Hardy at www.DarrenHardy .com or access free mentoring tips at his website www.darrendaily.com.

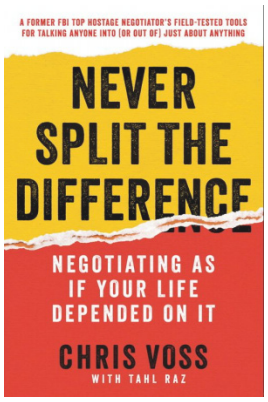
KEY QUOTES

"This book isn't designed to entertain you; it is designed to help you get results. To get results, you have to take some action."

"Motivation without action leads to self-delusion."

"My core value in life is significance. My desire is to make a positive difference in other people's lives. So to accomplish my goals, I need you to accomplish your goals. It is your testimonial of life-changing results I'm after."

"Whatever I want in life, I've found that the best way to get it is to focus my energy on giving to others."



NEVER SPLIT THE DIFFERENCE

Negotiating As If Your Life Depended On It

BY CHRIS VOSS

The Big "So What"

In this book, experienced FBI negotiator and award-winning teacher, Chris Voss, shares tried-and-tested techniques for negotiations, that can be applied in a wide range of work and personal scenarios, from hostage situations to buying your house.

Introduction

What would you do if you were to receive a call that says, "We have your daughter. Give us $1 million or she dies?" With more than 20 years' experience as a hostage negotiator with the FBI, Voss was involved in a range of high-stakes situations and saw how the approach to negotiations has evolved over the years. After teaching and testing his techniques at various leading universities, he found that his experience could be applied to a wide range of work and personal life situations.

This is because the fundamentals of human negotiations—be it to free a hostage, buy a car, or get a pay raise—are essentially the same. It boils down to the primal desire of getting what we want. Although we try to evaluate our options logically, our final decisions are ultimately emotions-driven and irrational.

Negotiation Strategies and Tips

Establishing Rapport

Negotiations are essentially about building rapport and having a dialogue. To be a good negotiator, you must master your active listening skills and tools:

KEY QUOTES

"This book will teach you to reclaim control of the conversations that inform your life and career."

"Kidnappers are just businessmen trying to get the best price."

"Life is negotiation. The majority of the interactions we have at work and at home are negotiations that boil down to the expression of a simple, animalistic urge: I want."

"The language of negotiation is primarily a language of conversation and rapport: a way of quickly establishing relationships and getting people to talk and think together."

Hypothesize; don't assume. Smart negotiators expect surprises in negotiations and aren't fixated on their assumptions. Instead, they prepare various hypotheses of what the other party really wants, and focus on *testing these hypotheses* during the negotiations.

Listen fully. When others are talking, most of us don't really pay attention; we're too busy formulating our own arguments in our heads. *Silence that inner dialogue*, and focus on listening to what the other party has to say. In so doing, you make them feel safe and quieten their own internal voices.

Don't rush. Don't rush toward a resolution; it makes the other party feel like they're not being heard, and breaks the *trust* required for a proper conversation. To get the other party to talk about what they want, you must slow down, listen, validate their feelings and make them *feel safe* to engage in a dialogue.

Use the right tone of voice to influence emotions. When people are in a positive state, they think better and are more willing to collaborate. There are 3 key types of voices in negotiations:

- Most of the time, you should be using the "*positive/playful voice*". Relax, smile, and speak slowly and clearly, to project the image of someone pleasant and amicable.

- Use the "*late-night FM DJ voice*" to make a point. Keep your voice calm, slow and warm, to project authority and trustworthiness. Make your statements using a downward voice inflection (which conveys you're in control), and use an upward inflection to invite a response.

- The "*assertive voice*" is rarely used, as it usually provokes the other party to push back.

Pause and encourage. *Silence/pauses* can be very effective for emphasis and to encourage the other party to talk freely. You can also use *simple phrases* like "Yes", "OK, "I see" to show that you're listening and encourage them to share more.

Humans instinctively trust what's familiar and fear what's different. **Use mirroring** to encourage the other party to talk more, build rapport and buy time to uncover their wants. Essentially, you're *imitating* the other person's speech patterns,

KEY QUOTES

"Negotiation is not an act of battle; it's a process of discovery. The goal is to uncover as much information as possible."

"When you slow the process down, you also calm it down. After all, if someone is talking, they are not shooting."

"When you radiate warmth and acceptance, conversations just seem to flow."

tone, vocabulary etc. One technique is to repeat the last 3 words or 1-3 key words that someone just said.

Handling aggression. Imagine you're facing an aggressive boss who just asked you to redo a project by the end of the day. To get your way without direct confrontation:

- Use the "*late-night FM DJ voice*" to calm him. Start with "*I'm sorry*…" then *mirror* his words with an inquisitive tone (e.g. "I'm sorry, redo everything by today?"). *Pause* for at least 4s, so the mirror can work, then *repeat* the process in response to his reply.

- Instead of saying, "What do you mean?" or "That's impossible", this approach prompts your boss to *explain* what he wants and why. In so doing, he may realize he only needs you to redo part of the work, or he doesn't need it by today.

Showing Empathy and Building Trust

People feel good when they are heard and understood. Focus on building a connection, not on getting what you want, to lay a strong foundation for the communication. Practice these techniques until empathy becomes habitual to you.

Tactical empathy. Being empathetic doesn't mean you must agree with others. It's about putting yourself in their shoes and understanding them. In negotiations, tactical empathy shows that you're listening and encourages your counterpart to share more, so you know what motivates them and how to influence them.

Labeling. There's usually an *underlying emotion* beneath any behavior, e.g. someone who's aggressive may be acting out of underlying feelings of insecurity. Labeling is about validating someone's feelings, by giving it a name to show you understand how they feel, e.g. "It seems like you're worried about losing control of the situation."

- To label the emotion, you must first *detect the feelings*. Start by asking simple questions like, "How's your family?", and take close notice of their responses, e.g. they may say they're ok, but visibly tense up or frown.

KEY QUOTES

"Being right isn't the key to a successful negotiation—having the right mindset is."

"There is nothing more frustrating or disruptive to any negotiation than to get the feeling you are talking to someone who isn't listening."

"Empathy is not about being nice or agreeing with the other side. It's about understanding them."

"Empathy helps us learn the position the enemy is in, why their actions make sense (to them), and what might move them."

"Think of labeling as a shortcut to intimacy, a timesaving emotional hack."

- You can label using *statements or questions*, starting with "It seems like…", "It looks like…." or "It sounds like". Avoid starting with "I", as it's more likely to make the other party defensive. Once you've put out a label, *be silent and listen*.

- When you label negative feelings, it reduces their *intensity*. When you label positive feelings, it strengthens or amplifies them.

The **best way to deal with negative feelings** is to get them out of the way asap.

- Denying a negative will only strengthen it. It's better to *acknowledge it* without judgement, then replace it with a positive idea or solution. By stating the worst possible things upfront, you diffuse the emotions and make them less scary. It also makes people feel understood and removes barriers to communication.

- Use an *accusation audit* to disarm your opponent:
  i. List down every bad thing or accusation that he/she can throw at you;
  ii. Label the fears upfront (e.g. "I understand you think I'm abusing my authority" or "You may feel like I'm treating you unfairly"); and
  iii. Ask for feedback or inputs.

The next time you encounter an angry customer or colleague, try using mirroring and labeling to diffuse the situation and turn it around.

Using "No" to Create Safety & Momentum

When someone says "Yes", it doesn't mean they agree with you. They could be avoiding conflict, or giving a quick response to a yes/no question. When someone is pushed to say "Yes" too quickly, it can make them feel defensive. Instead, invite them to say "No" to move your negotiation forward.

What "No" really means. When someone says "No", it's often not a clear-cut rejection, but a way of saying "I'm not ready to agree yet", "I need more information", or "I need more time".

KEY QUOTES

"Every one of us has an inherent, human need to be understood, to connect with the person across the table."

"The fastest and most efficient means of establishing a quick working relationship is to acknowledge the negative and diffuse it."

"'No' is the start of the negotiation, not the end of it."

"Your invitation for the other side to say "No" has an amazing power to bring down barriers and allow for beneficial communication."

Get from "No" to "Yes". When someone has the ability to say "No", it satisfies their *primal need* to feel safe and in control. Once someone has said "No", you can nudge them forward with questions like, "What about this doesn't work for you?" or "How could we make this work?". This allows them to bring up the real issues, tell you what they want and don't want, and feel ownership of the ideas/solutions.

Extracting a "No". Not everyone is ready to voice their objections. You can nudge someone to say "No" by (a) deliberately *mis-labeling* their wants or feelings, or (b) asking them *what they don't want*. Once they have voiced their objections, they tend to be more open to explore other options.

Getting a response. If someone has been ignoring you or your emails, you can use a *No-oriented question* that suggests you're ready to walk away, e.g. "Have you given up on this deal?" or "Are you dropping this project?". No one likes to be left behind or abandoned, and they'll typically respond.

Getting Permission to Persuade: "That's Right"

There are 2 magic words that can transform any negotiation, and are even better than "Yes". The words are: "That's Right".

When people feel **understood and affirmed**, they are more likely to take constructive actions.

- "That's right" may come in the form of a *subtle realization*, when the other party suddenly embraces something you've said, without even realizing their own shift.
- To influence change, you must first show an *unconditional positive regard*—to accept the other party as he/she is.

You can **use a summary** to trigger a "That's Right".

- This involves *2 elements*: *paraphrasing* (repeating what the other party said in your own words) and *labeling* (acknowledging the underlying emotions).
- This requires that you *listen carefully*, so you can summarize what the other party thinks and feels. Once you get a "that's

KEY QUOTES

"Good negotiators know that their job isn't to put on a great performance but to gently guide their counterpart to discover their goal as his own."

"Every 'No' gets me closer to a 'Yes'."
-Mark Cuban

"The sweetest two words in any negotiation are actually "That's right".

"The moment you've convinced someone that you truly understand her dreams and feelings..., mental and behavioral change becomes possible, and the foundation for a breakthrough has been laid."

right", you'd be in a better position to present how your solution helps them to achieve what they want.

"**You're right**" are 2 of the worst words in negotiations. It means the person is just agreeing so you'll shut up, and nothing will change.

Shaping Reality & Perceptions

Many people address conflicts by taking the middle ground. Good negotiation is about finding leverage in any situation and securing the best possible deal. Never split the difference.

Get time on your side. Time is one of the most critical components of a negotiation. Often, we're afraid to lose out, and thus rush into decisions that are not in our best interests.

- Most deadlines are artificially created and can be changed. Remember this rule: "*No deal is better than a bad deal*."
- If you know the other party's *drop-dead deadline*, you can work it to your advantage, e.g. it's usually easier to get a good deal toward the end of a month/quarter. If you have a firm deadline, make sure you start wheeling-and-dealing early enough, so you won't be pressured to make a hasty decision at the end.

The **perception of fairness** is key to negotiations. People retaliate when they feel they've been treated unfairly, and make irrational choices just to reject that sense of unfairness.

- In Voss' classes, he plays an "*Ultimatum game*": students are split into pairs, a "proposer" is given $10 and has to propose a split to an "accepter". If the accepter agrees, both parties get the money; if he refuses, both sides get nothing. Most accepters will reject an offer that's less than ½ of what the other party gets, and will feel offended if it's ¼ or less. No one agrees to a $10/$1 split, even though getting $1 is better than getting $0.
- Build a reputation for being a *fair negotiator*. You can also set the stage early in the negotiation by saying, "I want you to feel that you're fairly treated at all times. Please stop me

KEY QUOTES

"There's always leverage… We all have irrational blind spots, hidden needs, and undeveloped notions."

"Don't compromise. Meeting halfway often leads to bad deals for both sides."

"Deadlines are often arbitrary, almost always flexible, and hardly ever trigger the consequences we think—or are told—they will."

"While we may use logic to reason ourselves toward a decision, the actual decision making is governed by emotion."

at any point if you feel I'm being unfair." If your counterpart tries to get concessions from you by saying the deal is unfair, stay calm and ask him to explain how it is so.

Bend their reality. Although our decisions are irrational and emotionally-driven, there are mental patterns that can be used to influence decisions. Identify the other party's emotional drivers (pain, problems and desires), then show that (a) you can deliver what they want *and* (b) they'll lose something concrete if the deal falls through.

- Before presenting your offer, , use an *extreme anchor* to bend the other party's reality and set low expectations. Imagine you need to renegotiate a contract from $1000 to $400. Start with an accusation audit to acknowledge all their worst fears (e.g. they'll probably lose the contract). Then, present the opportunity to retain the contract at just $400. Most people will accept the deal.

- If possible, *let the other party make the first offer*; it gives a sense of their numbers, which may sometimes be higher than your intended closing figure.

- If you had to go first, *set a range*, e.g. if you're willing to close at $1000, you can say "these services can go for as much as $1300- $1600 in top companies". The other party will often look at the lower end of the range.

- *Go beyond monetary terms*, so you don't end up bargaining purely on numbers. After setting a high anchor, you can offer other things of value to the other party.

- *Use odd numbers*. Round numbers (e.g. $40,000) feel like estimates that can be negotiated, while an odd number like $38,257 feels like a carefully calculated bottom-line figure.

- *Throw in a surprise gift*. After your extreme anchor and your counterpart's initial rejection, offer an unexpected (and unrelated) gift. This generates goodwill and the other party may feel obliged to consider your offer or give a counter-offer.

KEY QUOTES

"We are emotional, irrational beasts who are emotional and irrational in predictable, pattern-filled ways."

"Know the emotional drivers and you can frame the benefits of any deal in language that will resonate."

"The real value of anything depends on what vantage point you're looking at it from."

In the book, Voss shares how he used the techniques above to get a hostage back safely for $4,751 and a portable CD stereo (which is a fraction of the initial $150,000 ransom fee). You can also use this approach to negotiate a better salary, a business deal etc.

Creating the Illusion of Control

A good negotiation is not a wrestling match or a showdown, but a process of nudging the other party to reach the conclusion you want. To achieve this, you must put aside your ego and the need to be right. Let the other party believe they are in control and the solutions are theirs.

The **calibrated question** is a powerful tool to affirm someone's views, make requests and introduce new ideas, while allowing the other party to feel in control. This shifts the negotiation from a confrontation into a *joint problem-solving session*. For example, instead of demanding "I want to speak with the hostage to know she's alive", you can ask: "How do I know the hostage is still alive?".

How to calibrate your question:

- Summarize the situation, then ask a "*how" or "what"* question, e.g. "How am I supposed to do that?", "What can I do to make this work?", or "How would you like me to proceed?". This prompts the other party to pause and consider the options.

- As a *general rule of thumb*, avoid questions that can be answered with a yes/no. Start your question with "what" or "how", but not "who", "when" and "where" as these can be answered factually without deep thought. "Why" questions should be used sparingly, since they may sound accusatory.

- To be effective, your questions must be *carefully designed* to nudge the conversation toward your goals, while having the other party think it's their choice.

- Your *tone of voice* is also crucial. Always ask the question calmly and respectfully. If done properly, it makes an aggressive or egoistical counterpart feel like you need his help to overcome the problem. Keep your emotions under

KEY QUOTES

"Let the other side feel victory. Let them think it was their idea Subsume your ego."

"Negotiation (is) coaxing, not overcoming; co-opting, not defeating."

"The secret to gaining the upper hand in a negotiation is giving the other side the illusion of control."

"Asking for help in this manner…is an incredibly powerful negotiating technique for transforming encounters from confrontational showdowns into joint problem-solving sessions."

"The trick to 'How' questions is that, correctly used, they are gentle and graceful ways to say 'No' and guide your counterpart to develop a better solution—your solution."

control and don't counter-attack even if you're verbally attacked or insulted.

Ensure Execution

It's possible to get a "yes", only to have the deal unravel later. As a negotiator, you must observe both verbal and non-verbal cues carefully, to make sure you have a real agreement that will be executed.

Keep asking **"How" questions**: This keeps the other party engaged, helps you to say "No" without a direct refusal and addresses execution issues upfront (e.g. "How am I supposed to raise $2mil?"). More importantly, it helps to create the illusion that they're in control, and the solutions are their ideas.

Consider the **entire team** on the other side, to ensure you're not missing decision-makers who're not at the negotiation table.

- *Ask questions* like: "How does this affect others?" and "How can we ensure we deliver the right solutions to the right people?".

- The *use of pronouns* also gives clues on the person's relative authority—those who use a lot of "I" or "me" tend to be less influential than those who use "we", or "them".

Learn to translate the **subtle cues** that tell you if the other party is lying or uncomfortable about the deal:

- The *7-38-55 percent rule* (by Prof Mehrabian) says that only 7% of a message is conveyed via words; the other 38% comes from the tone of voice and 55% from the body/facial expressions. If possible, conduct face-to-face discussions, so you can look for inconsistencies that suggest things are not what they seem.

- Use the *rule of three* to test if you have a real "Yes", i.e. get the other party to agree to the same thing 3x in one conversation. Vary your approach each time so you can check for consistency in the responses—use labels, summaries,

KEY QUOTES

"'Yes' is nothing without 'How'."

"Remember that these are listener's tools…They're about using the counterpart's power to get to your objective."

and ask calibrated questions (e.g. “how will we know if we’re ontrack?” or “what could be the biggest challenge you foresee?”).

- Most people have certain *giveaway signs* when they lie, e.g. they may use more third-person pronouns (e.g. him, hers, them), or speak in more convoluted sentences.

- People tend to respond more favourably to you as a person. *Use your name* to break the ice, and make yourself “real”.

Use multiple “Nos” to get the other party to bid against themselves and give a **better deal**. Start with more indirect “Nos”, and gradually become firmer.

- You can start with *calibrated questions* (e.g. “How am I supposed to do that?”), which are an indirect way to refuse.

- After the other party makes a counter-offer, you can say “No” again, with a *variation* like, “Your offer is very generous, but I’m sorry, I’m afraid it won’t work for me.” By suggesting your counterpart is generous and apologizing, you trigger empathy.

- As you receive more counter-offers, stay firm and *reinforce your position* with a polite “I’m sorry, no”.

Facing the Professional Bargainers: Prepare Yourself

At some point, you’ll face seasoned negotiators who know similar techniques and will bargain hard. It’s vital to prepare thoroughly before getting to the negotiation table.

Know your/your counterpart’s **negotiation style**. Treat others the way *they* want to be treated, not how you’d like to be treated. There are 3 key negotiation styles.

- *Analysts* are detailed-oriented and systematic, but may seem aloof. They take pride in being patient, thorough and seek to minimize mistakes. If you’re an analyst, remember to smile more. If you’re dealing with an analyst, be prepared with data and comparisons and give them time to analyze options.

KEY QUOTES

“Don’t treat others the way you want to be treated; treat them the way they need to be treated.”

- *Accomodators* seek to build relationships and achieve win-win. They're usually sociable but may be poor time-managers and lack focus. If you're an Accomodator, learn to voice your objections and focus on your goals. If you're dealing with an Accomodator, watch for concessions that they can't deliver.

- *Assertives* want to get things done. They're usually direct, task-focused, and like to win (even at the expense of others). If you're an Assertive, learn to soften your tone and use calibrated questions/labeling. If you're dealing with an Assertive, listen carefully and show that you've understood them (or they won't listen to you); use mirroring, calibrated questions and summaries.

When you're facing an experienced negotiator, **be ready to take punches (and to punch back)**.

- The other party may try to ruffle you with an *extreme anchor*. Stay calm, use multiple "Nos", or shift to other terms.

- If you're pushed to make the *first offer*, try making a generic statement that alludes to a range e.g. "Most good companies would charge $1800-$2,000 per day".

If things reach an **impasse**, you may need to shake things up while maintaining a collaborative climate. Avoid emotional escalation, and focus on the issue objectively.

- If someone poses a ridiculous offer, you can show a little *anger* and say "I don't see how this would ever work." This only works if the anger is real and you can keep it under control.

- *"Why" questions* generally make people defensive, but can be used to flip an uncertain situation to your benefit, e.g. "Why would you work with me instead of your established suppliers?"

- You can also use an "*I" statement* to create a strategic pause, e.g. "I feel_____when you _____ because_____."

- *Be ready to walk away*. If you're clear on your bottomline and it's turning out to be a bad deal, walk away.

KEY QUOTES

"The person across the table is never the problem. The unsolved issue is. So focus on the issue."

"No deal is better than a bad deal…be willing to walk away."

Prepare an Akerman Plan. Use this process to help you predictably meet in the middle: Identify your goal or *target price*. Set your 1st offer (your extreme anchor) at *65%* of your target price. Prepare 3 counter-offers at *85%, 95%, and 100%* of your target price (each to be offered only after calibrated questions, "Nos", and when the other side has made counter-offers). Use a *specific non-round number* (e.g. $7,893) for your final figure and throw in a *non-monetary item* to show you've reached your limit.

Finding the Black Swans

The Black Swan is a metaphor for the "unknown unknowns"—events that seem impossible and can't be predicted. Such hidden or unexpected information are hard to uncover, but can change everything in your negotiations. As a rule of thumb, Voss seeks to uncover at least 3 Black Swans in any negotiation.

Leverage comes from your ability to give what the other party wants, or make them lose what they value.

- Broadly, there are *3 types of leverage*: *Positive leverage* is what you can give (or withhold) that the other party wants. *Negative leverage* is what the other party doesn't want to lose (e.g. money, reputation, time). *Normative leverage* refers to the values or norms held by the other party that support your position, e.g. how your proposal is congruent with their principles.

- Your job is to *identify your counterpart's wants and fears*, and convince them that they have more to lose without a deal.

To effectively influence someone, you must **know their worldview**. Keep an open mind and break out of your own frames of reference.

- Listen fully and *put yourself in their world*. Double-check everything you've heard and use backup listeners who may catch things that you miss.

- The *Similarity Principle* says that we tend to trust people who seem to be similar or familiar. You gain influence if

KEY QUOTES

"Black Swans are leverage multipliers. They give you the upper hand."

"We are all to some degree blind…We do not know what we don't know."

"You want to see what language they speak, and speak back to them."

"In any negotiation…it's not how well you speak but how well you listen that determines your success."

someone thinks you share their attitudes, beliefs, culture etc. Identify and highlight your common ground.

- When you show that you share others' passions and can help them to achieve their *dreams and goals*, they will naturally want to collaborate with you.

Don't be too quick to dismiss what you can't understand. **Dig deeper** and you may uncover a Black Swan. For example:

- People may see things differently due to incomplete or different information: find the *info gaps* and provide the missing info;
- The other party may seem evasive because they're operating under *constraints* (e.g. they can't make the decision, or lack certain resources to proceed); or
- They may simply be acting on a different set of *interests* that you haven't yet identified.

To uncover the Black Swans:

- Use *face-to-face meetings* if possible; the 7-38-55 rule says that a few minutes of face-time can beat days of research or emails;
- Pay attention to *unguarded moments*, e.g. before/after meetings, during a meal, or when someone says something unexpected; and
- Use *calibrated questions and labels/mislabels* to probe for additional information, constraints or other views/interests.

Putting it together: The 1-Page Negotiation Sheet

Voss recommends that you prepare thoroughly, then condense your strategy into 1 page and stay flexible during negotiations:

Prepare for the extremes by considering your best and worst-case scenarios. Then, write down **1 specific best-case goal**, keeping an open mind to accept other better outcomes.

KEY QUOTES

"We're all hungry for a map to joy, and when someone is courageous enough to draw it for us, we naturally follow."

"When we are confronted by (the unknown), we ignore it, we run away, or we label it in ways that allow us to dismiss it."

"Remember: never be so sure of what you want that you wouldn't take something better."

Summarize (in a couple of sentences) the facts that've led to the negotiation, with the aim of getting the other party to say, "That's right." Ask yourself : What do you want (and why)? What do they want (and why)?

Consider how the other party will feel about your summary, and list down all the **possible accusations**. For each accusation, list down 3- 5 **labels** ("It seems like….").

Dig deeper into your counterparts' underlying motivations. Prepare 3-5 **calibrated questions** that will (a) highlight the value of your offer or (b) address potential deal-breakers. Remember to look at things from their viewpoint, not yours.

List down the **non-cash items** that you'd want from your counterpart. Ask yourself: What could they offer to make me do this for free?

Other Details in the Book to Look out For

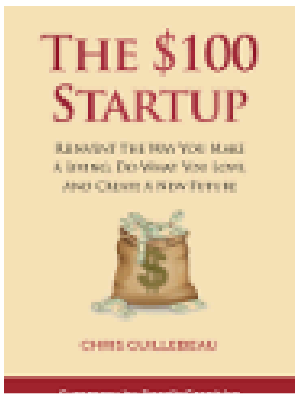
Most of us are afraid of conflict and to push for what we want. Through this book, Voss hopes to help us overcome that fear and uncover value through negotiations. The book also includes useful details including:

- Background on our decision-making processes, and a brief history of how the approach to negotiation has evolved over the years;
- Detailed accounts of various hostage situations (e.g. bank robbery, kidnapping by rebels, prison siege), and Voss' personal mistakes, successes and learning points;
- Detailed case studies/examples of how the techniques were applied by Voss and his students in various scenarios: to close a sale, secure a promotion, change behavior on the football field, etc.; and
- More details on how to prepare your 1-page Negotiation Sheet.

KEY QUOTES

"Motivations are what they are worried about and what they hope for, even lust for."

"If this book accomplishes only one thing, I hope it gets you over that fear of conflict and encourages you to navigate it with empathy."



The $100 Startup

Reinvent the Way you Make a Living, Do what you Love, and Create a New Future

CHRIS GUILLEBEAU

The Big "So What"

With technology today, it's much faster, easier and cheaper to build a small business. This book presents a blueprint to help you start your own microbusiness – one that can coexist with whatever you're currently doing, and/or eventually replace your traditional job. The big idea is, you can do something meaningful that you love, make money while doing it, and define your own future and freedom.

Introduction

Microbusinesses are typically small businesses run by one person. Although they have been around for a long time, technology has made it possible to test, launch and scale your business quickly and cheaply.

Guillebeau identified 1,500 individuals who had successfully built businesses with $50,000 annual net income, mostly with start-up capital of $100 or less (and no more than $1,000). From this group, he focused on the 50 most interesting case studies. Most of them can be operated by ordinary people with no special skills. The case studies are from all over the world, with about half from the USA.

The MicroBusiness Revolution

Charting your future

Many entrepreneurs didn't start out with the intention to do business. They often started out of necessity or accident, e.g. when they lost their jobs, or developed a solution for

KEY QUOTES

"This book...has two key themes: freedom and value. Freedom is what we're all looking for, and value is the way to achieve it."

"The blueprint does not tell you how to do less work; it tells you how to do better work... Read it if you want to build something beautiful on the road to freedom."

"It's a microbusiness evolution – a way of earning a good living while crafting a life of independence and purpose."

"Our story is about people who start their own microbusinesses without investment, without employees, and often without much of an idea what they're doing."

themselves that others also wanted to use. In such cases, the founders had no prior business experience, and often had no idea what they're doing, but succeeded anyway.

They are proof that you can build a business that allows you to do what you want to do. **Your business should work around your life, not vice versa.** Guillebeau's own businesses enabled him to visit almost every country on earth by his early thirties, and he has never held a "real job".

Obviously, you don't need to pursue a nomadic lifestyle if you don't want to. But, if you wish to have a business that gives you freedom to travel round the world, the book includes many such examples. Two of the easiest businesses to start with are information publishing and consulting.

The Point of Convergence

From the case studies, Guillebeau identified 3 key foundations behind the success stories:

Passion. In many of the case studies, people start doing something out of interest or passion – be it arranging free travel using air miles, or making wedding dresses. As more people learn about what they have to offer and ask for it, they start charging a fee, and the business is born. Passion is an important ingredient that keeps us going in face of failures. However, passion alone is not enough.

Usefulness. You must direct your passion toward something that helps people. Specifically, find the point of convergence – the area of overlap between

KEY QUOTES

"The business is structured around my life, not the other way around."

"There's no rehab program for being addicted to freedom. Once you've seen what it's like on the other side, good luck trying to follow someone else's rules ever again."

"There's no failproof method; in fact, failure is often the best teacher...We'll study how these and other brave entrepreneurs forged ahead and kept going, turning potential disasters into long-term successes."

"The missing piece is that you usually don't get paid for your hobby itself; you get paid for helping other people pursue the hobby or for something directly related to it."

what you love to do, and what people are willing to pay for. For example, Benny Lewis travels extensively and enjoys learning new languages. He realized that people are prepared to pay to learn a new language in 3 months, and found a way to monetize this.

Skills Transformation. Your business may not be built directly on your passion or hobby, but on something *related* to it. Most of us are good at multiple things. The crux is to :

- Apply your knowledge or skill to a *related area* that's useful for customers; and/or
- *Combine* a range of ordinary skills in a way that creates value. For instance, a cartoonist needs writing and art skills, a sense of humour and some business experience – each skill may not be outstanding but when combined, they create value.

Creating Value

Your freedom hinges on how far you help or add value to others. Offering value is about helping your customers; at the core, most human needs are emotional (e.g. our need for love and affirmation). For example, people at a horse ranch are not just buying horse rides; they are buying a sense of escapism and happiness. Many restaurants don't just offer food and drinks; they offer a place to relax after a hard day's work. Focus on helping others, and learn to articulate the emotional benefits (not boring features) that you bring.

Give the fish (don't teach them to fish). Very often, customers just want to be served the fish; they don't want to learn to fish. When you visit a nice restaurant, you want to enjoy your meal, not learn to cook. Keep it simple - find out what people want, and just "give them the fish".

Identify opportunities. Ideas and opportunities are everywhere. (Passion + skill) + (Problem + marketplace) = Opportunity.

KEY QUOTES

"You already have the skills you need – you just have to know where to look."

"To succeed in a business project, especially one you're excited about, it helps to think carefully about all the skills you have that could be helpful to others and particularly about the combination of those skills."

"Value is created when a person makes something useful and shares it with the world."

"Value means helping people... More than anything else, value relates to emotional needs."

"Freely receive, freely give... When all else fails, ask yourself how you can help people more."

- *Inefficiencies*: When you're frustrated with the way something works, there are probably others who are also frustrated and looking for alternatives;

- *New technology*: The wide use of smart phones creates not only opportunities for apps and smart-phone gadgets, but also for paper products positioned as alternatives to an all-electronics world. Where there are new technologies, there are new opportunities;

- *Changing space*: Consider if and how a space (e.g. an old, unused building) can be re-purposed for a different use; and

- *Spin-off or side-project*: Consider offshoots from a successful business, e.g. a music teacher who also sells music textbooks.

Identify real wants & needs. We add value when we give people more of what they want (e.g. love, money, recognition, free time), or take away what they don't want (e.g. stress, uncertainty, hassle), or both. Here are some tips:

- *Uncover hidden needs*. Often, what people want is different from what they *say* they want. The best way to assess if you're creating value is to see if customers buy; If they don't, ask what you must do differently.

- *Make your customer a hero*. Consider how you can make your customers look good in front of others - e.g. a software that helps them complete their work faster.

- *Evaluate ideas using money*. Learn to ask questions like "How would I get paid with this idea?", "How could I get paid or get paid more than once with this idea?"

KEY QUOTES

"Compared with working just to make a living, it's much easier to do what you love and get paid for it. You just have to find the right passion, the right audience and the right business model."

"You must focus continually on how your project can help other people, and why they'll care about what you're offering in the first place."

The New Demographics

It's important to know who our customers are, and how to find them. However, instead of traditional demographics like age, gender, race, income, location, it may now make more sense to look at shared interests, values, beliefs, passions, skills.

To **develop new customer groups**:

- *Leverage on a popular hobby, fad or craze* by establishing yourself as an authority and simplifying parts of the process for people. For example, adopting a popular diet plan yourself, then helping others who are struggling to implement the diet.

- *Sell what people buy (and ask them if unsure).* If you're unsure which idea to implement, the best way is to ask your customers or prospects directly. But, instead of asking if they "like" it, ask if they are willing to *pay* for it, and use questions like "What's the #1 thing I can do for you?"

Evaluating options. You may get so much feedback and options from your customers that it becomes overwhelming. Start by capturing all the ideas, then evaluate projects and options using these tools:

Start with a "*baseline evaluation*". There are only 3 things that you must have in a microbusiness (everything else is optional):

- Does the project produce an obvious product or service?
- Are there customers? (Do you know people who'll want to buy it, and do you know where to find them?)
- Do you have a way to get paid (i.e. exchange your product/ service for money)?

KEY QUOTES

"Old-school marketing is based on persuasion; new marketing is based on invitation."

When you have a "yes" to all 3 questions, you can proceed to the *decision-making matrix*. Score each idea (on a scale of 1-5) against these 4 criteria:

- Overall *impact* on the business and customers
- The amount of time and *effort* required
- The *profitability* relative to other options
- The level of fit with your overall mission and *vision*.

The aim is to identify your next steps, not necessarily choose 1 single option.

Create a "*possibilities list*" to keep track of other ideas that you may want to revisit in the future.

THE STEP-BY-STEP GUIDE TO LAUNCHING YOUR BUSINESS

The $100 Startup Model is about taking action. There are many free resources on the official website, www.100startup.com. In this segment, we'll outline the approach (with the download links), so you can start putting the ideas to practice right away.

The One-Page Business Plan

Many people spend all their time making a plan that doesn't convert to action. It's much better to quickly outline a 1-page business plan (download template here). Focus on taking action and "plan as you go".

Select a marketable idea. You don't need a huge idea; you just need something useful enough that people will pay for. That's why you should start asap - avoid spending too much resources until you've tested that people want what you have to offer. Use the 7 Steps to Instant Market Testing guide (download here).

KEY QUOTES

"Most of the time... having an idea isn't a problem for entrepreneurs...The problem is evaluating which projects are worth pursuing, and then decision between different ideas."

"In the battle between planning and action, action wins."

"A marketable idea doesn't have to be a big, ground-breaking idea; it just has to provide a solution to a problem or be useful enough that other people are willing to pay for it. Don't think innovation; think usefulness."

Marketing before manufacturing. Test that there's sufficient demand for your product/ service, before you spend all your time and effort figuring how to make it. And, keep costs low by investing your own time and effort initially (rather than sinking in your savings or borrowed money). False starts and initial failures are common; this approach minimizes the impact of potential failure.

Get your first sale asap. At the start, your challenge is inertia (not competition). Your first sale provides a huge motivator and morale booster to keep you going.

Regroup after initial success, to see what needs to be done next, e.g. sub-contract less important tasks to free yourself for more vital ones. Figure out if/ how you can duplicate your initial success.

Explain your business with a **short Mission Statement** of 140 characters or less, using this simple formula:

We provide [*product or service*] for [*customers*].
We help [*customers*] to do/achieve/other verb [*primary benefit*].

Consider incorporating a community project or social cause into your business. When you **receive freely and give freely**, you'll find your business to be a lot more fulfilling and rewarding.

Creating a Killer Offer

To craft an offer that people can't refuse, you need the Right Audience, the Right Promise, *and* the Right Time. All your messages should have a good story that's relevant to your audience, with the right amount of urgency. In crafting your messages, remember:

What people want is not necessarily what they say they want. For example, for years, people have said they want extra legroom on airline flights; yet, most are not willing to pay more for it. A great offer is

KEY QUOTES

"The first time you make a sale in a new business, no matter the amount, it's a very big deal."

what people want and are willing to pay for.

Most of us like to buy, but we don't like to be sold to. While persuasive marketing is still useful, it's more effective to create the impression that the customers are receiving an invitation rather than a sales pitch. Focus on emotional benefits, not features.

Here are 3 additional tips to improve your offer:

Frequently Asked Questions (FAQ). A good FAQ page helps to address the main objections that the buyers could have. Provide the primary benefit, secondary benefit, respond to concerns, and encourage them to take action

Satisfaction Guarantee. Offer a satisfaction guarantee and keep it simple, so your customers won't overthink it. You can even offer an "incredible guarantee" like a 110% refund.

Over-deliver. People sometimes get buyers' remorse, so you want to make them feel good by offering acknowledgement and reassurance immediately, and give them quick access to their purchases. To over-deliver, you can upgrade their purchases, send a handwritten thank-you card or something they didn't expect.

Gentle Self-Promotion through Hustling

Hustling is about getting the word out about your project. Besides taking action on your business, you must be willing to promote it. Create a great offer, share it sincerely, then get people to talk about it. For example, you can write to people who share similar values, beliefs or could benefit from your project. Share your big goal or idea, the main benefit of your project, and 1-2 action items that they can do to support you, if they like your idea.

Give freely and receive freely – it works. Guillebeau suggests that you keep saying "yes" to ideas, requests and opportunities until you have a good reason not to, or just

KEY QUOTES

"Compelling offers often create an illusion that a purchase is an invitation, not a pitch."

"The way we place a value on something isn't always rational. You must learn to think about value the way your customers do, not necessarily the way you would like them to."

"Being willing to promote in an authentic, non-sleazy manner is a core attribute of microbusiness success."

"The more you focus your business on providing a valuable service and helping people, the more your business will grow."

give something away. Use the **1-page promo plan** as a guide (download here).

Launching your Product/ Service

Launching your product is like launching a Hollywood blockbuster movie, with months of planning. You can use the **39-step product launch checklist** (download here) to guide you.

The idea is to tell a story, rolling it out in parts, and building up the suspense. Here are the key elements:

Pre-launch

- **Sneak peak**: Start with a teaser that something interesting is coming up, and explain why your prospects or customers should care;
- **Why it matters**: Explain why your project is a game changer, how people will benefit, and why it should matter to them.
- **Share the plan**: Give details of the launch, focusing on what they need to know now (e.g. launch date, early bird bonuses etc.)
- **Almost-there**: Remind people of launch details just before the big day. You want them to decide now that they're in.

Launch

- **It's finally here! (Launch Day)** If you've done the preparation well, this step is typically short, with just a link or instructions to encourage action.
- **Updates**. Keep your prospects and customers updated on the progress; share how other customers are happily enjoying your product.
- **Last chance!** Before the end of your offer, do a final push. Make sure you stick to your promise and don't extend or change terms.
- **Appreciation**. Thank everyone and let them know what's next.

Take a break after your launch to recharge and celebrate, but start thinking how else you can help people and serve them further. Remember: your launch is not just about sales; it's also about building your relationships and influence. Compared to advertising, hustling and relationship-building strategies take time, but they yield greater mileage in the long run.

KEY QUOTES

"Advertising is like sex: Only losers pay for it."

Money matters

There's no business without revenue. Yet, business owners often get distracted with non-revenue-generating activities. Here are 2 simple principles to manage your money:

Keep costs as low as possible. The businesses covered in the book began with an average investment of $610.60. In the initial stages, the best way to avoid excessive financial commitment is to start small. If you really need additional funds, consider going for crowdfunding instead of loans.

Make more money. To improve profitability:

- Price your product / service based on *Benefits, not Costs*.
- Offer a *small range of prices*, so you can (a) increase your income without increasing your customer base; and (b) create a "price anchor" to make the lower prices seem more reasonable.
- *Get paid repeatedly* using memberships or subscriptions.
- *Try raising prices* – it may not don't always result in a drop in conversion. To test this, try raising the price with no changes and see what happens.

LEVERAGE AND NEXT STEPS

Improving Profitability through Small Tweaks

It's generally easier to grow a business than to start one. You can greatly improve business profitability through small changes. Focus your tweaks on increasing:

- **Traffic**, e.g. visits to your website or to your store.
- **Conversion**, i.e. the percentage of prospects who become customers. The best way to do this is through A/B testing (test an offer, headline, or copywriting against another).
- **Average sales price**, through upsells (e.g. offer a

KEY QUOTES

"Spend as little money as possible and make as much money as you can."

"Small is beautiful, and all things considered, small is often better."

"When you base your pricing on the benefits you provide, be prepared to stand your ground, because some people will always complain about the price being too high no matter what it is."

"[Your product] doesn't need to be cheaper – competing on price is usually a losing proposition."

"The not-so-secret to improving income in an existing business is through tweaks: small changes that create a big impact."

premium version or additional item upon purchase), cross-sells (e.g. offer related items upon purchase) and sale-after-use (e.g. make a special offer to customers immediately after a sale).

- **Sales to existing customers**. Build relationships with your customers, and make additional offers that will benefit them.

  Some examples of action-based tweaking include: encourage referrals, hold a contest, or create a hall of fame for your best customers. You can also add a service to a product-based business, or create a product from a service-based business.

Grow at your own pace, to your ideal size

You should only grow your business if you want to. After all, a big business with a huge team and overheads doesn't guarantee long-term success. In fact, Having the stable income from a full- or part-time job can give you the peace of mind to build your business slowly and steadily. If you're in a creative business, depending on it as your only source of income could also bring so much stress that it drains you of your creativity.

Hence, you should consider the role that your business plays in your life, and decide if you prefer a small "freedom business", or to go all in and build a full team. If you decide to grow your business, you can do it horizontally (by serving more related customers or interests) or vertically (by serving the same customers with more levels of need).

Franchising yourself

When you buy a franchise, you put in a large investment, follow someone else's guidelines and business model, and build their brand. A more rewarding option is to clone yourself (your skills, activities and passions). It can also satisfy your itch for new projects as your business grows and stabilizes. **You can self-franchise in at least 3 ways:**

KEY QUOTES

"Although some customers would make more than one purchase, the best way the customers could help was by referring other buyers and fans."

"There' no point pursuing growth for growth's sake; you should scale a business only if you really want to."

"Become as big as you want to be (and no bigger)."

"Buying into someone else's franchise isn't usually a good idea, but figuring out how to leverage our own efforts is almost always worth careful consideration."

The Hub-and-Spoke model creates spin-offs from your core business. Your "hub" is the home base where you drive visitors to (e.g. your main website, blog, community). Spokes are "outposts" where you spend your time e.g. social networking sites, meetings, networking events etc. Every spoke must support the hub.

A **partnership** can be forged through a joint venture by 2 or more people. It has to be built on synergy, such that 1+1=3 and the partners can achieve together what each person can't achieve on his/her own. It's important to lay out (in advance) how the money will be split, each partner's responsibilities, how information will be shared, how the project will be jointly marketed, how long the agreement will last and how often the partners will meet.

Outsourcing. This option allows you to grow the business as a solopreneur, without doing everything yourself. However working with sub-contractors comes with its own challenges - balls may be dropped, and talented assistants often leave after they gain experience. In deciding whether to outsource, consider (a) if your business roles can be clearly defined and communicated, and (b) the type of business you want (e.g. a mobile, low cost business that gives you freedom, versus a business that can outlast you).

Monitoring your business

As your business grows, you'll need to review different aspects, fix problems and identify small actions you can take for long-term results.

- Use this **2-pronged strategy** to monitor the health of your business:

  - Select *1-2 metrics* to monitor on an ongoing basis (e.g. sales, cash flow, leads); and
  - Leave everything else for a *biweekly or monthly review*, when you look deeper into your business.

KEY QUOTES

"Franchising yourself isn't just doing more; it's about taking your skills, activities and passions to a higher level to create better returns."

"Just don't open a sandwich shop with someone else's name on it. A better way is to franchise yourself."

- Do a regular audit of your sources of income, your marketing and messaging, your price-points, your monitoring and testing, and the biggest opportunities you are missing.

- Work on your business, not in it. To avoid fighting fires daily as your business grows, dedicate 45 min of uninterrupted time daily to think about the future of your business, or how you can move ahead, considering your business development, offer development, long-standing challenges, pricing strategies, and customer communication.

The built-to-sell model is fundamentally different from the $100 Startup model:

- The **$100 Startup model** is great for transitioning to a business or new career, based on something you love to do.
- The **build-to-sell model** is about creating an separate entity that you can sell off for a big reward. It typical requires more capital and employees.

The right model will depend on what you want from your business. However, to give yourself more options, it's best to plan for a product/ service that (a) has the potential to scale, (b) is teachable, and (c) valuable.

This book is about starting a business that can support the life you want. While all the entrepreneurs interviewed come with their share of fears and worries, the biggest obstacles they overcame are those of self-doubt and inertia - this book provides the key steps you need to start taking action.

If the ideas of the $100 Startup resonate with you, do check out the various case studies in the book for added inspiration, as well as the useful links and resources on the official website. The book and website also include:

KEY QUOTES

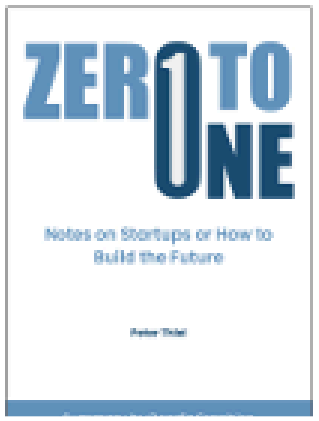
"Do what makes sense for you, not someone else."

"Since it's so much easier to start a microbusiness, why do something different unless or until you know what you're doing?"

"Don't confuse advice for permission. You don't need anyone to give you permission to pursue a dream."

"Sometimes the best advice is none at all. If you know what you need to do, the next step is simply to do it. Stop waiting. Start taking action."

"Creativity and initiative will get you far, regardless of the starting point."



Zero to One

Notes on Startups or
How to Build the Future

PETER THIEL (with Blake Masters)

The Big "So What"

How did companies like Google, Paypal, Amazon and Telsa become so successful, and how can you get there as a startup? In this book, Thiel – a billionaire entrepreneur and investor who co-founded PayPal and Palantir, and invested in hundreds of startups including Facebook and SpaceX - shares his insights about business and entrepreneurships. He shares why much of what we believe in may be flawed, and how we can think about and create truly valuable businesses that shape a better world.

Introduction

Changing the Future - Zero to One

0 to 1
- Doing new things
- Vertical /intensive progress
- Driven by Technology

1 to n
- Copying things that work
- Horizontal/ extensive progress
- Driven by Globalization

Progress can take 2 forms:

Horizontal (extensive) progress, which comes from copying things that work, e.g. when you improve a typewriter and sell it globally. It brings us from **1 to n**.

Vertical (intensive) progress, which comes from doing new things that haven't been done before, e.g. when you move beyond typewriters to invent a word processor. It brings us from **0 to 1**.

KEY QUOTES

"Every moment in business happens only once. The next Bill Gates will not build an operating system. The next Larry Page or Sergey Brin won't make a search engine. And the next Mark Zuckerberg won't create a social network. If you are copying these guys, you aren't learning from them."

"The paradox of teaching entrepreneurship is that such a formula necessarily cannot exist; because every innovation is new and unique."

"This book is about the questions you must ask and answer to succeed in the business of doing new things... an exercise in thinking."

The most successful businesses in the world – such as Apple, Facebook, Google – achieved success not by copying others, but by creating something fundamentally new. They moved from 0 to 1. Globalization is at the heart of horizontal progress, while technology is at the heart of vertical progress. And the good news is, both can coexist.

The most valuable companies became so because they uncovered truths behind widely-held (but incorrect) beliefs, hence fundamentally changing our world. Thiel calls these "secrets". Every multi-billion dollar company was once a startup, a small group of like-minded people who fervently pursued alternative truths to build a different future.

Revisiting the 1990s Dot-Com Mania

In the book, Thiel gives a quick recap of the dismal global settings in the 1990s, the rise of the dot-com mania, and the burst of the dot-com bubble in 2000. Here are 2 important takeaways:

First, although the dot-com mania was short-lived, it was a reflection of growing concerns that the "old economy" wasn't working. The internet held promise of solutions for a globalized world, and indeed, technology and the internet have helped to tackle many challenges of globalization today.

Second, much of what we "know" is shaped by circumstances and reactions to past mistakes, and may not be true at all. Thiel showed how the business "wisdom" in the post dot-com era was actually flawed. We'll now expand on some of Thiel's business insights and ideas in the book.

Zero to One Business Insights

Theil challenges several market and business wisdoms that are widely accepted. This segment provides an overview of the key ideas.

KEY QUOTES

"What makes the future distinctive and important isn't that it hasn't happened yet, but rather that it will be a time when the world looks different from today."

"Positively defined, a startup is the largest group of people you can convince of a plan to build a different future."

"The first step to thinking clearly is to question what we think we know about the past."

"The most contrarian thing of all is not to oppose the crowd but to think for yourself."

"Ask yourself: how much of what you know about business is shaped by mistaken reactions to past mistakes?"

Creative Monopoly, not Competition

Most of us grew up learning that competition is good and essential. Theil suggests the opposite – that competition is destructive while a "creative monopoly" is the way of the future. Thiel defines a creative monopoly as one that has achieves this status because it does such a great job that there're no viable substitutes.

It's as important to create value as it is to retain some of that value. Businesses fighting cut-throat competition are so preoccupied with survival that they can't focus on anything else. For instance, airlines create tremendous value through air travel, but are barely profitable. On the contrary, a creative monopoly like Google has not had viable substitutes - including Yahoo! and Microsoft – since the early 2000s, allowing it to retain some 20% of its revenues. It has resources to care about its stakeholders, invest in long term research and innovation, and make a greater impact on the world.

It's true that monopolies can be bad if nothing changes, and customers are forced to pay high prices with limited or no choices. But our world is a dynamic one, with better monopoly businesses replacing incumbents to offer more consumer choice and societal improvement. In any case, our perception of the level of competition is usually inaccurate. Monopolists lie and exaggerate the level of (non-existent) competition to protect themselves from being attacked, while non-monopolists lie and understate the level of competition by positioning themselves as the leader of their narrowly-defined (sometimes non-existent) niche.

Competition can shift the attention away from value-creation and productivity to beating our rivals or even scoring personal victories.

- Obviously, in business, we'll sometimes have to go all out and fight to win. But in many cases, competition is unnecessary. For example,

KEY QUOTES

"War is costly business. Rivalry causes us to overemphasize old opportunities and slavishly copy what has worked in the past."

"In business, money is either an important thing or it is everything…Only one thing can allow a business to transcend the daily brute struggle for survival: monopoly profits."

"All happy companies are different: each one earns a monopoly by solving a unique problem. All failed companies are the same: they failed to escape competition."

"If the tendency of monopoly businesses were to hold back progress, they would be dangerous… But the history of progress is a history of better monopoly businesses replacing incumbents."

"It's competition, not business, that is like war: allegedly necessary, supposedly valiant, but ultimately destructive."

Microsoft and Google are both great companies with different creations, and no obvious reason to fight. Yet, they were locked in fierce competition for years. Apple overtook them in January 2013 with a market capitalization of $500b (vs their combined capitalization of $467b), when just 3 years before, each company was individually more valuable than Apple. The same pattern is seen from credit card readers to online pet stores.

- By contrast, PayPal was also locked in fierce competition with X.com in the late 1990s. However, realizing the risk from the rapidly inflating tech bubble, the 2 companies decided on a 50-50 merger in 2000, which allowed them to ride out the dot-com crash that came soon after.

So why do we compete? Because the ideology of competition is so entrenched in our society that we end up being trapped in it. It starts with our education system, which is built on grades and ranking students against one another. When we enter the workplace or business world, we are constantly trying to beat our competition and compete with our peers for career advancement.

In short, Thiel believes that competition destructs rather than creates value, and advocates the concept of monopoly capitalism.

The Power Law Of Venture Capital

Venture capitalists (VCs) try to find, fund, and profit from promising early-stage companies. They make money when the companies in their portfolio go public or get bought by larger companies. Most venture funds last for 10-years, as that's usually how long successful companies take to grow and "exit."

KEY QUOTES

"We preach competition, internalize its necessity, and enact its commandments; and as a result, we trap ourselves within it—even though the more we compete, the less we gain."

"There is no middle ground: either don't throw any punches, or strike hard and end it quickly."

"Winning is better than losing, but everybody loses when the war isn't one worth fighting."

"Amid all the human drama, people lose sight of what matters and focus on their rivals instead."

"The biggest secret in venture capital is that the best investment in a successful fund equals or outperforms the entire rest of the fund combined."

"VCs must find the handful of companies that will successfully go from 0 to 1 and then back them with every resource."

Unfortunately, the reality is that most start-ups fail (usually soon after they start), and a few companies will drastically outperform all others. The one best investment in a successful fund will outdo the rest of the companies combined. A good VC should only invest in companies that can potentially return the value of the entire fund. Obviously, this is hard to predict, so a VC will still need a "portfolio". But, every single company in a good portfolio must have the potential to go from 0 to 1 and succeed at large scale.

This power law doesn't only apply to VCs. All of us are investors - entrepreneurs invest time and money in their startups, and employees invest time in their career. The question to ask is: will what you are doing be valuable decades from now?

Uncovering "Secrets"

The most valuable companies find and build their business upon "secrets", i.e. what the world believes in that isn't true. For example, Airbnb and Uber saw untapped supply and unmet demand in lodging and transportation, and created businesses to address them.

- **It starts with belief.** Most people act as if all the world's biggest problems have already been solved, there're no more opportunities left to find, hence they don't even try. But, so long as there are injustice and inefficiencies in this world, there are secrets to be found. Start by asking: "What valuable company is nobody building?" This will lead you to address hard but potentially world-changing questions.

- **Finding secrets.** There are two kinds of secrets:
  1. Secrets of nature: These are undiscovered aspects of the physical or natural world.
  2. Secrets about people. These are things that people hide, or don't know about themselves.

  The best place to look for secrets is where no one else is looking. Ask if are there any areas that matter, but haven't been standardized or institutionalized, e.g. Physics is

KEY QUOTES

"Once you think that you're playing the lottery, you've already psychologically prepared yourself to lose."

"You can't find secrets without looking for them."

"If you think something hard is impossible, you'll never even start trying to achieve it. Belief in secrets is an effective truth."

taught systematically in schools, whereas nutrition (which affects everyone) is not.

- **What to do with Secrets.** Generally, your secret or viewpoint is likely to be opposite of what the masses believe. When you share your secret, you are actually enlisting fellow conspirators, so do it discreetly.

Last Mover Advantages

Your business value is the sum of all the money it'll make in the future, discounted to the present worth. Being the first mover in a market can give you a headstart, but what matters is long-term cashflows, and it's useless being the first-mover if you get dethroned later.

It's better to be the last mover – study the end-game, dominate a small niche and scale up to eventually develop and enjoy years of monopoly profits.

However, for a company to become valuable, it must be durable. Many entrepreneurs are so focused on short-term growth that they fail to consider if their business will still be around 10 years from now.

Let's look at some of the questions and foundations to help you think about building a sustainable, monopoly business.

Building a Monopoly

Characteristics of Monopolies

Most successful monopolies share some of these characteristics:

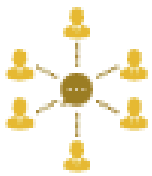
Proprietary Technology (e.g. Google's search algorithms) can be a massive advantage because it makes your product hard or impossible to replicate. To have a real monopolistic advantage, your technology must be at least 10 times better than any substitute in some key aspect(s). To achieve that, you can either create something

KEY QUOTES

"A great company is a conspiracy to change the world; when you share your secret, the recipient becomes a fellow conspirator."

"As a rule of thumb, proprietary technology must be at least 10 times better than its closest substitute in some important dimension to lead to a real monopolistic advantage."

completely new, or fundamentally transform an existing solution. For example, PayPal enabled buyers to pay on eBay straight after an auction (instead of mailing a check which took 7-10 days) and Amazon offered as least 10x as many books as any other bookstore.

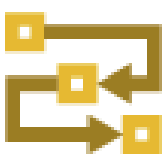


Network Effects make a product more useful as more people use it, e.g. the more of your friends are on Facebook, the more you'd want to use it. Yet, such businesses must still be valuable to their initially users and small markets.

Economies of Scale spread out business fixed costs (e.g. R&D, management, office space) over more users/ sales, such that the marginal cost of producing an extra unit is negligible. When designing your startup, build in the potential to scale up.

Branding is key to any monopoly, but it must be backed by substance. One of the strongest tech brands is Apple – its sleek minimalist design, consumer experience, advertising campaigns, and price positioning are backed by a suite of proprietary technologies, economies of scale and strong network of developers and users.

The Process of Building a Monopoly



As a small start-up, how can you put together the 4 elements above (brand, scale, network effects, and technology) to form your eventual monopoly?

1. Start Small and Monopolize

Every startup is small initially, yet a monopoly must dominate a large share of its market. Hence, don't try to go for 1% of a $100 billion market. As a startup, your ideal target market is a small, specific group of people concentrated together and served by few or no competitors.

However, make sure the market actually exists. PayPal's first product allowed PalmPilot

KEY QUOTES

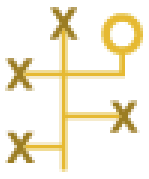
"It's easier to dominate a small market than a large one. If you think your initial market might be too big, it almost certainly is."

"It was much easier to reach a few thousand people who really needed our product than to try to compete for the attention of millions of scattered individuals."

users to beam money to each other; but the millions of PalmPilot users were scattered geographically, had little in common and didn't need to beam money to one another, so PayPal had effectively no customers. When they switched their focus to eBay auctions (with only a few thousand high-volume "PowerSellers"), they quickly secured 25% of the market within 3 months.

2. **Scale Up Progressively.**

Once you've create and dominated a niche, you can expand into related and slightly broader markets gradually and sequentially. Amazon wanted to dominate online retail, but started only with books (which had similar sizes and characteristics despite millions of titles). Then, it expanded into CDs, videos, and software, and gradually added categories until it became the world's general store. eBay launched its auction marketplace with intense interest groups (e.g. Beanie Baby obsessives), then expanded to other small-time hobbyists until it became a full-fledged marketplace for people trading anything online.



3. **Don't Disrupt.**

"Disruption" means using new technology to introduce a low-end product at low prices, then improving the product over time to eventually overtake the incumbents, e.g. PCs disrupting mainframe computers, then mobile devices disrupting PCs. However, disruption is not about taking the big boys head on – startups that try to do so end up in fights that they can't win. Instead, focus on creating something really new, then expand it gradually to adjacent markets, avoiding competition as much as possible.

Building Strong Foundations

Some foundations cannot be undone, so you must start the company on the right foot:

KEY QUOTES

"Don't disrupt: avoid competition as much as possible."

"Choosing a co-founder is like getting married, and founder conflict is just as ugly as divorce."

Synergy. The right people makes all the difference:

The Right Partner(s): Choosing the right partner for your business is like choosing the right person to marry. Besides technical abilities and complementary skills, the founders should know each other well and have worked well together.

Ownership, Possession, and Control. To minimize misalignment, distinguish between Ownership (who owns the company), Possession (who runs the company), and Control (who officially governs the company). For most startups, the founders usually have both ownership and possession, but conflicts can arise with the board members (who are supposed to exercise control). Thiel recommends that you select every board member carefully, and keep the board small (ideally 3 and maximum 5 members, unless you are a public company). This facilitates communication, agreement and effective control.

Beyond professionalism. To build a long-term business, the people in your company must be not just talented, but actually enjoy working together. Transactional relationships (however good the resumes) won't work.

Long Term Value & Alignment

On the bus or off the bus. Thiel advocates that everyone in your company should either own stock options or be engaged full-time (with the exception of positions like lawyers and accountants). Consultants and part-timers have no vested interest to create long-term value for your company.

KEY QUOTES

"Founders should share a prehistory before they start a company together - otherwise they're just rolling dice."

"In the boardroom, less is more. If you want an effective board, keep it small."

"Since time is your most valuable asset, it's odd to spend it working with people who don't envision any long-term future together."

If you're deciding whether to bring someone on board, the decision is binary...you're either on the bus or off the bus.

Cash vs vested interest. To get commitment, you must compensate people properly. But, cash compensation fosters short-term thinking - employees take value from the company instead of create long-term value. Instead of a high cash salary, consider giving outcome-based cash bonuses, offer equity (based on people's talents, responsibilities and opportunity costs) and limit the CEO's annual salary to $150,000 (so he'll focus on increasing the company's value and set a good example).

Build a Tribe. Startups have tight resources and small teams. To get the most from them:

Build a cult; Do 1 thing. Hire people who share your obsession – it's much better to have a team that shares a common world view and is fiercely-devoted to your mission, than a group of lukewarm professionals. Ask, "why should the 20th employee join your company?", to address why people should join you and who they will work with. To provide clear responsibility and reduce conflict, match talents with tasks such that every person in your company is just responsible for just one thing.

Extend the founding. You can't reverse that moment when your company is founded and rules are set from scratch. However, you can build a culture of openness and ongoing invention, so you can re-create the company over and over again.

- **Sales & Distribution.** No matter how good your product, you need to sell it. The best sales are those that are "hidden", i.e. you don't realize you've been sold to.

KEY QUOTES

"Any kind of cash is more about the present than the future."

"People at a successful startup are fanatically right about something those outside it have missed."

"Job assignments aren't just about the relationships between workers and tasks; they're also about relationships between employees."

"(The founding moment) lasts as long as a company is creating new things, and it ends when creation stops."

"Customers will not come just because you build it. You have to make that happen, and it's harder than it looks."

1. Apply 2 rules of thumb for effective distribution:

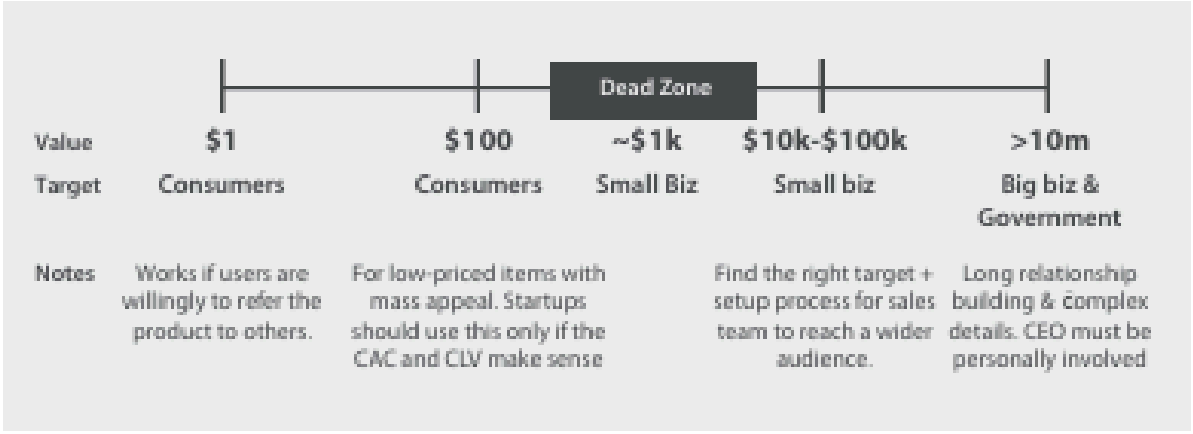
- Rule #1:

Customer Lifetime Value (CLV)
(the total net profit (average) from a customer over time)

(must be higher than)

Customer Acquisition Cost (CAC)
(how much you spend (average) to acquire a new customer)

- Rule #2: The higher the price of your product, the more you have to spend to make a sale. Thiel recommends sales and marketing approaches for different product categories, summarized here:



Of these methods above, one of the methods will likely be the most effective for your business. It's better to establish 1 sales channel that works rather than spread your resources over many that don't.

2. Sell to non-consumers: Besides selling to customers, you must also sell your company to employees, investors and the media. Media exposure creates publicity for your products and helps you to attract investors and employees.

Putting it Together

Since the start of the 21st century, clean technology has become the "next big thing", yet billions of dollars have been lost in this industry. Using 7 questions to integrate the points above, Thiel shares why Tesla succeeded where most cleantech companies failed. To secure massive success, you need to address most, if not all, of these 7 questions:

KEY QUOTES

"If you've invented something new but you haven't invented an effective way to sell it, you have a bad business—no matter how good the product."

"Superior sales and distribution by itself can create a monopoly, even with no product differentiation. The converse is not true."

"If you can get just one distribution channel to work, you have a great business. If you try for several but don't nail one, you're finished."

"Everybody sells...Look around. If you don't see any salespeople, you're the salesperson."

1. Engineering	Can you create breakthrough technology instead of incremental improvements?
2. Timing	Is now the right time to start your particular business?
3. Monopoly	Are you starting with a big share of a small market?
4. People	Do you have the right team?
5. Distribution	Do you have a way to not just create but deliver your product?
6. Durability	Will your market position be defensible 10 and 20 years into the future?
7. Secret	Have you identified a unique opportunity that others don't see?

Man and Machine

With computing capabilities growing exponentially, many people are predicting (and fearing) that computers will replace humans in the coming decades. Thiel argues that computers are complements, not substitutes to humans, and the most valuable businesses will be those who empower people in a computer age.

- Unlike people, who compete to supply their labour/ talent, and also demand for the same resources like food, shelter, and better lifestyle, computers compete for nothing.

- People have "intentionality". We make plans and can exercise judgement. Computers are great at data processing, but they can't exercise basic judgement, much less those in complex situations.

Hence, we shouldn't compete with computers because they are different from humans - they are merely tools. The key to the future is to create businesses where the human-computer combination could achieve much more than either could alone.

KEY QUOTES

"The most valuable businesses of coming decades will be built by entrepreneurs who seek to empower people rather than try to make them obsolete."

"Humans and computers are not just more or less powerful than each other—they're categorically different."

"Big data is usually dumb data. Computers can find patterns that elude humans, but they don't know how to compare patterns from different sources or how to interpret complex behaviors. Actionable insights can only come from a human analyst."

"As we find new ways to use computers, they won't just get better at the kinds of things people already do; they'll help us to do what was previously unimaginable."

For example, PayPal was initially losing millions each month due to credit card fraud. Humans couldn't cope with the volume of transactions, and automated computer-checks were outsmarted by the fraudsters. PayPal solved the problem with a hybrid approach - the computers flag out suspicious transactions, and human analysts apply their judgement for decision-making. Likewise, LinkedIn didn't try to replace recruiters with technology. Instead, they help professionals to build their personal brands, and empower recruiters to search and filter job candidates using technology.

Business founders play a crucial role for the success of their startups, not because of their personal brilliance and produce valuable work, but because they can bring out the best from everyone in their company.

Other Useful Details in the Book to Look Out For

This book originated from a start-up course that Thiel was teaching at Stanford. One of the students, Blake Masters, took detailed class notes, which were reworked with Theil to form this book.

The book is written in short, easy-to-read chapters, and packed with many useful examples, anecdotes and stories of companies like Paypal Google, Tesla, Siemens etc. to help us see interesting perspectives and alternative truths from Thiel's eyes. It also includes a detailed recap of the dot-com rage in the 1990s and the more recent cleantech bubble.

Although the book focuses almost exclusively on technology companies and using technology to move from zero to one, the ideas can be extremely useful to help any startup or user of technology to think about how things work, and how we can build a better world.

KEY QUOTES

"Founders are important not because they are the only ones whose work has value, but rather because a great founder can bring out the best work from everybody at his company."

The E-Myth Revisited

Why Most Small businesses Don't Work and What to Do About It

MICHAEL E. GERBER

The Big "So What"

In the United States, 80% of businesses fail within the first 5 years, and 80% of the survivors fail in the next 5 years. This book explains why small businesses fail, how to overcome common mistakes in business, so you can build a successful business that not only works, but is also deeply rewarding for you and your stakeholders.

Introduction

This book was released 15 years after the original E-Myth book was published. It captured the new insights and experiences that Gerber had accumulated while working with businesses to apply the E-Myth concepts, and also addressed common questions about these ideas.

Gerber found that the most outstanding businesspeople had lofty goals, yet were constantly learning, pragmatic, detail-oriented and down-to-earth. The key idea of the book is this – your business is really an extension of who you are, and transforming your business starts with transforming yourself. This summary presents the key ideas of the book in 3 key segments to introduce the E-Myth, the Turn-Key Revolution, and how to build a successful small business.

1. The Entrepreneurial Myth (E-Myth)

It's a myth that small businesses are started by true-blue entrepreneurs. The truth is, most business are started by people who were initially working for others (e.g. carpenters, designers). They are good at what they do, decide to go

KEY QUOTES

"This book... is about producing results - not simply 'how to do it'."

"The greatest business people I've met are determined to get it right no matter what the cost. And by getting it right...I mean that there is something uplifting, some vision, some higher end in sight that 'getting it right' would serve."

"Your business is nothing more than a distinct reflection of who you are...So if your business is to change...you must change first."

"People who are exceptionally good in business aren't so because of what they know but because of their insatiable need to know more."

"That Fatal Assumption is: if you understand the technical work of a business, you understand a business that does that technical work."

into business, and make the fatal assumption that their strong technical skills are enough for them to run a technical business.

They soon realize that running a business involves not just the technical skill that they excel in (and even love to do), but a host of things that they can't do or hate to do. They move from excitement to fear to fatigue and finally despair.

The Entrepreneur, The Manager, and The Technician

We all have multi-faceted personalities, with often-conflicting traits. A business owner is not just an entrepreneur, a manager or a technician. He is all 3 personalities rolled into one at the same time. Hence, he has to deal with their differing tendencies, needs and wants.

The Entrepreneur. This is the visionary and creative side of us. The Entrepreneur looks to the future, dreams of possibilities, focuses on opportunities and prods for innovations. He needs to shape the future, and constantly seeks change. The faster he moves, the more chaos he creates for those around him, and he feels frustrated with having to drag people along with him.

The Manager. This is the pragmatic, conservative part of us that seeks order and security, lives in the past and loves status quo. He cleans up the mess that The Entrepreneur creates and sees people as components of a system to be managed.

The Technician. This is the part of us that gets things done. He lives in the present, steadily working on one task at a time. He believes that lofty visions are useless without someone who can deliver it, and sees work as a part of who we are as unique individuals.

KEY QUOTES

"The problem is that everybody who goes into business is actually three-people-in-one: The Entrepreneur, The Manager, and The Technician...while each of these personalities wants to be the boss, none of them wants to have a boss."

"The Entrepreneur is the innovator, the grand strategist, the creator of new methods for penetrating or creating new markets, the world-bending giant."

"It is the tension between. The Entrepreneur's vision and The Manager's pragmatism that creates the synthesis from which all great works are born."

The truth is, we need all 3 personalities to succeed in business, and we also inherently have all 3 personalities in us. However, the 3 roles are usually not in balance or in the wrong proportion. The typical business owner is 70% Technician, 20% Manager and 10% Entrepreneur – this creates problems as the business grows and evolves.

Business Evolution and Growth

Businesses must grow and evolve, which means the business owner must be willing to change to meet the business needs.

Phase 1: Infancy. At this phase, the owner is typically the technician, doing the bulk (if not all) of the work. The business and the owner are one and the same, and the business would collapse without the owner. However, as the business grows, the owner finds himself being stretched to the max, standards drop, he no longer enjoys his work the same way, and the business moves into crisis. The owner realizes that he still has a job, only worse because the fanatic boss is himself. At this juncture, most Technicians walk away from the business; some move on to the next phase.

KEY QUOTES

"The Entrepreneur dreams, The Manager frets, and The Technician ruminates."

"Businesses, like people, are supposed to grow; and with growth, comes change... Most business are operated according to what the owner wants as opposed to what the business needs."

"The moment you choose to start a small business... you unwittingly chose to play a significantly larger game than any game you had ever played before."

"If you want to work in a business, get a job in someone else's business! But don't go to work in your own."

Phase 2: Adolescence. Every business that grows inevitably reaches this phase – when the owner decides to get help and hires his first staff. The owner typically starts by hiring people to do the work that he doesn't know how to do, or hates to do, and *hopes* that things will work out. The problem is, such management is by abdication rather than delegation. Without sound management, direction and guidance, the technicians that are hired to do the work can't perform consistently. As the business grows, balls start to drop, but this time at a much bigger scale.

At this point, the owner may scale back the business and does everything himself again, or he could keep growing the business until things collapse or he implodes. Whichever the case, the business doesn't survive.

In short, regardless of your predominant personality, your business will inevitably outgrow you – it will outgrow the amount of work the *Technician* can do himself, the number of technicians the *Manager* can personally supervise, and the number of managers the *Entrepreneur* can personally engage. Unless the owner gets out of his comfort zone and approaches things differently, the business is doomed to fail.

Phase 3: Maturity. Companies that reach maturity (e.g. Federal Express, IBM, Disney) have a clear vision of how the company will be like when it is "done", and they start behaving like that great company from the onset. The key is to start your business with the expectation that it will grow, and to have a plan (however rough or sketchy initially) for it to grow and work *without* you. This is the *Entrepreneurial Perspective*, which takes a top-down approach rather than a technical bottom-up approach.

Now, we'll take a look at a business model that will allow us to balance all 3 personalities, so the Entrepreneur can drive the business, the Manager can ensure it's sustainable, and the Technician can stay in touch with the nuts and bolts of the work being done.

KEY QUOTES

"Every Adolescent business reaches a point where it pushes beyond its owner's Comfort Zone – the boundary within which he feels secure in his ability to control his environment, and outside of which he begins to lose control."

"Luck and speed and brilliant technology have never been enough, because somebody is always luckier, faster, and technologically brighter."

"A Mature company is started differently than all the rest. A Mature company is founded on a broader perspective, an entrepreneurial perspective, a more intelligent point of view. About building a business that works not because of you but without you."

"I realized that for IBM to become a great company it would have to act like a great company long before it ever became one." - Tom Watson, IBM founder

2. The Turn-Key Revolution

Similar to how the industry revolution, technological revolution and information revolution have transformed our lives, the Turn-Key Revolution can change how we view and run businesses, and hence transform our world.

At the heart of the concept is the "Business Format Franchise", where the franchisee is not only given the right to market a known product, but also an *entire system* for doing business. Unlike the high failure rates of conventional business, Business Format Franchises have a 95% success rate.

The end-goal is to create a business that works without the owner, and predictably delivers its promise to customers. For that to happen, all components of the business must be broken down in a way that can be created, assembled and replicated at low cost.

Business Evolution and Growth

This model starts with the "Franchise Prototype", where ideas are incubated, tested and perfected until they work predictably, before they are deployed in business.

Using the example of McDonalds, Gerber explains how every detail (from how long french fries are left in the warming bin to how pickles are placed) is tested and standardized, with the goal of leaving nothing to chance and operational discretion. Franchisees are required to complete a thorough training program before they are allowed to run the business.

This Business Format Franchise balances the contributions and needs of the Entrepreneur (who uses the Franchise Prototype to further his vision), the Manager (who enjoys the system's structure and predictability), and the Technician (who's free to do the work).

KEY QUOTES

"At the heart of the Turn-Key Revolution is a way of doing business that has the power to dramatically transform any small business – indeed, any business, no matter what its size – from a condition of chaos and disease to a condition of order, excitement and continued growth."

"The Business Format Franchise is built on the belief that the true product of a business is not what it sells but how it sells it. The true product of a business is the business itself."

"The Prototype acts as a buffer between hypothesis and action."

"(The Business Format Franchise) is a proprietary way of doing business that successfully and preferentially differentiates every extraordinary business from every one of its competitors. In this light, every great business in the world is a franchise."

Working on your business, not in it

Here is a key message from Gerber – Your business is not your life, and it is imperative that you work *on* the business and not *in* it. You should build your business such that you *can* duplicate it; Regardless of whether you actually sell or franchise it in the future, this is the best way to ensure your business is successful and is not dependent on you.

In order for your business to be successfully cloned into thousands more like it, it must fulfil 6 criteria or rules:

Provide consistent value to your stakeholders, beyond expectations. Value can come from many things, be it a kind word, an unexpected gift, or reasonable pricing. The key thing is that your stakeholders (i.e. your customers, employees, suppliers etc.) *perceive* it to be valuable.

Be operable by people with the lowest possible level of skill. Your model must be achievable with the lowest skill level for that function, i.e. you need to establish systems that help ordinary people to deliver extraordinary results. Obviously, suggestions and improvements should be encouraged; however, the business must first equip people with the tools and know-how to deliver the intended results. By building a business that can be operated by ordinary people:

- You will not be held hostage by experts or scarce talents, who are expensive and hard to motivate; and
- You will force yourself to innovate through systems and solutions

Demonstrate precision and order. In today's ever-changing and chaotic world, a place with order and structure will stand out, be appreciated by your customers and employees, and build trust.

KEY QUOTES

"Your business is not your life... Recognize that the purpose of your life is not to serve your business, but that the primary purpose of your business is to serve your life."

"Value is what people perceive it to be, and nothing more."

"Value is essential to your business and to the satisfaction you get from it as it grows."

"Great businesses are not built by extraordinary people but by ordinary people doing extraordinary things."

"When you intentionally build your business around the skills of ordinary people, you will be forced to ask the difficult questions about how to produce a result without the extraordinary ones"

Capture all the work to be done in operations manuals. Proper documentation provides clarity and structure for your people to perform their work productively. Your manuals should set out the purpose, steps and standards (measuring both processes and results) associated with the work.

Provide a consistent and predictable service to the customer. Each time a customer uses your product or service, an expectation is set, and he/she returns expecting to enjoy a similar experience. Consistency is critical to customer satisfaction.

Use consistent codes (e.g. colour, dress, facilities). Colours and shapes affect consumers' decision-making and buying behaviours. Choose the right colours, logos etc. and apply them consistently across your business.

No one starts a business with all the answers. The key is to know what you don't know, so you can address them. Learn to separate the business from yourself – look at your entire business as the product, and keep asking yourself how you can achieve the following:

- Get your business to work without you
- Get your people to work without your constant interference
- Systematize your business, so it can be replicated consistently 5,000 times
- Own your business and still be free from it
- Spend your time on work you love to do, not work you must do

3. Building a Small Business that Works

The Business Development Process

Your Prototype will constant evolve as part of your business development process. It comprises 3 inter-related components:

KEY QUOTES

"What you do in your model is not nearly as important as doing what you do the same way, each and every time."

"Creativity thinks up new things. Innovation does new things."
- Professor Levitt

Innovation. Innovation is different from creativity – it's about getting things done (not just thinking about it). When you wear the franchisor's hat, you focus beyond the products you sell, to how your entire business operates. Innovation is about finding the best way to engage your customers and meet their needs, from how you greet them when they enter your store, to what you wear. It's about meeting their perceived needs and sub-conscious expectations.

Quantification. To know if an innovation is effective, you must quantify it. Gerber recommends that you start by quantifying *everything* in your business, from how many customers you see daily (and when you see them), to how many items are sold at each time of the day. Progressively, you'll learn which are the more important numbers to focus on, and how to "read"' them.

Orchestration. With innovations and quantification, you'll start discovering what works. The next step is to orchestrate it such that the best existing practices are duplicated predictably, every time. The combination of all your best practices, delivered predictably, becomes your unique business system that makes you stand out from others.

The innovate-quantify-orchestrate process is a never-ending part of business development, which helps you to grow and evolve as an extra-ordinary business. This can and should be more than just a routine habit – the process of continuous improvement and mastery involves a deep connection with the work being done, and purpose with which it serves, bringing a deeper level of fulfilment.

Your business development program

Your business should support your life goals, not be your life goals. Hence, the main task is to structure your business as if it was the prototype for 5,000 more like it, so you can

KEY QUOTES

"Where the business is the product, how the business interacts with the customer is more important than what it sells."

"Innovation...is the mechanism through which your business identifies itself in the mind of your customer and establishes its individuality."

"Without the number you can't possibly know where you are, let alone where you're going."

"Orchestration is the elimination of discretion, or choice, at the operating level of your business."

"The work itself becomes something other than a habit; it becomes an exploration into who we are and how we express ourselves in relationship to something much larger."

"Your Primary Aim is the vision necessary to bring your business to life and your life to your business."

work on your business and not in it. This involves a 7-step process, starting with you as the owner:

1 - Your Primary Aim. When you have been laid to rest, what should the story of your life sound like? This is your primary aim, and it will be your source of energy, purpose and direction. When you have clarity on how you want your life to look like, how you wish to live on a day-to-day basis, and who you want to be, then you can decide how to structure your business to support this Primary Aim.

2 - Your Strategic Objective. This statement lays out exactly how your business will help you to achieve your Primary Aim, and what your business will look like when it's "done". It should be presented in simple and clearly stated standards including:

- Money (gross revenues, gross profits, after-tax profits etc.), taking into account how much you need in order to be free from your work/ business. An opportunity is only worth pursuing if it can fulfil the financial standards for your primary aim and strategic objective. This in turn requires that your business solves a problem faced by a large enough number of consumers. To assess your business potential, consider:

  - *What business you are in?* Your business is not about your product, but what you make your customer feel. People buy the feelings they get from your business, not your commodity.

  - *Who is your customer?* Demographics (age, sex, income, education etc.) tell you who your customers are, while Psychographics tells you why they buy. To know if your business is worth pursuing, you need to know the size of your targeted demographic and how well you can satisfy their emotional or perceived needs.

- Other Indicators. Consider these 4 questions:

KEY QUOTES

"Great people have a vision of their lives that they practice emulating each and every day... Great people create their lives actively, while everyone else is created by their lives."

"Your Strategic Objective is a very clear statement of what your business has to ultimately do for you to achieve your Primary Aim."

"Your business is a means rather than an end, a vehicle to enrich your life rather than one that drains the life you have."

"You invented a turn-key solution to your specific kind of business's problems. A little money machine. An absolutely predictable little business that does what it promises to do every single time."

"The product is what your customer feels as he walks out of your business... The truth is, nobody's interested in the commodity. People buy feelings."

- When will your prototype be ready?
- Where will you be in business?
- How will you be in business (retail/ wholesale)?
- What standards will you insist on reporting?

3 - Your Organizational Strategy. Most small businesses organize their companies around personalities rather than functions and expertise. To set up your business correctly, you must separate yourself from the roles you play in the business. That's the only way to ensure the roles are independent of you. It also forces you to crystalize and demonstrate the rules of the game, so your employees can learn how to deliver the business the way you want them to.

- Map out your full organizational structure, and create a "Position Contract" for each position that summarizes the rules of the game or accountability for that role. For each position that you take up, sign the contract as you were you the employee.

- Now that you know what needs to be done, you can decide the best way to allocate the responsibilities amongst existing human resources (e.g. existing shareholders or co-owners).

- As you do the work, you concurrently work in the position and on the position. As the Technician, you document the technical work as you do it. As the Manager, you identify strategic aspects of the work to be addressed in the Franchise Prototype. As the Entrepreneur, you test different ways of operating each role, quantifying the impact of new innovations and documenting best practices in an operating manual.

- When you start hiring staff to handle these positions, you can now explain the aims, organization structure and train them using the operations manual (refining it along the way)

KEY QUOTES

"Unless I act as I expect my employees to act, unless I work in my business exactly as I wish them to, I will never be able to create a system for doing it exactly the way I expect them to do it."

4 - Your Management Strategy. The key to success is not to find amazing talents with sophisticated techniques – they will be too scarce and costly for your business, and may not be willing to do things your way. Instead, build a management system that develops your people predictably. Every element in your business needs to be captured in an operations manual, and orchestrated such that the same experience can be replicated by *anyone*.

This is a *marketing* tool, and not a management tool – by producing predictable results, your customers know what to expect, and trust you to deliver the same experience when they return.

5 - Your People Strategy. Even with the perfect operations manual, how do you get people to do what you want? The crux is to create an environment where "doing it" is a way of life, i.e. the idea or spirit behind the work is more important than the work itself.

- You must first define the core of your business, then figure out how to communicate it. For example, if your core is "caring", then you need to translate what it means to show care for your employees, to show care in your customer greeting or your service delivery.
- The implementation process starts at with your recruitment – you must communicate your Primary Aim, Strategic Objective and Organizational Strategy upfront, to ensure you're recruiting people who buy in to the idea and want to play your game.

6 - Your Marketing Strategy. This is where you put aside your own vision and objectives, and focus solely on what the customer wants. Your customers take in all kinds of cues about your business (from what they see, hear, and feel) and process them unconsciously before making an often irrational, emotional decision.

KEY QUOTES

"(A Management System) is a System designed into your Prototype to produce a marketing result."

"The system knows what I like and makes certain that I get it, in exactly the same way, at exactly the same time…Somebody had heard me. And they heard me every single time."

"The work we do is a reflection of who we are…How we do our work becomes a mirror of how we are inside."

"The degree to which people 'do what you want' is the degree to which they buy into your game. And the degree to which they buy into your game (depends) on how well you communicate the game to them – at the outset of your relationship, not after it's begun."

"(A business) can create a Game Worth Playing. It can become that place of community. It can become that place where words such as integrity, intention,

The best way to sell to your customer is to understand his perceived needs (which determine his decisions, rather than his "real" needs). By knowing his demographics (who he is in terms of age, profession etc.), you can identify his psychographics (why he buys), and then construct and scientifically test a Prototype that meets these needs.

7 - Your Systems Strategy. Systems, in the context of this book, refer to a cluster of "things, actions, ideas and information" that interact with one another, and in the process, change other systems. In business, we have 3 types of systems:

- *Hard systems* (e.g. computers, furniture, colours), which reflect visually how well your business is integrated;
- *Soft systems* (e.g. people, ideas, scripts), that reflects how well you communicate the soul of your business; and
- *Information systems* (e.g. sales reports, inventory control), that reflect your ability to extract information about your business

How well you integrate the 3 systems will determine how successful your Prototype is, in communicating and delivering the promise that your customer wants to hear.

Other Details in the Book to Look out For

Gerber brings his ideas to life in different ways throughout the book:

- He shares the learning points through the eyes of Sarah, a lady who loved baking pies, but found herself drained and burned out after starting a pie

KEY QUOTES

commitment, vision and excellence can be used as action steps in the process of producing a worthwhile result."

"When it comes to marketing, what you want is unimportant. It's what your customer wants that matters. And what your customer wants is probably significantly different from what you think he wants."

"The challenge of our age is to learn our customer's language. And then to speak that language clearly and well so that your voice can be heard above the din."

"(All your business functions) share one common purpose–to make a promise their customer wants to hear, and to deliver on that promise better than anyone else on the block...The COO is the driver of all this. The COO connects each part of the business process."

business. We follow Sarah's thought process and internal struggles, eventually sharing her "aha" moments and seeing how she applies the concepts to create her personal and business breakthroughs;

- He provides detailed examples and case studies of how companies like McDonalds and Venetia (a boutique hotel) successfully developed their Prototype.

- As he outlines the 7-step business development program, he also provides additional tools e.g. questions to think about your primary aim, sample "people game" rules, and examples of hard, soft and information systems at work at E-Myth Worldwide. The E-Myth Mastery Program covers these 7 steps in detail.

This is a must-read book for anyone who owns a small business, or plans to start one. For more details, please visit emyth.com.

About the Author

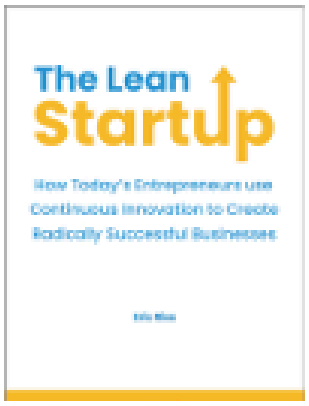
Michael E. Gerber (born 1936) is an American author and founder of Michael E. Gerber Companies, a business skills training company based in California. He was named "the World's #1 Small Business Guru" by Inc. Magazine, for impacting hundreds of thousands of companies worldwide for over 40 years.

Besides "The E-Myth Revisited", Gerber has authored 13 other business coaching books. Today, he is on a new mission to bring economic development strengths and capabilities to millions of people worldwide, by awakening the new entrepreneur within them. This is done through his entrepreneurial incubator called The Dreaming Room®, with more details at michaelegerbercompanies.com

KEY QUOTES

"This book is not simply a prescription for success; it's a call to arms...It's a call to learning."

"If the world is going to be changed, we must first change our lives...Your small business can become that bridge...that can draw together the world 'out there' and the world 'in here' in such a way as to make both more human.... more productive. In such a way that makes both worlds work."



The Lean Startup

How Today's Entrepreneurs use Continuous Innovation to Create Radically Successful Businesses

ERIC RIES

The Big "So What"

Each time startups and innovations fail, huge amounts of money, time, passion, and skill are wasted. Yet, with the right processes, their success could be significantly improved. This book is not just about starting a new business. It's about developing new products or services successfully under conditions of great uncertainty, reducing wastage, and building an adaptive organization that can thrive in a rapidly changing world.

The 5 Lean Startup Principles

Through his own business failures, Ries found many of the traditional entrepreneurship notions to be flawed. He began to try different approaches at IMVU – his new startup that developed avatars - experimenting with the application of ideas from lean manufacturing to his entrepreneurial challenges. This eventually evolved into Lean Startup – the application of lean thinking to the process of continuous innovation.

Startups face unique challenges, which call for not just "ordinary" management, but **entrepreneurial management.** There are 5 important principles that underlie The Lean Startup method:

1. Entrepreneurs are Everywhere

A startup is "a human institution designed to create a new product or service under conditions of extreme uncertainty."

KEY QUOTES

"My mission: to improve the success rate of new innovative products worldwide. The result is the book you are reading."

"Startup success is not a consequence of good genes or being in the right place at the right time. Startup success can be engineered by following the right process, which means it can be learned, which means it can be taught."

"Entrepreneurs are everywhere and the Lean Startup approach can work in any size company, even a very large enterprise, in any sector or industry."

"We often lose sight of the fact that a startup is not just about a product, a technological breakthrough, or even a brilliant idea. A startup is greater than the sum of its parts; it is an acutely human enterprise."

It's not defined by company size, organization type (e.g. corporation, government, non-profit) nor industry.

An "intrapreneur" in a big company – e.g. a HR manager doing creative recruitment, an IT manager developing a new solution – is as much an entrepreneur as a founder of a new company. The book details several examples of the Lean Startup at work, from large companies to fresh entrepreneurial startups.

2. Entrepreneurship is Management

Many people think that management is dull and boring, while entrepreneurship is exciting and cool. But, entrepreneurship is management, since a start-up is basically an institution that needs to be managed. The Lean Startup integrates ideas from lean manufacturing (e.g. just-in-time inventory management, small batch sizes, accelerated cycle times), to the specific challenges of entrepreneurship and startups.

3. Build-Measure-Learn

Since startups' products or services are new, they don't know who their clients are. They can't predict which approach works best until they put them to the test, yet it's inefficient to test all the options via trial-and-error. Entrepreneurs tend to either adopt a "just-do-it" approach, or suffer from analysis paralysis and spend too long trying to "perfect" their plan or product. Either ways, by the time they realize they've created something that nobody wants, it's usually too late.

The Lean Startup's Build-Measure-Learn feedback loop allows you to learn as early as possible and make constant adjustments, so you can decide whether to change course (to "pivot") or persevere.

4. Validated Learning

Startups need to quickly find out if customers want what

KEY QUOTES

"I believe that entrepreneurship requires a managerial discipline to harness the entrepreneurial opportunity we have been given."

"Most tools from general management are not designed to flourish in the harsh soil of extreme uncertainty in which startups thrive."

"For every success there are far too many failures…(these are) not just …economic damage done to individual employees, companies, and investors; they are also a colossal waste of our civilization's most precious resource: the time, passion, and skill of its people."

they have to offer, otherwise it's pointless to build it on time and on budget. They also need to learn how to market, sell, and operate this process effectively. Learning is essential; yet, how do you really know you've learnt the "right thing" and are creating value from it?

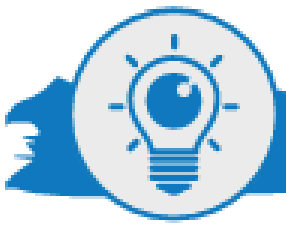
- The key is to determine which efforts are value-creating, which ones are wasteful, then systematically eliminate the wasteful ones.

- Yet, customers can't always tell you what they want, especially if it is a new product that they have not experienced before. Only by experimenting with different options and observing customers' actions (or inactions) can you derive true insights about their needs. Validated learning is about measuring the results of each applied insight, so you can measure real progress from learning.

5. Innovation Accounting

In order to measure progress towards goals and prioritise their work, startups need a different type of accounting. Innovation accounting quantifies if our efforts are generating results, and allows us to create learning milestones to access our progress accurately and objectively.

In this summary, we'll explain these 5 Lean Startup principles in 3 parts: **Vision**, **Steer**, and **Accelerate**.



Part 1: Vision

Building a startup is like driving a car. Most startups have a vision or destination in mind. To achieve that vision, they employ a strategy (a business model or road map) and create products or services to achieve that vision. The key is to avoid building your strategy and products/services on untested assumptions.

Instead, build experiments to test the hypotheses relating

KEY QUOTES

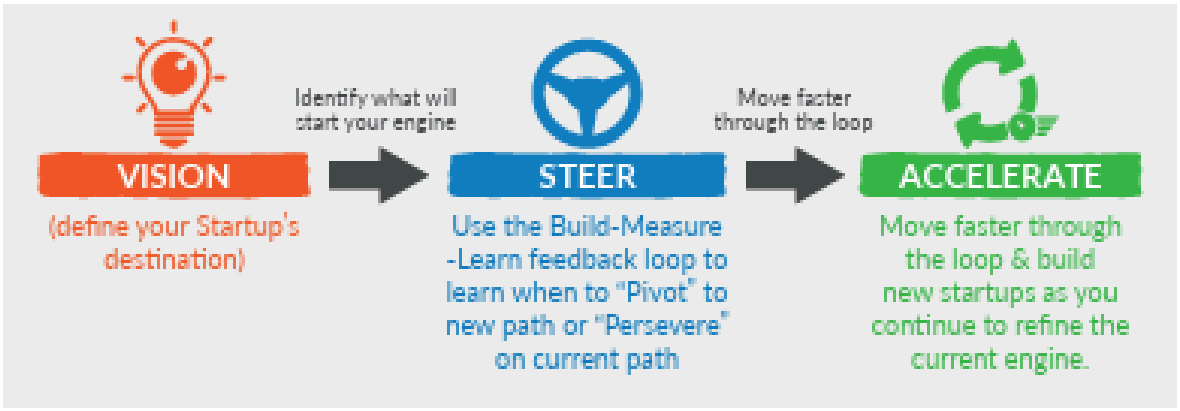
"Startups exist not just to make stuff, make money, or even serve customers. They exist to learn how to build a sustainable business."

"Customers could not tell us what they wanted...Instead, they revealed the truth through their action or inaction."

"Lean thinking defines value as providing benefit to the customer; anything else is waste."

"This is true startup productivity: systematically figuring out the right things to build."

to your vision, so you can identify and refine the key variables to start the engine. Then, you can "steer" your startup via the Build-Measure-Learn feedback loop (covered in the next segment), and use validated learning and innovation accounting to help you decide when to "pivot" or persevere. Once the engine is running, you can repeat the cycles and accelerate by progressively shifting into higher gears (covered in the last segment).



Part 2: Steer

Leap-of-Faith Assumptions

Break down your grand vision into smaller components and identify the riskiest elements, or your "leap-of-faith assumptions". For example Nick Swinmurn had a vision for a central online site for great shoes; he tested his hypothesis that "customers were ready and willing to buy shoes online", before building his online store. Today, Zappos is the largest global online shoe retailer. There are 2 important assumptions you should test:

Value hypothesis: Test whether a product or service truly provides value to customers who use it. Rather than ask customers (they may not be able to give an objective answer), run experiments to see how people participate, e.g. whether they sign up, how and how long they use the product etc.; and

Growth hypothesis: Test how new customers will discover a product or service, and if they will actively spread the word to other potential users.

KEY QUOTES

"This is one of the most important lessons of the scientific method: if you cannot fail, you cannot learn."

"Startups…have a true north, a destination in mind: creating a thriving and world-changing business. I call that a startup's vision."

"The Lean Startup method… is designed to teach you how to drive a startup."

"The goal of every startup experiment is to discover how to build a sustainable business around (its) vision."

"In the Lean Startup model, an experiment is more than just a theoretical inquiry; it is also a first product."

The idea is to do experiment(s) over a few weeks, rather than wait for months or years for a full plan to be developed. Such experiments can happen in parallel with strategic planning. That way:

- Once an experiment is successful, you can launch your campaign (and get even more inputs for refinements); and

- By the time the product is ready for mass-distribution, it will already have established customers, solve real problems, with detailed specifications for what customers want

Build (Minimum Viable Product)

Once we have defined our leap-of-faith assumptions, we are ready to test them with a Minimum Viable Product (MVP). This is when we enter the "Build" phase.

The MVP need not be a prototype or a smallest version of the product. It's simply a tool to test our hypotheses and complete the Build-Measure-Learn loop, with the least possible time and effort. We want to understand our potential customers and their problems, confirm that they have a real problem worth solving, and will buy our solution before we go about building it. Here are some examples of MVPs:

- Video. Dropbox realized that building a working prototype would take a lot of time and resources, and they needed inputs about a problem that people didn't yet know they had. So, they made a 3 minute video to explain to technology early adopters how Dropbox would work. Through viewers' signups, they validated that people wanted the product that they were about to built.

- Road trip. When Toyota wanted to create a new model of its minivan Sienna for North America, chief engineer Yuji Yokoya started with a test of his critical assumptions of what consumers wanted in a minivan. He made a road trip across 50 U.S. states, 13 Canadian territories, and all parts of Mexico, driving a then-model of Sienna to talk to and observe real customers.

KEY QUOTES

"What differentiates the success stories from the failures is that the successful entrepreneurs had the foresight, the ability, and the tools to discover which parts of their plans were working brilliantly and which were misguided, and adapt their strategies accordingly."

"Unlike a prototype or concept test, an MVP is designed not just to answer product design or technical questions. Its goal is to test fundamental business hypotheses."

"Metrics are people too… Successful sales models depend on breaking down the monolithic view of organizations into the disparate people that make them up."

"Deciding exactly how complex an MVP needs to be cannot be done formulaically. It requires judgment."

- Single deal. Groupon started out as a "collective activism platform" called The Point, with the aim of bringing people together to solve problems they couldn't solve on their own. It didn't work. Then, in 2008, they tried a new MVP – this time, 20 people bought a 2-for-1 pizza in a restaurant on the ground floor of their office block, and their engine started from there.

Here are **some important tips for MVP / hypothesis testing**:

Start with **early adopters** (people who most badly need the solutions). This group is most likely to give feedback, and be more forgiving of mistakes.

Building an MVP comes with some legal, branding, competitive and morale risks, especially since the quality is usually bad and there may be many failed iterations. **Consider launching the MVP under a different brand name**, so you can experiment under the radar before doing a public marketing launch with a proven product and real customers. You can also **secure prior commitment** that no matter what happens during MVP testing, the team will not give up hope or abandon the project.

Measure

In this phase, our key challenge is determining whether our product development efforts are making real progress. We need to know that we're learning the "right" things, and if our changes are delivering results. This is crucial to minimize wastage, and also to assure investors and stakeholders that we are making progress.

We can address this using innovation accounting, with 3 milestones:

Establish the baseline. Where are you now, and how are you currently performing?

KEY QUOTES

"The lesson of the MVP is that any additional work beyond what was required to start learning is waste, no matter how important it might have seemed at the time."

"Only 5 percent of entrepreneurship is the big idea, the business model, the whiteboard strategizing, and the splitting up of the spoils. The other 95 percent is the gritty work that is measured by innovation accounting: product prioritization decisions, deciding which customers to target or listen to, and having the courage to subject a grand vision to constant testing and feedback."

Tune the engine. Initiate the experiment to test your value or growth hypothesis. e.g. improving your product design to increase new customer activation / usage of your product.

Pivot or persevere. Based on the results or data, you can persevere with the product/features/process you now know to be correct, or pivot and test another assumption. Although a pivot means re-establishing a new baseline (and tuning the engine from there), you'll know it's successful if the engine-tuning efforts are more productive after the pivot.

It's important to use **Actionable Metrics, not "Vanity" Metrics**. Gross numbers like total revenue and total number of customers can be misleading. Instead, look at actionable metrics that measure actual behaviors behind desired performance. You can use a **split-test experiment**, i.e. offer 2 different versions of a product to customers at the same time, and observe if there are any differences in behaviours (e.g. signup rate, length of use, purchases). You may discover that some features (which you believed were important) have no impact on customer behaviour.

For such metrics to work, they must be:

Actionable: They must display clear cause and effect, so people know what action to take.

Accessible: First, make the reports as simple as possible so everyone understands them (e.g. instead of "a website hit", use "a person visiting the website"). Second make the reports widely accessible e.g. mail the document to every employee of the company, or make it available on your intranet.

Auditable: Ensure the data is credible to employees, e.g. the data can be validated with real customers, and/or the reports are drawn directly from master data (rather than intermediate systems) to reduce opportunities for error.

KEY QUOTES

"When cause and effect is clearly understood, people are better able to learn from their actions. Human beings are innately talented learners when given a clear and objective assessment."

Learn: (Pivot or Persevere)

Everything discussed so far is to equip us to answer this question: Are we making enough progress to believe our original strategic hypothesis is correct (hence we persevere), or should we make a major change (and pivot)? Unfortunately, this is not an easy decision, and there's no way to replace the human elements (of vision, intuition, and judgment) using scientific analysis. **Let's take a closer look at the pivot concept.**

If you see a decreasing effectiveness of your product experiments, or feel product development could be more productive, it's a tell-tale sign of the need for a pivot. A pivot is a structured course correction, designed to test a new hypothesis about your product, strategy, and engine of growth. Each pivot leads to new opportunities, experiments, and the cycle repeats – establish the baseline, tune the engine, make a decision to pivot or persevere.

A startup's "runway" is the number of pivots it can still make, or the number of chances it has left to make a fundamental change and take off. From this perspective, a startup's goal must be to get to the pivot asap, by moving through the feedback loop asap.

However, pivots can be hard to make. First, many businesses use *broad, vanity metrics* that blind them to the need for necessary change. Second, entrepreneurs with an *unclear hypothesis* cannot establish if an experiment has failed. Third, it's scary to acknowledge failure, i.e. *pivots require courage*.

Hence, the decision to pivot must be addressed in a structured, objective way. One solution is to schedule a regular "pivot or persevere" meeting in advance. At the meetings, the *product development team* presents detailed reports on the product optimization results over time, and the *business leadership team* presents detailed accounts of conversations with current and potential customers.

KEY QUOTES

"Startup productivity…is about aligning our efforts with a business and product that are working to create value and drive growth."

"Entrepreneurs need to face their fears and be willing to fail, often in a public way."

A pivot is not just any system of change: it must test a new, fundamental hypothesis. **Here are several pivots examples:**

Zoom-in pivot: What was previously considered a single feature in a product becomes the entire product.

Zoom-out pivot: Conversely, what was previously considered the whole product becomes only a feature of a much larger product.

Customer segment pivot: The product solves a real problem for real customers, but not the original customers you intended. At some point in a startup, you may also want to go beyond early adopters to start selling to mainstream customers. However, the latter have different requirements and are much more demanding, and a pivot will be needed to re-examine your assumptions.

Customer needs pivot: After knowing customers extremely well, it becomes clear that the problem you were trying to solve isn't very important to them. However, you discover other related problems that are important and can be solved by your team.

Platform pivot: The solution is changed from an application to a platform, or vice versa.

Business architecture pivot: This involves moving from a high margin, low volume model to a low margin, high volume model, or vice-versa. An example is to pivot from a Business-to-Business to Business-to-Consumer model.

Value capture pivot: This involves a change in the way the company captures and/or monetizes its products and services.

Engine of growth pivot: This involves a change in growth strategy (see next segment for the 3 primary engines of growth).

Channel pivot: The company changes the way in which it delivers its product to customers e.g. pivot from retail stores to direct delivery.

KEY QUOTES

"The critical skill for managers today is to match those theories to their present situation so that they apply the right advice at the right time."

Technology pivot: The company may discover how to achieve the same solution using a different technology, though this is more likely to occur in established businesses.

Part 3: Accelerate

So far, we've looked at breaking down a startup idea to its leaps-of-faith assumption, testing it with an MVP, using innovation accounting and actionable metrics to evaluate the results, and making the decision to pivot or persevere. All these set the foundation for the last part - acceleration.

Small-Batch Approach

By now, we've established the importance of getting through the feedback loop as quickly as possible. A "small-batch approach" allows us to complete one product at a time quickly, whereas a "large-batch approach" delivers all the products together at the end.

For example, instead of producing thousands of parts at a go, Toyota produced a range of parts in small batches. This allows Toyota to produce entire vehicles in small, varied batches, to better serve smaller, more fragmented markets in addition to larger markets. Any worker can also stop the production line if they spot a defect - problems are fixed on the spot (rather than compounded through mass production).

Pull, not Push (Just-in-time management)

Another lesson from lean production is the concept of "pull" in just-in-time production. In a Lean Startup, product development should only respond to "pull requests" from an experiment to be run. Once a hypothesis is formed, the product development team engineers the design and completes the experiment as quickly as possible, using the smallest possible batch size. Any other work or features "pushed" by the product development team is waste.

KEY QUOTES

"The essential lesson is... by reducing batch size, we can get through the Build-Measure-Learn feedback loop more quickly than our competitors can. The ability to learn faster from customers is the essential competitive advantage that startups must possess."

Growth Strategies

Sustainable growth for any startup is characterized by new customers who come from the actions of past customers : (a) Word of mouth, (b) as a side effect of product use, e.g. status symbols and networks, (c) through funded advertising and (d) through repeat purchase or use.

These 4 sources of sustainable growth spin the feedback loop like a combustion engine. Ries calls these the 3 Engines of Growth:

The sticky engine of growth: Companies with this growth strategy rely on a high customer retention rate, e.g. telco service providers. So long as the rate of new customer acquisition exceeds the attrition rate or "churn rate", the product will grow. Such companies must hence track their churn rate closely.

The viral engine of growth: Here, awareness of the product spreads rapidly from person to person similar to how a virus becomes an epidemic. The "viral coefficient" quantifies the virality of a product. A viral coefficient of 0.1 means that only 1 in every 10 customers will bring a friend along, and this loop will eventually fizzle out. However, a viral loop with a coefficient that's greater than 1.0 will grow exponentially, as each customer will bring, on average, more than 1 other person.

The paid engine of growth, which relies on paying to acquire customers e.g. through advertisements. A company can increase this rate of growth either by increasing the revenue from each customer, or reducing the cost of acquiring a new customer.

Startups should focus on just 1 engine of growth, specializing in everything that is required to make it work, before considering a pivot.

KEY QUOTES

"The Lean Startup works only if we are able to build an organization as adaptable and fast as the challenges it faces. This requires tackling the human challenges inherent in this new way of working."

The Adaptive Organization

Any engine of growth will eventually slow or stop. Hence, a sustainable business must concurrently tune its engine of growth and develop new sources of growth. To do this, we need to create an adaptive organization with the right structure, culture, discipline, and can automatically adjust its processes/ performance to current conditions.

Startups that move too fast may neglect problems which compound over time. To regulate themselves, lean startups can use the "Five Whys" system - slow down and invest just the right amount of resources to tackle the problems, before speeding up again:

- This is the investigative method of asking the question "Why?" 5x to understand the root causes behind the obvious symptoms. E.g. Why did the customer not collect the purchase (because the coupon was not delivered)... Why was the coupon not delivered, and so on.

- Make proportional investments for each of the 5 "Why" levels, focusing resources on the biggest, most painful problems.

- For the system to work, these 2 rules must be followed:
  1. Be tolerant of all mistakes the first time.
  2. Never allow the same mistake to be made twice.

- The book also covers useful tips like how to avoid the 5 blames, face unpleasant truths, start small, and appoint a Five Whys Master.

Ongoing Innovation

Large companies can retain the capacity for innovation, creativity, and growth by adopting "portfolio thinking", and structuring themselves to nurture disruptive innovation. To set up an innovative company:

- Give startup teams complete autonomy to develop and market new products within their mandate (just like how a startup would). Create cross-functional teams with full-

KEY QUOTES

"The Lean Startup works only if we are able to build an organization as adaptable and fast as the challenges it faces. This requires tackling the human challenges inherent in this new way of working."

"What really matters is not the raw numbers or vanity metrics but the direction and degree of progress."

"To work, startups require built-in speed regulators that help teams find their optimal pace of work."

"Both successful startups and established companies alike must learn to juggle multiple kinds of work at the same time, pursuing operational excellence and disruptive innovation. This requires a new kind of portfolio thinking."

time reps from all departments involved in the creation or launch of the products.

- Use resources wisely. Startups may need much less capital than big companies, but they must be accountable for every dollar.

- Give entrepreneurs a personal stake in the outcome of their creations – this could be through stock options, equity ownership, long-term performance incentives, or simply acknowledgement.

- Create a platform for experimentation, with clear ground rules for the startup teams to operate:

  (i) To protect the parent organization, *create a "sandbox"* that allows the startup team to work freely, yet contain the impact of the new innovations. e.g. it could be specific pages/ user flows for an online service, or a single store for a retail chain.

  (ii) *Hold teams accountable* using innovation accounting. Their goal is build the model based on customer archetypes, launch an MVP to establish a baseline, and tune the engine toward the vision.

  (iii) *Integrate successful innovations back into the parent organization*. The entrepreneurs could move on to next startups, or be given an option to follow their project back to the parent organization.

Other Useful Details in the Book to Look Out For

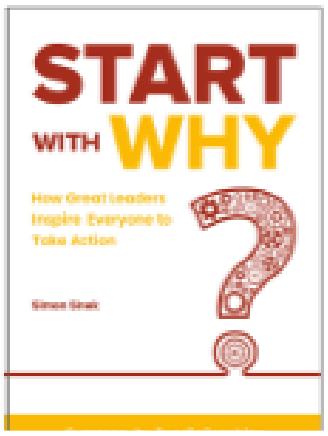
This book is full of detailed case studies to illustrate the Lean Startup at work, from young startups to established corporations, government bodies and not-for profit organizations. Some examples include his own startup IMVU, online shoe giant Zappos, leading software firm Intuit, Village Laundry Service by Procter & Gamble, Hewlett-Packard, Kodak, Wealthfront, Aardvark School of One, Toyota, Facebook and even the Consumer Federal Protection Bureau (CFPB) set up during the Obama administration.

KEY QUOTES

"A startup's work is never done...even established companies must struggle to find new sources of growth through disruptive innovation."

"Keep in mind that structure is merely a prerequisite—it does not guarantee success. But getting the structure wrong can lead to almost certain failure."

"The Lean Startup is not a collection of individual tactics. It is a principled approach to new product development. The only way to make sense of its recommendations is to understand the underlying principles that make them work."



Start with Why

How Great Leaders Inspire Everyone to Take Action

SIMON SINEK

The Big "So What"

Great leaders and organizations can create sustainable change because they *inspire* others. In the process, they create loyal followers who stick with them through thick and thin, so they can create success again and again. In this book, Sinek explains what it means to start with WHY, and how it can create true, lasting success for you and your business.

Manipulation vs Inspiration

It's possible to motivate people through carrots and sticks. However, great leaders - like Steve Jobs, the Wright brothers and Martin Luther King – go beyond that. They inspire people with a deeper sense of purpose or belonging. They touch people in a way that makes them want to go the extra mile. They inspire people by starting with WHY.

Carrots and Sticks

Manipulations are used everywhere in sales and marketing. Although they work, their effects are short-term in nature, and are costly over time. Here are some examples:

Price. When the price is low enough, people will buy. However, dropping prices means less profit, and may not be sustainable in the long run.

Promotions like "buy 1 get 1 free" or cash-back incentives, are also used rampantly to boost short-term sales.

Fear is one of the most powerful forms of manipulation. Marketers and politicians play on our fears, like fear of

KEY QUOTES

"This book is not designed to tell you what to do or how to do it. Its goal is not to give you a course of action. Its goal is to offer you the cause of action

"Those who are able to inspire will create a following of people - supporters, voters, customers, workers - who act for the good of the whole not because they have to, but because they want to."

"Great leaders are those who trust their gut. They are those who understand the art before the science. They win hearts before minds. They are the ones who start with WHY."

"From businesses to politics, manipulations run rampant in all forms of sales and marketing

"The danger of manipulations is that they work...Just because it works doesn't make it right."

"Fear, real or perceived, is arguably the most powerful manipulation of the lot."

illness, death, and loss, with messages like, "you must buy or do this, or beware of the consequences...".

Appealing to **aspirations** is about offering something that people desire, with the promise of achieving it more easily with your solution. It's very effective in motivating a burst of action, but the effects don't last.

Peer pressure. The use of celebrity endorsements, or messages like "4 out of 5 doctors prefer this solution", "over a million satisfied customers have tried this", are all manipulations using peer pressure. They appeal to our fear of being wrong, or being left out.

Novelty. True innovations can transform an industry or society. However most "innovations" in the marketplace (e.g. a new variant of toothpaste or shampoo) are merely tactics that play on the "shiny-object syndrome".

Inspiration, not manipulation

Manipulations work so well that they have become the norm in our society. Generally, manipulations (or carrots and sticks) work well for one-time transactions, e.g. a reward for returning a lost dog. Such transactions do not build loyal followers who will stick by you even when you slip up, or when better options emerge. If you want a lasting relationship built on loyalty, you need to inspire, not manipulate.

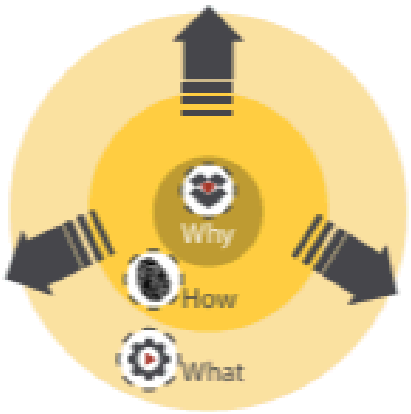
THE GOLDEN CIRCLE

The Golden Circle helps us to understand why we do what we do:

WHY: What's your purpose, belief, or cause? Why do you exist?

HOW: What makes you better or different? What's your unique selling proposition (USP)?

WHAT: What do you do? For example, what's your job function, or what products or services do you sell?



KEY QUOTES

"Peer pressure works not because the majority or the experts are always right, but because we fear that we may be wrong."

"Leadership requires people to stick with you through thick and thin. Leadership is the ability to rally not for a single event, but for years. In business, leadership means that customers will continue to support your company even when you slip up."

"It all starts from the inside out. It all starts with Why."

"When most organizations or people think, act or communicate, they do so from the outside in...We say WHAT we do, we sometimes say HOW we do it, but we rarely say WHY we do WHAT we do."

"People don't buy WHAT you do, they buy WHY you do it."

"Knowing your WHY is not the only way to be successful, but it is the only way to maintain a lasting success and have a greater blend of innovation and flexibility."

The "WHAT" is usually the easiest to define, while the "WHY" is usually the fuzziest. That's why most people communicate from outside in - they explain what they do, how their idea, product, or company is better than others, and most never explain why they exist.

The most impactful and inspiring leaders and organizations do the opposite - they communicate from inside-out. They start with WHY, and the WHATs are merely proof of their beliefs. A strong WHY offers reasons for people to buy, and gives you flexibility to offer a wide range of WHATs as a manifestation of your cause.

For example, Steve Jobs and Steve Wozniak didn't set out to build a computer company. They started Apple with the ambition to start a revolution. Apple stands for thinking differently, for challenging status quo, for simplifying technology so individuals could have the same power to create as big companies. Its earliest fans and supporters weren't just buying computers - they were buying what Apple stood for; and because Apple's WHY was so strong, people could relate to a wide range of their products, from the iPod to Mac.

Obviously, good products are important, and you must deliver what you promise. However, you don't need the best or perfect product. You need a good-enough product with a strong WHY. In fact, the technology used by Apple wasn't even pioneered by them; Apple simply did a superior job of showing us WHY we needed their solutions.

Communicating from Inside-Out

To communicate from inside-out, you'll need all 3 components – WHY, HOW and WHAT – and you'll need them in the correct sequence:

Clarity of WHY. To explain WHY you do WHAT you do, you first need to be clear about your purpose, cause or belief.

Discipline of HOW. With a clarity of WHY, you can figure out HOW to get there, e.g. what values or principles should guide your actions, what systems and processes should be put in place, what type of people or partners you should work with, and how to go about doing it. To establish the HOW, you need to breakdown vague concepts like "integrity",

KEY QUOTES

"It is the cause that is represented by the company, brand, product or person that inspires loyalty."

"No matter how visionary or how brilliant, a great idea or a great product isn't worth much if no one buys it."

"For values or guiding principles to be truly effective they have to be verbs... we have a clear idea of how to act in any situation."

"What authenticity means is that your Golden Circle is in balance. It means that everything you say and everything you do you actually believe."

"innovation", or "honesty" into actionable behaviours, that can be articulated in the form of verbs.

Consistency of WHAT. Others assess how coherent and authentic you are, by looking at whether what you do and say are in line with what you believe. You are authentic when all 3 aspects of your Golden Circle are aligned and in balance.

Let's take a look at Southwest Airlines. It wasn't the first low-cost airline, but it stood out because it had a clear purpose – to allow the average person to move freely in the United States. It backed up its WHY with a coherent HOW, keeping things cheap, fun and simple. For example, it had only open seating on its flights, and had hot pants and go-go boots for flight-attendant uniforms. When Delta Airlines and United Airlines launched their low-cost airlines subsidiaries, they copied elements of Southwest's "how" and "what". However, without a clear WHY, their Golden Circle wasn't balanced and they failed.

The WHY and Human Biology

The Golden Circle relates to how we're built biologically.

All human beings have a biological **need to belong**, and we are willing to go out of our way to get that feeling. When we are amongst people who share our beliefs and values, we feel connected and safe. Hence, if people can relate to your WHY, they are more willing to make the extra effort or investment to include your products, brands or companies in their lives.

Our "**limbic brain**", which is in charge of our decisions, is also the part of our brain that's in charge of feelings, like trust and loyalty. Our neocortex handles analytical thought and language, allowing us to rationalize our decisions and put them into words. Most of us don't try to analyze all possible data before making a decision - It takes too much time and effort, and we usually feel unsure even after processing all the empirical evidence.

On the other hand, when we "follow our heart" or make a "gut decision", such decisions "feel right", because they involve

KEY QUOTES

"Gaining clarity of WHY, ironically, is not the hard part. It is the discipline to trust one's gut, to stay true to one's purpose, cause or beliefs. Remaining completely in balance and authentic is the most difficult part."

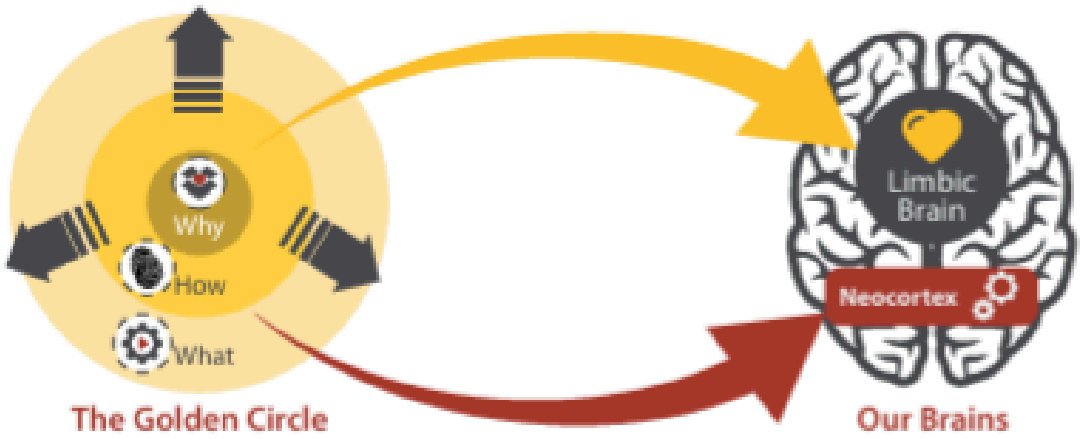
"Our need to belong is not rational, but it is a constant that exists across all people in all culture."

"Our desire to feel like we belong is so powerful that we will go to great lengths, do irrational things and often spend money to get that feeling."

"The reason gut decisions feel right is because the part of the brain that controls them also controls our feelings."

"Our behaviour is affected by our assumptions or our perceived truths. We make decisions based on what we think we know."

our emotions-centred limbic brain. That's why decisions that start with WHY literally win hearts and minds.



3 levels of certainty

The Golden Circle helps us to understand why some brands can build a strong or even cult-like following.

When we use the neocortex to make rational decisions, we *think* it's the right decision.

When we make gut decisions with our limbic brain, we *feel* it's the right decision.

When we can explain our gut feel in words, we involve both aspects of our brains, and we *know* it's the right decision. This is the highest level of confidence that can be achieved.

Both manipulation and inspiration appeal to our limbic brain. The difference is, inspiration goes deeper, to relate with who we are and how we view ourselves. When we're inspired by a product or brand, it becomes a mirror of who we are. It feels right to us and we're prepared to pay a premium (or be inconvenienced) for the products or services. Your brand or product becomes infused with meaning, and your buyers use it as a symbol to express who they are and what they believe.

KEY QUOTES

"Most companies are quite adept at winning minds; all that it requires is a comparison of all the features and benefits. Winning hearts, however, takes more work."

"Loyal buyers will always rationalize the premium they pay or the inconvenience they suffer to get that feeling (of trust and value)."

"The ability to put a WHY into words provides the emotional context for decisions."

"When we are inspired, the decisions we make have more to do with who we are and less to do with the companies or the products we're buying."

"For a logo to become a symbol, people must be inspired to use that logo to say something about who they are.""

Creating a Following

Two people given the exact same job could view it very differently. One person may find it laborious and boring to build a wall (of a cathedral), while another feels proud to be building a cathedral. Consider these 2 case studies:

Man's first flight. Samuel Pierpont Langley had an ambitious goal to build the world's first flying machine. He was a senior officer at the Smithsonian Institution, an ex-professor from Harvard, and was supported by grants, influential friends, and press coverage. Unfortunately, his key motivation was to become rich and famous; he had no clear WHY. In face of setbacks, he felt humiliated and quit. On the other hand, the Wright brothers didn't have any funding, grants, nor high-level connections. But, they were deeply passionate about solving the scientific and engineering problems of flight, and managed to rally people to help them. After persevering through numerous failures, they made mankind's first flight in 1903.

Civil Rights Movement. In pre-civil rights America, Martin Luther King Jr was not the only person who suffered. Yet, he could start a civil rights movement, because he had such a clear WHY and conviction, that he persevered when others gave up. His famous "I Have a Dream" speech touched people with similar dreams and beliefs, and rallied the masses behind his cause.

Trust: The Key Ingredient

Leaders may hold a rank or position, but they are only "leading" when people trust them and willingly follow them. Trust is an irrational feeling that develops when people feel you have their interests at heart. They start to trust you when they understand your beliefs (WHY), and can see that your actions (HOW) and results (WHAT) are aligned with your beliefs.

In business, we do not just want to leverage the power of WHY to generate more sales. We want to use it to do business with people who share our WHY, so that trust and loyalty can be built.

KEY QUOTES

"When (the WHY) is clearly understood, it attracts people who believe the same thing."

"Companies with a clear sense of WHY tend to ignore their competition, whereas those with a fuzzy sense of WHY are obsessed with what others are doing."

"WHY is just a belief, HOWs are the actions we take to realize that belief, and WHATs are the results of those actions. When all three are in balance, trust is built and value is perceived."

"There are leaders and there are those who lead."

"Trust is not a checklist... Trust is a feeling, not a rational experience... Trust begins to emerge when we have a sense that another person or organization is driven by things other than their own self-gain."

First, find those who believe

A company is essentially a culture, and common values and beliefs are what hold people together. To build a strong and trusting organization, you should start by finding people who are passionate for your WHY (your belief, cause or purpose), *before* you assess if they have the right skill sets and experience.

This ensures that you hire people with the right attitudes who can connect at a deeper level. During the 1914 Endurance expedition to explore the Antarctica, the crew was trapped for months in the bitter cold of winter, and had to cross 800 miles of rough seas to seek help. Yet, the team stuck together and no one died despite the insurmountable odds. This was probably because the right people had been hired for the job. Instead of focusing on job scope and experience, the *Endurance* ad had said: "Men wanted for Hazardous journey. Small wages, bitter cold, long months of complete darkness, constant danger, safe return doubtful. Honour and recognition in case of success." The ad attracted survivors – the right people for the job.

Create the right environment

Besides finding the right people, great leaders create a trusting environment where people feel a sense of belonging, and feel safe to take risks, seek advice, and depend on others for support.

- **Continental Airlines** used to have a toxic culture. When Gordon Bethune took over as Chief Executive in 1994, he focused on building trust and an environment where people could win. He made himself accessible and helped the staff to see how cleanliness, better service and turnaround times could benefit themselves (not just customers and the company). He introduced bonuses for everyone when common goals are met, and celebrated small wins. He created a WHY for people to feel like they are in it together.

- **Steve Jobs** did not design Apple's creations himself, nor did he tell people what products to fix. Instead, he provided the purpose and context, within which people were motivated to create and push the boundaries of their creativity.

KEY QUOTES

"The goal is not to hire people who simply have a skill set you need, the goal is to hire people who believe what you believe."

"What all great leaders have in common is the ability to find good fits to join their organizations – those who believe what they believe."

"When you fill an organization with good fits, those who believe what you believe, success just happens."

"When we are selective about doing business only with those who believe in our WHY, trust emerges."

"Pulling together a team of like-minded people and giving them a cause to pursue ensures a greater sense of teamwork and camaraderie."

"No one likes to lose, and most healthy people live their life to win. The only variation is the score we use."

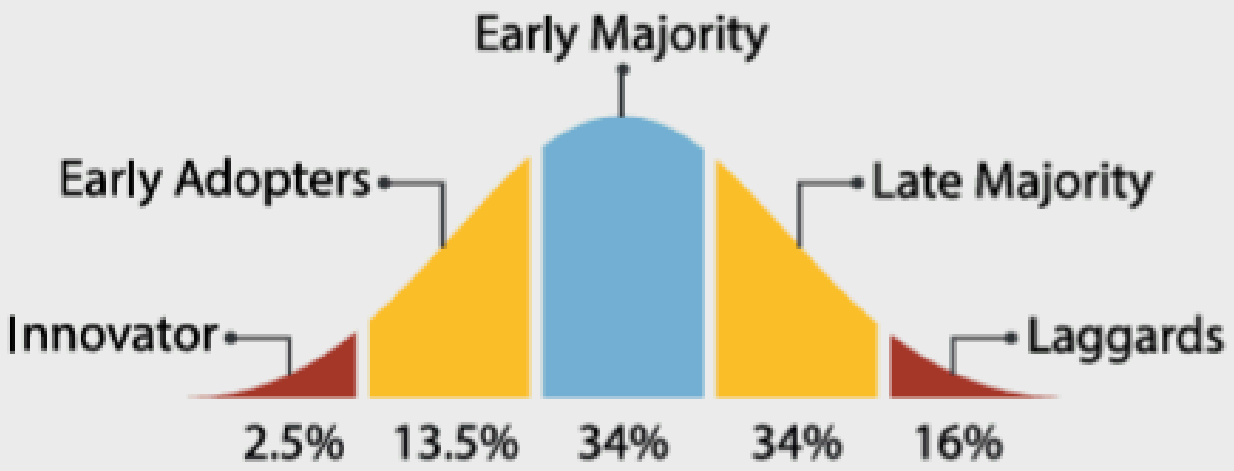
"Average companies give their people something to work on. In contrast, the most innovative organizations give their people something to work toward."

"The role of a leader is not to come up with all the great ideas. The role of a leader is to create an environment in which great ideas can happen."

Creating a Tipping Point

In the book, "The Tipping Point", Malcolm Gladwell shared how connectors and influencers are critical for creating a tipping point. However, he didn't address an important question: why should the influencers help you to spread the word? The answer is, you need influencers who believe what you believe.

Sinek explains how innovations, technology and ideas spread, using concepts from "Diffusion of Innovations" by Everett M. Rogers and "Crossing the Chasm" by Geoffrey Moore.



The key message is this – Focus on finding the 15-18% of innovators and early adopters who believe what you believe, and want to incorporate your ideas and products into their lives.

- 2.5% of the population are **innovators** (they challenge others to see the world differently), and 13.5% are **early adopters** (they see value in the new ideas or technologies and will bear with inconvenience and imperfections to try them). Innovators and early adopters support brands because it's a part of who they are; they are often willing to pay a premium, are more loyal and forgiving.

- The **early or late majority** typically care less and don't "get it". They are comfortable buying your products only after they see others trying it, which is why you should target your marketing efforts toward the early adopters first. Specifically, according to the Law of Diffusion, you need 15-18% market penetration before the early majority will try it.

KEY QUOTES

"You don't just want any influencer, you want someone who believes what you believe. Only then will they talk about you without any prompts or incentives."

"Trust is a remarkable thing Trust allows us to rely on others."

"The opinions of others matter. And the opinions of those we trust matter most."

"Passion comes from feeling like you are part of something that you believe in, something bigger than yourself."

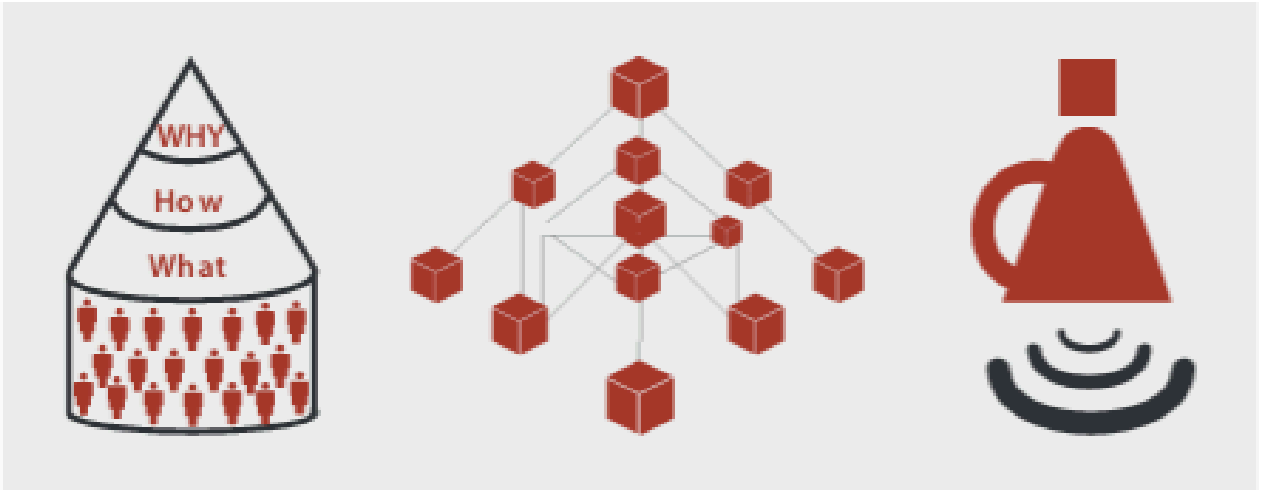
Rally Those who Believe

Injecting energy into an organization can create short-term boosts in employee motivation and action. However, to inspire and create loyalty, you need charisma, which comes from the clarity of your WHY, and the conviction of your belief or purpose.

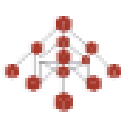
For a message to make an impact and build loyalty, you need:

- **Clarity**: To clearly articulate a higher purpose, cause or belief that others with similar values can relate to; and
- **Amplification**: It must reach enough people to reach a tipping point.

It's like amplifying your WHY with a "megaphone". Apply the Golden Circle in 3-dimensions, like a cone:



People with the WHY are visionaries; to succeed, they must **partner with people who know the HOW**. The leader's vision and charisma attract innovators and adopters, who make sacrifices to help make the vision a reality. Martin Luther King Jr. was supported by Ralph Abernathy, who took the dream and showed people what to do. Steve Jobs was supported by Steve Wozniak, who engineered Apple's early products. Bill Gates was supported by Paul Allen, who built the company.



In an organization, the CEO sits at top of the organization and represents the WHY; he must be surrounded by senior leaders who can help him to translate the HOW, and employees who are able to deliver the WHAT.

- A vision statement states the founder's intent (WHY the company exists).

KEY QUOTES

"Energy motivates but charisma inspires….Charisma commands loyalty. Energy does not."

"Loyalty to a company trumps pay and benefits…It's the cause we come to work for."

"In every case of a great charismatic leader who ever achieved anything of significance, there was always a person or small group lurking in the shadows who knew HOW to take the vision and make it a reality."

"Those who know WHY need those who know HOW."

"To reach the billion-dollar status, to alter the course of an industry, requires a very special and rare partnership between one who knows WHY and those who know HOW."

"Regardless of WHAT we do in our lives, our WHY – our driving purpose, cause or belief –never changes."

- A mission statement describes the route or guiding principles (HOW the company will create the future).

- To succeed, both statements must be aligned, and you must be supported by trust and the right skills. Our WHAT changes over time, but our WHY doesn't.

When the WHY is clear, others who share the belief are attracted and want to participate. The belief is amplified and more people are rallied.

The Celery Test

If you didn't know what you wanted to buy, you may go to the supermarket and grab everything – chocolates, cakes, celery, fruits. You spend more money, and people who look at your shopping basket see no pattern. However, if you clearly want a healthy lifestyle and will only eat whole foods, you'll only pick celery and fruits. Your choices are more focused, more cost-effective, and your shopping basket shows a clear theme. Sinek calls this the "Celery Test". A clear WHY can be used as a decision filter for your HOWs and WHATs.

Creating Lasting Success

Many people achieve their goals but feel like failures. That's because achievement comes when you achieve WHAT you want, while success comes from fulfilling your WHY. True success is a feeling or state of being which goes deeper. Unfortunately, most of us will reach a point when our WHY and WHAT are misaligned–Sinek calls this the "split".

When WHY Goes Fuzzy

Wal-Mart's founder, Sam Walton, believed that if he looked after people, people would look after him. This was WHY Wal-Mart existed. However, when Sam passed away, the company started to focus on the HOWs and WHATs, and the people-touch was gradually lost. Sinek shares example after example of companies who have faltered or weakened when the founding leader steps down–Starbucks losing sight of great personal experience, Dell losing sight of efficiency, Microsoft losing sight of people empowerment.

KEY QUOTES

"What matters more is that WHAT and HOW you do things is consistent with your WHY. Only then will your practices indeed be best."

"Success and achievement are not the same thing, yet too often we mistake one for the other."

"Achievement is something you reach or attain, like a goal. It is something tangible, clearly defined and measurable. Success, in contrast, is a feeling or a state of being."

"The challenge isn't to cling to the leader, it's to find effective ways to keep the founding vision alive forever."

"Those with an ability to never lose sight of WHY, no matter how little or how much they achieve, can inspire us."

When the company is small, the founder's personality is the company's personality. As it grows, systems and structures are put in place. More people start to make decisions, the CEO becomes distanced from the WHAT, and the WHY gets diluted.

To ensure lasting success, you must ensure that the WHAT continues to be aligned with the WHY as the company grows.

Only hire people who believe in the WHY and know HOW to build it;

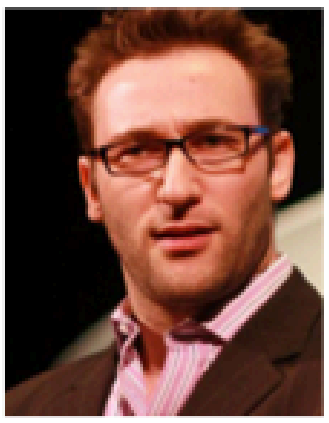
Focus your **succession plan** on finding the right leaders who are inspired by the founding cause, and can lead the future generations in the right direction. Succession is all about continuing the WHY and the vision.

What gets measured, gets done. Constantly apply the "Celery Test" to check that your WHY, HOW and WHAT are aligned.

Conclusion

Finding your WHY is a process of discovery, and the hardest part is not just to discover the WHY, but to stick to it and have the discipline to maintain balance and alignment with your HOWs and WHATs. The book is full of examples to help us understand the concept at work. For more details, please go to www.startwithwhy.com

About the Author



Simon O. Sinek (born 1973) is an author, speaker, and consultant who writes on leadership and management. He joined the RAND Corporation in 2010 as an adjunct staff member, where he advises on matters of military innovation and planning.

He is best known for popularizing the concepts of "the golden circle" and to "Start With Why".

KEY QUOTES

"Successful succession is more than selecting someone with an appropriate skill set – it's about finding someone who is in lockstep with the original cause around which the company was founded....That's why we call it succession, not replacement. There is a continuity of vision."

"Finding WHY is a process of discovery, not invention."

REMOTE

Office Not Required

Jason Fried & David Heinemeier Hansson

The Big "So What"

The book covers the benefits of remote work, the perceived obstacles, and practical tips for companies or employees who are considering or doing remote work. It builds on the authors' experience in running 37signals, a successful software company.

Introduction

Working remotely hasn't been a real option till recently, due to technological advancement (e.g. documents and screen sharing, instant messages etc.). People no longer need to live in the city to have access to information, entertainment and resources – these are accessible from anywhere in the world. In fact, having the flexibility to travel anywhere will be the new luxury.

Remote work brings **win-win benefits** for employers and employees:

Productive time: A typical day at the office is filled with many interruptions. Working remotely provides stretches of uninterrupted time to get meaningful work done.

Save on commuting. If you save 1.5 hours of commute each work day, you can save 300-400 hours per year.

Flexibility: Remote working, once set up properly, frees up employees from a fixed 9am-5pm schedule – they can decide how to distribute their time most effectively within the stipulated parameters. Companies also have flexibility in choosing the right formula that work for them e.g. you can have parts of the workforce working remotely, or have most staff working remotely part of the time.

Cost savings with better outcomes. Besides cost savings (e.g. cutting down office space, removing redundancies), remote

KEY QUOTES

"Remote work is about setting your team free to be the best it can be, wherever that might be."

"'Office not required' isn't just the future – it's in the present.. Now is your chance to catch up."

"The new luxury is the luxury of freedom and time. Once you've had a taste of that life, no corner office or fancy chef will be able to drag you back."

"The ability to be alone with your thoughts is... one of the key advantages of working remotely."

"Soon you'll see that it's the work – not the clock – that matters."

"Remote work speeds up the process of getting the wrong people off the bus and the right people on board."

working brings better quality of life, access to the best talents etc. It also forces the company to evaluate people based on the work they produce, rather than other considerations that don't really matter - it becomes clear who is performing and who isn't.

Keeping great talent. Companies no longer have to let go of great talent just because they can't be in the same office due to personal reasons like family/health. Talents who work away from the hubs also tend to be happier in their work and are less likely to be poached by the competitor next door.

Dealing with the Concerns & Excuses

There are several common concerns about remote work that are just excuses if they are examined closely.

No face-to-face brainstorming and breakthroughs. Breakthroughs and brilliant ideas can indeed emerge when the right people are in a room together. But, too many meetings will only overwhelm your team, and people typically have no time to follow up on so many good ideas. When you ration the number of in-person meetings, they can actually become special and more productive.

What if they loaf on the job? People who choose to loaf can do it in the office too. The solution is to hire only people you can trust. People tend to live up or down to your expectations, so if you trust them to excel without close supervision, they may prove you right.

The home is full of distractions. Distractions can be managed by setting up the work environment properly. In fact, the best antidote to distractions is stimulating and fulfilling work – if you find yourself/your employees unmotivated or distracted, review whether the work is well-defined or meaningful in the first place.

It's not as secure. It is a myth that only the office is secure, since most laptops (which people bring out of the office) are unencrypted to begin with. In fact, having everyone work from one office could mean having a Single Point of Failture (SPoF) if a major disaster hits the office. If people can

KEY QUOTES

"Saving money on labor is definitely not a valid reason to invite the hassle, but access to one-of-a-kind talent just might be."

"How many breakthrough ideas can a company actually digest? Far fewer than you imagine."

"Coming to office just means that people have to put on pants. There's no guarantee of productivity."

"Either learn to trust the people you're working with or find some other people to work with."

"The number one counter to distractions is interesting, fulfilling work.... Most people want to work, so long as it is stimulating and fulfilling."

securely perform online banking and purchases, they can securely work from a remote location. The authors share a list of good security measures adopted by 37signals (e.g. using hard-drive encryption and disabling automatic login).

Being accessible to customers. Rather than have someone sit by the phone from 9am-5pm to answer clients' calls, you can adjust the customer service hours/staff people through shifts so the entire day can be covered by remote staff.

But the big businesses don't do it... Many big businesses are still operating ineffectively, and this actually presents an opportunity for smaller businesses to differentiate themselves. There are also already a growing number of multi-national companies that are embracing remote working (e.g. IBM, Accenture, eBay).

Our size or industry is different... To debunk this excuse, the authors list a wide range of industries and companies (e.g. AT&T, Intel, McKinsey & Co, Unilever) whose people regularly work remotely.

The culture will be affected. Culture isn't about people hanging out together. It is the "spoken and unspoken values and actions of the organization" e.g. how we treat stakeholders, the quality we uphold. Remote work actually forces companies to have a strong culture that can be clearly articulated and communicated to new staff.

Non-remote staff may get jealous. Different jobs have different requirements and not all are suitable for remote working (e.g. delivery services). Most staff can understand that. Where possible, let people choose how they prefer to work and assess them based on the work completed (rather than location of completion).

I need an answer now! When other colleagues are easily accessible in the same office, we may fall into the bad habit of bothering them for anything, at any time, disrupting personal productivity. This is one of the biggest transitions when shifting to remote working. Learn to question if an answer is really needed immediately:

- 80% of your questions are usually not time sensitive: Use emails.

KEY QUOTES

"Creating security protocols and algorithms is the computer equivalent of rocket science, but taking advantage of them isn't... These days, security for your devices is just simple good sense, like putting on your seat belt."

"You're all in the game to find the best way to work: the most productive and happiness-inducing setup wins."

"Once you're ASAP-free... you'll be amazed at how your former self was able to get anything done in the face of constant inperson interruptions."

- 15% of your questions may need a response in the next few minutes: Use instant messages.
- Only 5% of your questions will likely need immediate answers: Pick up the phone and the answer is a phone-call away.

Losing control. This is one of the most difficult challenges to overcome, as the fear of losing control is usually primal or subconscious in nature. Start small (e.g. have someone work from home for just 1 day, then 2 days) to show that things won't fall apart, then scale up gradually from there.

Past investment in the office. The money spent on the current office is a sunk-cost and cannot be recovered. Focus instead on creating new productivity, in or out of the office.

Tips for Successful Remote Collaboration

There are real trade-offs involved in remote work, including reduced face-to-face time and the loss of imposed structure and regiment. This calls for greater personal commitment and new work frames. The key is to maximise the benefits and minimize the drawbacks.

Create overlap in work hours. This is important to avoid collaboration delays and to help remote workers to feel part of a team. The authors recommend about 4 hours of overlap across time zones (e.g. 11am to 7pm in Copenhagen and 8am to 5pm in Chicago, local time), so there's a balance between time for collaboration and flexibility for staff.

Ensure key resources are shared. Use shared calendars, shared drives etc. to ensure that all important materials are "out in the open" and not stuck in someone's computer. Use screen-sharing tools (e.g. WebEx, GoToMeeting), so staff can interact with the same materials, just like seeing it on the same computer or projector screen.

Create a "virtual water cooler". Create chat rooms where people can "hang out" virtually and interact throughout the day on any work or non-work issue, just like how they would at a staff pantry or a water cooler in the office.

KEY QUOTES

"Working remotely isn't without complication or occasional sacrifice. It's about making things better for more people more of the time."

"To instill a sense of company cohesion and to share forward motion, everyone needs to feel they're in the loop."

"Progress is a joy best shared with co-workers."

"When you can't see someone all day long, the only thing you have to evaluate is the work…it's clear who in the company is pulling their weight and who isn't."

Keep people in the loop. Create a platform where people can share their latest progress and goals targets, celebrate accomplishments and feel part of a common goal. For example, you can create a weekly discussion thread on "What have you been working on?"

Focus on the work. Evaluate people based on their work, rather than charisma, duration/ location of their work etc.

Ramping it up. Working remotely doesn't have to involve an overseas staff. It simply means not being in the office from 9am-5pm. Your staff can be working from a café downstairs or at the library across the road.

It is a good idea to start testing out remote arrangements for at least 3 months, by allowing local staff to work remotely, and/or with 1-2 days of remote work a week. When you are ready, you can increase the frequency and/ or move into truly remote overseas working. You can also consider hybrid strategies with some employees working in the office and others at home.

Minimise the M&Ms (Meetings & Managers). In the remote-working world, we still need to have meetings and managers (to plan and monitor output). However with an online "paper trail", we can easily cut down on the M&Ms.

Critical mass. Adjustments and teething pains are expected during the transition, and people must be committed to iron out the issues. It won't work if only 1-2 people start the arrangement while the rest carry on business as usual. You need a sizeable group of people, including important stakeholders, to try it out.

Build trust with clients:

- Highlight upfront (during the pitch) that you are based in a different location
- Voluntarily provide references to show you have nothing to hide
- Show them your work regularly, so they can see the progress/results
- Be extremely available - return calls, emails, messages etc.
- Let them be involved/ feel a part of your project by including them in your shared calendars etc.

KEY QUOTES

"Meetings should be like salt – sprinkled carefully to enhance a dish, not poured recklessly over every forkful. Too much salt destroys a dish. Too many meetings can destroy morale and motivation."

"Give remote work a real chance or don't bother at all. It's okay to start small, but make sure it's meaningful."

Hiring and Keeping Remote Workers

Find the best internationally. Don't limit yourself to local talent – look for the best people internationally. An international team/presence can broaden your company's perspectives and serve as a selling point with clients.

Equal pay for quality. Even if you hire someone from a city with lower cost of living, make sure you pay them an equivalent amount to those staff from the big cities. Don't use remote work as an option to skimp on salaries.

Use test projects/contracts: To truly assess a candidate's suitability, it's a good practice to do "pre-hiring", i.e. hire the potential candidate for a mini project (representative of the work they're being hired for) for 1-2 weeks, before making the hiring decision. Contract work is also a great way for both the hirer and hire to assess the remote work relationship and mutual fit.

Legalities & Finances. You need to consider the legal, taxation, accounting and foreign exchange implications of hiring overseas talents. Generally, taxes kick in once you have an overseas office or a taxable presence in that country/ state. A simpler way to start may be to hire the talents as contractors (perks and benefits can be built into the fees), or even engage lawyers or accountants who can advise you on the best setup.

It's the work that matters. When hiring remote workers, the work matters most. Rather than depend on personality assessments/quizzes, ask to see past work, or present real-world problems and have the candidate answer them as part of their job application.

Good writing skills. Much of the communication in remote work is done over email, hence good writing skills are important.

Meet them in person. Both talent and character matter. To determine cultural fit, the authors recommend flying 2-3 final candidates in for a casual chat and to hang around the office to meet and interact with the team. That way, the staff can assess if they "like" the person and vice versa. Once hired,

KEY QUOTES

"The world has never been smaller and markets have never been more open. Don't be a cultural or geographical hermit."

"Remember, doing great work with great people is one of the most durable sources of happiness we humans can tap into. Stick with it."

"Your star designer out in the sticks is just as valuable (maybe more so) to the team as those working from the big-city home office. Make sure she feels that way."

"Given how hard it is to find great people, you should be doing your utmost to keep them."

"When you're seeking remote workers, you have to do even more to encourage and nurture diversity and personal development. It's a small price to pay for a more interesting workplace and to keep people engaged for the long term."

it's useful for the new recruits to spend a few weeks in the office first, so they can understand the company, its people and processes, before returning home.

Compensate for the distance. To ensure that relationships can survive the physical distance, it is important to hire the right people (from a social perspective). Strictly no bad vibes, drama or politicking should be condoned. As an employer, you should also create opportunities to expand the diversity of "human experience" and create opportunities for personal development, e.g. encouraging or sponsoring trips and activities to create memorable experiences and/or develop new skills.

Managing Remote Workers

The rise of remote work is inevitable, and you should start setting up for it as early as possible. When managing remote workers:

Look out for overwork. When passionate people work from home, they risk working round the clock and getting burnt out. Help employees to set a healthy boundary by developing a "culture of reasonable expectations", thinking in terms of productivity (not work hours), and consciously "checking in" and "checking out" of work.

Use scarcity to your advantage. What is scarce tends to be valued more. Face-to-face interactions are scarce in remote work, hence people tend to look forward to and make better use of the opportunities when they arise. Don't be afraid to reduce the amount of face-to-face interactions, and you'll see their value go up.

Manage what matters. Managers should ideally know what needs to be done, know how to split the work into meaningful chunks, understand potential delays, help solve problems, and put the right people on the right projects.

Meet-ups & sprints. It is important for the team to meet up in person occasionally say, twice a year. It creates an opportunity for people to be involved in charting the company's direction, get reacquainted with one another as individuals, or even do a sprint to finish a project.

KEY QUOTES

"A manager's natural instinct is to worry about his workers not getting enough work done, but the real threat is that too much will likely get done."

Lessons from open source. Open source platforms like Wordpress and Linux are built from contributions by thousands of users worldwide. From their experience, we learn several lessons:

- Intrinsic motivation: people who are passionate about their work don't need to be managed.
- All out in the open: Because all the information is out in the open, anyone who wishes to help out can.
- Meeting occasionally: Most successful open-source projects grow to a point where they can support their own conferences or general sessions to allow people to meet up in person.

Remove the roadblocks, Level the playing field. To create true flexibility to work anytime, anywhere, empower people to make decisions and give them access to every resource they need. This requires trust that your remote workers will be reasonable and responsible. Invest in good intercom systems, shared desktop apps etc. so your remote workers can participate meaningfully in office discussions. Ensure everyone is seeing the same picture.

One-on-ones. Do regular "check-ins" or one-on-one calls with your remote employees every month or every few months. A casual "how are things with you" call can help to keep the connection and unearth small things that may otherwise go unnoticed.

Life as a Remote Worker

Remote work brings flexibility and new lifestyle options, but also requires some adjustment in thinking and behaviour:

Cabin fever. Remote work should not translate into isolation and solitude. As a remote worker, you can set aside quality time with family and friends, and /or step out of your home occasionally to create opportunities for human interaction.

Ergonomics. Remote working means you have the freedom to work anywhere. To make it viable in the long-term, consider your equipment (chairs, tables, screens) to take care of your body anatomy, and vary your sitting/standing positions so you're not cooped up for long periods in the same positions.

KEY QUOTES

"If you let them, humans have an amazing power to live up to your high expectations of reasonableness and responsibility."

"Flexibility is your friend here. Remote isn't binary. It's not here or there, this or that."

"Just because you work remotely most of the time doesn't mean you have to, or should, work remotely all of the time."

Staying healthy. Remote working may result in even lesser opportunity for movement and exercise, so you'll need to deliberately build in reasons to move around in the day.

Build a routine. Most people require some form of routine to be productive. You can use specific routines or cues (e.g. change of attire) to switch into "work mode", divide the day into chunks (e.g. "serious work", "catch-up" etc.), or use specific parts of your house for different activities. You can also use hybrid approaches that best suit your work/team e.g. remote arrangements in the morning (for focused work) and going to office in the afternoon (for collaborative work).

Draw the lines. To avoid overworking, create a greater distinction between work and play e.g. have different computers, device or accounts for work and personal use.

Find your space(s). Remote work allows you to change your scenery/work environment regularly, creating opportunities for new ideas. Remember that working alone in the presence of others (e.g. at a vibrant café with Wifi) can sometimes induce greater productivity than if you are totally alone.

Stay motivated. A person's level of motivation can be a gauge of the quality of work and the work environment. If you find yourself becoming unmotivated, have the courage to speak up and diagnose the issue. To make sure you are not neglected or ignored by your company, you can either make more noise or show exceptional work.

Conclusion

Like how the internet has transformed the way we communicate and do business, remote work is here to stay and will become more prevalent. The right time to get onboard is now.

Other Useful Details in the Book to Look Out For

The book reads somewhat like a collection of blog posts. Fried and Hansson share many examples of how they have implemented remote work at 37signals, such as their security measures, how

KEY QUOTES

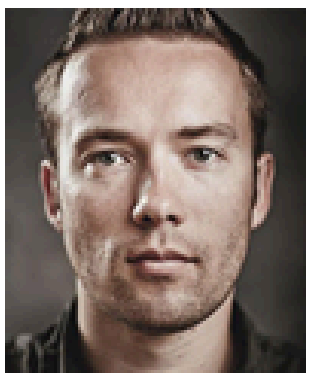
"The only reliable way to muster motivation is by encouraging people to work on the stuff they like and care about, with people they like and care about."

"Motivation is pivotal to healthy lives and healthy companies. Make sure you're minding it."

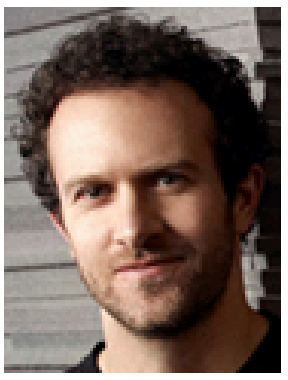
"Remote work is here, and it's here to stay. The only question is whether you'll be part of the early adopters, the early majority, the late majority, or the laggards."

they promote staff interaction and a healthy lifestyle, and how they support their staff with a company credit card and flexible vacations. They also provided a list of tools that they use in the "Remote Toolbox". These examples and tools may not be applicable to all companies, but provide ideas of what can be done.

About the Authors

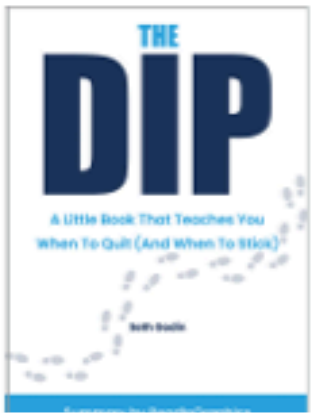


David Heinemeier Hansson (born 1979) is a Danish programmer & author. He is best known for his creation of the Ruby on Rails web development framework, for which he was recognized by Google and O'Reilly with the Hacker of the Year award in 2005.



Hansson graduated from the Copenhagen Business School with a bachelor's degree in Computer Science and Business Administration, before moving to Chicago, USA. He became a partner at Basecamp (formerly 37signals) together with Jason Fried. Jason Fried is the co-founder & CEO at Basecamp.com. He's the co-author of Getting Real, Remote, and NYT Bestseller REWORK. Hansson co-wrote Agile Web Development with Rails with Dave Thomas, as well as Getting Real, Rework, and Remote with Jason Fried.

KEY QUOTES



THE DIP

A Little Book That Teaches You When To Quit (And When To Stick)

SETH GODIN

The Big "So What"

It's a myth that winners never quit. In reality, winners and high-achievers attain outstanding results precisely because they know when to quit and when to persevere. This book provides simple but powerful tips to help you know when to stick and when to let go.

Introduction

People often don't quit when they should. They may hang on to a dead-end job or a sunset business out of habit or pride, or they may cling on to status quo out of comfort. In the process, they incur opportunity costs, since their time, energy and resources could have been redirected to more productive alternatives.

On the other hand, people also quit when they shouldn't. They may quit in the midst of pain and setbacks, when they could have achieved success if they pushed just a little longer and harder.

In this summary, we'll explain why it's so hard to quit the wrong things and stick to the right things, and how you can learn to quit strategically.

Being the Best in the World

To enjoy extraordinary rewards, you must become the best in the world.

In any sector or industry, people and organizations at the top get a disproportionate amount of rewards and recognition.

- If you plot the amount of rewards against ranking on a graph, you'd get an *exponential curve*, not a straight line. For example, the top ice-cream flavor (vanilla) sells many times more than the other 9 top flavors. A top musician, actor or coach earns hundreds or thousands of times more than an average one.

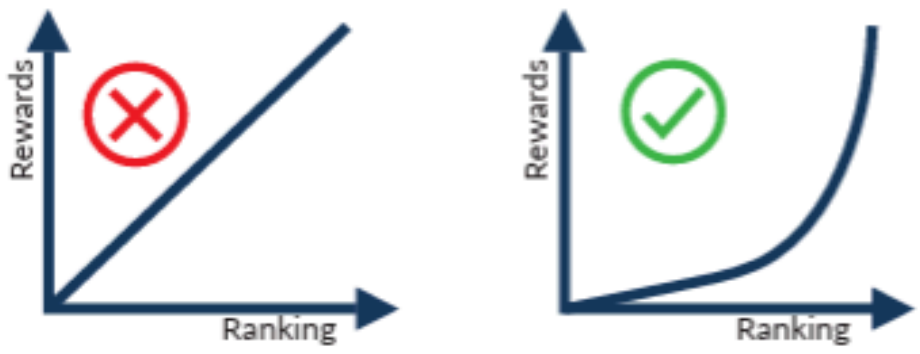
KEY QUOTES

"Believe it or not, quitting is often a great strategy, a smart way to manage your life and your career."

"Winners quit all the time. They just quit the right stuff at the right time."

"Extraordinary benefits accrue to the tiny minority of people who are able to push just a tiny bit longer than most. Extraordinary benefits also accrue to the tiny majority with the guts to quit early and refocus their efforts on something new."

Relationship between Rewards and Ranking



- Jack Welch took *General Electric* to success with this principle: GE would only be in an industry if it could be #1 or #2.

Why is there a premium for the best?

- People are naturally *risk-averse*. Given limited time and resources, we tend to go for what's "best" to minimize our perceived risks. For example, if you can afford it, you will seek the best medical treatment from the top surgeon, or get the best advice from the #1 expert. When you're on holiday, you'd search for the top restaurants and attractions. When you hire people, you'd interview the best available candidates.

- More importantly, *what's scarce is valuable*. Since there can only be a few people at the top, it makes you extremely valuable if you're considered to be the best or one of the best.

Start by defining and developing your unique niche.

- The concepts of "best" and "world" are actually *subjective*. What's "best" is merely a perception in people's mind; the definition can vary with the target audience and with time. Someone's "world" is what's accessible to him/her. The size, nature and boundaries of this world also varies with each person. For example, the best fried chicken in your world could be what's recommended by your friends, colleagues or online community, based on their subjective idea of what the best fried chicken should be like.

- Generally, categories are getting *more specific*. You're less likely to look for the "best doctor in the world" than the "best orthopaedic" or the "best heart surgeon" in your country or city. Likewise, even if you can't offer the best food globally, you can certainly operate the best steakhouse in your town.

KEY QUOTES

"Strategic quitting is the secret of successful organizations."

"With limited time or opportunity to experiment, we intentionally narrow our choices to those at the top."

"Winners win big because the marketplace loves a winner."

Quit the non-essentials. It's impossible (and unnecessary) to be the best in everything. Every individual and organization has finite time and resources. To be the best in something, you must give up the non-essentials.

- Unfortunately, many people and organizations don't aim to be the best. They settle for being "*good enough*"—they hire people who're good enough, they deliver good enough results and they learn just enough to get their work done.

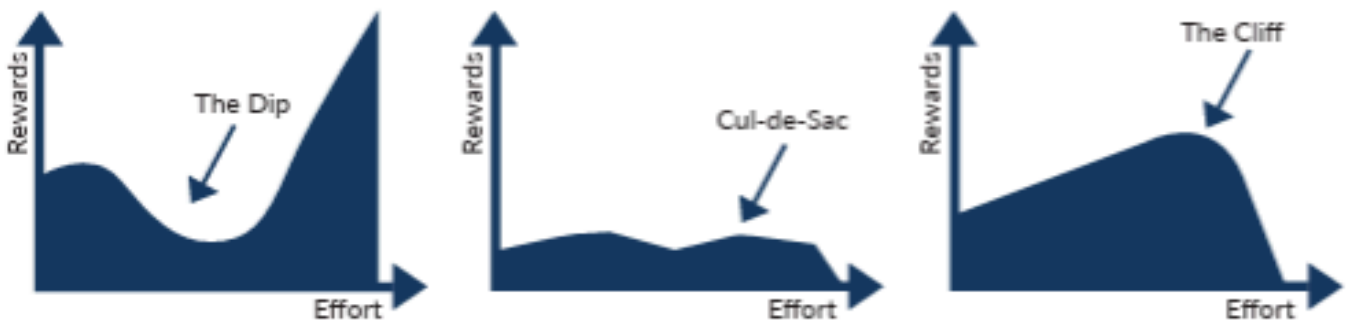
- Another common trap is to try to be *well-rounded*—if you try to do a bit of everything, you'll end up excelling in nothing.

- *Strategic quitting* is about (i) being proactive and perseverant in the areas you want to focus on and can be the best at, and (ii) giving up everything else. It's not about quitting reactively because of bad decisions or difficulties.

Strategic Quitting

Understanding the 3 Curves

The first step to strategic quitting is to understand and recognize the situations that cause people to quit. Generally, most life experiences can be represented by these 3 types of curves.



The Dip. Almost everything in life follows this curve. When you start doing something, it usually seems fun and interesting. Then, you start to experience challenges, and it becomes increasingly hard to get the desired results. This is "the Dip".

- For example, when you first start a business, you tend to feel excited and optimistic. Then, reality sinks in and you find yourself struggling to find customers and pay your bills. Your energy dips and the future no longer looks so rosy.

KEY QUOTES

"You really can't try to do everything, especially if you intend to be the best in the world."

- Or, you may find it interesting initially to learn a new hobby. However, you'll soon find your progress stagnating and the only way to push to a new level is to start putting in regular, disciplined practice.

- On the surface, the Dip seems to be an obstacle to your desired outcome. In reality, if you manage it well, it can be an opportunity or a shortcut to success and mastery.

The Cul-de-Sac is essentially a dead-end. No matter what you do, nothing moves and there's simply no progress.

The Cliff is a situation where it's hard to quit until you find yourself at the edge of disaster and things are about to fall apart. For example, people usually find it hard to quit smoking or gambling until they hit a major health or financial crisis.

When to Quit vs When to Stick

In a nutshell, quit when (i) you're facing a Cul-de-sac or a Cliff, or (ii) if you're not going to become #1 on this path. Never quit in the Dip due to short-term pain—this is actually your opportunity to win big.

When you're facing a Cul-de-sac or a Cliff, quit immediately. Do not procrastinate. The Cul-de-sac may seem safe/boring while the Cliff may seem exciting. However, if you stick to either curve, you'll eventually fail. The only exception is if you can change a Cul-de-sac into a Dip.

When you're in the Dip, never quit. Instead, invest your time, energy and effort to conquer the challenges to get to the next level.

- The challenges in the Dip are actually *opportunities*. The harder and more uncertain something is, the more people will drop out. This makes the remaining players more scarce and valuable.

- Lean in to the challenges, push harder, learn as fast as you can and consider how you can change the rules to win the game. When you deliberately *work through the challenges*, you'll move out of the dip much more quickly to achieve success.

KEY QUOTES

"Stick with the Dips that are likely to pan out, and quit the Cul-de-Sacs to focus your resources."

"The Dip creates scarcity; scarcity creates value."

"Dips don't last quite as long when you whittle at them."

- *Do not quit* and take the easy way out by moving on to something else. If you keep switching paths each time you face difficulties, you will never achieve excellence. Top marketers, consultants and professionals earn a huge premium because they've spent years honing their skills and accumulating experience that help them stand out in a crowded marketplace. A woodpecker that pecks a few times on every tree will soon starve to death, whereas a woodpecker that keeps pecking on 1 tree will eventually get to its prize.

- On the other hand, don't simply go with the flow or buckle down and hope to survive. Unless you make a conscious effort to attain mastery, you will simply stagnate and *stay mediocre*.

Remember this **rule of thumb**: Only start something if you can be #1 in that area.

- *Why people fail*. People don't make it through the Dip because they (i) run out of time, money, courage, or passion, (ii) focus on short-term pain/results instead of long-term goals, and/or (iii) focus on the wrong areas where they can't be the best at.

- Anything worthwhile will involve a dip. Before you enter a new market, take on a project or job, step back to consider (i) what it'd be like if you can be #1 or a superstar in that area, (ii) what challenges you'd have to overcome to get there and (iii) if you're able/willing to do what it takes. *Be selective* of what you embark on in the first place.

- Unfortunately, many people/organizations do things without *prior deliberation*. As a result, they end up choosing the wrong areas (where they can't be #1) or giving up prematurely. Either ways, they end up wasting time and resources.

Here are several **common situations** where people get stuck in the Dip or quit:

- *Manufacturing*. It can be fun to build something at home or in your backyard. However, it's much harder to scale up your production: you'll have to invest in materials, equipment and figure out how to deliver efficiently with consistent quality.

- *Sales & distribution*. You may enjoy some initial success by selling personally. However, to compete effectively, you may

KEY QUOTES

"In a competitive world, adversity is your ally. The harder it gets, the better chance you have of insulating yourself from the competition."

"It's easier to be mediocre than it is to confront reality and quit."

"It's human nature to quit when it hurts. But it's that reflex that creates scarcity."

"If you're going to quit, quit before you start.... Don't play the game if you realize you can't be the best in the world."

eventually need to develop a professional salesforce, invest in sales tools/systems, and/or develop new distribution channels (e.g. getting onto the prime shelves of major retail chains).

- *Education*. At some point in your career, you'll have to learn something new and/or rebuild your skills to move to the next level.

- If you're growing a business, at some point you'll need to take the *risk* to invest in systems, processes and offices to scale up.

- *Relationships* take time to build and you can only see returns much later. If you focus only on immediate returns, you'll neglect the long-term relationships needed for future successes.

- At various points in your life, you need to let go of old beliefs and assumptions and adopt *new perspectives* to move forward. You may also have to give up your *ego*, pride or sense of control.

When we see others getting a big break, it may seem effortless because we only see their end results. We don't see the struggles and multiple Dips that they've overcome.

- A study found that the average salesperson gives up after the 5th contact with a prospect, when 80% of customers only buy on the 7th attempt. The salespeople who stick it out are the ones who close the sale.

- Mass-market demand is nurtured through years of market development and product-refinement. When a new product is launched, only a small percentage of early adopters will be willing to try it. The majority of customers will wait till the product is extensively tested, more standardized with much cheaper options. Even an established company like Microsoft needs multiple iterations to develop a successful solution—it failed 2x, 3x and 4x respectively with Windows, Excel and Word.

Once you understand the Dip, you can leverage it not just for your own success but also to build a competitive advantage.

- Established businesses often try to create Dips that are hard for *competitors* to overcome. For example, Apple's proprietary platform, network of partners, systems and relationships make

KEY QUOTES

"The businesses we think of as overnight successes weren't. We just didn't notice them until they were well baked."

it difficult for contenders to establish a foothold. Professionals (e.g. doctors, lawyers) also create barriers to entry through onerous professional certifications and other requirements.

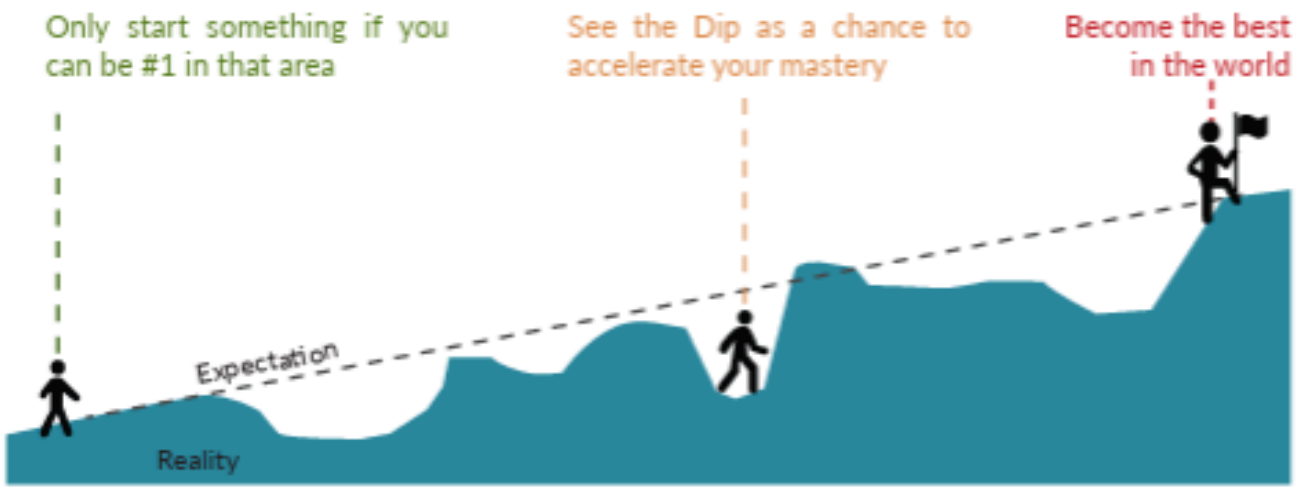
- Businesses can also use the Dip to *make more money*. For instance, health clubs know that they can sell more memberships than their actual capacity, since people tend to quit before they've consumed their health packages.

Putting it Together

So long as you've chosen your niche/path well (i.e. it's one where you can be the best in the world at), stick to it. Don't quit.

- After each setback, *recommit* your efforts and resources to find alternative routes to reach your end-goals. It's ok to quit specific tactics so long as you don't quit your main strategy. Know that the Dip is not static and you can change your circumstances with proactive action.

- Don't focus on the short-term pain. Focus on your *long-term vision* beyond the Dip and andit pull you along. The good news is, with every dip you get past, you'll become better and more valuable.



- However, you should quit if (i) you're not going to become #1 on this path, or (ii) you're facing a Cul-de-sac or Cliff.

  - Remember: *quitting ≠ failing*. It's wise to quit something that's not aligned with your long-term strategy or vision. It's unwise to quit because of short-term pain or stress.

  - Don't cling on to an existing path out of pride or familiarity. Either quit or push to be the best. *Don't settle for being average*.

KEY QUOTES

"The opposite of quitting is rededication. The opposite of quitting is an invigorated new strategy designed to break the problem apart."

"Quitting the projects that don't go anywhere is essential if you want to stick out the right ones."

"Never quit something with great long-term potential just because you can't deal with the stress of the moment."

"Coping is a lousy alternative to quitting."

"Quit or be exceptional. Average is for losers."

Apply strategic quitting: quit and persevere for the right reasons.

- *Select your Dip*. Assess how much time, energy, and resources you have, so you can select a dip of the right size to conquer. Remember: your goal is to focus on an area where you can be #1 in. There's no point in going into a huge market if you don't even have the resources to make yourself heard. Instead, aim for the biggest dip your resources can permit.

- Before you get started, *write down the strategic criteria* or circumstances under which you're willing to quit, e.g. if your assumptions prove to be wrong and you clearly can't be #1 in that area.

- *Stick with your pre-planned criteria*. Never make decisions based on your feelings or impulses. Before you quit, ask yourself 3 questions:

  (i) "*Am I panicking?*" Panic is never pre-planned, and is a sign that you're probably making in-the-moment decisions for the wrong reasons. In fact, something that scares you could very well be something you *should* try.

  (ii) "*Who am I trying to influence?*" A decision to quit usually involves a failure to influence someone, e.g. your boss (to get a promotion), or your customers (to sell your product). Consider who decides what's "best" in your context. If your success hinges on 1 person and you've already tried (and failed) to change his/her mind several times, then things are unlikely to change. However, if you're trying to influence an entire market, then it pays to be patient; each step you take can create a ripple effect and that makes things easier.

  (iii) "*What measurable progress am I making?*" In any situation, there are only 3 options: move head, fall backward, or stay still. To move beyond the Dip, you must at least make some progress. Identify meaningful measures and track your progress, e.g. to reach the breakeven point in your business, you must have new sales or customers. Each time you stagnate or reach a dead-end, explore if there are better ways to redirect your energy and resources to achieve your strategic goals.

KEY QUOTES

"If you are making a decision based on how you feel at that moment, you will probably make the wrong decision."

"Influencing one person is like scaling a wall. If you get over the wall the first few tries, you're in. Influencing a market…is more of a hill… every step of progress you make actually gets amplified."

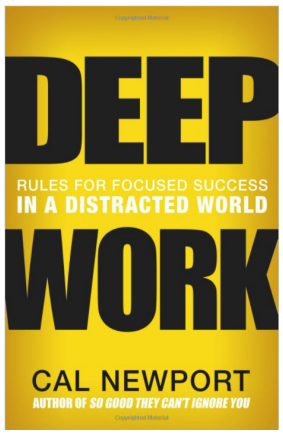
Conclusion

This is a short book, and Godin uses a conversational style to repeatedly reinforce the key ideas in this summary. For more details please visit www.sethgodin.com.

About the Author

Seth W. Godin (born 1960) is an American author and entrepreneur. Godin previously founded and sold a book packaging business. He then launched Yoyodyne to promote permission marketing. In 1998, Yoyodyne was sold to Yahoo! for about $30 million and became Godin Yahoo's vice president of direct marketing. In March 2006, Godin launched Squidoo which was sold to HubPages in 2014. Godin has authored 18 books.

KEY QUOTES



DEEP WORK

Rules for Focused Success
in a Distracted World

CAL NEWPORT

The Big "So What"

Deep work is about focusing without distraction on cognitively-demanding tasks. It's vital for mastering hard things and delivering high-value outcomes. Yet, in our high-tech, hyper-connected society, people are constantly distracted by emails, social media and infotainment, losing their capacity for intense focus. This book explains the importance of deep work and how to nurture this valuable but increasingly-rare skill.

Introduction

Deep work is performed in a state of distraction-free concentration that pushes your skills and abilities to the limit. Such work creates real value and is hard to replicate. On the other hand, shallow work is cognitively undemanding and is often performed in a state of distraction. Such work doesn't typically create much value and is easily replicated.

Many famous works are the result of **deep work**. Mark Twain wrote the bulk of "The Adventures of Tom Sawyer" in a secluded shed. Screenwriter and director Woody Allen did all his writing manually on a typewriter to stay free from digital distractions. In our modern economy, deep work is vital for high-impact activities ranging from writing a great novel to formulating a winning strategy.

Yet, technological and societal changes are pushing us increasingly toward a **shallow work culture**. A 2012 McKinsey study found that the average knowledge worker spent >60% of work hours on electronic communication and surfing the Internet. Such digital distractions are damaging as they (i) make us less effective in work that requires stretches of intense concentration and (ii) can permanently reduce our capacity to focus.

KEY QUOTES

"Deep work requires long periods of uninterrupted thinking."

"Spend enough time in a state of frenetic shallowness and you permanently reduce your capacity to perform deep work."

In this summary, we've distilled and reorganized the key ideas about Deep Work into 2 parts: "Why deep work is important" and "Rules and strategies for deep work".

Why Deep Work is Important

Deep work has value

In the book "Race Against the Machine", economists Brynjolfsson and McAfee say that intelligent machines are rapidly changing our economy. They theorize that in this new economy, people whose skills can be easily automated or outsourced will lose out, while 3 groups of people will win:

- *Highly-skilled workers* (e.g. computer programmers or data analysts) who can work with machines to create new value.
- *Superstars* i.e. the top talents in each field. Technology has made it possible for employers to hire the best talents globally to work on projects remotely for a fixed fee. This can be more attractive than hiring full-time staff with average skills.
- *Owners* with the capital to invest in new technologies. Instagram, for instance, had only 13 staff but was sold for a billion dollars.

To become a highly-skilled worker or a superstar, you need 2 key abilities. Deep work provides the foundation for both skills:

- *Learn and master hard things quickly*. To master complex machines and keep up with rapid technological changes, you must repeatedly learn hard things quickly. This requires intense concentration or deep work. Anders Ericsson discovered that "deliberate practice" was a key differentiator between normal vs outstanding performers—those who achieved top results did so because they (i) applied focused attention to improve a specific skill and (ii) received feedback to improve that skill precisely. This can be explained by neuroscience research: when you focus intensely on a specific skill, it forces an isolated neural circuit in the brain to fire repeatedly. This in turn triggers the production of myelin (fatty tissues) around those neurons to help them fire better (thus reinforcing the skill).

KEY QUOTES

"Once the talent market is made universally accessible, those at the peak of the market thrive while the rest suffer."

"Talent is not a commodity you can buy in bulk and combine to reach the needed levels: There's a premium to being the best."

"If you're comfortable going deep, you'll be comfortable mastering the increasingly complex systems and skills needed to thrive in our economy."

- *Deliver top-notch results*. Superstars don't just master valuable skills; they also apply them in a way that creates massive value, e.g. using computer programming to develop a solution to a real-world problem.

  - Jason Benn, originally an economics graduate, managed to learn a new skill and switch industry by going deep for 6 months. To force himself to learn computer programming, Benn locked himself in a room with just books and writing material. After 2 months of intense self-study, he attended a coding bootcamp, excelled there and got himself a job as a developer for double his previous salary.

  - When you switch between tasks, the "attention residue" from the previous task hinders your ability to fully focus and perform on the current task. By working singularly on 1 hard task for a long time, you minimize attention residue to drastically improve your effectiveness.

Deep work is uncommon

Deep work is valuable and should be a business priority. Yet, it is becoming increasingly uncommon at the workplace. This means there's a huge opportunity for individuals: by mastering the rare skills and abilities for deep work, you can significantly increase your value in the new economy.

There are at least **3 business trends that hinder deep work**:

- *Serendipitous collaboration*. Serendipity is about putting random people together to spark unexpected ideas and synergies. This has led to open-office concepts which bring free interaction but also constant distraction.

- *Instant communication*. Instant messaging, phone messages and emails are now widely used in organizations, resulting in constant disruption and an overwhelming volume of random inputs.

- *Having a constant social media presence*. Social media is now seen to be a key marketing tool and companies may encourage their staff to post regular updates—such low-value work creates a distraction to other high-impact work.

KEY QUOTES

"To produce at your peak level you need to work for extended periods with full concentration on a single task free from distraction."

"Big trends in business today actively decrease people's ability to perform deep work, even though the benefits promised by these trends… are arguably dwarfed by the benefits that flow from a commitment to deep work."

It's hard to reverse such trends due to **3 biases for shallow work**:

- It's generally hard to quantify the impact of deep work vs shallow work. Without concrete stats, the *Principle of Least Resistance* kicks in and we do whatever is the easiest or most convenient. Yet, shallow work is costly in the long term. The CTO of Atlantic Media analysed their company-wide email usage in 2012 and found that every email was costing the company 95¢ in labor costs (or $1mil per annum). In another experiment, a Boston Consulting Group team found that allowing its team member to take 1 day off work each week instead of being available 24x7 for clients actually resulted in better team outcomes.

- Most companies also *lack clear productivity metrics* for knowledge workers. Without clear metrics, people use busyness as a gauge for productivity. Doing more things may mean higher productivity for industrial workers, but it actually decreases the value of the output for knowledge workers.

- We're typically *biased toward technology*, i.e. we tend to assume that anything high-tech is generally good. Thus, we tend to adopt new technologies before stopping to debate the trade-offs.

Deep work improves your quality of life

Deep work can also improve your levels of happiness and fulfilment.

Neurological perspective: When you focus on something regularly, it strengthens the associated neural pathways in your brain. Over time, you can train your brain to habitually ignore the negatives and savor the positives to feel happier overall. By engaging in deep work regularly, you shut out trivial concerns and train your mind to see your work as rich and fulfilling.

Psychological perspective: The very experience of going deep into a challenge can be very fulfilling. Renowned psychologist Mihaly Csikszentmihalyi found that people felt best when they were in "flow"—when their minds or bodies were stretched to the limit in a quest to achieve something both difficult and worthwhile. In fact, his studies found that people often enjoyed work more than free time, since work allowed them to be immersed in meaningful goals, feedback and challenges.

KEY QUOTES

"Without clear metrics to support it, any business behavior is vulnerable to unstable whim and shifting forces."

"Knowledge work is not an assembly line, and extracting value from information is an activity that's often at odds with busyness, not supported by it."

"Clarity about what matters provides clarity about what does not."

"A deep life is a good life, any way you look at it."

"What we choose to focus on and what we choose to ignore—plays in defining the quality of our life."

"Human beings, it seems, are at their best when immersed deeply in something challenging."

Philosophical perspective: You can find meaning in any type of work regardless of the job description. The key is to adopt a craftsman's approach—don't treat it like a job, but a craft that you're seeking to master. Seek to hone your skills, deepen your appreciation and perfect your craft in your own unique way. Even a computer programmer can see well-written, simple/elegant code as something beautiful or poetic.

Rules and Strategies for Deep Work

In this section, we present 4 rules for deep work and their associated strategies.

Build rituals and routines

Even if you want to work deeply, it's not easy to do so because most office setups and work cultures are not ideal for deep work. You'd also have to overcome your natural instinct to switch to easy, distracting activities (e.g. checking emails or surfing social media sites). Build rituals and routines so it's easier to overcome obstacles and move into states of intense focus.

Tailor your depth approach to match your circumstances.

- *Monastic approach*: completely remove or cut down shallow work. For example, computer scientist Donald Knuth deleted his email accounts and returned to communication via postal mails, with an admin assistant to sort through his letters and bring only the important ones to his attention. This approach works best if you have a clear, concrete contribution that's pegged to your individual effort.

- *Bimodal approach*: Split your time so you devote stretches of time for deep work and leave the rest for other obligations. To achieve extreme productivity, set aside minimally 1 full day each time for deep work. Try blocking out a few days per week or an entire season per year just for deep work. For example, psychologist Carl Jung took regular retreats to Bollingen to think and write, but immersed himself back into his usual meetings, clinical practice and digital connections once he returned to Zurich. This model is compatible with most jobs, though it may take some time to adjust.

KEY QUOTES

"You don't need a rarified job; you need instead a rarified approach to your work."

- *Rhythmic approach*: Create a rhythm for deep work daily so it becomes a habit. You can use visual indicators (e.g. marking a big red X on your calendar each time you finish a stretch of deep work or a deep output), or set a distinct time period to start and end deep work every day. This approach won't have the same impact as going deep for 1 full day, but it's useful if your self-discipline or work schedule doesn't allow you to devote full days for deep work.

- *Journalistic approach*: Fit deep work into your schedule whenever you can. This approach is not for novices as task-switching is usually counter-productive. Walter Isaacson could write his first book using this approach because he already had years of journalism experience and could switch into writing mode at will.

Build strict rituals so you can transit smoothly into your deep work sessions without having to decide on the elements each time.

- Pulitzer Prize winner Robert Caro trained himself to be organized by creating *strict rules*, from where he places his books to what he wears to the office. When Charles Darwin was working on "On the Origin of Species", he followed a *strict daily routine*: wake up at 7am, take a walk, eat breakfast alone, work for 1 hour in his study, read his letters for 1 hour, then continue for 1.5 hours in his study till noon.

- *Consider these factors* when tailoring your ideal ritual:

  (i) Location and duration. Ideally, find a place dedicated to deep work and set a duration that makes each session challenging.

  (ii) Rules for how you'll work, e.g. specific processes, no internet.

  (iii) Supporting elements, e.g. having a healthy meal and a cup of coffee before you start.

Make grand gestures that break your routine and involve a big investment of time, money or effort, e.g. travel to an exotic location or lock yourself up to finish a project.

KEY QUOTES

"By supporting deep work with rock-solid routines that make sure a little bit gets done on a regular basis, the rhythmic scheduler will often log a larger total number of deep hours per year."

"(Great creative minds) think like artists but work like accountants."
- David Brooks

"To make the most out of your deep work sessions, build rituals of…strictness and idiosyncrasy."

"Sometimes to go deep, you must first go big."

- Microsoft founder Bill Gates retreats into the forest each year for 2 weeks to think and read. Writers like Daniel Pink and Michael Pollan built writing cabins for focused writing. Entrepreneur Peter Shankman invested 30 hours and $4,000 for a round-trip business-class ticket just so he could focus on finishing a book manuscript in the plane/lounge.

- Such grand gestures provide a refreshing change of environment and commit you psychologically to get things done.

Collaborate. Deep work need not be done in isolation and can be enhanced through collaboration. The key is to separate serendipitous collaboration from deep work sessions.

- It's ideal to have a *hub-and-spoke office setup* with both common spaces (e.g. shared hallways for people to connect) and private corners/offices (for people to think/work quietly).

- You can hold deep work sessions by *jointly working on a problem with someone* to stimulate ideas and push deeper into the issue.

Execute effectively. Use the framework from "The 4 Disciplines of Execution" to roll out your plan seamlessly:

- Discipline 1: *Focus on just a few "wildly important goals" (WIGs)*. To work deeply, don't try to avoid distractions. Instead, focus on a goal that excites you enough to shut out those distractions.

- Discipline 2: *Act on the lead measures*, i.e. the activities that drive your end-results. The lead measure for deep work is the amount of time spent working deeply toward your WIGs.

- Discipline 3: *Have a compelling scoreboard* so you can keep score. Newport created a visible scoreboard where he (i) tallied the # hours spent weekly on deep work and (ii) circled out the tally whenever he completed a big milestone. This helped him to connect deep work hours with results, and gave him a realistic idea of how much deep work he needed for each milestone.

- Discipline 4: *Create a rhythm of accountability*. Be accountable to yourself through weekly reviews: examine the deep work you've done the previous week, celebrate good results, identify learning points, and set new commitments the following week.

KEY QUOTES

"When it comes to deep work… consider the use of collaboration when appropriate, as it can push your results to a new level."

"It's often straightforward to identify a strategy needed to achieve a goal, but what trips up companies is figuring out how to execute the strategy once identified."

Go for downtime. At the end of your work day, learn to put away all work issues physically and mentally.

- Idle time is not wasteful; it's actually essential for optimal performance. Switching off from work regularly *improves your results* because (i) it allows your subconscious mind to work on complex problems that your conscious mind can't unravel and (ii) it allows you to recharge so you're more productive at your next deep work session. In any case, the type of shallow tasks we fit into the evenings typically create little value.

- Develop a "*shutdown ritual*" to help you put away your work totally: check your emails to ensure there're no urgent follow-ups required, list down all the tasks on your mind so you can find them the next day, check your calendar to ensure there're no vital events you've missed, have a rough plan of action for the next day, and then say to yourself "shutdown complete".

Train your mind

Our mental muscles grow strong with use and weak with disuse. People who constantly multi-task have been found to become chronically distracted, i.e. they can't concentrate even when they want to. Learn to resist distractions and improve your capacity for intense focus.

Make focus your default state of mind. Don't schedule periods of time away from distractions; schedule time for the distractions instead.

- Often, people will start looking at their phones the moment they enter a queue or feel bored—this trains the mind to constantly seek novelty. Such habits can't be weaned off with occasional distraction-free periods, e.g. an internet-free day. You must *operate distraction-free by default*.

- Fix specific *time blocks for distracting activities* like TV or internet and avoid them totally outside of those time blocks. Do this both at work and at home. If your work requires you to be connected, then create more internet blocks but stick to them strictly.

Compress your timelines. Think of a complex/hard task, estimate the amount of time you'd typically need, then give yourself a drastically reduced timeline to complete it. Ideally, make this goal

KEY QUOTES

"Idleness is not just a vacation, an indulgence or a vice; it is as indispensable to the brain as vitamin D is to the body…it is, paradoxically, necessary to getting any work done."
- Tim Kreider

"When you work, work hard. When you're done, be done."

"The ability to concentrate intensely is a skill that must be trained."

"Instead of scheduling the occasional break from distraction so you can focus, you should instead schedule the occasional break from focus to give in to distraction."

public. This will force you to tackle the task with intense focus. Do this for once a week initially then gradually increase the frequency as your mind adapts to the intensity of the sessions. After a few months, you should see a marked improvement in your focus and performance.

Meditate productively. Find periods of time when you're occupied physically but not mentally (e.g. when you're walking or showering). Use that time to think deeply about a concrete professional problem, e.g. a presentation outline or a business strategy. Aim for at least 2-3 such sessions a week.

- *Catch yourself* if you start looping over what you already know instead of doing the hard work of thinking. Each time your mind wanders, bring it back to the problem at hand.

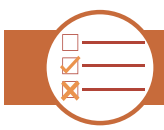
- *Develop a structure* for your deep thinking. For example, you can define the variables, the next-step question (e.g. "How can I deliver this presentation powerfully?") and review your answer.

Do memory training. Memory athletes can achieve cognitive feats because they've trained themselves to develop a superb attention span. Use this technique by Ron White to *memorize a deck of cards*:

- Imagine yourself walking through 5 rooms in your house. Place 10 items (e.g. a welcome mat, a pen) in each room and add 2 items in the backyard. Repeat the process until you can recall all 52 items easily.

- Associate each of the 52 playing cards with a memorable person or thing, e.g. Queen of Hearts with Queen of England.

- Shuffle the cards. As you draw each card from the deck, place the associated person/thing sequentially in the house, e.g. the Queen of England wiping her shoes on the welcome mat. Memorize the entire deck of cards using this visual technique.



Use digital media selectively

Network tools can be useful for your success and happiness, yet most of them are counter-productive. Instead of using any tool that offers a benefit. Newport advocates selecting your tools carefully to use only tools that have a huge nett positive impact on your goals.

KEY QUOTES

"Your ability to concentrate is only as strong as your commitment to train it."

"To master the art of deep work...you must take back control of your time and attention from the many diversions that attempt to steal them."

Focus on the vital few. In most aspects of life, 80% of outcomes come from 20% of causes. While many things can give us minor benefits, only a handful will give us massive results.

- *Apply the 80-20 rule* to your internet habits. Identify your top personal and professional goals, and 2-3 most critical activities to help you achieve them. Evaluate each network tool against these goals/activities. Use only tools that have substantial positive impact that outweigh any negative impact.

- By dropping most tools with only marginal benefits, you free up the time and energy for *a few top tools* that'll deliver much greater payoffs. For example, if your goal is to build deep relationships with people who matter most to you, then it's more productive to catch up with a close friend over coffee than spend time on Facebook.

Use leisure time wisely. You have total freedom to do whatever you want with the leisure time outside of work. Don't use it to mindlessly to surf the internet. By planning your leisure time carefully and filling it with quality activities that enrich your mind, you'll end up feeling more energized and fulfilled.

Do a social media embargo. Of all network tools, social media tends to be the most addictive and disruptive. Stop using all social media services for 30 days without announcing your intent or deactivating your accounts. Then, ask yourself: (i) Were the last 30 days noticeably worse without the service and (ii) Did people care that you weren't on the service? Unless the answer is "yes" to both questions, stop using that service.

Limit shallow work

It's not necessary nor possible to eliminate all shallow work. In any case, the average person only has enough cognitive capacity for about 4 hours of intense deep work a day. The key is to take control of your shallow work, so they don't hijack your time/energy for deep work.

Schedule each day in advance. List down your key priorities and activities, then assign them to time blocks so every minute of your day is accounted for. You should also include time blocks for meals and relaxation.

- As the day unfolds, you may find that you've underestimated the time needed for certain tasks, or you may get interrupted

KEY QUOTES

"All activities, regardless of their importance, consume your same limited store of time and attention."

"Shallow work...doesn't become dangerous until after you add enough to begin to crowd out your bounded deep efforts for the day."

by unexpected events. You can (i) revise your schedule, (ii) create conditional time blocks to be used differently depending on how earlier events unfold or (iii) create time blocks for contingencies.

- The goal is not to follow the schedule rigidly but to get better at estimating your time requirements and to be deliberate about how you spend your time.

Quantify depth. Assess how deep every activity is by asking: "How many months would it take to train a smart, fresh college graduate to complete this task?" Tackle the activities progressively down the deep-to-shallow scale.

Set a quota for shallow work. Ask yourself: what percentage of my time should be spent on shallow work? For most non-entry level jobs, the range should be between 30-50%.

- Stick to the quota so you'd (i) reject some shallow work to free up time for higher-value deep work and (ii) become more selective with your shallow work.
- If you're an employee, discuss this quota with your boss. If your boss doesn't believe in the need for deep work, then it's a sign that your job may not be ideal for long-term career growth.

Artificially limit your work hours. Instead of extending your work hours to fit the workload, fix your work schedule (e.g. don't work beyond 5pm or 5.30pm). Work backward to fix the rules and habits needed to complete your goals within the available time. You'll be forced to turn down unessential tasks and requests which you may otherwise have accepted. Newport calls this "fixed-schedule productivity".

Take control of your emails. Don't be overly accessible.

- *Make the sender work harder*. Don't offer general-purpose emails on your website. Use a sender-filter: list down different email addresses for specific purposes and set expectations on if/when you'll respond, e.g. "We welcome interesting proposals that meet the following criteria. We'll only be responding to shortlisted proposals." This frees you from the obligation to reply to every single message.

KEY QUOTES

"The shallow work that increasingly dominates the time and attention of knowledge workers is less vital than it often seems in

- *Invest time to craft a concrete email*. Resist the urge to send quick/vague replies or open-ended questions like "Thoughts?" Pause to consider the project involved and how you can bring it to a successful close with the minimal messages. Then, craft a process-centric email that describes the process you've identified, specifying clearly the next step(s) to take. Ideally, aim to close the loop in 1 email.

- As a rule of thumb, *don't reply to emails* that (i) are ambiguous or hard to give a straightforward response; (ii) are irrelevant to you, or (iii) have no good/bad outcomes regardless of your reply.

Conclusion and Other Details in the Book

Deep work involves hard work and massive changes to your work habits. However, by going deep, you can drastically improve your levels of productivity and fulfillment to become much more valuable in the modern economy.

In the book, Newport shares many of his personal experiences, observations and other references to support his theories and recommendations. For more details, please visit calnewport.com/books/deep-work/.

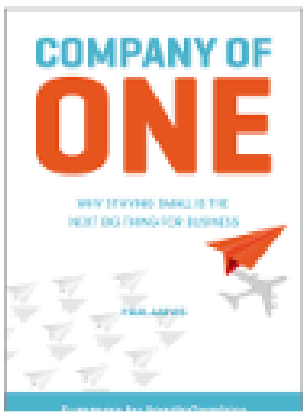
About the Author

Dr. Calvin Newport (born 1982) is an author and associate professor of computer science at Georgetown University. He completed his undergraduate studies at Dartmouth College and received a Ph.D. from MIT in in computer science. He spent 2 years as a post-doctoral associate at the MIT before joining Georgetown University as an assistant professor of computer science.

Dr. Newport also runs a blog, Study Hacks, which focuses on academic and career success. He's an advocator of "deep work" and "digital minimalism".

KEY QUOTES

"To leave the distracted masses to join the focused few...is a transformative experience."



COMPANY OF ONE

Why Staying Small Is the
Next Big Thing for Business

PAUL JARVIS

The Big "So What"

Growth isn't always good. In fact, growing for the sake of growing can hurt a business. This book challenges traditional ways of thinking about business and work, and shows why being small can be a goal in itself. A Company of One isn't just for freelancers and entrepreneurs—the insights can be used for anyone who wants to design their work to support their desired lifestyle.

Introduction

When we think of business, we tend to assume that bigger is better. The default is to keep adding *more*—more customers, more employees, more products etc. But, what if you can spend/do less and have more time, money and freedom to live the life you want?

A Company of One represents a different mentality that allows you to reap the benefits of a large company—including revenue, autonomy, fans, and enjoyable experiences—without the costs and burdens of one.

- *Company of One ≠ freelancing*. Freelancers exchange time for money, whereas a Company of One brings in sustainable revenue in a way that serves your life goals.

- Anyone—be it an entrepreneur or a corporate leader—can adopt the *mindset/model* of a Company of One to build a lean and agile setup that can survive in any economic climate.

The book is organized into 3 sections, which we've condensed into 2 parts in this summary.

KEY QUOTES

"Not all growth is beneficial, and some growth can actually reduce your resilience and your autonomy."

Part 1: Become Better, not Just Bigger

Bigger isn't always better

Growth is often used to measure business success. When a company does well, it tends to hire more people, build more infrastructure, expand its customer base and product range. However, growth isn't always beneficial.

- A company focused on growth may invest heavily in advertising, a sophisticated website and mobile app. It must now hire a big team to manage the ads and website/app, then add systems and people to manage the team. As expenses continue to rise, it's forced to keep growing its revenue in a *vicious cycle*.

- Starbucks lost money when it tried to expand into CDs, fancy drinks and sandwiches. In the end, they had to scale back, close hundreds of stores and *refocus* on what they did best—coffee.

Unchecked growth is also a key factor behind startup failures. The Startup Genome Project found that 74% of high-growth tech startups failed because they scaled up too rapidly. Pets.com was one of the rising stars during the dot-com boom. However, its rapid growth was fueled by aggressive marketing—in the 2nd quarter of 2000 alone, it spent $17 mil on an advertising campaign when its revenue was only $8.8 mil. The company ended up losing almost $300 mil. Flushed with cash from investors, many start-ups waste money on flashy offices, high-profile teams, sophisticated products and huge marketing campaigns, on the assumption they can make back the money later. It's no wonder the failure rate is so high.

Staying Small as an End-Goal

A Company of One is not anti-growth. However, it questions if growth is truly needed, and if so, how to grow

KEY QUOTES

"Growth, as a primary focus, is not only a bad business strategy, but an entirely harmful one."

"Running a business of any size is hard work. Having made it sustainable and profitable, whether it's big or small, should be something to be proud of."

with the same or less resources. Instead of growing for the sake of growing, it considers if and how growth can serve its end-goals.

Businesses may sometimes benefit from economies of scale. However in most cases, companies seek growth for 4 reasons, all of which can be served by staying small as a Company of One:

- You need more profits to *counter inflation*, though you need not grow big just to do so. By serving your existing customers better, you can gradually raise prices, then invest the extra profits to earn a rate of return that's higher than inflation.

- *Satisfying investors*: Investors typically expect ≥3x returns on their investment, which creates pressure for rapid growth. The solution is to start with the smallest version of your idea so you don't need extra funding, then expand only when you have enough profits to fund the growth.

- *Off-setting churn* or replacing customers who leave you: It costs about 5x as much to acquire a new customer than to keep an existing one. So, it's better to prioritize retention over acquisition.

- Most people start a business because they want a higher income and the flexibility to do what they believe in. Yet, they pursue growth ceaselessly to *satisfy their ego*, and end up being trapped in the business.

A bigger company may not be better, more stable or profitable. There's a growing number of businesses without employees that generate 6- or 7- figure revenues and can easily weather any economic storm.

- A corporation that earns $50 mil and spends $100 mil is less stable than one that earns $500,000 and spends only $50,000. During an *economic downturn*, companies with high overheads are more likely to retrench staff or even go bankrupt.

- Traditionally, a successful career means climbing the corporate ladder and managing a large team. This is changing as more people choose gig-based, remote work

KEY QUOTES

"Staying small and not focusing entirely on growth keep your own integrity and personality at the heart of the business, making it much easier to run your business or team in a way that suits you and helps customers."

"The current business paradigm teaches us that to make a lot of money or to achieve lasting success, we need to scale our businesses—as if larger businesses are less prone to fail or to become unprofitable (obviously not true)."

for more *flexibility and autonomy*. A Company of One can also be embedded in a large organization.

(i) It's similar to how an *intrapreneur* creates and markets new products using the company's resources, except a Company of One may or may not involve product creation. It can be as simple as a leader who defines and executes his own goals to increase value/output with existing resources.

(ii) In *Results-Only Work Environments (ROWEs)*, employees are free to manage their time so long as they deliver the results. Google lets its staff spend 20% of their work hours on projects outside their job roles—a practice which has led to more than half of Google's new products and projects.

- Even if your organization doesn't grow (or grows very slowly), you can still *grow your career* by going deeper or wider into your role:

(i) Increase your *scope of influence* or the impact you make within/outside your organization. For example, can your software code be used in more industries, or can you become the "go-to" person for a specific area?

(ii) As you become more skilled and experienced in an area, you can also increase your *ownership* in an area, e.g. propose and drive meaningful projects or run an entire function independently.

In fact, with modern technology, you can accomplish a lot with 1 person or a few people.

- You can use *prepackaged solutions* to automate sales funnels, drop-ship and even manufacture products without investing in expensive offices, IT systems and infrastructure. Need/Want managed to reach almost $10 mil revenue with less than 10 employees—they used Shopify (a prepackaged ecommerce solution), chose affordable online marketing channels, and outsourced their manufacturing, shipping and fulfillment.

- Instead of hiring full-time employees (which mean fixed salaries, benefits, office space and equipment), you can hire *freelancers/contractors* and pay only for completed

KEY QUOTES

work. Invest some time/effort to find A-players who share your values, and pay them a premium for above-average work. You'll probably find it much more enjoyable to work with a small team you trust.

In short, focus on what you can do now with existing resources to make the business **better, not just bigger**.

- Stop using growth as the only measure of success. Instead, consider *other meaningful indicators*, e.g. quality of customer relationships, resilience and happiness for you and your employees/customers.

- Don't just set a lower bound for your goals (e.g. "I want to earn at least $1mil"). Learn to also set an *upper bound*, i.e. the point where you start to experience diminishing returns on your profits or enjoyment (e.g. "I want to earn at least $1 mil but no more than $1.5mil"). In 1996, Southwest Airlines could have expanded to more than 100 cities, but it chose to serve only 4 new locations at a time. This upper limit helped them to stay profitable at a time when most airlines were losing lots of money.

KEY QUOTES

Leading a Company of One

A Company of One has 4 key traits:

- *Resilience* or the ability to bounce back from difficulties. This includes: (i) *accepting reality* so you can address it head-on, (ii) a *sense of purpose* that keeps you on-track, and (iii) the *ability to adapt* as circumstances change.

- A Company of One can give you more *autonomy and control* over your business/career. However, you must first invest the time/effort to master the required skills.

  (i) Entrepreneurs may be their own boss but slaves to their clients. They can only choose the ideal customers or projects after attaining a certain level of skills and experience. Likewise, employees in ROWEs are evaluated by results—the faster/better they work, the more they're rewarded.

"You have to be good at your skill set before you can expect to achieve autonomy from using it."

(ii) To develop good solutions, you must first understand the problem/domain well. To run a Company of One, you must become proficient in a range of skills, including sales, marketing, project management, relationships etc. You must learn how people and businesses work, including psychology, communication skills, resilience, and focus.

- *Speed*: People are typically more creative when they work under constraints. Basecamp has a 4-day workweek and encourages employees to enjoy their free time. When people develop smart solutions with less time and resources (in return for extra time and rewards), it benefits both the employees and the organization. This also builds the company's ability to adapt quickly to market changes.

- *Simplicity*: Instead of adding more, a Company of One rigorously simplifies processes and rules. If a business idea requires a lot of time, money or resources, it's probably too complex. Start with the simplest possible option, and only add new layers of complexity if it's absolutely required.

You don't need to be charismatic, dominant or an extroverted leader to run a Company of One. Regardless of your personality type, you can tailor your work/team to leverage your strengths. The author Jarvis is awkward around people, so he hires A-players who can work independently with clear parameters, and conducts online courses instead of live speaking engagements.

It's a myth that if you work for yourself, you must work twice as hard. Workaholism only leads to poorer mental, emotional and physical health. As a leader, you must set a clear direction, then use processes, systems and checklists to improve the speed/quality of your team's work. Balance between giving too little guidance (which leads to chaos) and too much guidance (which leads to over-reliance), and also balance between hard work and recovery by leading with self-awareness, empathy and gratitude.

KEY QUOTES

"By being smarter at getting more work done faster when you work for yourself, you can create a more flexible schedule that fits work into your life in better ways."

"For a company of one at any size, simple rules, simple processes, and simple solutions typically win."

"A leader's job is to provide clear direction and then get out of the way. Even companies of one require direction and set processes."

Part 2: Building & Maintaining a Company of One

Adopt the Right Mindset

To succeed as a Company of One, you need a clear purpose that guides your decisions and everything you say and do.

- *You can't fake your purpose*—it shows up in your choice of suppliers, customers and employees, your products/services, and how you allocate your time/resources. For example, Seventh Generation considers the impact of their products on the next 7 generations. This led them to create non-toxic plant-based cleaning supplies, and encourage people to line-dry their clothes (even if it reduced their dryer sheet sales).

- To *find your purpose*, take time to reflect on how to serve your clients in a way that meets your common values and desires.

Being passionate about something doesn't make you good at it. People who succeed in their areas of passion also meet 2 other criteria: they (i) are skilled in that area, and (ii) have rigorously tested their offerings in the marketplace.

- Don't blindly follow your passion. Start by getting really good at solving a problem and *helping others to succeed*. Chances are, you'll end up developing a passion for what you do.

- *Build your foundation* before making the leap. For example, an engineer may start working on web-design projects outside his day job, and become a full-time web designer only after honing his skills and building a customer base.

Realize that a busier life isn't always better. There's always an opportunity cost: each time you say "yes" to something, you're saying "no" to something else. You also lose precious time whenever you switch tasks or get distracted.

KEY QUOTES

"How you think about work is important to how work gets done."

"Your purpose is the lens through which you filter all your business decisions, from the tiny to the monumental."

"Passion isn't the catalyst that creates success, but more often what develops after success is achieved."

"In saying no to anything that doesn't fit, you leave room to say yes to those rare opportunities that do fit—opportunities that align with the values and ideas of your business."

- Do a *productivity audit* 1-2x a year to take stock of how you're spending your time. Are you wasting too much time on emails, chats and random meetings?

- Get clear on your priorities, then become adept at *single-tasking*, i.e. to focus deeply on 1 task for a period of time.

- Challenge yourself to get the same amount of work done in half the time. Adopt sound *productivity habits*, e.g. prioritize time daily for focused work, create a stop-doing list, and batch similar tasks (say, handle all your calls and social media in 1 afternoon).

Launch and Iterate with Baby Steps

A new product idea involves many assumptions about what your customers want/need, how well your solution works, what's the ideal price-point etc. Release the smallest possible version of your idea so you can start to test your assumptions, learn what works and doesn't, and start earning money instead of spending it.

- Don't try to perfect a product before launch. For example, instead of creating a complete online course, try *testing it as a service* in the form of a 1-1 consultancy. This allows you to start making money while getting feedback to improve your solution.

- Being *small and obscure* initially is actually an advantage. It allows you to test and refine your approach quickly, with minimal repercussions when you fail (which you will).

Your goal is to attain Minimum Viable Profit (MVPr) asap. Instead of spending money upfront in hope for potential profits, aim to achieve realized profits *now*.

- Once you start to make profits (however small), you can *invest the profits* back into the business to generate even more profits. With each iteration, you can improve the solution and increase your MVPr.

- You achieve the *minimum MVPr* once you make enough money to cover the salary of the owner(s), and can start to spend on additional hires or resources. Your business

KEY QUOTES

"Starting out small is the best time to learn what your business truly is and why it serves who it serves."

"By starting out small, a company of one can put all of its energy into solving problems for real people rather than into growing large enough to maybe solve problems for people one day."

"Every minute you spend getting set up and started is a minute when you aren't making money."

"Scale it down to what can be done right now, on the cheap and fast, and then iterated upon."

becomes *viable* when the MVPr grows to the point where it can support the owner(s) and have enough left over to fund business improvements.

- In short, you're forcing yourself to come up with creative solutions that can be executed with minimal resources, then learn and earn on the way. The growth will be *slower but much more sustainable*.

Launching is actually a recurring process. You should continually collect feedback, improve your solution and adjust your strategy instead of sticking to a fixed plan. This will help you to stay agile and adapt quickly to market changes.

Leverage Scalable Systems

Scale up without getting bigger. Use scalable systems that allow you to keep your team lean and focused.

Creation: Consider how you can make your products more impactful without necessarily selling more. For example, Arthur & Henry measures success using sustainability: they encourage customers to wear their clothing longer (e.g. rolling up frayed sleeves when the clothes get older), focus on steady revenues and minimizing environmental damage.

Consider how to scale your connections with stakeholders without scaling up your business. For example, it takes the same amount of effort to send an email or newsletter to 1 person vs 5,000 people. The key is to automate the process so the right message reaches the right person at the right time. Keep using market tests and A/B tests to improve your positioning, personalization, and segmentation. You can also automate other processes (e.g. onboarding and project management) using emails, videos and FAQs.

Consider how you can use technology to facilitate collaboration. Instead of insisting that your employees respond immediately to all messages (which can be distracting and unproductive), limit real-time communication to time-critical matters or pre-scheduled collaboration (like brainstorming sessions or hackathons). This allows people to stay connected while still having the time to focus on important work.

KEY QUOTES

"Launching isn't a one-time, singular event, but a continual process of launch, measure, adjust, repeat."

"Working for yourself doesn't necessarily mean working by yourself."

Stand out with your Unique Personality

Every brand has a personality that's determined by what it says and does, e.g. Harley-Davidson connotes rebelliousness, and Snapchat connotes youth and freshness.

- If you don't design your brand personality, your audience will assign one for you. In a Company of One, your brand should reflect an *authentic, distinct aspect* of who you are and who you serve.

- The best way to capture people's attention is to fascinate them by being unusual, quirky or interesting. Don't be afraid to *make a stand* or to be different. You may alienate people who don't resonate with your viewpoint or personality, but you'll also win the support, loyalty and advocacy of others who believe in what you do and why. On the other hand, if you try to appeal to everyone, you'll end up appealing to no one.

Use polarization to spark debate and create visibility without costly advertising:

- *Placation*: Try to win over people who dislike or hate you, e.g. General Mills created low-carb, gluten-free cake mixes to address concerns over obesity and gluten sensitivities.

- *Prodding*: Antagonize your haters to sway neutral parties over to your point of view.

- *Amplification*: Play up a specific characteristic, e.g. Marmite knew that people either loved or hated its unique taste, so they released "Marmite XO" with an extra-strong flavor that became a hit with their biggest fans.

Build Trust and Long-term Relationships

Every company needs 3 types of capital:

- *Financial capital*: Keep this as small as possible initially so that you can achieve your MVPr quickly.

KEY QUOTES

"While skills and expertise can be replicated, it's near impossible to replicate someone's personality and style."

"When you hoist your viewpoint up like a flag, people know where to find you; it becomes a rallying point."

"Brand personality needs to foster a two-sided relationship—one focused on not just how your businesses can benefit or gain something from others, but on how others can benefit from having a relationship with your business."

"This is the way to bank social capital: by starting a long-term and mutually beneficial relationship."

- *Human capital*: This is the value that you (and your team) brings to the business, and is derived from your skills and experience.

- *Social capital*: This is the perceived value that you offer. Relationships are like bank accounts—you can only withdraw what you've put in. Instead of asking "What can I sell?", ask "how I can help?"

It's easier to sell to someone who already has an established relationship with you. Unfortunately, companies obsessed with growth can get so caught up with acquiring new customers that they neglect existing ones. Companies of One should leverage on their small size to develop close, personal relationships with their clients.

- According to McKinsey, 70% of buying experiences are influenced by customers' feelings rather than logical considerations. When a customer feels special, or if he feels that you've gone out your way to help him, it creates a *strong emotional connection*. A service rep from RackSpace was on a call with a client when she overheard someone in the client's office saying he was hungry. So, she secretly delivered a pizza to the client's address. This story quickly became the talk of the town.

- Customers don't care if you're profitable. However, if you can *help them to be profitable and successful*, you'll quickly earn their loyalty.

In the end, building strong connections is about making your customers happy, so they'll stick with your brand and share about it. The only way to serve your customers well is to listen carefully, so you understand their needs, wants, problems and desires:

- One of 3M's divisions decided to actively use customers' ideas to drive their innovations. Within 5 years, the *user-led innovations* from that division were generating 8x the average revenue from other internally-led innovations.

- A *customer-centric mindset* should cut across all aspects of your business, from product design to delivery and after-sale service.

People are more likely to buy from those they trust. And, it's easier to build trust and engagement with a small, targeted

KEY QUOTES

"There's something quite memorable about a personal touch, or a business taking ownership of a problem and going out of its way to fix it."

"Customer success is the cornerstone of a profitable company of one."

"Customer happiness is the new marketing. If your customers feel that you are taking care of them, then they'll stick around and they'll tell others."

"Trust has to be totally baked into every aspect of not only what you sell, but how you sell and support it."

audience whom you understand and serve well. Remember: a customer who pays $10 a month and stays with you for 10 years is worth more than a customer who pays $100 once. On the contrary, a bad customer experience can spread quickly via online reviews and social media.

- According to Glen Urban, there are *3 aspects of trust*: (i) confidence ("I believe what you say"), (ii) competence ("I believe you can do what you say"), and (iii) benevolence ("I believe you're acting on my behalf").

- Instead of mass-marketing to get more likes and clicks, measure *trust and engagement* as meaningful predictors of long-term sales and success.

- Keep every promise that you make. When things go wrong, *take ownership of the problem* regardless of whether it's your fault. Seek to understand the situation, empathize with the customers, and apologize sincerely.

Teaching is one of the best ways to build trust and connection, so don't be afraid to teach everything you know.

- When you *teach your customers*, you can:

  (i) Establish yourself as the *domain expert* on a topic, so they're more likely to consider you when they make a purchase.

  (ii) Subtly *promote the benefits* of your product. For example, if you sell electric vehicles, you can share how electric vehicles save costs and reduce environmental damage, and also how your electric vehicles are different from competitors'.

  (iii) Help them to use your product/service successfully and share their *positive experience* more easily.

- People are often afraid that their ideas will be "stolen". In reality, ideas alone are worthless. True value comes from great execution. Facebook is basically an improved version of MySpace, while Uber is an improved concept of the traditional taxi service. *Instead of protecting your ideas, get better at executing them*. As you teach and share your ideas, use the valuable feedback to refine/improve your solutions.

KEY QUOTES

"Trust happens first. Only then does the commerce follow."

"To stand out and build an audience as a company of one, you have to outteach and outshare the competition, not outscale them."

"Ideas aren't a valid currency. Execution is the only valid currency in business."

Word-of-mouth is an important way to gain trust. According to Nielsen, 92% of consumers trust friends' or family's recommendations more than advertising. To convert your customers into advocates:

- Ensure you have a *good product and customer service*.
- Offer *incentives* (e.g. small discounts, exclusive benefits, access to premium features) for both the referrer and purchaser.
- *Reward loyalty*.
- *Follow up* with clients after they've had the chance to experience the product benefits. This allows you to collect success stories, identify additional services they may require from you, and get them to refer your services. For example, 1 week after a purchase, you can ask customers to rate their satisfaction on a scale of 1-10. Then another week later, send a follow-up email to those who had given a rating of ≥7 with an incentive for them to share their experience.

KEY QUOTES

"Making money is often easier than earning trust, because money can be lost and won back without judgment, whereas trust is hard to regain once it's lost."

Starting your own business

Starting a business isn't for everyone. To succeed, you must be willing to set aside your ego and learn different things from HR to accounts, product development, sales and marketing.

Before you make the leap, build your skills and customer base on a part-time basis first. As you set up your business, consider how you can minimize expenses and use your time optimally to achieve MVPr asap. Set up your business as a separate *legal* entity so you're protected from personal liability, and get find a good accountant who can advise you on financial laws and taxes. Plan for adequate income, savings, investments, and design your business to achieve your desired lifestyle. Remember: your business should work for you and not vice versa.

"Working for yourself requires ego and purpose in equal measure."

TOOLS OF TITANS

The Tactics, Routines and Habits of Billionaires, Icons, and World-Class Performers

Tim Ferriss

The Big "So What"

In this book, Tim Ferriss compiles valuable insights from top performers and experts from "The Tim Ferriss Show", as well as tools and strategies that he has tested himself. The book includes a wide range of advice on health, productivity, and success, to help you craft the life you desire.

Introduction: Learning from Others' Successes

At times, we feel stuck and need **inspiration or guidance** to move forward. Success often comes from learning from those who excel in your field or have achieved what you aim to accomplish. This book is based on two key principles:

- The iconic figures we admire might seem larger than life, but they struggle with challenges too. They achieve phenomenal results by *maximizing 1-2 unique strengths*, and building habits around them.
- We, too, can succeed by adopting *relevant, field-tested beliefs and habits*. Every achievement, no matter how groundbreaking, has parallels in history that we can learn from.

This book is a collection of **success recipes** from >100 high-performing individuals or "titans" who've achieved significant successes in their field. They include entrepreneurs, athletes, creators, tech investors, and more. Each titan shared his/her insights on health, wealth, life philosophies or other wisdoms. In this summary, we have distilled the key insights and re-organized them into 3 parts:

KEY QUOTES

"Most "superheroes" are nothing of the sort. They're weird, neurotic creatures who do big things DESPITE lots of self-defeating habits and self-talk."

- *Health and wellness including*: physical training, atheletic mindset, nutrition, mental well-being, rest and recovery;
- *Personal and professional growth* including: mindset, performance optimization, creative processes, and career development; and
- *Business and investment strategies*, including: business insights, success principles, digital security, and investment.

Part 1: Health and Wellness

Training, Recovery, and Injury Prevention

Amelia Boone, known as the "Michael Jordan of obstacle course racing," shares techniques for **maintaining peak physical condition**:

- To increase *hamstring flexibility*, roll your foot over a golf ball.
- For *connective tissue repair and endurance* mix hydrolyzed gelatin with beetroot powder.
- For *recovery*, use a RumbleRoller for deep tissue massage and the Concept2 Skierg for lower-body recovery.
- For *tight muscles*, use dry needling as a more intense alternative to acupuncture.

Dr. Rhonda Patrick, leading researcher in aging, cancer, and metabolism, shares insights on **proactive health practices**:

- Use extracted teeth for *stem-cell banking*. The dental pulp stem cells can be used for future treatments like repairing damaged tissues or traumatic brain injuries.
- Use hyperthermic conditioning (e.g. sauna sessions or hot baths) to increase growth hormone levels and improve endurance. Amelia Boone also adopts this practice.

The **Wim Hof Method** can be used to improve physical performance, health, fat loss, and mood elevation.

KEY QUOTES

"Don't overestimate the world and underestimate yourself. You are better than you think. And you are not alone."

"Give me six hours to chop down a tree and I'll spend the first four sharpening the axe."
—Abraham Lincoln

- *Cold exposure* can improve immune function, increase fat loss, and elevate moods. Start with 30-60 seconds of cold water at the end of showers, gradually advancing to ice baths. Alternate between heat and ice baths for additional benefits.

- Use this *breathing technique* to enhance physical performance.

  (i) Do about 40 reps of this exercise: Inhale to the max (your chest rises), then exhale fully (your chest drops sharply).

  (ii) After 20-30 reps, you might feel slightly light-headed. On the last cycle, breathe in completely, exhale completely. If you performed a physical activity now (e.g. pushups), you will experience a sharp improvement in performance.

Christopher Sommer, a former U.S. National Team gymnastics coach, shares tips from his **Gymnastics Strength Training (GST) system**:

- *Focus on the weakest areas* (e.g. shoulder extension and thoracic spine bridging) for the biggest improvements.

- Use *vibratory tools* (e.g. Hitachi Magic Wand) to relax hypertonic muscles.

- Focus on "*eat and train*" over "diet and exercise."

- Go for *consistent effort over time* over high-intensity training.

- Include both *passive flexibility* (stretch muscles to their maximum length for overall flexibility) and *active mobility* (move through a full range of motions) in your training.

Pavel Tsatsouline, a renowned strength coach with a background in Soviet special forces training, shares tips to **enhance endurance, mobility, and physical prowess**.

- Increase *strength-to-weight ratio* by focusing on heavy weights, and low reps (2-3 sets of 2-3 reps) during training.

- Improve *endurance* using the breathing ladder technique for

KEY QUOTES

"All the problems I have in the daily world subside when I do [cold exposure]. Exposing myself to the worthy cold . . . it is a great cleaning purifying force."

"Achieving the extraordinary is not a linear process. The secret is to show up, do the work, and go home."
—Coach Sommer

rest periods (e.g. 1 breath after 1 burpee, 2 breaths after 2 burpees).

- Boost *strength and mobility* with daily one-arm swings, Turkish get-ups, and goblet squats.

- To improve *strength and endurance*: Do half the maximum possible reps throughout the day (e.g. if your personal best is 8 pull-ups, then do sets of 4), with ample rest (at least 15 min) between sets.

- For *flexibility and strength*, add kettlebell windmills to regular training.

Dr. Kelly Starrett, founder of San Francisco CrossFit and a renowned performance coach, touches on **mobility and functional movement**:

- To *prevent hyponatremia* common in marathon runners, add salt to water.

- To *test your mobility*: (i) do a full squat with feet and knees together (to assess hip and ankle mobility), and (ii) do an overhead squat to check trunk stability (leaning forward indicates instability.)

- Do *daily mobility exercises* like cow stretch, lunges, and rolling a medicine ball on the gut before bed.

Athletic Mindset

It takes time to build strength and achieve top performance. **Be patient** and set realistic expectations.

- *Embrace frustration* as part of the process towards excellence.

- Focus consistently on achieving a *single, clear goal*, rather than get bogged down by small decisions.

- Celebrate both victories and lessons from defeats. *Appreciate the process*, not just the outcome.

Paul Levesque (aka Triple H), a WWE Champion and Executive, shares various **success tips and mindsets**:

KEY QUOTES

"Try a few of my favorite exercises, and you'll quickly realize that gymnasts use muscles you didn't even know you had."

"Frustration is a matter of expectation."
—Luis von Ahn

- It's not enough to set goals. You *must have a plan* to transform vague dreams into achievable objectives.

- To enhance any skill or performance, *focus on your strengths* while concurrently minimizing your weaknesses.

- Before a contest, relax and *focus on the present moment*. Worrying won't change your level of preparedness.

- To *combat jetlag*, he engages in immediate physical activity upon arrival at a destination in a different time zone.

Diet, Nutrition and Supplements

Dominic D'Agostino, a specialist in metabolic therapies, ketogenic diets, and ketone supplements, shares about **the ketogenic diet**:

- The ketogenic diet is a high-fat diet that induces ketosis—where the brain/body use ketones from fat for energy instead of glucose. *Benefits* include fat loss, anti-cancer effects, improved oxygen use, and strength maintenance.

  (i) Ferriss uses a high-fat, low-carb, moderate-protein diet to maintain ketosis. He recommends supplements like MCT Oil Powder, bone broth, idebenone, magnesium, and BCAAs.

  (ii) Paul Levesque also follows a ketogenic diet. His daily routine includes a special "Frappuccino" made with whey protein, coffee, ice, and macadamia nut oil.

- *Periodic fasting* (1-3x a year) can purge precancerous cells, reboot the immune system, and treat conditions like Lyme disease.

- For *aggressive cancers*, D'Agostino suggests combining a ketogenic diet, intermittent fasting, ketone supplementation, metformin, and dichloroacetic acid (DCA) .

- Patrick Arnold, known as the "father of prohormones," suggests *ketone supplementation* for body recomposition and energy during workouts. Both Arnold and D'Agostino

KEY QUOTES

"A dream is something you fantasize about that will probably never happen. A goal is something you set a plan for, work toward, and achieve."
— Paul Levesque

mentioned *metformin* for its potential anti-aging and anti-cancer effects.

Peter Attia, known for his work in performance enhancement and longevity, combines **intermittent fasting and ketosis**.

- He often skips breakfast and also cycles into *nutritional ketosis* weekly for cognitive and physical benefits.
- During ketosis, he monitors *markers* like CRP, uric acid, homocysteine, and LDL particles, adjusting his diet with monounsaturated fats if necessary.
- Attia recommends taking *targeted supplementation* based on personal needs—such as magnesium, low-dose lithium, and occasional calcium carbonate—rather than multivitamins .

Charles Poliquin, a strength coach who has trained many elite athletes, shares tips for **optimizing nutrition and metabolic health**.

- Match *carbohydrate intake* with body composition and physical activity. For example, those with sub-10% body fat can consume significant carbs post-exercise, while others should maintain a high-protein, low-carb diet. To prevent food intolerances, adopt dietary consistency and variety.
- Poliquin suggests the use of *supplementation* such as gotu kola for loose skin or stretch marks, and magnesium supplements for different tissues and anti-aging properties.
- To monitor and improve *metabolic health*: regularly check fasting insulin, fasting glucose, reactive insulin test, and HbA1c levels.

Happiness and Mental Well-Being

All the top performers Ferriss interviewed engage in **meditation or some form of mindfulness activities**. For example:

- *Arnold Schwarzenegger* practiced Transcendental Meditation for a year to manage anxiety, improve focus and mental clarity.

KEY QUOTES

"What you put in your mouth is a stressor, and what you say—what comes out of your mouth—is also a stressor."
—Charles Poliquin

- *Ed Catmull* practices daily vipassana meditation for 30-60 minutes, which has contributed significantly to his well-being.

- *Sam Harriss* experienced a transformation during his first 10-day vipassana retreat. He recommends "sky meditation," meditating outdoors and looking at the sky to clear the mind.

- *Justin Boreta* includes Transcendental Meditation and outdoor kettlebell swings in his morning routine (similar to Ferriss).

- Others enhance focus or creativity by listening to specific types of *music* on repeat. Ferriss combines music with muted films during writing sessions for focus and creativity.

Chade-Meng Tan, a well-known figure at Google and a leading voice in **mindfulness**, shares several practical tips:

- Do *short mindfulness sessions* (3-5 minutes) multiple times a day, and take *1 mindful breath daily*.

- For support and accountability, engage in a 15-minute *reflection discussion* with a mindfulness buddy.

- Two of *Ferriss' favorite mindfulness exercises* from Tan are:

  (i) Focus on the end of each breath, sound, or thought to appreciate impermanence.

  (ii) Spend 10 seconds daily wishing for others' happiness to reduce mental chatter and enhance overall happiness.

BJ Miller, a palliative care physician, triple amputee, and health advisor, discusses various **healing techniques**.

- Use the *"Star Gazing" therapy* for existential reflection and to put trivial concerns in perspective.

- It can be therapeutic to *engage in simple activities* like listening to someone, baking, or immersing in art (such as Rothko's paintings and Beethoven's music).

Whitney Cummings (comedian, actor, writer, and producer) and Tara Brach (a renowned Buddhist teacher), share about **self-awareness and emotional wellbeing**:

KEY QUOTES

"We do not rise to the level of our expectations. We fall to the level of our training."
—Archilochus

"The wisdom of life consists in the elimination of non-essentials."
—Lin Yutang

"In order for art to imitate life, you have to have a life."
—Whitney Cummings

- *Avoid people-pleasing*, as it leads to neglect of personal needs.
- *Say "I love you"* before conversations to foster compassion.
- Use *equine therapy* to reflect and learn about oneself through interactions with horses.
- Don't suppress feelings like anger. *Acknowledge your emotions* to create personal growth and inner peace.
- *Embrace all parts of yourself*, including what's uncomfortable, for holistic self-understanding and acceptance.
- Tim Ferriss shares his own experiences with *depression and suicidal thoughts* during his time in university. He advises:

  (i) Call a hotline from suicide.org if you're contemplating suicide. Realize that your death won't make things better, but will devastate your loved ones.

  (ii) Use strategies like gratitude exercises and the "Jar of Awesome" to capture positive moments in your life. Write down joyful, exciting, or positive events and place them in the jar. This serves as a depository of your small victories and happy memories to tide you through tough times.

The **use of psychedelics** is also explored by several titan and experts.

- Martin Polanco (who specializes in psychedelics for addiction treatment) and Dan Engle (who focuses on regenerative health and peak performance) discuss several *types of psychedelics*, including: Ayahuasca for deep psychological exploration, 5-MeO-DMT for inducing mystical experiences, and Ibogaine for opiate addiction treatment.

  (i) Keep psychedelic experiences private initially, and share only with individuals who can support your healing journey.

  (ii) You can also consider flotation therapy, which provides intense sensory deprivation to offer mental health benefits comparable to mild psychedelic experiences.

KEY QUOTES

"Being deeply loved by someone gives you strength, while loving someone deeply gives you courage."
— Lao Tzu

"If something offends you, look inward...That's a sign that there's something there."
—Whitney Cummings

"Even if you 'feel' like no one loves you or cares about you, you are most likely loved, and you're most definitely lovable and worthy of love."

"The key is building fires where you can warm yourself as you wait for the tempest to pass."

- James Fadiman, a leading researcher in this field, discusses their potential for *psychological healing and self-discovery*.

  (i) Psychedelics like LSD and psilocybin can broaden consciousness, but they're illegal in many countries and can worsen mental health issues for some individuals.

  (ii) Fadiman suggests combining micro-doses for well-being, with occasional higher doses for deeper exploration. Have someone you trust to supervise the experience, and integrate any insights afterward.

Sleep and Relaxation

Jane McGonigal, PhD, a renowned researcher and game designer, found that playing visually-engaging games (e.g. Tetris) for 10 minutes before bed can help with **insomnia and negative visualizations**. The visuals occupy the brain's visual processing center, preventing unwanted images or cravings for several hours.

Ferriss shares other tools for **faster and better sleep**:

- *Prepare your mind/body* for sleep.

  (i) Try acrobasing with your partner (especially the Folded Lead position) to realign the femur in the hip.

  (ii) Decompress the spine through devices like Lynx Portable Back Stretcher, "Leg Love" stretch, Inversion Table.

  (iii) Shift your mind away from your troubles by playing 10 minutes of Tetris or watching an uplifting episode on TV.

  (iv) Take a pre-bed beverage or supplement.

- Create a *conducive sleep environment*.

  (i) Use a ChiliPad under your sheets to adjust bed temperature.

  (ii) Use a sleep mask, earplugs, or a white noise machine.

KEY QUOTES

"I've learned an important trick: To develop foresight, you need to practice hindsight."
— Jane McGonical

The opposite of play isn't work. It's depression.
— Dr. Stuart Brown

Part 2: Personal and Professional Growth

Philosophy and Mindset

Several military figures like Jocko Willink and Chris Fussel (former Navy SEALs) share tips on **discipline and mental toughness**:

- *Mental toughness is a choice*—you can persist simply by deciding to do so. Always have contingency plans in place.
- Willink's personal mantra is "*Discipline equals freedom*". You need structure and self-control for freedom and success.
- *Take full accountability* for your actions and environment.
- To *develop mental toughness*, push beyond perceived limits, share difficulties as a group, and confront fear deliberately. Joe De Sena (co-founder of the Death Race and Spartan Race) suggests pushing beyond perceived limits by taking on physically and mentaly demanding challenges (e.g. chopping wood or removing a metal I-beam from a river).

Ferriss suggests this approach to **overcome limiting beliefs**. Examine what each of your limiting beliefs has cost you and your loved ones. Acknowledge the pain they've caused, visualize their consequences, and *create new empowering beliefs*. For example, Ferriss changed his belief from "I'm not hardwired for happiness" to "Happiness is my natural state."

It's also important to **embrace vulnerability and discomfort**.

- Famous author Brené Brown advocates l*eaning in to your discomfort*, choosing courage over comfort in face of challenges, and embracing vulnerability to building trust. Know the difference between shame (which focuses on the self, e.g. "I am bad") and guilt (which focuses on behavior, e.g. "I did something bad").

KEY QUOTES

"If you want to be tougher, be tougher."
— Jocko Willink

"Discipline equals freedom."
—Jocko Willink

"I think that in order to truly experience the light and the bright, you have to see the darkness."
— Jocko Willink

"It's incredible what can happen when you stop driving with the emergency brake on."

"If I'm not a little bit nauseous when I'm done, I probably didn't show up like I should have shown up."
—Brené Brown

- Author and adventurer, Caroline Paul, sees fear as just one of many emotions and doesn't allow it to impede her. Instead, she focuses on *pride as a motivator for success*.

Ferriss also shares 2 **strategies for overcoming fear**:

- *Define the your worst fears* to realize they're less daunting than they seem. Write down the worst-case scenarios in detail—recognize they're unlikely to happen, and identify the steps you can take to mitigate any negative outcomes. Compare the costs of inaction with benefits of action.

- *Expose yourself to what you fear* in controlled doses to gradually reduce its impact.

Gain freedom and happiness by **living authentically and minimally**.

- Celebrated filmmaker and actor Kevin Costner learned that *letting go of others' opinions* freed him from external pressures and opened new possibilities.

- Kevin Kelly, a prominent figure in technology and futurism, encourages people to *create a unique path* rather than fit into existing roles.

  (i) He advises young people to spend the early parts of their life exploring, seeking peak performance and satisfaction. Leave productivity for later.

  (ii) Learn to live with minimal resources, to free yourself to explore and take risks.

Know yourself and **manage external influences carefully**.

- Philosopher and author Alain de Botton believes that success involves inner peace and simple pleasures in life. When you're *clear on your own goals and desires*, you become less vulnerable to others' opinions and distractions.

- Author and documentary filmmaker Sebastian Junger says that to define your *identity and purpose*, consider who you'd

KEY QUOTES

"To not do something because you might get injured is a terrible reason not to do something. We can get injured in anything."
—Caroline Paul

"I am an old man and have known a great many troubles, but most of them never happened."
—Mark Twain

"There is more freedom to be gained from practicing poverty than chasing wealth. Suffer a little regularly and you often cease to suffer."

"Productivity is for robots. What humans are going to be really good at is asking questions, being creative, and experiences."
—Kevin Kelly

"When people seem like they are mean, they're almost never mean. They're anxious."
—Alain De Botton

"The point of journalism isn't to make everything better. It's to give people accurate information about how things are."
—Sebastian Junger

die for and what you owe to the community. He believes that journalism's main goal is to present the truth, not to advance society.

- Naval Ravikant, an accomplished entrepreneur and angel investor, advises to *choose your circle wisely*, because your behavior and mood are influenced by the 5 people you spend the most time with. To avoid conflict, steer clear of conflict-prone people.

Ultimately, it's **what you do in the present moment** that matters.

- Kevin Kelley uses a death countdown clock to remind himself that life is finite, and to *focus on what's important in the present*.

- Serial entrepreneur, Hedge fund manager, and author James Altucher believes that *happiness and fulfillment* can exist without a single, overarching purpose in life.

  (i) Learn to say "no" without justifying or explaining.

  (ii) Avoid constant news consumption: adopt "selective ignorance" instead.

- Shaun White won multiple gold medals at X Games and the Olympics despite being born with a heart defect. He believes in *seizing opportunities* as they arise, and to focus on the present during a competition. One of his strategies for managing pressure is to set a mix of serious goals and silly goals.

- According to Naval Ravikant, in any situation, you have 3 choices: change it, accept it, or leave it. *Indecision leads to misery*.

Rolf Potts and Tim Ferriss also discuss perspectives on **travel, freedom, and self-discovery**.

- Wealth involves more than money or assets; it's also about having the time and freedom to explore and grow. Travel offers not just a change of scenery, but also a chance to challenge perceptions and habits, leading to self-transformation. Potts sees *vagabonding* as a philosophy—

KEY QUOTES

"Remember that you're going to die. It's a great way to remember to live."

"There is no way to happiness—happiness is the way."
— Thich Nhat Hanh

"Happiness is a choice that you make and a skill that you develop. You choose to be happy, and then you work at it. It's just like building muscles."
—Naval Ravikant

"Action may not always bring happiness, but there is no happiness without action."
—Benjamin Disraeli, former British Prime Minister

"Travel isn't just for changing what's outside, it's for reinventing what's inside."

to simplify your life, let go of the need for control, and focus on experiences over possessions.

- However, *you need to work*—both to fund your travels, and to prepare mentally and emotionally a life of discovery.

On the topic of **analyzing problems and making decisions**:

- Author and podcast host Stephen Dubner suggests approaching problems with an *open, analytical approach* (not just a moral perspective) to avoid biases.

  (i) Brainstorm as many ideas as possible, then rigorously scrutinize them to filter out the most robust ones.

  (ii) Use writing as a tool to explore new subjects and ideas.

- When predicting future trends, Kevin Kelly advises to list down what others think is true, then brainstorm the implications if it isn't true. Share ideas freely and *only keep the ideas that persist*.

KEY QUOTES

"Work is how you settle your financial and emotional debts—so that your travels are not an escape from your real life, but a discovery of your real life."

"Let's come up with as many ideas as possible, and then put them under scrutiny, and basically try to kill them off, and if they were unkillable, then we'd keep going with them."
—Stephen J. Dubner

Performance Optimization

Chess prodigy and learning strategist Josh Waitzkin finds it useful to apply **lateral thinking**—to study details in an area, then apply the lessons to solve problems in other areas. For example, he studied specific techniques in Brazilian Jiu-Jitsu, to uncover overarching principles that can be applied in different areas, such as fluidity, weight distribution, and movement efficiency.

"If you set your goals ridiculously high and it's a failure, you will fail above everyone else's success."
—James Cameron

World champion grappler Marcelo Garcia emphasizes the importance of **embracing your unique qualities**, and using language to shape perceptions and build resilience. See challenges as opportunities rather than setbacks.

"He who suffers before it is necessary suffers more than is necessary."
—Seneca

You need a **positive mindset** for performance and resilience.

- Tony Robbins is a famous performance coach who has influenced many high-profile individuals from Bill Clinton to Serena Williams, and Oprah Winfrey. He believes in *asking good questions* to shape our priorities and perspectives.

"Good questions are what open people up, open new doors, and create opportunities."

- He also emphasizes the importance of getting into a *positive state of mind* before you try to solve problems, make decisions, or strategize. This advice is mirrored by other titans, such as:

  (i) Actor BJ Novak, who advises putting yourself in a good mood before engaging in creative processes; and

  (ii) Tracy DiNunzio, who suggests adopting a "complaining diet" to stop complaining and develop positive thinking.

- The best way to stop suffering, Robbins says, is to focus on others with *loving kindness*. Suffering occurs when we focus on ourselves.

Use **morning routines** to set the right tone for your day.

- Ferriss shares his preferred practices to *start the day positively*:

  (i) Make your bed to create order and a sense of control.

  (ii) Meditate for 10-20 minutes to ground yourself.

  (iii) Do 5-10 reps of a physical activity (e.g. pushups) to energize your body.

  (iv) Drink "titanium tea" (black tea, green tea, turmeric, ginger, coconut oil) for an energy boost.

  (v) Journal for 5-10 minutes to organize your thoughts and set priorities. If you're feeling down, wake up an hour earlier to journal your top 3-5 anxieties. Identify 1 task that will make other tasks easier or irrelevant, and devote 2-3 hours to focus on it.

- Tony Robbins starts his day with a *"priming routine"* including:

  (i) A cold plunge or shower;

  (ii) Breathing exercises: 4 short inhales through the nose and 4 short exhales through the mouth; and

  (iii) Emotional priming: Take 3 minutes to focus on three things you're grateful for, 3 minutes to focus on a

KEY QUOTES

"The reason you're suffering is you're focused on yourself... Suffering comes from three thought patterns: loss, less, never."
—Tony Robbins

"Sometimes, you think you have to figure out your life's purpose, but you really just need some macadamia nuts and a cold fucking shower."

"The struggle ends when the gratitude begins."
—Neale Donald Walsch

higher power healing your mind/body/emotions/life, and 3 minutes to focus on what you'll accomplish today (visualizing and feeling as if they're already done).

Creativity and Media

Ferriss shares the **insights from many famous creators**.

- Scott Adams, creator of the popular Dilbert Comic Strip, *dissects humor into 6 elements*: naughty, clever, cute, bizarre, mean, and recognizable. Successful humor often combines ≥2 elements.

- Acclaimed author Paulo Coelho points out that *every story falls into 1 of 4 archetypes*: (i) a love story between 2 people, (ii) a love triangle between 3 people, (iii) a power struggle, or (iv) a journey. He advises novelists to *keep it simple*: to trust the reader's imagination rather than over-describing.

- Famous author, Malcolm Gladwell, often starts writing a book/chapter with multiple openings to *explore different angles*.

- Author and journalist Neil Strauss shares his *editing process*, which involves: (i) editing for himself (what he likes), (ii) editing for his fans (what they'd find helpful and enjoyable), and (iii) "hate-proofing" against what haters could criticize.

- Distinguished writer Cal Fussman shares how he was only given 2.5 mins to interview Mikhail Gorbachev, but managed to get 30 minutes by asking, "What's the best lesson your father ever taught you?" In interviews, always *go for the heart first*. If you can capture both their heart and head, you'll win people over.

  (i) Embrace silence to elicit thoughtful responses.

  (ii) Neil Strauss recommends sharing personal or vulnerable information first, so the interviewee is likely to reciprocate.

Storytelling and emotional resonance are more important than technical perfection.

- Acclaimed documentary filmmaker, Morgan Spurlock, shares how a *compelling story* outweighs perfect cinematography.

KEY QUOTES

"The world is changed by your example, not by your opinion."
—Paulo Coelho

"Trust your reader. Understand that he or she can fill the empty spaces. Don't over-explain."
—Paulo Coelho

"Don't waste your time on marketing, just try to get better."
—Mike Birbiglia

"Aim for the heart, not the head. Once you get the heart, you can go to the head. Once you get the heart and the head, then you'll have a pathway to the soul."
—Cal Fussman

"The technical part of any job is 10%. 90% is creativity."
—Robert Rodriguez

- Filmmaker and YouTube personality, Casey Neistat, shares how he *channels his frustration* into his projects.

- Alex Blumberg, co-founder of Gimlet Media, shares how to *ask the right questions* to draw out stories. Ask about:

  (i) The setting (including where, when, who, and what), e.g. "What did you do to..." or "Describe the time when..."

  (ii) Emotions, e.g. "How did that make you feel?"

  (iii) Details, e.g. "What did you learn from that?" or "Tell me more."

Authenticity is a crucial success ingredient in media. For example:

- *B.J. Novak* values authenticity over scripted jokes in comedy, since genuine content resonates more deeply with the audience.

- *Bryan Callen* emphasizes genuine skills and delivery in fighting and comedy. He also suggests exploring personal fears and aspirations to create relatable material in comedy.

- *Andrew Zimmern* says that authenticity is more important than playing a character.

- *Morgan Spurlock* emphasizes the importance of embracing one's flaws and experiences, and to seek self-support over external validation.

- *Glenn Beck* discovered the power of authenticity when he shared his flaws and mistakes which resonated deeply with his audience.

- *Jon Favreau* finds his humor emerging naturally when he's authentic.

- *Mike Shinoda* values artistic freedom, and would rather stick to his authentic style and miss out on certain opportunities, rather than conform to external expectations.

The titans also share various **ways to overcome creative blocks**.

KEY QUOTES

"Asking the right dumb question is often the smartest thing you can do."

"There is great security in insecurity."
—Bryan Callen

"It is so much less work just to be yourself."
—Andrew Zimmern

"Be willing to fail or succeed on who you really are. Don't ever try to be anything else."
—Glenn Beck

"Not accepting the norm is the secret to really big success and changing the world."
— Neil Strauss

- When Paulo Coelho is stuck, he *focuses inward* on his heart and soul for a solution, rather than relying on external research.

  (i) He says there's no need to capture every thought/idea—the important ideas will stick while the unimportant ones fade.

  (ii) It's normal to procrastinate. But once you commit to 30 minutes of writing, it often turns into 10 hours of deep work.

- Neil Strauss sees writer's block as a form of temporary performance anxiety. Just *write 2 pages a day*, regardless of quality, to build momentum and remove perfectionism. The is echoed by many other titans, like:

  (i) Rick Rubin, who advises artists to start with a ridiculously small step like writing 1 word; and

  (ii) Robert Rodriguez, who suggests to just start working (and let creativity follow) rather than wait for the perfect idea.

- Sebastian Junger suggests that writer's block often stems from *inadequate research*, not a lack of words.

- Reid Hoffman writes down problems before bed to let the *subconscious* work on them overnight, then tackles them first thing in the morning when the mind is fresh.

It helps to be supported by **effective systems and strategies**.

- Scott Adams says that to succeed, you can (i) become the best at 1 thing, or (ii) *combine multiple skills* in which you're in the top 25%. The latter is easier.

- *Focus on systems* (such as having a balanced diet and exercising daily), not short-term goals (such as losing 5kg in 3 months).

- *Use affirmations* to focus your mind on opportunities. Add your name for emphasis, e.g. "I, Scott Adams, will become a famous cartoonist."

- To *accelerate learning*, use the right learning modalities for you. For example, Ed Catmull finds it easier to listen than read poetry.

KEY QUOTES

"Occasionally, a good idea comes to you first, if you're lucky. Usually, it only comes after a lot of bad ideas.
— Alex Blumberg

"Writer's block is almost like the equivalent of impotence. It's performance pressure you put on yourself that keeps you from doing something you naturally should be able to do."
— Neil Strauss

"Losers have goals. Winners have systems."
—Scott Adams

"It's always the hard part that creates value."
—Seth Godin

To **expand your creativity and innovation**:

- Award-winning photographer and entrepreneur Chase Jarvis, encourages people to *be different (not just better)*. For example, he shared his journey of mastering photography at a time when it was unusual to share trade secrets openly.

  (i) Pursue varying interests to gain a richer, wider perspective.

  (ii) Choose high-value projects so you can work less and deliver top-quality output.

  (iii) Focus on amplifying your strengths (not on fixing weaknesses).

- Develop your *observational skills*, which are crucial to both art and science according to Ed Catmull.

- Essayist and cartoonist Tim Kreider recommends taking time out *to play, recharge, and daydream* for creativity and productivity.

- Acclaimed author, Cheryl Strayed, uses *writing prompts* for creativity and to explore her thoughts/feelings, writing continuously without self-editing to let her unfiltered thoughts flow. For example, explore a time when (i) you did the right thing, (ii) learned a painful lesson, (iii) experienced an irreplaceable loss, (iv) felt loved, (v) or chose to do or avoid something.

- Renowned filmmaker, Robert Rodriguez, made his first film on a minimal budget by *creatively using available resources* like a friend's ranch, a bar, a bus, and even a turtle.

  (i) Focus on your assets instead of your limitations. Use projects to test ideas.

  (ii) Document your daily life and ideas to build on past experiences.

  (iii) When making decisions or pitching ideas, start with "why" to communicate the purpose of your actions.

Ferris shares tips on dealing with **criticism and haters**.

KEY QUOTES

"How do you zig when everyone else is zagging?"
—Chase Jarvis

"I don't create art to get high-dollar projects, I do high-dollar projects so I can create more art."
—Chase Jarvis

"What artists do is they learn to see."
—Ed Catmull

"Idleness is not just a vacation, an indulgence, or a vice…it is, paradoxically, necessary to getting any work done."
—Tim Kreider

"Learn the rules like a pro, so you can break them like an artist."
—Pablo Picasso

"You have to act first before inspiration will hit."
—Robert Rodriguez

- *Focus on your supporters* and those who appreciate your work. Ignore the rest. Don't try to win over everyone, nor to change others' opinions.

- *Respond occasionally* to valid criticisms, using a simple acknowledgment, e.g. "Thanks for the feedback. I'm always looking for ways to improve. Meantime, I hope you find what you're looking for."

Professional Development

Master sommelier and entrepreneur, Richard Betts, recommends **hands-on experience and excellence** over formal education or accolades. He opted for kitchen work over culinary school.

- Peter Thiel, the co-founder of PayPal and Palantir and Facebook's first outside investor, also suggests more *diversity in learning and education*. Keep asking yourself questions like: What am I learning and why? Are there better ways to learn it?

Entrepreneur, musician, and philanthropist, Derek Sivers, advises young people to say "yes" to diverse opportunities early in your career to **broaden your experience**.

- Seek to learn at your own faster pace (rather than follow the standard educational route). As you become more successful, be more selective: accept only *opportunities that truly excite you*.

- Maria Popova advises that the best way to say "no" to irrelevant requests is simply not to respond. Instead of "following your dreams", discover your purpose through a blend of *conscious choices and chance discoveries*.

- Innovator Chris Young, points out that the majority of jobs in the future probably don't even exist today. The best way to build a strong foundation is to do *what you're interested in and excel in* it. Maintain high standards; never release sub-standard work.

Prominent philosopher Will MacAskill believes that true satisfaction comes from **mentally-engaging work** that offers variety, growth, autonomy, and meaningful impact.

KEY QUOTES

"The millions or billions who don't get it don't matter. Focus on the few who do."

"Living well is the best revenge."
—George Herbert

"Life is a continual process of arrival into who we are."
—Maria Popova

"Whenever you find yourself on the side of the majority, it's time to pause and reflect."
—Mark Twain.

"You can do everything you want to do. You just need foresight and patience."
—Derek Sivers

"If you're looking for a formula for greatness, the closest we'll ever get, I think, is this: Consistency driven by a deep love of the work."
—Maria Popova

"The interesting jobs are the ones that you make up."
— Chris Young

- Investor Chris Sacca emphasizes *being proactive and immersing yourself in meaningful activities*. For instance, he expanded his role at Google by showing up at high-level meetings, offering to take notes, and making himself indispensable. Gradually, he became an integral part of important discussions.

Part 3: Business and Investment

This section features insights from many successful entrepreneurs, investors, venture capitalists, authors, and Silicon Valley icons.

Entrepreneurship and Business Strategy

A **simple, consistent business model** can be effective and profitable.

- For example, Derek Sivers' *CD Baby* thrived on this simple model for 10 years—charging a $35 setup fee and $4 per CD sold.

- Seth Godin suggests starting on a *smallest viable scale*, validating it with a handful of people, then growing from there.

Balance commitment with flexibility—hold strong views, but be willing to adapt to new information.

- Marc Andreessen argues that Silicon Valley companies place too much emphasis on failure. Often, it's better to *persist with focused improvements*, rather than to pivot constantly.

- Peter Thiel also says that *failure is overrated*, since business failures come from many factors, making it hard to learn from them.

- Phil Libin, co-founder of Evernote and managing director at General Catalyst, found that companies change significantly at multiples of 3 and 10 (e.g. 1 to 3, 10, 30, 100 employees). It's vital to *keep adapting and reinventing yourself*.

Value-creation and originality are crucial in business.

KEY QUOTES

"Hold the standard. Ask for help. Fix it. Do whatever's necessary. But don't cheat."
—Heston Blumenthal

"I believe you shouldn't start a business unless people are asking you to."

"I have come to learn that part of the business strategy is to solve the simplest, easiest, and most valuable problem."

"They're never going to converge on anything because they're never going to put the time into actually figuring it out and getting it right."
—Marc Andreessen

"The danger of maps, capable assistants, and planning is that you may end up living your life as planned. If you do, your potential cannot possibly exceed your expectations."
— Scott Belsky

- Peter Thiel advises not to follow technology trends or others' footsteps. Instead, *create value with a unique mission* by asking: "What problem do you face every day that nobody has solved yet?" If something is worth doing 5-10 years later, why not do it now?

- Marc Andreessen lives by *2 rules*: (i) be so good that others can't ignore you, and (ii) focus on creating and building things.

- Alexis Ohanian emphasizes the need to think big and pursue ideas that *challenge the status quo*. True innovation often defies old models, so it's important to understand past successes without being constrained by them.

- Reid Hoffman believes that business strategy should target the *simplest, most valuable problem*. Use the 80/20 rule to prioritize the highest-value activities that are the easiest for you to do.

- Peter Diamandis believes that to predict the future, you must *create* the future. *Aim for 10x improvements*, not incremental gains. Seek solutions that can impact billions of people.

- Eric Weinstein points out that innovations often come from *connecting different ideas*. Uncover existing weaknesses and biases by asking: What are their main sources of income? What are they afraid to admit?

- Chris Young suggests *asking questions* like: "If you had $100 million, what can you build that others can't copy? For every $1 of revenue you generate, can you cost an incumbent $5 to $10?"

Add a human touch, with empathy and emotional resonance.

- Alexis Ohanian advises to *focus on your customers*, and use humor to create connection and differentiate your brand.

- *Small details can have a big impact*, like how CD Baby's quirky thank-you email led to a jump in customer satisfaction and word-of-mouth marketing.

- *Compelling narratives* are often more persuasive than numbers or data for fundraising, selling, or recruiting.

KEY QUOTES

"You don't have to wait to start something. So if you're planning to do something with your life...you should ask: Why can't you do this in 6 months?"
—Peter Thiel

"If you set your goals ridiculously high and it's a failure, you will fail above everyone else's success."
—James Cameron

"I think of problems as gold mines. The world's biggest problems are the world's biggest business opportunities."
—Peter Diamandis

"The best way to become a billionaire is to help a billion people."
—Peter Diamandis

"Never forget that underneath all the math and the MBA bullshit talk, we are all still emotionally driven human beings."
—Chris Sacca

Both Tim Ferriss and Ramit Sethi adopt a similar approach to their content business, creating sustainable income by building deep relationship with a **small, dedicated fanbase**. They have a focused niche, but serve the mass markets in other ways.

- Provide most of your content for free, but *charge a premium for flagship solutions* for a small segment of your audience. A $100 profit from each of 1,000 fans means a sustainable income of $100,000 per year. In addition, you can attract high-paying opportunities like speaking engagements and consulting.

- Build *direct relationships* with your fans, and serve them with high-value, personalized offerings.

- Use *checklists* to streamline processes and ensure consistency.

Ryan Holiday also coined the "**Canvas Strategy**" to describe the idea of serving others to create your own path to success.

- Make others' lives easier by providing the canvas for them to paint on, or *clearing their paths to success*. This could mean generating ideas, doing what nobody wants to do, or removing waste. Make yourself indispensable to your team or organization.

- Set aside your ego and the need for recognition. Consider *serving as an apprentice* to successful people and organizations, as this is a great way to learn, build relations, and create opportunities.

Stand out with a **unique niche/brand or by being first**.

- *Convert perceived flaws into unique strengths*. For example, Arnold Schwarzenegger turned his size and build (seen as a flaw) into an asset in Hollywood. Dan Carlin turns his loud, passionate way of talking into his trademark podcasting style.

- Use *personal branding* to stand out, like how Chris Sacca was known for his trademark cowboy shirts in the tech world.

- To succeed in marketing, you don't always need to be the best in your field; it's better to *be the first in a unique*

KEY QUOTES

"'Success' need not be complicated. Just start with making 1,000 people extremely, extremely happy."

"True fans are not only the direct source of your income, but also your chief marketing force for the ordinary fans."

"The person who clears the path ultimately controls its direction, just as the canvas shapes the painting."

"If you want great mentors, you have to become a great mentee. If you want to lead, you have to first learn to follow."

"We can't out-obedience the competition. Therefore, we have to out-lead or out-solve the other people."
—Seth Godin

category that gives you a competitive edge. When launching a new product, ask, "What category is this new product first in?" If you're first in a new category, focus on promoting the category rather than just your brand—like how Ferriss established the term "lifestyle design" and anchored himself as the leader in this category with his book, "The 4 Hour Workweek."

- Prioritize aspects of business that directly impact *sales*, such as email lists instead of social media followings.

Matt Mullenweg always considers the **long-term impact** of his decisions 1 year vs 10 years from now. Entrepreneur and investor Bryan Johnson adopts a long-term perspective by asking: "What can I do that will be remembered in 200 to 400 years?"

- Reid Hoffman accepts a small error rate (10-20%) to make *fast, efficient decisions*. For major decisions, he prefers to have 1 one clear reason that can be validated later.

To find good ideas, **generate as many ideas as possible**.

- *James Altucher* writes down 10 ideas daily to strengthen his "idea muscle".

- *Scott Adams* generates ideas for his comics by clearing his mind then flooding it with ideas. As the ideas flow, he monitors his body for changes that signal if an idea is worth pursuing.

- *BJ Novak* suspends judgments to brainstorm "What if" scenarios, separating idea generation from execution.

Reid Hoffman and Matt Mullenweg share tips on **building teams**.

- Find *A-Players* who will examine and refine your strategies rather than blindly following them.

- Automattic thrives with a *fully-distributed team*, focusing on clear, text-based communication and minimal in-person meetings. They hire detail-oriented people who are passionate about their work and can adopt the desired communication style.

KEY QUOTES

"If you find yourself in a fair fight, you didn't plan your mission properly."
—Colonel David Hackworth

"If you can't come up with 10 ideas, come up with 20 ideas."
—James Altucher

"Once you get enough bad ideas, then some good ones have to show up."
—Seth Godin

- To *address bottlenecks*, Noah Kagan suggests asking yourself: "What are the things which, if slow or unusable, will hurt your productivity? Simple things like mouse speed and internet connection can improve your efficiency across the board.

Change your perspectives/stories to change your outcomes:

- Seth Godin believes that what you track affects what you focus on. *Track your successes and contributions* (not your failures and rejections). If you're struggling, ask how you can change the situation to make it easier. Use criticism as a source of motivation for improvement.

- Learn to handle both successes and losses with *equanimity*. Once, Matt Mullenweg lost a $400,000 cheque and spent months worrying about it, only to realize he had used it as a bookmark and forgot about it.

- *Don't undervalue your products*, says Marc Andreessen, since you can't sustain sales and marketing efforts with too-low pricing.

- Have a "beginner's mind" to spot overlooked issues or options. However, don't just look for new ideas; it's often more important to *execute existing ideas well*.

- Noah Kagan suggests the "*Coffee Challenge*"—to ask for a 10% discount on your next coffee—as a means to practice negotiation and overcome the fear of rejection.

Investment Strategies

Marc Andreessen spots exciting trends by observing what tech professionals are passionate about during their personal time. He emphasizes the importance of **stress-testing investment decisions** to minimize personal biases and blind spots.

Tony Robbins also highlights **4 traits of successful investors**: they (i) limit the downside, (ii) seek asymmetrical risks/rewards (to get huge rewards with little/no risk), (iii) diversify their asset allocations, and (iv) have a strong inclination to give back.

KEY QUOTES

"Sometimes you need to stop doing things you love in order to nurture the one thing that matters most."
— Scott Belsky

"Being an entrepreneur is being willing to do a job that nobody else wants to do, [in order] to be able to live the rest of your life doing whatever you want to do."

"It's not about ideas, it's about making ideas happen."
— Scott Belsky

Ferriss shares **additional investment tips**:

- Be clear on your *investment goals*. Balance financial returns with personal well-being, ensuring your investments contribute positively to your life instead of causing extra stress.
- *Diversify* investments to manage risk.
- *Timing is key*. Consider both market conditions and your personal readiness before investing. Know when to moderate and when to go all-in.
- Analyze your *fears and worst-case scenarios* to realize the actual risks are often lower than perceived.
- Tech investor Kevin Rose uses "*gut investing*" by combining emotional quotient (EQ) with due diligence. He uses gut feel for initial assessments of a new idea/product with limited data, but uses data-driven decisions in later stages when data becomes available.

To gain a **wider perspective**, study different or opposing investment philosophies. For instance, Andreessen focuses on technology and startups, but studies value investors like Warren Buffett.

Tracy DiNunzio points our that your first investment pitches are likely to be lousy, so **practice your first 10 pitches** with investors you don't intend to get funding from.

Both Tony Robbins and Warren Buffett stress the importance of **investing in yourself**. Robbins's best investment was a $35 seminar by Jim Rohn, while Buffett's best investment was a public speaking course by Dale Carnegie.

- Ferriss, inspired by this mindset, chose *hands-on experience* over an MBA. He used $120,000 (equivalent of 2 years' MBA fees) to invest in startups through angel investing. After learning from initial losses, he refined his strategy and achieved successful exits.

KEY QUOTES

"The first principle is that you must not fool yourself, and you are the easiest person to fool."
—Richard P. Feynman

"If you let your learning lead to knowledge, you become a fool. If you let your learning lead to action, you become wealthy."
—Jim Rohn

Digital Security

Cybersecurity expert, Marc Goodman, warns about how criminals and terrorists can **exploit personal information** shared on platforms like Google and Facebook, or even misuse genetic data to create personalized biological weapons.

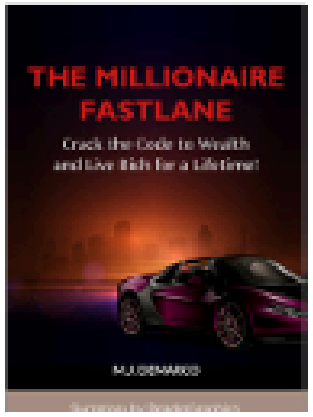
Famous computer hacker Samy Kamkar offers **digital security tips**:

- Use full disk *encryption* to protect device data;
- Use long and unique *passwords* for different sites; and
- Monitor *outbound connections* with network traffic monitoring tools to block unauthorized access and malware.

Other Details in the Book to Look out For

This book is written as a compilation of Ferriss' notes, ranging from interview snippets to personal observations, principles, step-by-step walkthroughs, trivia, and fun facts. We have extracted the practical tips from numerous titans and organized them into themes for easy reference. The book also includes other details like Ferriss' travel list and podcast equipment, examples of good music for creative/focus work, mnemonic techniques for memory recall, advanced digital security tips, how to raise money on Kickstarter, and more. For more details, please visit https://tim.blog/.

KEY QUOTES



THE MILLIONAIRE FASTLANE

Crack the Code to Wealth
and Live Rich for a Lifetime!

M.J. DEMARCO

The Big "So What"

Most of us are taught to get a good degree, get a good job, work hard, save, invest, and hopefully retire rich by 65. However, this is a flawed approach. In this book, self-made millionaire and semi-retired entrepreneur DeMarco presents the roadmap for anyone to become truly wealthy in ≤10 years.

Introduction

Retiring Young and Rich: DeMarco's Journey

Unlike most people, DeMarco didn't climb the corporate ladder after graduation. Instead, he pursued the entrepreneurial route and retired at 33 years old.

- When DeMarco was a teenager, he met a young inventor driving a Lamborghini. He realized that it was possible to get rich young, and started to research self-made millionaires who were (i) <35 years old, (ii) didn't have extraordinary talents, and (iii) could live a truly lavish lifestyle (instead of scrimping and saving).

- After college, he was determined to get on the Fastlane. By 26, he had failed in several businesses, his girlfriend had left him, and he was broke and depressed. Meanwhile, his friends were advancing in their careers and his mum urged him to get a proper job.

- He decided to start afresh in Phoenix with just $900. While he was working as a limo driver, he got the idea to build a website to connect limo companies with potential clients.

KEY QUOTES

"There's a hidden road to wealth and financial freedom, a shortcut of blinding speed where you can achieve wealth in youthful exuberance over elder entropy."

"The Millionaire Fastlane [is] a complete psychological and mathematical formula that cracks the code to wealth and unlocks the gateway to the shortcut."

"'Retirement' doesn't have to happen when you're old and bent; it can (and should) happen while you're still young and vibrant."

He taught himself search engine optimization, graphic design, copywriting, and marketed his website aggressively with cold calls, emails, and snail mail. Gradually, he started to make hundreds, then thousands of dollars.

- As the business grew, so did the customer complaints. While DeMarco's friends were out having fun, he was working to resolve customer issues. In 2001, he sold the website for $1.2mil. However, business suffered under the new owners, and DeMarco eventually bought it back for $250,000. He refocused on customers, streamlined and automated the processes until the income continued to grow even when he worked less. In 2007, he sold the company for $8 million and retired at a relatively young age of 33.

The Road Trip to Wealth

Wealth creation is *not* an event. Behind every success, there's a long and often-arduous process. You may see an athlete being offered a $50mil contract, but you don't see the years of practice, failures and injuries. You may see a business being sold for $20mil, but you don't see the years of hard work, sleepless nights and rejections.

- The process of wealth creation is *exponential, not linear*. You may struggle for several years, only to see a sudden explosion in growth like what happened with DeMarco.

Becoming wealthy is like taking a road trip. To arrive at your destination, you need 4 main components:

- *Your roadmap* = The beliefs that guide your actions like a compass.
- *Your Vehicle* = You. Since your level of wealth depends on the person you become, you must personally drive the vehicle.
- *Your Roads* = Your financial pathways. There are many ways to make money as an employee, self-employed or business owner.
- *Your Speed* = Execution, or how rapidly you move from idea to implementation.

KEY QUOTES

"Old age is not a prerequisite to wealth or retirement."

"Millionaires are forged by process, not by events."

"Fast wealth is created exponentially, not linearly."

The 3 Roadmaps to Wealth

Your belief system is like a compass that guides your life. Your beliefs shape your choices, which in turn shape your outcomes.

There are 3 financial roadmaps to wealth.

- Each roadmap comes with a different *belief system* that shapes how you think and act. These define your end-destination, perspectives about debt, time, education, money, wealth, responsibility and life in general.
- Each roadmap is also governed by a *mathematical wealth equation* that defines how you earn money and multiply your wealth.
- Of the 3 roadmaps, *only one allows you to retire comfortably*.
  - (i) People on the *Sidewalk* spend more than they earn. They sacrifice tomorrow for today's pleasures and end up living in poverty.
  - (ii) People on the *Slowlane* work hard for 50 years and hope they can save enough to retire comfortably. They end up living a life of mediocrity.
  - (iii) People on the *Fastlane* build businesses that satisfy 5 commandments (NECST), make millions within 10 years and create true wealth.

KEY QUOTES

"If you want to change your life, change your choices. To change your choices you must change your belief system."

"Whatever roadmap you choose, your universe for wealth creation will abide by each map's respective wealth equation."

	 Sidewalk	Slowlane	Fastlane
Wealth Equation	Wealth = Income + Debt	Wealth = Job + Market investments	Wealth = Net Profit + Asset Value
Destination	None. Live by the day.	Retire comfortably by 65	Lifetime passive income thru' business or investments
Life Perception	Live today. Don't worry about tomorrow.	Live frugally. Avoid unnecessary risks.	My dreams are worth pursuing. It helps to have money.
Debt Perception	Use credit for what you want now	Remove debt at all cost (including your time)	Use credit to build and grow a system
Time Perception	Spend time like there's no tomorrow.	Trade time for money. Hope to retire at 65	Time is the most valuable asset
Education Perception	Graduation = end of education	Education = a way to earn a bigger salary	Continually learn and grow your knowledge & awareness
Money Perception	Flaunt it if you have it. Don't bother saving.	Budget every hard-earned cent.	Money is a reflection of how much value you create.
Wealth Perception	Have as many "toys" as possible	Work → Save and invest → Repeat	Build business systems for cash flow and asset value
Main Source of Income	The best-paying gig right now	A job	Business systems and investments
Main Wealth Accelerator	Hope for a lucky break or windfall	Compound interest over 50 years	Create valuable assets, or add value to existing assets
Control and Responsibility	Victim mindset. Blame others.	No leverage or control over financial plan.	Take full responsibility for dreams and financial plans

The Sidewalk: Roadmap to Poorness

Sidewalkers live in the moment, maximizing pleasure now with no regard for tomorrow. They're governed by this equation: Wealth = Income + Debt.

- Their attitude to money is to "*flaunt it if you have it*". They spend all of their money on "toys" and don't bother to save.
- As a result, most sidewalkers have *low or zero net worth*. They don't have a destination nor a financial plan. They look for the highest-paying gig available, live from paycheck to paycheck, and borrow money to buy whatever they want.
- This roadmap leads to *poverty*, both in terms of time and money. Sidewalkers are always a step away from being broke, and can be derailed by a bump in the road (e.g. a recession, retrenchment).

Sidewalkers think of **wealth as an event**, e.g. winning the lottery or getting an inheritance. They seek to find lucky breaks or shortcuts, and get scammed into paying for "secrets" that promise easy money.

Instead of taking the driver's seat, they choose to hitchhike then **blame others** when they fail to arrive at their destination. To become wealthy, you must take responsibility and accountability.

- *Take responsibility* for your past/current actions, e.g. acknowledge that you lost your wallet because you carelessly left it on the table.
- Then, *be accountable* for your future outcomes, e.g. make sure you keep your wallet safely on your person in the future.

Sidewalkers equate wealth with **material possessions** such as ten-carat diamonds, seaside mansions, and exotic cars. Even if they earn a huge income, they still end up broke because they overspend on designer clothes, expensive hobbies and toys.

- *True wealth* doesn't come from material possessions. It comes from *familial relationships* (including friends, family, community, and God), *fitness* (including physical health,

KEY QUOTES

"Because the Sidewalk is about the short term, it never works for the long term. Your future becomes a mortgage for a pleasant present."

"Sidewalkers are ripe for swindling because they seek events and want to avoid process."

"You can't be a victim if you don't relinquish power to someone capable of making you a victim."

"Poor financial management is like gambling; the house eventually wins."

"Wealth is the ability to fully experience life."
— Henry David Thoreau

energy and vitality), and *freedom* of choice (i.e. the ability to freely pursue your dreams, manage your time and live as you wish).

- Own your possessions; *don't allow your possessions to own you*.

  (i) Being rich should give you more options, not less options. Use money to buy freedom and choices that make you happy. Don't entrap yourself with an extravagant lifestyle that forces you to keep working harder.

  (ii) You can truly afford something if you can pay for it in cash without any impact on your current and future lifestyle.

The Slowlane: Roadmap to Mediocrity

Slowlaners believe in the mantra: get a good job, save/invest 10% of your income, use compound interest to grow your money, and hopefully retire rich at 65. They're governed by this equation: Wealth = Job + Market investments.

- This plan requires you to work hard, live frugally, and sacrifice time today to have money 50 years later. In reality, there're *many factors beyond your control*, e.g. you may die early, lose your job, or encounter a market downturn just as you're about to retire.

You can't amass a large sum of money because you lack control and leverage.

- Your *job salary* = hourly wage x hours worked. As an employee, you can't control your company's financials. You can't get a 1000% pay raise no matter how well you perform, and market changes can easily render your job obsolete. You're also limited by 24 hours in a day.

- Your returns from *market investments* depend on compound interest = Invested Sum x $(1 + \text{Yield})^{\text{Time}}$.

  (i) To get rich from compound interest, you need to invest for a long period of time with good investment yields. If

KEY QUOTES

"Wealth isn't embodied in a car but in the freedom to know that you can buy it."

"The Slowlane is a lifetime wager that a sacrificial today will yield a wealthier tomorrow."

"Wealth is best experienced when you're young, vibrant, and able, not in the twilight of your life."

you earn $150,000 and save $7,500 a year, then invest it at 8% returns, you'll get $2 mil after 40 years (*if* you're still alive).

(ii) To get rich while you're still young, you need returns of 80% or 800% (not 8%). Unfortunately, investments rarely yield annual returns of >10% consistently.

The Slowlane leads to mediocrity. You end up trading your life away for money with little control or leverage.

- You can try to increase work hours, change jobs, advance your education, cut expenses, find better investments, or invest longer. However, there's a *limited upside* to how far you can improve your financial results. For example, you may take a $50,000 loan and spend 800 hours to get an MBA to increase your salary by 15%. However, this also means extra student loans which you must now work off.

- On the other hand, there are *huge downside risks*, e.g. a health crisis or economic recession can disrupt your financial plans.

- The only way to create massive wealth is to concurrently control expenses while having an "income explosion" through (i) fame (e.g. becoming a famous actor or entertainer) or (ii) becoming a top honcho (e.g. a CEO who gets millions in stock options). Most people in the Slowlane simply *get stuck in the middle*. In fact, being a millionaire today (i.e. having a net worth of $1 mil) only puts you in the upper-middle class. To live a truly lavish lifestyle, you need much more than $1mil.

The Fastlane: Roadmap to Wealth

This roadmap allows you to create huge amounts of wealth quickly because you have both control and leverage.

- Unlike the Slowlane (which is about having a job), the Fastlane is about having a *business system* so you needn't do everything yourself. Building a process isn't easy, but it's extremely rewarding. Remember: get rich quick ≠ get rich easy.

- The world is made of a minority of producers selling to a majority of consumers. Fastlane success requires you to *think like a producer*. Instead of buying products online, sell products online. Instead of having a job, offer jobs.

KEY QUOTES

"The Slowlane is predisposed to mediocrity because the numbers are always mediocre."

"When you perform an autopsy on the Slowlane you see its true colors: It's slow, it eats time, and it's risky."

"The toil of wealth is the process itself...the toil is the creation and management of the system itself."

"To consume richly, produce richly first."

- Producers are *innovators, entrepreneurs, creators and visionaries*. They create something valuable out of nothing, add value to existing solutions, and/or multiply it unlimited times. You can make millions if you're an inventor who patents a process and licenses it to Fortune 500 companies, a doctor who develops and sells an anti-aging treatment, or a marketer who builds and sells a successful website.

The Fastlane is governed by this equation: **Wealth = Net Profit + Asset Value**.

- *Net Profit* = Units sold x Unit profit. If you have a website, you can increase net profit by:

  (i) Increasing the number of units (by increasing your web traffic or your conversion ratio); or

  (ii) Increasing unit profit (by increasing prices or reducing costs).

- *Asset Value* = Net profit x Industry multiplier. Slowlaners and Sidewalkers buy/sell assets that depreciate in value, e.g. cars or designer clothes. Fastlaners buy/sell assets that appreciate in value, e.g. businesses, licenses, intellectual property, or patents.

  (i) Once you've built an asset (e.g. a business), the asset value is determined by the net profit multiplied by prevailing market conditions. A multiplier of 5 means that every increase in net profit increases your asset value by 5x or 500%.

  (ii) To accelerate your wealth, grow the value of your assets and sell them. Once you have a huge amount of money, you can convert it into a money system (e.g. lend out $10 million at 5% interest for $500,000 passive income per year).

- In short, Fastlaners don't use *compound interest* to build wealth. They create and sell assets to build wealth, then use compound interest to increase their income and liquidity.

Growing a Fastlane business is about building business systems that can run on their own, like a money tree that generates passive income.

KEY QUOTES

"Fastlaners accelerate wealth by building cash-flowing assets that can be sold in the marketplace to realize gains. Their wealth equation has controllable, unlimited leverage."

"To weaponize the Fastlane wealth equation, you must engage in a Fastlane business that has the potential for leverage or high speed limits."

"Money is the king of money trees."

- You must still maintain the systems periodically, but the income is delinked from your time. You can *retire* so long as your monthly passive income exceeds your monthly expenses (including taxes).

- Here are *5 types of seedlings* that can grow into money trees:

  (i) *Rental systems*, including real estate, licenses, leases, patents or royalty payments.

  (ii) *Computer systems*, including internet businesses and software.

  (iii) *Content systems*, including books, blogs, magazines, social networks or other information systems.

  (iv) *Distribution* systems that bring solutions to the masses, including app-stores, franchising, and network marketing.

  (v) *Human resource systems (HRS)*: The more you rely on people to operate a business, the less passive the income will be since humans are hard to predict or control. However, to make millions or billions, you'll need some form of a HRS since you can't do everything yourself.

Fastlaners follow the Law of Effection, not the Law of Attraction.

- The *Law of Attraction* says that your thoughts are picked up by the Universe and manifested in reality. However, positive thinking alone isn't enough; you need concrete action to deliver results.

- The *Law of Effection* says that the amount of money you make is proportionate to the amount of value you give. The more people you impact directly or indirectly, the more money you'll make. Put yourself in a position that can affect millions of people, or serve someone who does (e.g. a famous actor or athlete).

KEY QUOTES

"Human resource systems can add passivity or erode it."

"The more lives you impact, directly or indirectly, the more wealth you will attract."

"To serve millions is to make millions. Think big to earn big."

The Vehicle: You

Own the Vehicle: Start your Own Business

One of the Slowlane mantras is to pay yourself first. However, this is impossible so long as you're holding a job with a fixed salary and must pay mandatory government taxes, 401(k) contributions etc.

Start a business and structure it as a separate entity. This allows you to deduct your expenses to reduce the taxable amounts. It also allows your business to outlive you.

- Don't start a sole proprietorship or a general partnership, since your personal and business assets/liabilities are tied, and you can lose all your assets if something goes wrong with the business. Instead, go for *C-corporations, S-corporations or Limited Liability Corporations* (LLCs), all of which offer tax efficiency and limited personal liabilities.

Steer Your Vehicle: Make Good Choices

Your financial success or failure comes from hundreds of choices that jointly create your process and lifestyle. Every choice you make has a trajectory. Where you are now is the combined result of all your past choices. The choices made before the age of 30 have an especially huge impact since they decide your paths in life and the habits/processes you develop.

Beware of treasonous choices that can cause irreversible harm and permanently change your life, e.g. if you kill someone in a street race, or commit a crime that lands you in jail.

Clean Your Windshield: See Things Differently

Your perceptions (thought patterns) affect your actions (what you choose to do). Change your perceptions to change your actions.

KEY QUOTES

"To pay yourself first, you must own yourself."

"People drown in the misery of their own choices while neglecting to acknowledge they are the cause."

"Poor choices are the leading cause of poorness."

- Build *new beliefs*: gather evidence that it's possible to retire young, and that a job is as risky as a business.

- Use *helpful words* to shift your perceptions. Stop using words like "I can't..." or "It's impossible..." and start using words like "I can/will...", "It's possible to..."

Use 2 strategies to make better decisions:

- Analyze the *worst-case consequences* to avoid treasonous or disastrous choices. Evaluate your daily decisions with 3 questions: (i) What's the worse-case consequence? (ii) What's the probability of this outcome? and (iii) Is this risk acceptable?

- Use the *weighted average decision matrix* to evaluate options for big decisions.

  (i) On a piece of paper, list down the all the factors that affect your decision. Add a weightage in brackets (from 1-10).

  (ii) Evaluate each option. Multiply the score by the weightage and indicate the sub-total in parenthesis. Add up the scores and choose the option with the higher score.

Factors	Option 1	Option 2
Factor 1 (10)	2 [20]	6 [60]
Factor 2 (8)	4 [32]	2 [16]
Factor 3 (4)	6 [24]	8 [32]
Factor 4 (6)	5 [30]	1 [6]
Total	106	114

Don't look at the rearview mirror and lament the past. Focus on your choices now and the person you become in the future.

Put the Headwind Behind You: Manage Your Relationships

Take stock of your environment and relationships.

- Toxic relationships and naysayers are like *headwinds* that drain us and slow us down. They may try to discourage you from the Fastlane or even obstruct you. Turn your back so the headwind now becomes tailwind to accelerate your progress.

- Create *accelerative winds* by associating with people who empower or support your goals. Join entrepreneur clubs, the Fastlane Forum, networking events and be around people with a possibility-mindset.

KEY QUOTES

"Extraordinary wealth will require you to have extraordinary beliefs."

"Changing your life starts with changing choices."

"Success follows those who break the headwind and put it at their back."

Maximize Your Fuel-Efficiency: Free Up Your Time

All of us have a finite lifespan and 24 hours a day. So, time is your most valuable asset. Slowlaners value money over their time, e.g. they may queue for 5 hours to get a free gift or to redeem a $10 discount. Fastlaners realize that time is king—you can always make more money, but you can't avoid mortality.

Your life is the sum of your free time (time spent as you wish) and indentured time (time spent earning money). The more indentured time you have, the less free time you have. Aim to transform indentured time into free time.

- An extravagant lifestyle is a form of "*parasitic debt*": your 30-year home mortgage, designer clothes and car installments all create financial burdens that force you to work and limit your choices. It's like driving with a trunk full of junk—it reduces your car's efficiency and performance.

- *Clear out the junk* so you can move quickly. The true cost of a purchase is the dollar cost *and* the free time you must forego.

Change the Stale Oil: Reinvent Yourself

To keep a car running smoothly, you must change the oil every 3,000 miles. Likewise, you must continually educate and reinvent yourself to stay up to date.

- The goal of education is to enhance your business systems. Instead of being a cog in the system, learn to *build the entire wheel*. The best way to do so is through repeated action.

Throw out the common excuses:

- "*I don't know how*": We're surrounded by free information, e.g. library books, internet blogs, podcasts, webcasts, and courses. With discipline, you can learn virtually anything from programming to digital marketing and graphic design.

- "*I don't have time*": You can always find pockets of time to learn, e.g. while you're in the queue, in the toilet, during tea breaks, or by giving up TV or computer games.

KEY QUOTES

"The reality is that time is deathly scarce, while money is richly abundant."

"Time is an asset that is undervalued and mindlessly squandered."

"The ultimate wealth is having the free time to live how you want to live."

"The acquisition and application of knowledge will make you rich."

"Education is unplucked fruit from a tree, and all it needs is a ladder."

Hit the Redline: Be 100% committed

It takes years to grow money trees and build business systems. To succeed, you must commit to take action and persist despite repeated failures.

- Be prepared for *sacrifice, hard work, and bumps on the road*. When DeMarco was building his company, he worked 12 hours a day, lived in a tiny apartment, and gave up lifestyle comforts and social gatherings. You must be willing to take calculated risks, try new things, learn from mistakes, and keep going in face of inevitable failures. This process *cannot* be outsourced.

The Roads to Wealth

The 5 Fastlane Commandments (NECST)

Not every business gets you on the Fastlane. The right route to wealth must address the Law of Effection by satisfying 5 Fastlane Commandments: Need, Entry, Control, Scale and Time (NECST). Such a route can make you wealthy quickly, such that you'll earn not just a good income (e.g. $20,000 a month) but big money (e.g. $200,000 or $2 mil a month).

The Commandment of Need: Your business must fulfill a real need that people will pay for. This could be a pain point, unsolved problem, service or emotional gap.

- Don't start a business to do what you love or to fulfill your personal goals/dreams. Consumers don't care about your selfish dreams or interests. They want to know *what is in it for them*, and why they should give you their money.

- Paradoxically, the best way to attract money is not to focus on it. When you focus on *solving huge problems and offering massive value*, you'll naturally attract lots of money.

  (i) Ask questions like: How can I help 1 million people to look/feel better, solve their problems, do things more easily, or achieve their dreams?

KEY QUOTES

"Fastlane success requires an investment toll of time and effort. This is the toll that makes you special and keeps everyone else out."

"To live unlike everyone else, you have to do what everyone else won't."

"Businesses that solve needs win. Businesses that provide value win. Businesses that solve problems win profits."

"Stop chasing money and start [to] chase needs, problems, pain points, service deficiencies, and emotions."

(ii) Do not ask questions like: How can I start a business with no money? How can I make passive income?

- Doing what you love isn't enough, unless that thing also (i) solves a real need and (ii) you're outstanding at it. To power your vehicle you need more than interest; *you need passion*. This involves something bigger than yourself that can compel you to take action. It could be:

  (i) Something that truly *excites* you (e.g. making a difference); and/or

  (ii) Something that triggers strong *discontent* in you (e.g. wanting to prove someone wrong).

  DeMarco was motivated by the Lamborghini he saw in his teens and how his mother struggled to single-handedly raise 3 kids.

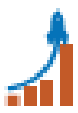
The Commandment of Entry: Your business must have barriers to entry, i.e. it takes time and skill to set up.

- If anyone can enter a business or industry, it will become *overcrowded*. Unless you're truly exceptional, you won't be able to differentiate yourself. Avoid a business (i) if it can be started with 1 event (e.g. filling up a form), or (ii) if everyone is doing it.

- For example, you'll just be a cog in the system if you're a network marketer, internet blogger or selling things on eBay. However, you can *own the entire wheel* if you own the network marketing company, the blogging platform, or eBay itself.

The Commandment of Control: You must have control over your business. If someone can destroy your business overnight, then you lack control. For example, Amazon can easily suspend a seller's account or change its affiliate marketing terms at any time.

- Invest time and money to *grow your own brand*, not someone else's. Offer rentals instead of renting from others, sell franchises instead of buying them, or manufacture products instead of retailing them.



The Commandment of Scale: To have leverage, you must be able to scale up your business exponentially or infinitely.

KEY QUOTES

"The amount of money in your life is merely a reflection to the amount of value you have given to others."

"Crowded, jammed roads move slowly, if at all."

"Stop climbing pyramids and start building them."

"There is no dependence that can be sure but adependence on one's self."
— John Gay

- There are *3 barriers to the Law of Effection*:

  (i) *Scale*: You can't make millions if you can't reach millions. If possible, sell to an entire country or the world.

  (ii) *Magnitude*: You must be able to control your unit profit by increasing prices or decreasing costs.

  (iii) *Source*: You must control the source or business system, or minimally serve the source directly.

- To *test if you satisfy this commandment*, consider if the business can: (i) increase net income by 100x or 1000x, (ii) impact millions of people, (iii) be worth millions in asset value, or (iv) be replicated easily through franchising, licensing or other options. A hot-dog stand by the beach isn't a Fastlane business. However, selling an international hot-dog franchise is.

The Commandment of Time: Your business must be able to survive and operate without you, i.e. it's delinked from your time and works even if you're asleep or on holiday. Otherwise, it's just another job.

- Find ways to *automate and systematize* your business by introducing the 5 money tree seedlings into your operations.

Find Your Interstates/Highways

Businesses that fulfill all 5 commandments are like highways or interstates with high speed limits. Here are 3 options:

- You can meet all 5 commandments with an *Internet* business. Common business models include: subscriptions (offering data or software for a recurring fee), content (offering free content and selling advertisements), leads-generation (linking customers to potential solutions), advertising (linking buyers and sellers for a fee), social networks (building communities), brokerage systems (facilitating transactions), and e-commerce (selling goods, services or information over the internet).

- *Innovation*: Invent a product/service that solves a need or want, manufacture it, then distribute it. This could be as simple

KEY QUOTES

"The larger the habitat, the greater the potential speed, or leverage, of your Fastlane."

"Effection always is biased toward the architect of the system."

"Successful businesses take existing ideas, services, and products and simply make them better, or spin them in new directions."

as repackaging a boring solution in a fresh/fun way, or taking something unconventional and making it conventional.

- *Intentional iteration*: Test, build and develop a winning business model that can be replicated unlimited times. For instance, you may start with 1 coffee kiosk, then use a cookie-cutter approach to multiply the successful model through franchising or chaining.

Fastlane opportunities are everywhere. You don't need groundbreaking ideas; you just need to improve existing ideas or execute better than your competitors. Google built a better search engine than existing players like Yahoo, Snap and AltaVista. Starbucks reinvented coffee—a beverage that had been around for thousands of years. Along the way, it's ok to change course so long as you don't quit the Fastlane to end up on the Slowlane or Sidewalk.

KEY QUOTES

"Skip the big idea and go for the big execution."

Moving Toward your Destination

Define your destination in 4 parts:

- *Define your ideal lifestyle*, including cars, house(s), holidays, children's education etc.

- *Estimate the costs* including taxes and insurance if any. Add other monthly expenses (e.g. clothing, food) to calculate your Gross Monthly Living Cost. Divide this amount by 60% to get the Net Living Cost after taxes.

- *Set your targets* for your business system and/or money system.

  (i) Build a *business system* that generates a target monthly passive cashflow of 5x your Gross Living Cost, of which 40% goes toward taxes, 40% funds your money system and 20% pays for your lifestyle.

  (ii) Alternatively, build a *money system*: amass a lump-sum of money, then earn a monthly interest to support your lifestyle. The target is Net Living Cost x 12 months divided by 5%.

"The tragedy of life doesn't lie in not reaching your goal. The tragedy lies in having no goal to reach."
— Benjamin Mays

- *Make it happen*: Build your business system a few steps at a time so you won't feel overwhelmed. Start your money system by dropping a quarter into a jar. Then, add your loose change to the jar at the end of each day. Once you have $1,000, open a brokerage account (and invest in an income fund with ≥5% annual returns), or open a trading account for Exchange Traded Funds (ETFs).

You can't get rich (or stay rich) without financial literacy.

- Learn about *economics and financial instruments*, e.g. interest rates, mortgage amortization, taxable vs non-taxable yields, return on investment, or how bonds, stocks insurance, mutual funds and global currencies work. Otherwise, you can't differentiate between good and bad financial advice, nor audit what your financial managers are doing with your money.

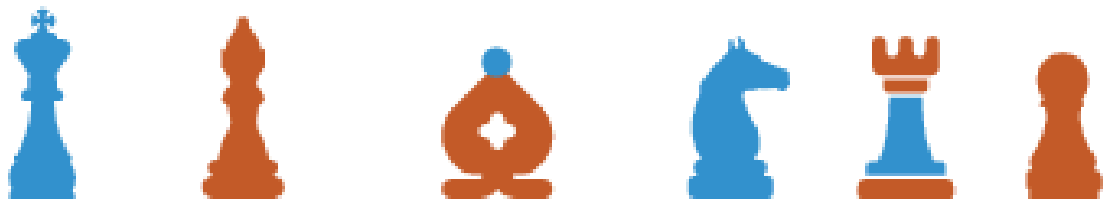
- Regardless of your income level, *live well below your means* to expand your means for maximizing income and asset values.

Speed of Wealth Acceleration

The 3 ingredients above help you to prepare for your road trip to wealth. However, nothing happens until you step on the accelerator.

- To get really good at something, you must live and breathe it. So, *focus on 1 thing at a time*. Dabbling in 20 opportunities will dilute your focus and bring mediocre results. Once you've built your wealth, you can diversify into other investments or ventures.

Think of your Fastlane business like chess. Use all the pieces on the chessboard to win the game:



King – Execution
Queen – Marketing
Bishop – Customer service
Knight – Product
Rook – People
Pawn – Ideas

KEY QUOTES

"No matter how big or small, dreams have a price, and that price is money, responsibility, accountability, and commitment."

"Financial advisers do not solve financial illiteracy just as more money doesn't solve poor money management."

"Fastlane success comes from monogamy; not split attentions among wives and mistresses...Focus on one Fastlane business and kick ass at it."

Execution is King

An idea is worthless until it is executed. You won't know if an idea or plan works until you test it in the market.

- By all means do some market research and financial analysis, but don't waste time on a complex business plan. Use *real-world feedback* to validate your direction, figure out what to change or continue. If people like your idea or offer, they will give you their time, support and money.

Investors look for a strong track record of execution. The best way to secure investment or venture capital is to make your idea tangible—develop a prototype, start acquiring customers and build a brand/process so there's something concrete for investors to see, experience and touch.

Marketing and Branding = Queen

A weak business can still survive with strong marketing, because marketing shapes perceptions which in turn shapes reality.

- *Build brands, not businesses*. If you sell cars or computers, you're just selling commodities. However, when you build a strong brand, you create an identity that consumers can relate to, e.g. Volvo stands for safety, Ferrari stands for luxury, and Apple stands for elegance and simplicity.

To build a brand, you need a Unique Selling Proposition (USP). This is the compelling reason for customers to choose you over your competitors, and it forms the anchor for your brand.

- To *develop a strong USP*:

  (i) Focus on the need/want that you serve better than anyone else. What's the *biggest benefit* you offer to consumers that competitors don't? What makes you unique?

  (ii) Describe the unique benefit using *strong action verbs*, e.g. "obliterate fat" is more compelling than "lose weight".

  (iii) Incorporate the USP into all your marketing materials, e.g. website, email signature, receipts, advertisements etc.

KEY QUOTES

"Execution is the great divider separating winners and losers from their ideas."

"The owner of an idea is not he who imagines it, but he who executes it."

"The value is not the plan, but the person giving it and his track record of execution."

"Own the consumer's mind and you own the consumer."

"Businesses survive. Brands thrive. Businesses have identity crises, brands don't."

- Use these tactics to make sure you're *heard above the noise*.

  (i) Polarize: Present an extreme viewpoint so people either love or hate you.

  (ii) Move your audience by triggering feelings of pride, joy etc.

  (iii) Use sexual appeal to grab attention.

  (iv) Be interactive: People are more likely to buy something if they can touch, taste, or use it first.

  (v) Be unconventional.

- People don't buy cars, dresses, or holidays; they're actually buying reliability, confidence or memories. Once you catch people's attention, focus on what's in it for them. To *translate features to benefits*:

  (i) *Put yourself in your buyers' shoes*: Who are they? What do they want or fear? What problems do they wish to solve?

  (ii) Identify your solution's *features*, and how each feature provides advantages that translate into *benefits or results*. For example, your app allows home-sellers to create and upload 3D pictures, which allows potential buyers to "tour" the house remotely. Home-sellers can filter out serious buyers and waste less time on those who're just browsing.

Use price as a branding tool since it affects the perceived value of your product. A painting priced at $200 may actually sell faster than one priced at $20. Product B below appears more valuable than Product A (even though the sale price is the same).

Product A	Product B
$9.99	~~$59~~ ~~$29~~ $9.99 (Final Reduction!)

Customer Service = Bishop

The goal of customer service is to help/support customers to resolve their issues.

Use complaints to learn what customers are thinking. Keep a record of all complaints, look for patterns and identify which ones to prioritize. There are 4 main types of complaints:

KEY QUOTES

"If you can move your audience's emotions and make them care, they will buy."

"Price is a brand-builder because price implies value."

- Complaints about *change*. It's normal for people to resist changes, but a change clearly doesn't work if brings lots of complaints and a loss of customers.

- Investigate complaints that you've failed to meet *expectations*. Often, these reveal operational or product problems and/or marketing misinformation that should be rectified.

- If customers frequently ask for *something you don't have*, it represents an opportunity to address unmet needs.

- *Fraudulent complainers* seek to exploit the business (e.g. a diner adding an insect to his food to get a free meal). Respond graciously, politely explain your stand and move on.

You earn customers' loyalty and positive word-of-mouth when you exceed service expectations. For instance, rather than send customers to a voicemail or automated attendant, surprise them by having a real person pick up the call and resolve their issue within 5 minutes!

Products/services = Knight

A Fastlane solution must solve such a big problem for customers that you become their savior.

- Many entrepreneurs waste too much time focusing on rivals. They end up reacting to competitors' moves instead of growing their own businesses. Focus 95% of your energy/ resources on *innovations* that can win your customers' hearts and minds. Use just 5% of your focus to differentiate your business further by exploiting your competitors' weaknesses.

People = Rook or Castle

The right people accelerate your journey while the wrong ones can derail you.

- *Business partnerships* are like marriages. Take the time to make sure you're compatible—you have complementary skills, a common vision, goals, and values—before you get married.

KEY QUOTES

"Poor service gaps are Fastlane opportunities."

"To create raving customers, you must exceed satisfaction."

"Partnerships are like marriage-half the time they will fail because the partners just aren't compatible."

- Hire *accountants and attorneys* you can trust. Do your due diligence, including background and reference checks.

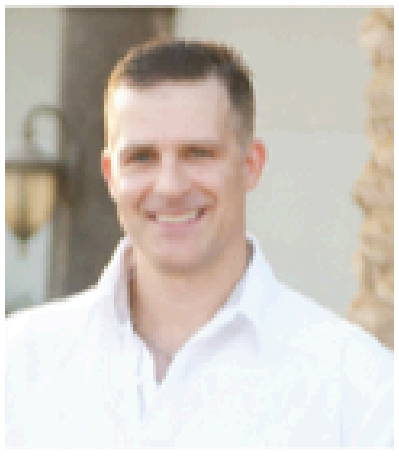
- Your *employees* are your co-drivers. Find the right people who can represent your business and execute your vision and customer service philosophy.

Other Details in the Book to Look out For

You won't get results from knowledge alone. Make a firm decision to apply the insights in this book and start your road trip to wealth. This book is written in 45 short chapters, each with specific distinctions to change how you think about wealth, and examples to bring the ideas to life. For more details, please visit https://www.mjdemarco.com/.

About the Author

M.J. DeMarco is a semi-retired entrepreneur, investor, advisor, and author. He is currently the founder of Viperion Publishing Corp. and The Fastlane Forum (an entrepreneurial community). Previously, he founded Limos.com (1997-2007) which he sold in 2001, reacquired and resold in 2007.



KEY QUOTES

"Be very careful with whom you trust with the keys to your castle because they can drive you to financial ruin."

"Your choices are made in a moment, but their consequences will transcend a lifetime."

THE HARD THING ABOUT HARD THINGS

Building A Business
When There Are No Easy Answers

BEN HOROWITZ

The Big "So What"

Owning a business or being a CEO may sound enviable, but in reality it's full of challenges. The hardest thing is, there are no fixed formulas you can follow. The author, Ben Horowitz, is one of the most respected and experienced entrepreneurs in Silicon Valley. In this book, he shares his experience as an entrepreneur, CEO and venture capitalist, and offers practical tips and advice for dealing with the "hard things" in business that have no clear answers.

Introduction

Horowitz starts by sharing his journey—from an employee to entrepreneur, building a company, falling to nothing, and rebuilding a business that was eventually sold for $1.65b. He then moves on to explain the key lessons learnt, using anecdotes from his experiences, e.g. what it's like to lay off people, run out of cash, or keep people motivated during a crisis. While his experiences are in technology companies, the insights are applicable to most businesses.

In this summary, we've distilled and organized the key ideas from the book into 3 parts:

- Behind the Scenes: Highlights of Horowitz's business journey;
- Building your Business; and
- Holding Things Together.

Behind the Scenes

Most people don't see the stress and sleepless nights that a CEO goes through. In the book, Horowitz shows us the real challenges and the emotional roller coaster that come with running a business. Here are some key highlights:

KEY QUOTES

"There's no recipe for really complicated, dynamic situations."

"That's the hard thing about hard things—there is no formula for dealing with them."

"I do not attempt to present a formula in this book. Instead, I present my story and the difficulties that I have faced…in the hope of providing clues and inspiration for others who find themselves in the struggle to build something out of nothing."

"We've built something from nothing, saw it go back to nothing again, and then rebuilt it into a $1.65 billion franchise."

Horowitz started his career in Silicon Valley as an engineer, and got to know Netscape's CTO, Marc Andreessen when he was hired as Netscape's project manager. After Netscape was sold to AOL, Horowitz and Andreessen started their own company **Loudcloud** in 1999, offering cloud technology.

- Loudcloud *grew aggressively* and secured $10m worth of contracts within 7 months. However, with the *dotcom crash* in 2000, it quickly found itself at the brink of bankruptcy.

- To survive, they had to *bring the company to IPO*, even though they were operationally unsound, lacked a strong sales process/customer base, and faced a market that was cynical about technology stocks.

- Despite overcoming massive challenges to IPO the company, Loudcloud *continued to struggle*. Their share price fell by two-thirds after they missed their first-year forecast. This was followed by the 2001 terrorist attacks in the USA. Even their largest competitor, Exodus, lost $40b market capitalization and $800m cash in just over 1 year, and filed for bankruptcy.

- At his wits' end, Horowitz asked himself, "*What's the worst thing that could happen?*" He realized that, if they went bankrupt, he would cut off their cloud business and salvage their software arm Opsware. He started to make this shift discreetly, and business improved.

Then, their largest customer went bankrupt and defaulted on $25m of outstanding payments. At this point, they had no choice but to **sell off Loudcloud**, their entire cloud business. This meant laying off 140 employees and selling 150 employees with Loudcloud.

- Selling Loudcloud to EDS also meant selling 100% of their customers and revenue. *Stock price plummeted* to $0.35.

- They retained the Opsware IP, but had to *rebuild a new software company*. The remaining staff were presented with the new opportunity, and given the option to commit to the new vision or leave the company. Only 2 employees quit, and 76 out of the remaining 78 staff stayed with the company until it was sold to Hewlett Packard (HP) 5 years later.

KEY QUOTES

"If you are going to eat shit, don't nibble."

"Every CEO likes to say she runs a great company. It's hard to tell whether the claim is true until the company or the CEO has to do something really difficult."

- Next, they had to *revive their stocks* by convincing the market of their new vision, then figure out how to deliver the right product.

- In the process, they had to *let go of the old executive team* and rebuild a new team that understood the software market.

Building Opsware came with many new challenges:

- Within a few quarters, they received news that EDS—their main client which contributed to 90% of their revenues—wanted to *cancel their contract* and get a refund. They had only 60 days to fix the software to EDS' satisfaction. In the end, they found a creative solution: they acquired Tangram (a different system that EDS wanted) for $10m, and offered it as a free service with Opsware. Having saved the EDS account, Opsware now had to work out if/how to integrate Tangram's 57 employees.

- Before long, they faced another challenge: a *new competitor*, BladeLogic, was beating them with a superior product. Horowitz rallied his engineers, who worked 7 days a week, for more than 12 hours a day, over 9 months, to redefine and deliver a *new winning product*. The company now needed a *strong sales force* to sell the product. Mark Cranney was hired as the new head of sales: he assembled a strong team, relentlessly trained them, and personally reviewed the details of each deal to coach his team toward sales mastery.

As Opsware grew, offers to buy the company started to stream in, and it was eventually **sold to HP** in 2007 for $1.65bil.

Through these ups and downs, Horowitz learned the myths and realities of what it means to start a business and be a CEO. In the next 2 sections, we'll present some of these key tips and insights.

Building a Business

The correct sequence of priorities for any business should be: people, products, *then* profits.

KEY QUOTES

"It turns out that...figuring out the right product is the innovator's job, not the customer's job."

Building a Great Place to Work

Taking care of your people is all about making your company a great place to work.

A good organization is one where people can **focus on doing a great job**, feeling secure that both they and the company will be rewarded. On the other hand, in a bad organization, people lack clarity and fight internally; products and profits suffer as a result.

Generally, people are happy to work for a company when things are rosy. However, when things go wrong, the quality of your workplace will decide **whether people stay** and stick it out.

Hiring the Right People

Size mismatch. Many startups hire big company executives, only to realize there's a mismatch:

- Work in a startup involves *different rhythms and skill-sets* from that of a large company. *Startup executives* must be hands-on, create things from scratch, handle 8-10 new initiatives a day, and get out there to make things happen. On the other hand, *large company executives* must be good at juggling tons of emails/meetings, handle organizational design and process improvements, and usually take on ≤3 new initiatives a quarter.

- To avoid wrong hires, *test for mismatches* during interviews. Ask questions like, "What will you do in your first month on the job?", "What do you think will be different between your current job and this job?" *Integrate* your new hires asap by requiring weekly creations, hands-on involvement in product/customer details, and personal interaction with key people in the company.

As a CEO, you must hire and manage executives who can do things better than you can, and for jobs you've never done yourself. How do you know **what to look for?**

KEY QUOTES

"The most important thing to understand is that the job of a big company executive is very different from the job of a small company executive."

- The best way is to put yourself in the role, to get first-hand knowledge of what's needed for your company. *Identify what's required* for the specific role, at that specific point in time.

- *Convert the criteria into processes*. Identify the *essential strengths*, acceptable weaknesses, and hire for those strengths (not for a lack of weaknesses). Develop *specific questions* that test for those criteria. Organize an *interview team* that can assess the fit, and whose support is needed once the executive is hired.

- The CEO must be prepared to make the *final decision*. When Horowitz hired Mark Cranney as Opsware's Head of Sales, he decided to accept Marks' weaknesses, as Mark had the strengths needed to assemble a strong Opsware sales team for their new product. During the interview, Horowitz asked targeted questions like, "What do you look for in a sales rep?", "How will you screen for these during an interview?", "How will you train the sales team?". With the right strengths, Mark grew Opware's sales by more than 10x, with low staff turnover on his team.

Training Your People

Startups tend to focus on recruiting the best talents, but neglect their training. Training is vital in startups, as it helps to set performance expectations, create consistency and alignment, and improve productivity and staff retention.

You can start with *functional training* tailored to specific job roles, to set expectations and provide the background/details on your products. Use *management training* to convey clear expectations for your managers, e.g. are they expected to meet and coach their staff regularly? You can also get your *best people* to teach their top skills, to improve overall competencies and recognize good staff.

Managing a Company

What you measure can change behaviors, e.g. when you measure the duration of customer service calls, your staff may start to focus on finishing the calls quickly rather than

KEY QUOTES

"You must hire the right person for your company at this particular point in time."

"I'd learn the hard way that when hiring executives, one should follow Colin Powell's instructions and hire for strength rather than lack of weakness."

"Bringing in the right kind of experience at the right time can mean the difference between bankruptcy and glory."

"Being too busy to train is the moral equivalent of being too hungry to eat."

"Management purely by numbers is sort of like painting by numbers—it's strictly for amateurs."

engaging the customers. Always **blend qualitative and quantitative targets**, e.g. combine product vision with metrics like speed or durability.

Sometimes, an easier decision can have a costly long-term effect– this is called a "**management debt**". Here are 2 common scenarios:

- When a key staff gets a better job offer, it's common for companies to make a counter-offer to retain him, even if he's now *over-compensated* relative to his peers. Soon, others also threaten to quit to get a pay raise.

- As a company grows, CEOs may resist adding *HR systems*, to save costs and keep the environment casual. In the long run, performance drops and the company suffers.

Great CEOs make the hard decisions in the short-term, so they don't have to pay the price of management debt in future.

Strong **HR capabilities** can improve your management quality:

- *A strong HR Head* should be perceptive, an effective facilitator between the managers and CEO, strong in process design and control, and well-versed with the latest HR knowledge.

- Use the *employee life cycle* to evaluate your management quality, by looking at the components of recruitment/ hiring, compensation, training/integration, performance management, and motivation.

Leading a Growing Company

A company with 10 staff vs 10,000 staff must behave differently. A CEO must embrace and manage the changes that come with growth.

Politics emerge when people are rewarded for reasons besides contribution/merit. It often starts unintentionally with the CEO, e.g. when you agree to change someone's job title/responsibility due to their lobbying efforts. To minimize politics:

KEY QUOTES

"Management debt is incurred when you make an expedient, short-term management decision with an expensive ,long-term consequence."

- Hire people with the *right ambition*, i.e. they don't pursue personal success at the company's expense. During interviews, be cautious of people who regularly use words like "I" and "me", or claim personal credit for big projects without knowing the details.

- Develop *processes for politically-sensitive areas*, such as a proper performance evaluation/compensation system and a transparent, merit-based promotion system.

- Your *words, actions, or even silence* as a CEO can be misinterpreted by your staff. Be mindful of gossip, hearsay, and the types of rewards or incentives that you offer. Handle issues with transparency and don't allow staff to complain to you about other colleagues in their absence

Managing titles/promotions. At the startup phase, people do whatever's required to get things going, and roles are often vaguely defined. However, titles must be carefully managed as they affect expected compensation, perceived fairness and organizational effectiveness.

- The *Peter Principle* (by Peter and Hull) says that people will be promoted to their "level of incompetence", while the *Law of Crappy People* (by Horowitz) says that people will benchmark themselves against the lousiest person at the next level and expect to be promoted when they reach that level of competency.

- Make sure the titles reflect the *level of influence and value* of that role. You need to specifically define the skills and responsibilities for each level, and have a formal committee and process to review employees for promotion.

- Never evaluate people based on their *potential* to meet your company's future needs, since skills can be learned, things will change and you can't predict the future.

Horowitz places great emphasis on **1-1 meetings** as a key management tool. The aim of such meetings is to provide a platform for employees to flexibly discuss any issue or idea that may not otherwise be raised.

- To provide *structure* for the meeting, ask your staff to set the agenda in advance.

KEY QUOTES

"Because titles will be used to calculate relative value, they must be managed carefully."

- To *draw out key issues*, try using questions like, "Are you happy working here?", "If we can improve in anything, what will it be?", "If you were me, what changes would you make?"

Your culture is essentially how things work in your company. Having the right culture helps you to find the right employees, preserve your values, deliver great products, a great work experience and long-term performance.

- Great companies are often associated with strong, "cult-like" cultures. To influence behaviors on a large scale, focus on a few "*cultural design points*", i.e. things that are so shocking that they trigger discussion and behavioral change. For example, Amazon had its office desks made from cheap Home Depot parts, which give reason for staff to explain to visitors/new staff how Amazon always seeks to deliver the best solutions at the lowest cost.

- *Ask good questions*. Horowitz found it useful to incorporate this question at his meetings: "What are we not doing?". This question shifts the focus away from the work being done/completed, to identify gaps and blind spots. Asking this question led Opsware to acquire a network automation company, which won them a business deal that paid for the acquisition almost immediately.

To make a big impact, you must know how to scale your company.

- Scaling your company involves *specialization* (devoting people and teams to specific tasks) and *organizational design*. Consider what needs to be communicated, the types of regular decisions to be made, your business priorities (e.g. is it more vital for your designers to know the customer or product architecture?), and decide who to lead each group. There's no perfect structure; decide on your trade-offs, and address the gaps in other ways.

- As you scale, your communication, info-sharing and decision-making become exponentially more complex, e.g. the more specialized your staff are, the more coordination you need. Thus, *don't add processes/changes unless you absolute have to*. You know it's time to make changes if you find that adding a new staff creates more trouble than the help he/she brings.

KEY QUOTES

"Sometimes an organization doesn't need a solution; it just needs clarity."

"Perhaps the CEO's most important operational responsibility is designing and implementing the communication architecture for her company."

"A properly designed culture often ends up looking cultlike in retrospect, but that's not the initial design principle."

"You want to optimize the organization for...the people doing the work—not for the managers."

"Be mindful of your company's true growth rate as you add architectural components. It's good to anticipate growth, but it's bad to overanticipate growth."

Holding Things Together as the CEO

Challenges are inevitable in business. In fact, greatness is born from struggles, and the CEO can make the biggest difference in times of crises. When things fall apart, it's the CEO's job to hold everything together and find a solution. Don't start a company unless you're willing to deal with this.

Surviving the Struggle

Everyone starts the entrepreneurship journey feeling confident of success—you see yourself making a positive impact, with a great team, great products and happy customers. However, the reality often turns out to be the opposite: your product isn't ideal, market conditions aren't up to expectations, good people leave and you run out of cash.

Every successful entrepreneur goes through the phase when everything seems to fall apart: Horowitz calls this **"The Struggle"**.

- At this point, you'll feel lost and lonely; you're filled with self-doubt and wonder why you're hanging on. Rather than waste energy feeling sorry for yourself, just *do what you have to do* to fix things. *That* is the job of the CEO.

- It doesn't matter if you have a 1% or 90% chance of success—as the CEO, you must stay focused and *find the best possible move*, no matter how hopeless things appear.

Here are some tips that can help you to **survive The Struggle**:

- *Share your burdens*. As the CEO, you're the only one who can see all the pieces of the puzzle, and have to shoulder the full burden. However, don't try to take on everything yourself, or feel bad about troubling others. No one will feel the load or responsibility as much as you. Opsware survived its multiple crises due to the entire team's effort.

KEY QUOTES

"When you are building a company, you must believe there is an answer and you cannot pay attention of your odds of finding it. You just have to find it."

"As your dreams turn into nightmares, you find yourself in the Struggle."

"It's the moments where you feel most like hiding or dying that you can make the biggest difference as a CEO."

"The Struggle is not failure, but it causes failure."

"Nobody takes the losses harder than the person most responsible. Nobody feels it more than you."

- *There are always options*. Businesses are complex, with constantly changing variables (people, competitors, technology etc.). This means that there will always be moves that you can make, however desperate the situation. As things change, new answers (that previously weren't available) also emerge—the key is to stay long enough in the game to find them.

- *Don't take it personally*. Although you are ultimately responsible for your decisions/mistakes, bashing yourself won't help. Everyone makes mistakes; don't be too hard on yourself.

Tell Things As They Are

When things go wrong, leaders sometimes lie to themselves with excuses like, "We lost the deal because the competitor was desperate enough to price below cost". CEOs may also try to boost morale by putting up a positive front and playing down the negatives. **Be transparent** and tell things as they are:

- You can't fix all the problems by yourself. By sharing the truth, you build *trust* between you and your team, which facilitates communication and collaboration.

- If people are used to masking bad news, problems can stay hidden until it's too late. Build a healthy culture where people feel free to *discuss problems and explore solutions*. After all, why hire great people if you don't put their talents and skills to use?

Face the reality. We want to believe that we can predict or control our business. However, the truth is, we can't. When the unexpected happens, don't wish for normalcy or magic solutions; face the issues head-on, like how Opsware recreated their product to counter BladeLogic's superior product.

Distinguish facts from assumptions. Shortcuts, conventional wisdoms and first impressions are often misleading. Gain *first-hand knowledge* wherever possible, and always step back to look at *alternative perspectives*.

KEY QUOTES

"If you survive long enough to see tomorrow, it may bring you the answer that seems so impossible today."

"My single biggest personal improvement as a CEO occurred on the day when I stopped being too positive."

"In any human interaction, the required amount of communication is inversely proportional to the level of trust."

"A brain, no matter how big, cannot solve a problem it doesn't know about."

"Following conventional wisdom and relying on shortcuts can be worse than knowing nothing at all."

Asking People to Leave

One of the hardest things about running a company is to ask people to leave. Yet, it's vital to do it right.

Layoffs can tear a company apart, as the remaining employees no longer feel committed to build the company. Yet, Opsware succeeded despite 3 rounds of layoffs. It *is* possible to lay off people properly, however unpleasant it is.

- *Focus on the real reasons and the future*. Layoffs are the result of the company's *failure* to fulfill its goals; it's not an excuse to remove people for poor performance. Admit that the company's failure has resulted in the need to lose great people. Look to the future and don't let bad feelings of the past cloud your mind.

- Once the decision is made, *execute it asap*. Once news leak out, they create questions, uncertainty and confusion.

- *Don't outsource* the layoffs to your HR department or an outsourcing firm: The CEO must *personally address* the entire company, to set the context and lay the ground for execution later. T*rain your managers* to lay off their people: they must be able to (a) explain the company failure, (b) convey that the decision is non-negotiable, and (c) share the details of the benefits and support to be offered. Be visible and available throughout the process.

If you need to **fire a senior executive**, prepare in advance using these 4-steps:

- *Analyze the root-cause*. This is always due to a system failure, e.g. poor job definition, failure to hire for specific strengths, or failure to integrate the person. "*Scaling*" is also a common cause, when the people you hired are no longer suitable for the new roles/needs of your growing company. If your firm is growing rapidly, go for executives with a strong track record of managing growth and adapting with the company.

KEY QUOTES

"The wrong way to view an executive firing is as an executive failure; the correct way is to view an executive firing as an interview/ integration process system failure."

- *Get the Board's support* for your decision, the separation package, and to protect the reputation of the executive. Ideally, call each board member to break the news personally, especially if the executive was recommended by one of them.

- *Prepare for the conversation*: Script, practice, then speak with the executive asap. Make sure you (a) present the reasons clearly, (b) convey the decision firmly and (c) be ready with the details of the severance package. Let the executive decide how best to communicate the news to internal and external parties.

- *Prepare to inform the company*. Ideally, the decision should be communicated to the rest of the company in a few hours, or within the day. Start with the executive's direct reports, other members of your staff, then the rest of the company.

Becoming a Better CEO

As an entrepreneur or CEO, you often have to lead even when you have no idea where you're going. One of your key challenges will be to **manage your own headspace**.

- The path of a CEO can be a *lonely* one. You have to learn on the job and from your mistakes, bear full responsibility for the company, yet you can't share your fears or doubts with employees or outsiders.

- The best CEOs manage their emotions, act decisively, and simply don't quit. To *help yourself cope*, (a) get psychological support from friends who've survived tough times, (b) think on paper to clear your head, and (c) focus on your options, not the problems.

You can **improve your effectiveness** by working on several areas:

- Learn to *give and receive feedback*;

- Often, the tough decisions are not about knowing what to do, but having the courage to do them, e.g. to kill a product line or sell off an entire division. By making small

KEY QUOTES

"When a company multiples in size, the management jobs become brand-new jobs... everyone needs to requalify for the new job, because the new job and the old job are not the same."

"When you expect your employees to act like adults, they generally do."

"You will face a broad set of things that you don't know how to do that require skills you don't have."

"Focus on the road, not the wall... Focus on where you are going rather than on what you hope to avoid."

"Spend zero time on what you could have done, and devote all of your time on what you might do."

"The right decision is often obvious, but the pressure to make the wrong decision can be overwhelming."

but difficult choices regularly, you *build courage* to take on bigger challenges;

- Nurture *3 key leadership attributes*: (a) *express the vision* and sustain people's belief, (b) *have the right ambition* and show that you truly care for your people, and (c) work on your *competencies* to deliver the vision.

Different leadership styles are required during **"peacetime" and "wartime"**. When the company is doing well relative to competitors, the CEO's role is to improve innovation across-the-board, grow your market and enhance your strengths. However, when the company is fighting for survival, the CEO must focus all the resources on a single goal that's aligned to your mission, and ensure its achieved. The 2 sets of skills are so different that you typically need different leaders for peace vs crisis.

Other Details in the Book to Look out For

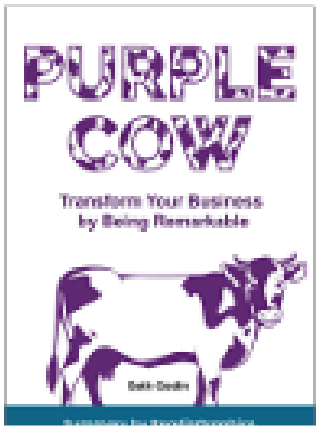
While there are no secret formulas for the "hard things" addressed in this book, Horowitz uses a wide range of anecdotal examples to illustrate how you can deal with these tough issues, and the important pitfalls to avoid. In the book, he includes many other details including:

- Sample interview questions, documents and checklists that he used to communicate expectations and review his organization;
- Detailed accounts of how he handled situations involving politics, competition, internal communications etc.; and
- Other advice on how to give feedback, how to evaluate CEOs, whether you should sell your company, etc. For more details and resources, do visit the Andreessen Horowitz website.

KEY QUOTES

"Peacetime CEO knows that proper protocol leads to wining. Wartime CEO violates protocol in order to win."

"The world looks one way in peacetime but very different when you might fight for your life every day."



PURPLE COW

Transform Your Business by Being Remarkable

SETH GODIN

The Big "So What"

The world of marketing has changed forever, and traditional forms of marketing no longer work. The best way to launch a new product/service or build a brand successfully is to be remarkable. This book explains why and how to build Purple Cows that people will notice and talk about.

Introduction

In the past, businesses typically used the 5Ps of marketing to guide their marketing strategy and tactics. Depending on the company or individual, the 5Ps could include: product, pricing, promotion, positioning, publicity, packaging, pass-along, and permission.

Today's marketing climate calls for a new P—the "Purple Cow".

- The Purple Cow refers to something *remarkable*, i.e. something worth noticing and talking about. Imagine you're a city-dweller driving through the countryside. Initially, you may feel excited to see brown cows grazing in the fields, but you'll quickly lose interest after a few hours of the same scenery. Then, you notice a purple cow in the field. Suddenly, you're sitting up, snapping photos and sharing it with everyone—because it's unique and remarkable.

- This book is written in many short, bite-sized chapters, each discussing a concept or insight about marketing. In this summary, we've consolidated the ideas into *2 main sections*:

  (i) The New World of Marketing; and

  (ii) Creating your Purple Cows.

KEY QUOTES

"This book is about the why, the what, and the how of remarkable."

"Marketers for years have talked about the five Ps of marketing…This is a book about a new P, a P that is suddenly exceptionally important."

"Remarkable marketing is the art of building things worth noticing right into your product or service."

The New World of Marketing

Marketing has changed dramatically in the past decades:

- *Before* the age of TV and advertising, people relied primarily on word of mouth to discover great products/services, such as the market stalls with the freshest produce.

- *During* the advertising era, companies with big budgets could spend money on mass media ads (e.g. TV, newspapers, magazine) to reach masses of people, sell more products, then invest the profits in more advertising to grow their market share. Mass-market ads were effective since there were relatively fewer advertisers and choices for consumers.

- We're now in the *post-advertising era*, where the market is so saturated with ads that consumers have become indifferent to them. Successful marketing now hinges on the ability to solve consumers' problems and get word-of-mouth referrals. To do so, marketers must first grab consumers' attention and have a solution that works.

Today's consumers are still looking for great solutions to their problems. The key marketing challenge is this: there are now more and more choices, and people have less and less time. So, they simply ignore the unwanted messages. Even satisfied customers are less likely to share about a product unless it's truly exceptional.

- You can only sell a product/service to someone who has the *money, time, or desire* to buy it. The person must:

  (i) Be able to afford your product;

  (ii) Have the time to listen to your pitch/message; and

  (iii) Want the product after hearing the pitch.

- *For example*, if you were the first to invent aspirin, it would've been much easier to get people's attention. Today, to sell a new brand of aspirin, you must:

KEY QUOTES

"The world has changed. There are far more choices, but there is less and less time to sort them out."

"As consumers, we're too busy to pay attention to advertising, but we're desperate to find good stuff that solves our problems."

(i) Find a way to reach the people who need pain relief;

(ii) Find those who're willing to consider a new brand; and

(iii) Convince them to choose your brand over your competitors (including established brands that've had years to hone their products and ads).

- Today, results from *mass-media advertising* are dismal despite the high costs. If you reach 1 mil people but only 0.001% make a purchase, that translates to just 10 customers.

  (i) Godin did an experiment with people reading the Wall Street Journal at a hotel lobby. He asked if they could name 2 companies that had run a full-page ad, if they could recognize the company (after he hid the logo on the ad), or if they had ever enquired about a product/ service after seeing the ads. The answer was "no" to all 3 questions.

  (ii) Famous marketer Sergio Zyman admitted that 2 of Coke's most famous commercials—"I'd like to teach the world to sing" and "Mean Joe Greene"—didn't generate any additional revenue.

KEY QUOTES

"Stop advertising and start innovating."

Why You Need Purple Cows

According to Godin, 80% of the new entrants to Interbrand's top 100 brand list succeeded due to word of mouth, not extensive advertising. The most wildly-successful solutions tend to be outliers, i.e. they're unusually fast or slow, big or small, luxurious or affordable.

"Services that are worth talking about get talked about."

- Each of these companies stood out because they *didn't play by the rules*—and neither should you:

  (i) JetBlue Airways went with a low-cost structure, underused airports, and non-union staff, at a time when air travel was dominated by full-service airlines with unionized staff.

  (ii) Starbucks invented the coffee bar concept, at a time when canned supermarket coffee was the norm.

  (iii) Vanguard created low-cost index funds that full-service brokers simply couldn't compete with.

- If you try to *copy the market leader*, you'll always lag behind. More importantly, you'll never be remarkable since your idea/approach won't be unique.

- Offering the *lowest price* is also not a good strategy since your rivals can always undercut you. Being a Purple Cow means offering drastically lower prices *and* higher value by fundamentally changing how a product is designed, produced or delivered—like what IKEA did with home furnishing.

In *"Crossing the Chasm"*, Geoff Moore presents the adoption curve which explains how new technology moves through the market. Although the book was written for high-tech solutions, the insights apply to virtually *any* product/service in any market.

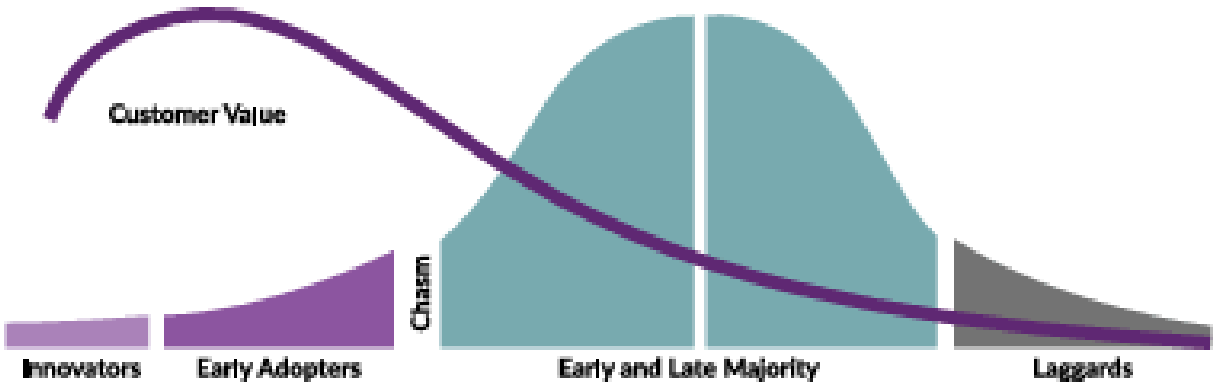


Diagram adapted from Crossing the Chasm (by Geoff Moore) and Purple Cow (by Seth Godin)

- *Innovators* are the first to try new products, not because they need the products but because they simply love new solutions.

- After them comes the *early adopters* who actually benefit from the products. They're actively looking for good solutions to their problems, and will pay for such products or services.

- The *early and late majority* represent the bulk of the market. However, they're happy with existing solutions and will ignore your marketing messages. The only way to get their attention is by getting the early adopters to embrace your solution and spread the word.

- The *laggards* start using the products when people are already moving on to newer solutions, e.g. they start using CDs when people are ready to move on to mp3s.

In short, a new product/service cannot reach the mass market without first going through the innovators and early adopters. If you target the mass market directly, you'll fail because:

KEY QUOTES

"The leader is the leader because he did something remarkable. And that remarkable thing is now taken–it's no longer remarkable when you do it."

- Products that seem safe enough for the masses will be too *boring* for innovators and early adopters.

- You'll also need to spend millions (or even billions) to advertise directly to the masses. Yet, the early/late majority will ignore your marketing messages by default. If you fail to grab their attention, you won't have enough *resources* to try again.

☑ Instead, aim to win over the "sneezers" among the early adopters. These are people who can spread contagious ideas (which Godin calls "ideaviruses") to heavily influence the rest of the curve.

- Don't try to target everyone. Instead, focus on a *specific niche* to increase the chances that you can design an irresistible solution and reach a critical mass of people through a few sneezers.

- Use *targeted marketing* with the goal of getting the sneezers (early adopters with influence) to try your solution and recommend it to others. For example, when Zespri launched their new kiwi fruit with golden flesh and an edible peel, they used in-store tasting in upscale Latino groceries to reach the right people.

- Most importantly, design a *virus-worthy product* that can attract the early adopters *and* help them to promote it to others easily. To evaluate a product/idea's potential as an ideavirus, consider:

  (i) Is it easy to spread your idea?

  (ii) How often will people share the idea?

  (iii) How closely-knit are the communities? How far do they trust one another?

  (iv) How influential are the potential sneezers?

  (v) Will the idea persist over time or fade quickly?

- Once you've *dominated the niche* and have sneezers spreading the ideavirus for you, it's much easier to reach the masses without spending millions on advertising.

📖 In short, the rule of marketing has fundamentally changed.

KEY QUOTES

"Don't try to make a product for everybody, because that is a product for nobody."

"A brand (or a new product offering) is nothing more than an idea. Ideas that spread are more likely to succeed than those that don't."

- In the past, the rule was to create safe products that can be marketed to the masses. Now, the *new rule* is to create remarkable products that will attract the right people.

- Since every Cow is unique, there's *no fool-proof formula* for creating a Purple Cow. However, you can use the principles, ideas and concepts below to increase your chances of success.

Creating Your Purple Cow

Dare to Stick Out and Be Remarkable

To build a Purple Cow, you need the courage to take risks. Purple Cows are so rare because most people are afraid to stick out.

- All great artists, authors, chefs, and businesses have their share of *failures and criticisms*. If you're remarkable, you *will* get both attention and criticisms. Moreover, you can't predict which ideas will succeed, so you'll definitely experience failures. Ultimately, you can either be safe and boring, *or* unique and virus-worthy. You can't be both.

- *Being safe is riskier* than being different. A safe, boring idea makes you invisible in a crowded marketplace so you'll certainly fail. A bold idea at least gives you a shot at greatness. Moreover, the more others avoid risks/criticisms, the greater your opportunity to stand out as a Purple Cow. For example:

  (i) In the past, chairs were treated as boring complements to desks. Then in 1994, *Herman Miller* introduced the Aeron chair which looked and worked differently, and cost much more at $750 each. The idea was risky, but it paid off.

  (ii) When *Lionel Poilane* inherited his dad's French bakery, he didn't just continue to do the same thing. His bakery was the first in France to introduce organic flour, and to create wood-fired oven-baked sourdough bread using just flour, water, sea-salt and starter. His innovation paid

KEY QUOTES

"The old rules don't work so well any more. Marketing is dead."

"What's missing isn't the ideas. It's the will to execute them."

"The best the timid can hope for is to be unnoticed. Criticism comes to those who stand out."

"Being safe is risky."

off, and the Poilane bread can now be found across the globe.

- Purple Cows are not meant to appeal to everyone. If you have creative people working on your Purple Cows, give them the *space to develop exceptional ideas* for a niche market. Don't insist on using focus groups or user tests to prove the concept with mainstream customers.

It's not enough to create something that's "very good". The more noisy, crowded or rigid a market is, the more you need a truly remarkable Purple Cow to cut through the clutter.

- It's better to go for a few *dramatic improvements* that the right customers will care about, than to keep churning out meaningless marketing campaigns. Take 1-2 seasons off to develop promotions or activities that are worth noticing. For years, Ben & Jerry's didn't run any short-term promotions. Instead, they generated massive buzz and publicity just by giving out free ice-cream once a year.

Go for Targeted Marketing, not Mass Advertisements

Not all customers are equally profitable. Differentiate your customers with the goal of finding the group that's (i) the most profitable or (ii) the most likely to sneeze. Then, focus on reaching, cultivating, and rewarding this group. Ignore all others.

- Go for the *smallest market niche* you can serve remarkably:

  (i) Which is 1 underserved market niche that you can dominate?

  (ii) What product could be irresistible to this market?

- *Match your product to the market niche*. For example, if you're selling frozen comfort-food, it makes more sense to target overworked house-husbands than people watching a gourmet cooking show. You can:

  (i) Figure out your audience, then solve their problem; or

  (ii) Start with a problem you can solve, then figure out the people who'd love your solution.

KEY QUOTES

"Very good is an everyday occurrence and hardly worth mentioning."

"Irresistible (for the right niche) is just remarkable."

Develop a slogan or positioning statement that captures what's remarkable and true about you.

- *Slogans* are so powerful because they can convey a message in seconds. They don't even have to involve words. For example, Tiffany's blue box conveys elegance and quality, while the name "The Leaning Tower of Pisa" speaks for itself.
- If you're in an *intangible business*, consider what's remarkable about your solution and your people (i.e. you or your team).
- Back these up with *real-life stories* that sneezers can spread.

Keep Exploring the Edges

The best way to create Purple Cows is to constantly explore the fringes and find/test ways to make your products remarkable:

- Go through the *list of marketing Ps*: Product, Pricing, Promotion, Positioning, Publicity, Packaging, Pass-along, and Permission.
- For each area, identify the edges that you can explore. List down valuable attributes and consider if/how you can *be the "mostest"* in each area. For example, can you be the most durable, simple, complex, caring, cool, fun, exclusive, personalized, or value-for-money?
- *Test* which one(s) will most likely deliver the desired results.

Use the ideas and examples below to stimulate your imagination:

- What ideas can you gain from *other industries*? How do their most remarkable solutions stand out from the rest?
- Challenge the things that are "just not done" *in your industry*. Or, study a competitor with a Purple Cow—can you outdo them by going in the opposite direction?
- How can you *combine different ideas* to come up with a remarkable one?

KEY QUOTES

"Explore the limits. What if you're the cheapest, the fastest, the slowest, the hottest, the coldest, the easiest, the most efficient, the loudest, the most hated, the copycat, the outsider, the hardest, the oldest, the newest, the . . . most!"

"You have to go where the competition is not. The farther the better."

- Can you *redefine what you're selling*? Most paint companies assume that they're selling paint. Dutch Boy realized that customers are actually buying painted walls, so they redesigned their paint cans to be easier to carry, pour from, and close—a simple change that delivered a huge increase in sales.

- Can you get users to *change their behavior* to optimize your product's performance? For example, elevators are expensive and take up valuable space for lift lobbies. If each elevator stops at every floor, you'll need many elevators in a tall building. Otis came up with a solution to this problem—they created a central control pad for passengers to enter the floor they're going to. By the time they reach the lift lobby, an elevator is already assigned to bring them directly to the desired floor. This allows fewer lifts to serve more passengers more quickly.

- What will it take for your product/service to be so unusual that people start to spread spoofs or *parodies* of it? However, being remarkable doesn't mean being ridiculous or outrageous just for the sake of being so. Focus on the purpose behind your outrageousness, and build it into the product itself.

- Can you create a *collectible version* of your product? For example, Curad successfully challenged established leader Band-Aid by introducing colorful bandages with cool characters. This soon became a favorite with kids.

- Can you stand out by *being honest*? In France, McDonald's subsidized a report that recommended fast-food consumption at most once a week. This honest message reached more people than advertisements asking people to consume more.

KEY QUOTES

"Instead of selling what we wanted to sell, we sold what people wanted us to sell, and then figured out how to make money doing it."
—Brad Anderson, former CEO of Best Buy

Go for Short, Repeated Development Cycles

The Purple Cow is just a part of the product life cycle, most suited for growth or starting something new. However, any idea—no matter how fresh or remarkable—will eventually lose its novelty. Once a market leader's product becomes common and boring, it can be disrupted by new Purple Cows.

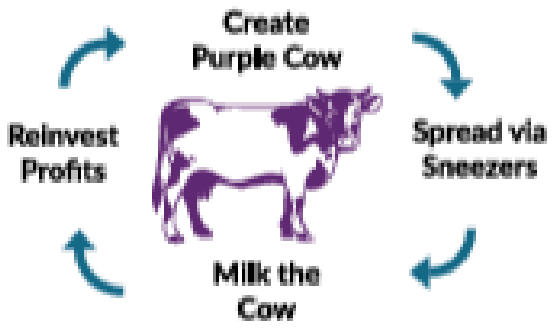
So, it isn't enough to create 1 Purple Cow. You must continually reinvest the money to develop new Cows.

- Once you've crossed the chasm to capture the early/late majority market, hand the product to another team to *milk the Cow*. Aim to extend the Cow and profit from it as long as possible by improving and refreshing the product.

- Concurrently *invent a new Purple Cow* before the original one becomes boring and mainstream.

  (i) Ideally, target the same audience. Gather the contacts of the top 20% of customers who love what you do, and get their permission to reach out when you launch your next Purple Cow. Do not spam them with marketing messages in the meantime.

  (ii) Be prepared to keep failing, and to repeat the cycle over and over again.



You can't fix something without knowing what's broken. Look for the fastest and most cost-effective ways to measure meaningful outcomes so you can keep improving and refining your approach. For example, Zara changes its clothing line every 3-4 weeks, monitors what works and doesn't, then adjusts its lineup.

Find People with "Otaku"

Godin describes the Japanese word "otaku" as something between a hobby and an obsession. For example, only people who're truly passionate about science fiction will attend a science fiction convention. Engage early adopters with otaku, i.e. people who care enough to learn about your product and tell others about it. Get their help to refine and launch your Purple Cows.

Often, the creators of Purple Cows are also passionate about their products, e.g. Starbuck's Howard Schultz is a coffee lover himself.

KEY QUOTES

"The Purple Cow is not a cheap shortcut. It is, however, your best (perhaps only) strategy for growth."

"It's about being irresistible to a tiny group of easily reached sneezers with otaku."

- Even if you're not personally passionate about your products, you can get to *know your target audience* intimately in 2 ways:

  (i) Look for people/agencies in your industry with a track record of launching remarkable products, and hire or learn from them. Immerse yourself in fan magazines, conferences and design reviews to get in the heads of people who care deeply about the product, so you can make something they'll love and share.

  (ii) Build processes and a culture where people systematically and repeatedly test new prototypes and explore new ideas.

- Equip your people with the *innovation, design and influence skills* they'll need to launch amazing solutions.

  (i) Send your designers for marketing courses and send your marketers for design courses etc.

  (ii) Involve your marketers in the product conceptualization and development, so you can design the product's marketing into the product itself.

KEY QUOTES

"If you are a marketer who doesn't know how to invent, design, influence, adapt, and ultimately discard products, then you're no longer a marketer. You're deadwood."

You can also be a Purple Cow in your career. People who're truly remarkable don't have to worry about their job-search techniques. They get recommended by others or sought out by companies.

- Position yourself as the go-to-person for a narrow *niche*, e.g. as a publicist for plastic surgeons; and/or

- Build up a *remarkable resume* over time. Don't try be a Purple Cow only when you're looking for a job. Regularly take on high-profile projects, and allow yourself to take risks (and fail). These will naturally make your resume stand out.

"Remarkable people with remarkable careers seem to switch jobs with far less effort."

"The path to lifetime job security is to be remarkable."

Other Details in the Book to Look out For

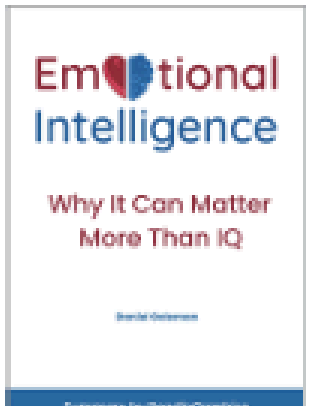
This book is written in short, easy-to-read chapters, with numerous examples to illustrate how Purple Cows can be created in any area—from hotels to cars, supermarkets, or even salt. Although the book was first published in 2002, many of the key ideas are still

applicable today. For more ideas and resources, do visit Godin's website (www.sethgodin.com) or his blog (https://seths.blog).

About the Author

Seth W. Godin (born 1960) is an American author and entrepreneur. Godin previously founded and sold a book packaging business. He then launched Yoyodyne to promote permission marketing. In 1998, Yoyodyne was sold to Yahoo! for about $30 million and became Godin Yahoo's vice president of direct marketing. In March 2006, Godin launched Squidoo which was sold to HubPages in 2014. Godin has authored 20 books.

KEY QUOTES



EMOTIONAL INTELLIGENCE

Why It Can Matter More Than IQ

DANIEL GOLEMAN

Introduction

Data suggests that emotional intelligence is a much better predictor of success than academic intelligence in various aspects of life. This was one of the first books to comprehensively review the research, insights and implications of emotional intelligence. The book was organized into 5 parts on the emotional brain, emotional intelligence, applications, societal influences and emotional literacy. In this summary, we've consolidated the insights into 4 sections to explain the biology and neurology behind emotions, the dangers of emotional illiteracy, and how to develop emotional intelligence for better outcomes.

1. Emotions and the Human Brain

Emotions are strong impulses that drive us to take action. They're nature's way to guide our actions, primarily to help us survive.

- Each emotion primes us for a *different type of action*. For example, anger increases our heart-rate and blood circulation to unlock energy so we can confront an enemy. Surprise causes the eyes to widen so we can take in more of our surroundings to figure out what's happening. Love helps us to relax, cooperate and feel contented.

- Our biological makeup comes from 50,000 generations of evolution. Yet our lifestyle has changed drastically in the last 5-10 generations alone. Our biological evolution hasn't caught up with our new realities, and problems arise when our emotions are *out of sync* with the situation.

KEY QUOTES

"Emotional intelligence [is] a meta-ability, determining how well or how poorly people are able to use their other mental capacities."

"All emotions are, in essence, impulses to act, the instant plans for handling life that evolution has instilled in us."

The Architecture of the Human Brain

The human brain is about 3x the size of primates'. It evolved from the bottom-up over millions of years.

- The *brainstem* (at the top of the spinal cord) is the most "primitive" part of the brain. It runs our body's key functions (e.g. breathing, digestion) automatically.

- The first mammals developed a new *limbic system* on top of the brainstem. This is responsible for our basic emotions, and gives us the ability to learn and adapt to new environments.

- About 100mil years ago, the *neocortex* (or frontal lobe) was formed on top of the limbic system. This is our rational mind or thought-center, which enables us to integrate and analyze data, manage our senses and emotions, and make conscious decisions. Humans (*Homo Sapiens*) have a much larger neocortex than other species, giving us superior intellect and a much wider range of responses.

So, we effectively have 2 minds: an emotional mind that's intuitive and impulsive, and a rational mind that's thoughtful and analytical.

- Since our thinking brain evolved from our emotional brain, *our thoughts and feelings are linked*. Most of the time, they feed off each other to provide deeper insights and help us to make better decisions. However, we can feel conflicted when our logic tells us 1 thing while our feelings tell us another.

- Moreover, our emotional brain is older and more dominant, especially during emergencies. When the amygdala is aroused by intense feelings, it's more likely to *override your rational mind*. This is your body's way of protecting you in times of peril, e.g. you may intuitively jump away from a table before you realize that someone spilt a bowl of hot soup.

KEY QUOTES

"In a very real sense we have two minds, one that thinks and one that feels....These two fundamentally different ways of knowing interact to construct our mental life."

What Happens During Emotional Hijacking

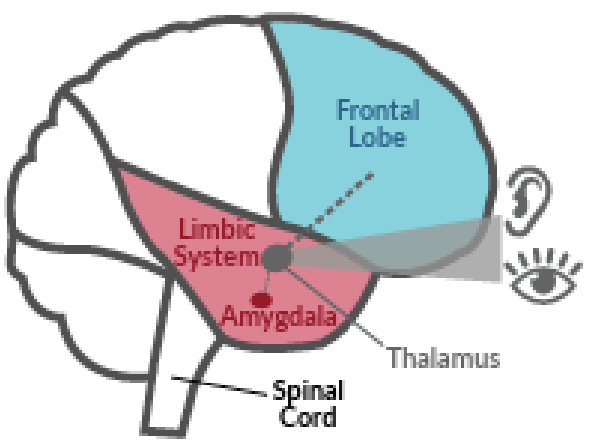
Emotional hijacking happens when we act on impulse before the logical brain has had the chance to assess the situation and choose a response. For example, we may laugh uncontrollably at a funny incident, or lash out defensively at a snide remark.

The amygdala is the emotional-center of our brain, and we have 2 amygdalas on either side of the brainstem.

- The amygdala is responsible for our *feelings and emotional memory*. Without it, you'll lose the ability to feel and understand others' feelings. You'll also lose all sense of personal values and the desire to compete/collaborate with others.

- The amygdala is constantly scanning for potential threats. Once it perceives a threat, it acts like a *tripwire* to instantly send out a crisis message to the rest of your brain, hijacking most of the brain functions including your rational mind.

- Sensory information from our eyes/ears go to the brain's thalamus. From there, 1 synapse goes to the neocortex which processes the signals before routing them to other parts of the brain (including the amygdala). Another synapse goes directly from the thalamus to the amygdala. The amygdala can react faster than the neocortex since (i) its pathway to the thalamus is shorter and smaller, and (ii) the neocortex takes a moment to process the data before responding.



- Our brain stores "normal" facts separately from emotionally-charged ones. *Emotional memories* are stored in the amygdala as raw impressions. The stronger the feelings (e.g. extreme thrill or fear), the deeper the imprint on the amygdala. When the amygdala encounters something associated with an old memory,

KEY QUOTES

"The amygdala acts as a storehouse of emotional memory, and thus of significance itself; life without the amygdala is a life stripped of personal meanings."

"Our emotions have a mind of their own, one which can hold views quite independently of our rational mind."

it will trigger a similar response. That's why we may instantly like or dislike something without knowing why.

- Unlike the neocortex, our amygdala is almost fully-formed at birth. This allows us to accumulate emotional memories even before we have the language/logic to articulate those experiences. These memories influence us throughout our lives in the form of raw, unconscious impulses. *Problems arise* when:

  (i) The amygdala's memory is *out of date*, e.g. a former army nurse is terrified by the smell of her toddler's diaper because it reminds her of the stink of the battlefield.

  (ii) It brings *errors and false alarms*. The thalamus' signal to the amygdala is meant as a rough warning, and contains only a fraction of the data sent to the neocortex. So, the amygdala doesn't have the full picture and reacts based on a few pieces of the puzzle.

Usually when an emotion is triggered, the prefrontal lobes will assess the situation and decide on the best course of action, e.g. whether to attack, flee, soothe, persuade, etc.

- The neocortex *manages our emotions* by (i) dampening the limbic center's activation signals while it processes the inputs, and (ii) providing an off-switch to moderate emotional surges. For example, you feel a wave of panic when you hear a series of gun-shots, then calm down when you realize they're just fire-crackers.

- Typically, your rational thoughts and emotions work together. *You need emotions for effective thought*, e.g. to choose a life partner or to weigh your priorities. A patient who lost the link between his 2 brains during a surgery could still think logically but lost all awareness of his feelings and preferences.

- Yet, *strong feelings can disrupt your cognitive ability*, making it hard to think clearly. Emotional trauma can also impair learning and increase the risks of depression, alcoholism, drugs, crime etc.

KEY QUOTES

"In the dance of feeling and thought the emotional faculty guides our moment-to-moment decisions, working hand-inhand with the rational mind, enabling—or disabling—thought itself."

"IQ and emotional intelligence are not opposing competencies, but rather separate ones."

"Academic intelligence has little to do with emotional life...people with high IQs can be stunningly poor pilots of their private lives."

"Intelligence can come to nothing when the emotions hold away."

2. Emotional Intelligence

Emotional intelligence refers to your ability to exert self-control, regulate your moods, empathize with others, and motivate yourself to persist in face of setbacks.

Research suggests that a person's intelligence quotient (or "IQ") accounts for only 20% of our success in life. The remaining 80% comes from non-IQ factors, such as luck, social class and emotional intelligence.

- No matter how smart you are, you won't do well if you can't manage your emotional impulses. Children and adults with strong *emotional skills* were found to be more effective, contented, focused and productive, while being less likely to be sabotaged by internal turmoil.
- Moreover, IQ is fixed while *emotional intelligence can be learned*.

Goleman did a detailed review of the theories and insights from numerous researchers and psychologists, and presented 5 components of emotional intelligence (EI): self-awareness, self-regulation, self-motivation, empathy and relationship management. In his later books, he organized these into 4 categories: self-awareness, social-awareness, self-management and relationship-management. We'll elaborate on the 5 EI components in the sections below.

Self-Awareness: Know your Emotions

This is about being aware of your emotions as they arise, instead of being swept away by them. Instead of hitting someone with uncontrolled rage, you can observe that "I'm furious with him."

- This awareness shifts your mental activities to the *neocortex*, so your unconscious gut-feelings become conscious. You can evaluate your experience, and even notice your feelings about your feelings. This helps you to choose your responses and make sound decisions. For example, if you know why you're feeling irritable,

KEY QUOTES

"Intellect cannot work at its best without emotional intelligence."

"An inability to notice our true feelings leaves us at their mercy."

you can do something fix it, or simply shrug it off and move on.

- The stronger your emotional awareness, the more you'll be aware of what used to be unconscious, e.g. your deepest fears or desires. People who're self-aware generally have *more clarity and control* over their emotions. They enjoy better psychological health compared to people who get engulfed by their feelings, or passively accept their moods without trying to manage them.

Self-Regulation: Manage your Responses

We usually can't control our emotions when they first surface. However, once we're aware of them, we can manage our response to (i) determine how long those feelings last, and (ii) react in a way that's appropriate for the situation.

- *We need both "good" and "bad" feelings*. People who experience intense sadness and pain can still be mentally and emotionally healthy if they also feel extreme joy and happiness.

- Managing your emotions involves the *ability to soothe yourself* so you won't be incapacitated by feelings of distress, and can bounce back more quickly from setbacks. Anger, anxiety and sadness are 3 common feelings that people struggle with.

We get angry when we feel attacked physically or symbolically, e.g. when someone threatens or insults us. Anger brings a rush of energy to prime us for action, making it easier for the next strong feeling to trigger an emotional hijack. After a frustrating day, you're more likely to blow up at someone.

- Don't dwell on the reasons for your anger. One self-righteous thought will lead to another to *fuel your rage*. Giving vent to your anger also increases your arousal to make you more angry.

KEY QUOTES

"Emotions that simmer beneath the threshold of awareness can have a powerful impact on how we perceive and react, even though we have no idea they are at work."

"Downs as well as ups spice life, but need to be in balance."

"Anyone can become angry—that is easy. But to be angry with the right person, to the right degree, at the right time, for the right purpose, and in the right way—this is not easy."
—Aristotle

"Anger builds on anger...rage, unhampered by reason, easily erupts in violence."

- The best way to quench your anger is to pause asap and *consider the opposite perspective*. For example, if a driver cuts in right in front of you, you may rage at how the selfish bastard almost killed you with his careless driving. Diffuse your anger by reframing your assumptions, e.g. consider that he may not have seen you, or is having an emergency.

- Once your anger has escalated beyond a certain point, no amount of reasoning will help. In such cases, try to *cool down* first: go for a long walk, try some relaxation techniques, or exercise to release steam. The key is to distract yourself from the source of the anger.

When we're anxious, we tend to replay the problem in our minds to try and find a solution. However, we often get stuck in an unproductive worry-loop. Anxiety may come in the form of worrisome thoughts and or physiological symptoms (e.g. sweating, heart pounding).

- Chronic worrying tends to involve a *catastrophic image* which leads to all sorts of imaginary causes and outcomes. Chronic worriers may obsess over unlikely problems, then convince themselves that they had prevented the disaster from happening in the first place.

- To *overcome anxiety*: (i) recognize the cues for anxiety before you spiral downward, (ii) use relaxation techniques to ease your tension, and (iii) challenge the worrisome thought. Ask yourself: what's the probability of it occurring and what can you do to address it? If there's nothing you can do, then there's no point worrying. In extreme cases, you may need medication/therapy to disrupt the cycle of anxiety.

We feel sad when we've lost something or someone important. Melancholy helps us to shut down temporarily, conserve our energy, mourn the loss and regroup. However, you can fall into despair if you dwell on bad feelings without a viable course of action (e.g. thinking how tired/useless you are). You end up making mistakes, getting fired, etc. to worsen your confidence and negative feelings.

- To *overcome depression*:

  (i) Challenge and reframe the depressing thoughts.

KEY QUOTES

"Brooding fuels anger's flames. But seeing things differently douses those flames."

"Empathy is a balm for anger."

"Bereavement is useful; full-blown depression is not."

"A passive immersion in the sadness simply makes it worse."

(ii) Distract yourself with pleasant activities (e.g. exercise, watch a funny movie, read an uplifting book).

(iii) Engineer a small win, e.g. dress up or finish some chores.

(iv) Help others in need or compare with those who're worse-off.

(v) Turn to a transcendent power e.g. praying to God.

Self-Motivation: Channel your Emotions Productively

This is about managing your impulses so they support your goals, including the ability to delay gratification, stay motivated, and channel your feelings productively.

The ability to delay gratification is an important emotional skill. In a study, 4 y.o. kids were given a choice: they could eat a marshmallow right away, or have 2 marshmallows if they waited for about 15min. The kids who held out for 2 marshmallows grew up to be more confident, reliable, and socially competent adolescents. They handled challenges better and had higher SAT scores (compared to the kids who couldn't resist grabbing the marshmallows).

When we face setbacks, people who get distressed cannot focus, learn or solve problems effectively. Those who stay motivated and persistent end up being more successful in all areas of life.

- Our *moods* affect our mental state. Bad moods tend to call up negative memories to make us more cautious and constrictive. Good moods, on the other hand, tend to enhance our creativity and problem-solving capacity. People who're consumed by worries also have little/no mental capacity left for their tasks.

- When faced with challenges, our *self-efficacy*—the belief that we can prevail—predicts how far we persist and how well we bounce back from failures. Being *hopeful* about the future also helps us to take constructive steps forward, instead of simply giving up.

KEY QUOTES

"Disputing the depressing thoughts vanquishes the gathering mood of gloom."

"Marshaling emotions in the service of a goal is essential for paying attention, for self-motivation and mastery, and for creativity."

"Emotions out of control impede the intellect."

"From the perspective of emotional intelligence, having hope means that one will not give in to overwhelming anxiety, a defeatist attitude, or depression in the face of difficult challenges or setbacks."

- Famous psychologist Martin Seligman found that *optimists* tend to perform much better than pessimists because:

  (i) Optimists attribute failure to something specific within their control, e.g. "I failed because I used the wrong approach." So, they'll be motivated to find new solutions.

  (ii) Pessimists blame their failure on a broad reason beyond their control, e.g. "I'm just too stupid to get this right."

Mihaly Csikszentmihalyi used the term "flow" to describe people who're fully-absorbed in a state of enjoyable peak performance.

- People who're in flow learn faster, perform better, and feel joy and fulfillment from the task. This is *emotional intelligence at its peak*, since you're stretching yourself and harnessing your inner strengths without any anxiety.

- To *get in flow*, find a task you're skilled at, focus your attention on it and perform just at the edge of your current abilities, so you're neither bored nor anxious.

Empathy: Recognize others' emotions

People who are empathic are more attuned to others' needs and wants, making them more effective in a range of social interactions. However, to notice and influence others' emotions, you must first be able to know and manage your own emotions.

- Humans have a natural tendency to *mirror or mimic* others' expressions or nonverbal cues. We can sense and even "catch" others' moods. People who're more forceful in expressing their feelings tend to transmit their feelings to others. The more physically-attuned 2 parties are, the more synchronized their moods will become. By sending the right signals, great leaders and performers can move a huge audience.

Thomas Hatch and Howard Gardner identified 4 components of interpersonal intelligence:

KEY QUOTES

"Flow occurs in that delicate zone between boredom and anxiety."

"Attunement to others demands a modicum of calm in oneself."

"We are all part of each other's tool kit for emotional change, for better or for worse."

- Organizing groups: to initiative and coordinate people's efforts;
- Negotiating solutions: to prevent, mediate or resolve conflicts;
- Personal connection: to get along with others by empathizing and connecting with them; and
- Social analysis: to identify and understand others' feelings, motives, and concerns.

People who lack these skills are socially-inept and awkward in social settings. They tend to get alienated or rejected because they have a poor sense of personal space, misinterpret others' body language, or fail to project the right cues.

Relationship Management: Manage others' emotions

Managing relationships is largely about managing emotions in others, which is partially addressed above. In the next section, we'll examine how all 5 components of emotional intelligence come together to affect outcomes in various aspects of life.

3. Applying Emotional Intelligence

Emotional Intelligence in Marriage

Divorce rates have been rising, as social pressure for couples to stay married declined over the generations. Emotional intelligence is now more crucial than ever to hold a marriage together.

A starting point is to recognize gender differences in handling relationships. From young, girls are socialized to be less outwardly-aggressive than boys. Adults are more likely to talk to girls about emotions and tend to their hurts, while boys are expected to be independent and "rough it out". The 2 genders end up with different emotional skills. Men tend to value independence while women value

KEY QUOTES

"Being able to manage emotions in someone else is the core of the art of handling relationships."

"The art of relationships is, in large part, skill in managing emotions in others."

"Boys take pride in a lone, tough-minded independence and autonomy, while girls see themselves as part of a web of connectedness."

connection. In a marriage, women usually prefer to talk through relationship issues. They get upset when the husbands avoid such discussions or fail to notice their feelings.

John Gottman has studied hundreds of couples in a lab-setting, and can predict (with a 94% accuracy) if a couple will divorce within 3 years. Key warning signals in a relationship include:

- *Harsh criticisms* that target the person ("You're a selfish jerk"), instead of an action ("You didn't fix the rack as promised");
- Criticisms delivered regularly with *contempt* (including words/tone that convey disgust or insult, like "bitch" or "wimp"); and
- *Stonewalling*, where one party withdraws into stony silence.

These behaviors cause hurt and trigger defensive responses in the other party (counterattack or withdrawal) to further injure the relationship.

There are 2 parallel conversions in any communication: what's said vs what's unsaid. You may say, "Would you like to check why the kids are screaming?" when you're thinking, "He just can't be bothered to help out." Your spouse detects and responds to the underlying toxic thoughts/feelings, triggering an emotional hijack.

- The more emotional hijacking occurs, the harder it is for the couple to recover. Gottman calls this "*flooding*". When a partner is continually flooded, he/she feels overwhelmed and thinks the worst of the other party. By this stage, even a harmless comment or gesture can spark a flooding, preventing the couple from working things out cordially.
- Men are more prone to flooding, get triggered at lower levels, and take longer to recover. They're also more likely to stonewall, which can cause huge emotional distress to their wives. She retaliates by criticizing him (which only triggers him further), and the situation *escalates out of control*.

KEY QUOTES

"When grievances simmer, they build and build in intensity until there's an explosion; when they are aired and worked out, it takes the pressure off."

The solution is for couples to develop shared emotional intelligence, so you can break the vicious cycle and work things out before it's too late. Here are several key competencies to master:

- Recognize *gender differences* and agree on how to disagree:

  (i) *Men*: realize that your wife is bringing up a grievance not to attack you, but to improve the relationship. Even if you disagree with her views, you can listen and empathize with her feelings. Often she'll calm down once she feels heard.

  (ii) *Women*: be mindful not to use personal criticisms or show contempt. Reassure your spouse that you love him.

- Learn to *calm yourself and your partner*. Monitor your pulse rates during an upsetting discussion, and take a 20-min break once your pulse exceeds the normal rate by 10 beats/min (which signals the onset of flooding). Or, agree prior that either party can call for a time-out if you notice signs of flooding.

- *Detoxify your self-talk*. Catch your negative thoughts/ feelings of victimization or self-righteousness (e.g. "I don't deserve this"). Pause to look for evidence to the contrary.

- Use Haim Ginott's *XYZ formula* to express a complaint constructively: "When you did X, it made me feel Y, and I'd rather you did Z instead."

- *Listen and empathize*. Learn to listen past the anger, e.g. if your wife shouts "Stop interrupting me!", focus on the message (and let her finish) instead of her tone. Calm down enough to listen for the feelings behind the words—if you can empathize with or mirror your partner's feelings, it'll quickly soothe the negative feelings. To shift to the positive, express your love for them, respect their viewpoint (even if you don't agree with it), and express something you appreciate about them.

Such responses won't develop overnight. You must practice enough until they become your default response during an emotional crisis.

KEY QUOTES

"Men and women, in general, need different emotional finetuning."

"Listening is a skill that keeps couples together."

Emotional Intelligence at the Workplace

Job satisfaction can be boosted by emotional competences, e.g. being attuned to own/others' feelings, effective conflict management, and the ability to regularly work in flow. On the other hand, low morale and cowed workers often lead to lower productivity, more errors and accidents.

Managers can apply emotional intelligence in 3 key ways:

- *Giving feedback effectively*. We need feedback to know what's expected of us, where we stand, and where to improve.

  (i) Avoid harsh personal criticisms or general complaints like "you always screw up". These are counter-productive since the receiving party will simply get defensive and ignore the message.

  (ii) Instead, focus specifically on what was done well, what was done poorly, and how it can be changed. Ideally, do this face to face.

- *Harnessing diversity*. Workplace diversity can enhance creativity and entrepreneurial spirit, and provide a real competitive advantage in a global marketplace.

  (i) It's a human instinct to be loyal to our groups and to be hostile to outsiders. Our personal prejudices are formed since childhood and are hard to change. We may not even be aware of our biases and stereotypes.

  (ii) You can't remove personal biases, but you can stop them from being expressed. Make discrimination and harassment explicitly unacceptable in your company, and never turn a blind eye to such acts. Train your people on the benefits of diversity, and how to effectively speak up against prejudices (using a similar approach as effective feedback).

- Research suggests that one of the best ways to tap on intellectual capital is to *improve how people work together*.

  (i) The success of a group depends less on individuals' IQ than the group IQ, i.e. how far they can create internal harmony to tap on team members' talents.

KEY QUOTES

"Leadership is not domination, but the art of persuading people to work toward a common goal."

"How criticisms are given and received goes a long way in determining how satisfied people are with their work, with those they work with, and with those to whom they are responsible."

"The psychological price of loyalty to one's own group can be antipathy toward another."

"It is more practical to try to suppress the expression of bias rather than trying to eliminate the attitude itself."

(ii) Star performers don't shine due to their superior intellect, but how they motivate themselves, build trust/rapport to tap into people's ideas/info, and coordinate their teams' efforts.

Emotional Intelligence in Health and Medicine

The medical definition of a disease is very different from a patient's experience of the disease. There's now strong evidence that patients' emotional states can affect their disease progression and recovery.

In the book, Goleman provides an extensive review of research findings on the link between emotions and health. In a nutshell, our emotions affect our nervous system and a range of hormones, which in turn affect our immune system.

- Specifically, *chronic anger, anxiety, and depression* can increase people's susceptibility to diseases, impede recovery and increase the risk of death.

  (i) People subject to prolonged anxiety and distress tend to suffer from poorer immunity and the onset of diseases (from heart disease to diabetes, asthma, and gastrointestinal disorders). Existing patients' symptoms are also worsened by stress and emotional distress.

  (ii) Of all the emotions, anger is the most closely linked with risks of death from heart disease. Anger may trigger other emotions, flooding the body with stress hormones that increase the risks of cardiac arrest.

  (iii) Depression worsens a range of health conditions, partially because the depressed patients are less compliant with their medical regimes. The sense of social isolation can also double the chance of illnesses or death.

- By contrast, *positive feelings and social support* seem to help with health and recovery.

  (i) *Optimistic* patients are less likely than pessimistic patients to die after a heart attack. They also recover faster from a bypass surgery and paralyzing spinal injuries.

KEY QUOTES

"Historically, medicine in modern society has defined its mission in terms of curing disease—the medical disorder—while overlooking illness —the patient's experience of disease."

"Having people to turn to and talk with, people who could offer solace, help, and suggestions, protected them from the deadly impact of life's rigors and trauma."

(ii) The number and quality of your *relationships* also seem to buffer the effects of stress. Bone marrow transplant patients and heart-attack survivors recovered faster and survived longer if they had close ties and emotional support.

Medical care professionals should address patients' psychological needs along with their medical needs.

- Teach patients to use relaxation techniques and to *soothe themselves* (including chronic anger, anxiety, depression and pessimism). Heart-attack patients who received anger-control training had 44% lower heart attack rates. Medical patients who receive psychotherapy in addition to surgery/medicine also fared better than those with a medical treatment alone.

- Encourage them to get *social support*. Patients with advanced breast cancer survived 2x as long when they attended weekly meetings with other patients (compared to those who coped on their own).

- Address patients' *unanswered questions* (which may spark fears and uncertainty) by proactively offering information or giving patients options for self-research.

- *Emotional intelligence* can even be incorporated into health education and disease prevention programs for (i) children (to build the right emotional foundations), (ii) people reaching retirement age (to help them cope with the aging process), and (iii) at-risk people (to help them cope with daily stress).

4. Windows of Opportunity for Change

The Role of Family

Children learn their first lessons on emotions through family life.

- From their time in the cot, babies start to develop a basic level of *trust/distrust* in human interactions, e.g. whether

KEY QUOTES

"Family life is our first school for emotional learning; in this intimate cauldron we learn how to feel about ourselves and how others will react to our feelings; how to think about these feelings and what choices we have in reacting; how to read and express hopes and fears."

their needs will be noticed and tended to when they cry. By the age of 3-4, toddlers' brains reach two-thirds of the adult size—distress during this period can impair the brain's learning centers with long-term implications.

- As children grow up, their daily interactions with adults also reinforce their *emotional outlook and skills*. Those who receive consistent encouragement tend to be more curious, confident and enjoy learning. Children who suffer from neglect end up even worse off than those who're abused.

Parents' emotional intelligence impact their children's emotional skills, since the children learn from what their parents say and do.

- Children who're *violently punished* since young (instead of being consoled) fail to learn what "care and concern" means. When other children get upset, they respond with aggression because that's the only approach they know. The severe lack of emotional skills often leads to learning difficulties, rejection by peers, and higher risks of depression or crime by adulthood.

- The *3 worst parenting styles* are: (i) ignoring children's emotional upsets, (ii) accepting feelings passively (without managing them), or (iii) responding to feelings with contempt (e.g. dismissing children's feelings or disallowing them to express their feelings).

- The *best results* come from parents who use children's upsets as opportunities to coach them to identify, and soothe/manage their feelings. These children tend to be physiologically healthier and are well-liked by their peers and teachers.

Conquering your Temperaments

We're each born with temperaments, or basic dispositions based on our genetic makeup. Psychologist Jerome Kagan found at least 4 temperament types—timid, bold, upbeat, and melancholy—due to differences in the brain's emotional circuits. These affect (a) how easily a feeling is triggered, (b) how long it lasts, and (c) how intense it becomes.

KEY QUOTES

"Emotionally adept parents can do much to help their children with each of the basics of emotional intelligence: learning how to recognize, manage, and harness their feelings; empathizing; and handling the feelings that arise in their relationships."

- *Timid* people have neural circuits that're more easily triggered, e.g. their hearts start to beat faster even at low levels of stress. They avoid new/unfamiliar situations and are more prone to stress-related problems including heart palpitations and panic attacks. By contrast, *bold* people have higher natural thresholds for stress and uncertainty.

- *Upbeat* people have more activity in their left frontal lobes (associated with positive moods). They can stay unfazed and cheerful no matter the situation. On the other hand, *melancholy* people have a more active right frontal lobe. They're more prone to negative moods and emotional disorders.

Such genetic differences stay with us for life, but our innate predispositions can be magnified or dampened by our childhood experiences.

- For example, infants with an easily-excitable amygdala can relearn their responses by kindergarten if their parents encourage them to overcome their fears instead of coddling or protecting them. Each time they calm themselves when they're afraid, their *prefrontal circuits* get to practice moderating the knee-jerk reactions of the amygdala.

- Many systems in our body have a *critical formative period*, during which the changes have a disproportionate impact on our subsequent development.

  (i) If a child's eye is taped close for just a few weeks during the formative window, fewer synapses will be developed in that part of the brain, and the child will suffer from impaired vision in that eye even after the tape is removed.

  (ii) At 10-18 months, the orbitofrontal area of the prefrontal cortex goes through a critical period of growth. During this period, if infants are picked up and held each time they cried, it'll reinforce the links between the neocortex and limbic brain. The neocortex becomes more effective in switching off distressful emotions, so the infants can soothe themselves.

- Our brains continue to *change throughout our lives*. Patients with obsessive-compulsive disorders (OCD) could

KEY QUOTES

"The emotional lessons of childhood can have a profound impact on temperament, either amplifying or muting an innate predisposition."

change their brain circuits if they repeatedly exposed themselves to the item of obsession, forced themselves not to act upon it and questioned their fears.

The Costs of Emotional Illiteracy

The habits formed in childhood are critical because they define the brain's synaptic wiring. The more these are reinforced over time, the harder they are to change.

Yet, in many countries, there's a disturbing rise of juvenile drug use, violent crimes, unwanted pregnancies, mental illness and suicides. This is partially due to the lack of parental guidance as children grow up in single-parent or dual-income families. Symptoms of emotional illiteracy include: withdrawals and social issues, anxiety and depression, attention deficit, delinquent or aggressive behaviors.

- *Bullies* wrongly assume that they're being threatened or slighted. They jump into an antagonistic response without considering alternatives, thus building/reinforcing unhelpful mental circuits and beliefs like "only cowards back down during a fight."

- *Depression* in children/teens usually stem from a lack of relationship skills and the tendency to interpret setbacks in a pessimistic way. Each time they do badly in school or get rejected by peers, they attribute it to a fundamental flaw in themselves, reinforcing the sense of helplessness and despair.

- Children with *eating disorders* (bulimia, anorexia, or binge eating) or *alcohol/drug abuse* also use food, alcohol or drugs as a form of "self-medication" to escape their negative feelings.

Such problems can be minimized (or even prevented) by teaching children to adopt an optimistic view of challenges, identify and soothe their distress, and connect to a support network. Emotional-management training has been found to benefit all the issues above, and even to buffer the harmful effects of poverty and abuse. Without proper intervention, the emotional issues can take root and get

KEY QUOTES

"Temperament is not destiny."

amplified by adulthood. A good emotional literacy program should cover the range of competencies outlined above, including self-awareness, impulse control, evaluating options/ consequences, and interpersonal skills.

Trauma and Emotional Relearning

Most emotional trauma can be healed. Post-traumatic stress disorder (PTSD) is actually a form of limbic disorder. The traumatic experience is so vividly imprinted in the emotional circuits that the amygdala sounds the alarm at every cue that reminds it of the trauma. Someone who was mugged in a lift may be afraid of elevators and enclosed spaces, or panic whenever they see someone wearing a cap.

The best way to recover is to get patients to relearn their encounter and retrain the neocortex to manage the amygdala. There're 3 stages in trauma recovery:

- Regaining a sense of *safety or control*, by using medication or relaxation techniques to provide a window of calmness.

- *Acknowledging the trauma and the loss it brought.*

  (i) By recounting the details of the trauma and putting your feelings into words, you extract the subconscious elements from amygdala to be processed by the neocortex, so you can understand and moderate those feelings. This must be done in a safe environment (e.g. with the help of a therapist), so the brain can recreate the scene without the same terror. With each retelling, the trauma loses its grip until the victim can fully mourn his/her losses and move on.

  (ii) You can also get the trauma victims to express themselves using art as an emotional outlet and a window to recovery.

  (iii) Children tend to use games as an outlet. After a tragic shootout in an elementary school, the kids started to reenact the shooting scene with toy guys, except in their games they may get to "win" by killing the gunman. This helped them to regain a sense of control and come to terms with the trauma.

KEY QUOTES

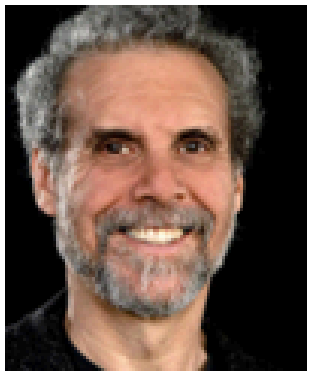
"Emotional lessons—even the most deeply implanted habits of the heart learned in childhood—can be reshaped. Emotional learning is lifelong."

- *Re-establishing a normal life*. PTSD patients may continue to experience symptoms throughout their lives, but the traumatic memories no longer explode uncontrollably and they can revisit the memory without falling apart.

Other Details in the Book to Look out For

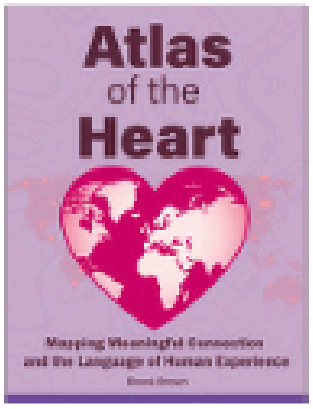
This book is packed with academic research, studies and examples about the human brain, psychology, and behavioral sciences. Goleman also includes appendices on emotions, the emotional mind, fear neural circuits, and the list of active ingredients for prevention programs. For more details please visit www.danielgoleman.info.

About the Author



Daniel Goleman (born 1946) is a psychologist, author, and science journalist. He was a visiting lecturer to Harvard, and wrote for The New York Times for 12 years, reporting on the brain and behavioral sciences. Besides authoring and coauthoring several books, he also cofounded the Collaborative for Academic, Social, and Emotional Learning, co-directed the Consortium for Research on Emotional Intelligence in Organizations and sat on the board of the Mind & Life Institute.

KEY QUOTES



ATLAS OF THE HEART

Mapping Meaningful Connection and the Language of Human Experience

Brené Brown

The Big "So What"

Do you sometimes feel misunderstood or struggle to explain how you feel? *Atlas of the Heart* equips you with the emotional language to understand and communicate how you feel, build stronger relationships, and navigate life experiences with greater clarity.

Introduction: Mapping the Human Experience

Language helps us make sense of and navigate life experiences; it affects our decisions, behaviors, and relationships. By naming our emotions, we gain clarity on what we feel and why, facilitating emotion regulation and psychosocial well-being.

In this book, Brené Brown maps out 87 human emotions and experiences (or thoughts that lead to emotions) to help us identify, understand, and talk about the feelings that shape our lives.

- It categorizes emotions into *13 "places" we go when we experience life situations*. By thinking of our emotions and experiences as places, we can consider questions like: Where am I? How did I get here? How do I move to where I want to be?

- Brown's insights are based on more than 20 years of studying *emotions, vulnerability, and human connection*. This includes an extensive review of over 1,500 academic publications, and analyzing thousands of stories and experiences.

KEY QUOTES

"I want this book to be an atlas for all of us, because I believe that with an adventurous heart and the right maps, we can travel anywhere and never fear losing ourselves. Even when we don't know where we are."

"Language is our portal to meaning-making, connection, healing, learning, and self-awareness. Having access to the right words can open up entire universes."

"Naming an experience doesn't give the experience more power, it gives us the power of understanding and meaning."

Mapping out the 87 Emotions

As you explore each "place" on the atlas, consider how emotions manifest in your life in 4 ways:

- *Biology*: How emotions physically manifest in your body;
- *Biography*: How your family, upbringing, and culture shape your emotional responses;
- *Behavior*: The habitual ways you react to emotions; and
- *Backstory*: The triggers or contexts that lead to these emotions.

1. Places We Go When Things Are Uncertain or Overwhelming

Stress is the feeling of being overburdened by external demands. It's linked to a sense of uncertainty and lack of control. It triggers physical, mental, and emotional responses in our body, such as increased heart rate and cortisol production.

- The level of stress is determined more by our *perception* of how well we're coping, rather than the actual demands.

KEY QUOTES

"Human emotions and experiences are layers of biology, biography, behavior, and backstory."

"Without understanding how our feelings, thoughts, and behaviors work together, it's almost impossible to find our way back to ourselves and each other."

"Feeling stressed and feeling overwhelmed seem to be related to our perception of how we are coping with our current situation and our ability to handle the accompanying emotions."

A buildup of stress leads to overwhelm, where we feel paralyzed because there's too much happening at once. We lose mental clarity and tend to make poor decisions.

- Stress feels like you're struggling with your tasks, while overwhelm *feels like you're drowning* and unable to function.
- The best solution is to *take a break*—to engage in play or do nothing—to recover and reset your mental state.

Anxiety involves tension, worry, and a growing sense of uncertainty and loss of control. We tend to dwell on worst-case scenarios, which amplifies the sense of helplessness. It also manifests physically through increased heart rate, muscle tension, restlessness, etc.

- Anxiety can be a temporary response (*state*), or it can be a more permanent part of your personality (*trait*). People with persistent or chronic anxiety might require professional support.

Worry and avoidance are 2 ineffective ways of coping with anxiety:

- *Worrying* or repeatedly thinking about negative possibilities wastes mental energy and reinforces anxiety.
- *Avoidance* or dodging the causes of anxiety might offer relief in the moment, but increases anxiety in the long run.

It's more effective to reframe anxious feelings as excitement. Both feelings bring similar physical sensations like increased heart rate and energy. By relabeling your feelings—telling yourself you're excited, not anxious—you can positively shift your perception of the experience.

Dread and fear are closely associated with anxiety.

- *Dread* is a form of anxiety that arises when you anticipate something negative that feels inevitable. It intensifies as the event draws nearer (e.g. a big presentation or a medical procedure), and you might just want to "get it over with." Acknowledge the dread to prepare yourself mentally, but don't focus on it as it could lead to mental exhaustion.
- *Fear* is an instinctive response to an immediate threat, unlike anxiety which is future-oriented. It's a protective mechanism

KEY QUOTES

"Stressed is being in the weeds. Overwhelmed is being blown."

"Anxiety feels like...escalating loss of control, worst-case scenario thinking and imagery, and total uncertainty."

"Our anxiety often leads to one of two coping mechanisms: worry or avoidance.Unfortunately, neither of these coping strategies is very effective."

"Anxiety and excitement feel the same, but how we interpret and label them can determine how we experience them."

"If we can't handle uncertainty, risk, and emotional exposure in a way that aligns with our values and furthers our organizational goals, we can't lead."

to prepare us for danger. We can learn to distinguish between true danger and irrational fears (e.g. fear of social rejection).

Vulnerability is an emotion experienced during times of uncertainty, risk, or emotional exposure. It's not about "letting your guard down" or exposing yourself unnecessarily. It's about engaging wholeheartedly even if you can't control the outcome.

- It is not a sign of weakness but *an indicator of courage*.

2. Places We Go When We Compare With Others

Comparison is a cognitive process that leads to various feelings. It often happens unconsciously, making it hard to recognize its impact on our behaviors and relationships.

- Comparison is about *trying to fit in and stand out at the same time*. You want to belong, yet you want to be superior to others.
- Both *upward and downward comparisons* can trigger negative emotions like anger, fear, shame, and sadness.
  - (i) When you compare yourself *upward* to someone who seems better off, you may feel inferior, insecure, or inspired.
  - (ii) When you compare yourself *downward* to someone who seems less successful or fortunate, you may feel temporarily superior, but it erodes long-term satisfaction.
- Choose to *refocus on your own path* instead, e.g. focus on your personal progress instead of comparing with others during a task or competition.

Comparison might bring admiration and reverence:

- *Admiration* arises when others' abilities, accomplishments, or characteristics inspire us to become better versions of ourselves. It's not about wanting to be that person, but feeling motivated to improve ourselves.
- *Reverence* is a deeper form of admiration, often linked to a sense of awe. It's about aligning yourself with the qualities you value, and it's usually associated with things/experiences that feel sacred or transcendent, such as religion, nature, or art.

KEY QUOTES

"Vulnerability is not weakness; it's our greatest measure of courage."

"Comparison is the crush of conformity from one side and competition from the other—it's trying to simultaneously fit in and stand out."

"Comparison says, 'Be like everyone else, but better'."

"We can choose connection over comparison."

"While admiration fosters selfbetterment, reverence seems to foster a desire for connection to what we revere—we want to move closer to that thing or person."

Comparison can also cause envy or jealousy.

- *Envy* is about wanting something that someone else possesses, be it *attraction* (appearance or social popularity), *competence* (intelligence, skills, or expertise) or *wealth* (material possessions, financial status, or lifestyle).
  - Envy could be *hostile* (you want what they have and hope they will lose it), or *non-hostile* (you desire what they have without wishing them harm).
  - Acknowledge your feelings of envy and don't allow it to dominate your thoughts and relationships.
- *Jealousy* is the fear of losing something you possess and value to someone else. It usually involves 3 parties in relationships—be it romantic relationships, friendships, or family. For example, you might fear losing your partner's affection to a rival.
  - Some jealousy is normal. But if left unchecked, it can lead to destructive behaviors like possessiveness or aggression.

Resentment involves a mix of frustration, judgment, anger, and envy.

- It's often mistaken for anger, but it actually *stems from envy*. You feel resentful not because of others' behaviors, but because you wish you could do/have the same things.
- To manage resentment, *address the root causes*, such as:
  - (i) Unmet needs, e.g. feeling overburdened or unappreciated because you failed to set boundaries with yourself/others.
  - (ii) Perfectionism, e.g. resenting that others can take it easy or accept lower standards.
  - (iii) Unvoiced or unrealistic expectations that set you up for disappointment.

Schadenfreude is about deriving pleasure from another person's misfortune or suffering.

- It's often driven by *insecurity, inferiority, or fear* arising from:
  - (i) Social comparison: when we see others' failure as a relief or a boost to our own self-esteem; or

KEY QUOTES

"Envy occurs when we want something that another person has. Jealousy is when we fear losing a relationship or a valued part of a relationship that we already have."

"We think jealousy in response to how we feel."

"While resentment is definitely an emotion, I normally recognize it by a familiar thought pattern: What mean and critical thing am I rehearsing saying to this person?"

"Your lack of work is not making me resentful, my lack of rest is making me resentful."

"Nothing that celebrates the humiliation or pain of another person builds lasting connection."

(ii) Groupthink and collective schadenfreude, especially when the suffering person is a rival or part of an opposing group.

- Schadenfreude can feel good in the moment and create a temporary sense of group bonding. But in the long run, it *erodes values* like empathy or kindness, creates guilt, shame, and other negative social dynamics.

Freudenfreude is the pleasure or joy we feel in response to another person's success or happiness. It's the opposite of schadenfreude, reflecting our ability to empathize and share in others' positive emotions.

- It *deepens relationships and builds emotional resilience* by promoting positive social interactions and a sense of community.
- Here are *2 ways to practice freudenfreude*:

(i) *Shoy*: Intentionally share in the joy of someone's success by showing interest and asking follow-up questions; and

(ii) *Bragitude*: Expressing gratitude to those who celebrate your success.

3. Places We Go When Things Don't Go as Planned

Boredom often arises from a lack of stimulation, or when tasks feel repetitive and without purpose.

- How we feel when bored depends on our *levels of autonomy or control*. When we have little control over a boring task, we tend to feel irritated or frustrated. If we have control over the task, we might feel lethargic or disinterested.
- Boredom is actually *essential for creativity*. When we're bored, our minds tend to wander, fueling creativity and problem-solving.

Disappointment occurs when things don't turn out as we expected. The higher the expectation, the greater the disappointment.

- Often, disappointments arise from *silent expectations* that we haven't communicated or even acknowledged to ourselves.

KEY QUOTES

"If this is your flame and the wind picks up, good friends cup their hands around your flame to prevent it from going out. And you do the same for them."

"The lack of stimulation that defines 'being bored' gives our imagination room to play and grow."

"Boredom is your imagination calling to you."
—Sherry Turkle

"Disappointment is unmet expectations. The more significant the expectations, the more significant the disappointment."

These set us up for frustration, especially if they involve outcomes beyond our control (e.g. how others react or respond).

- Some people try to *avoid disappointment* by reducing their expectations and adopting a cynical view of life. They end up numbing their emotions and felling unfulfilled.

- The best way to manage disappointment is by *reality-checking our expectations and communicating them clearly*. We will still get disappointed, but it's easier to navigate the experience when there's a shared understanding of what went wrong.

Regret occurs when we don't get the outcomes we wanted or hoped for, and wish we had made different choices.

- Unlike disappointment, which is often about events outside our control, regret involves personal responsibility. In the short term, we tend to regret actions that led to undesirable outcomes. But in the long term, we tend to *regret the actions we didn't take* and their missed opportunities.

- *Regret can be a powerful teacher*. Analyze your regrets to gain wisdom and make more courageous decisions in the future. Practice self-compassion to take accountability in a healthy way.

Discouragement is the loss of confidence or motivation, usually after repeated failures, persistent lack of progress, or unmet expectations. However, you might still take action.

Resignation is the sense of futility that no matter what you do, things won't improve. You lose hope and stop trying.

Frustration is the feeling that arises when your goals are obstructed. It overlaps with anger, but with a key difference—With anger, you feel you can still do something to fix the situation; with frustration it feels like there's nothing you can do.

4. Places We Go When Things Are Beyond Us

Awe is the feeling from encountering something so vast or unfamiliar—be it nature, art, or a powerful idea—that it challenges our understanding of the world. It's more passive in nature, leading us to observe the phenomenon in amazement.

KEY QUOTES

"There are too many people in the world today who decide to live disappointed rather than risk feeling disappointment."

"Communicating our expectations is brave and vulnerable."

"If you have no regrets, or you intentionally set out to live without regrets, I think you're missing the power of regret to teach us."

"Regrets about not taking chances have made me braver. Regrets about shaming or blaming people I care about have made me more thoughtful."

"When feeling awe, we tend to simply stand back and observe...Wonder fuels our passion for exploration and learning, for curiosity and adventure."

Wonder, on the other hand, sparks our curiosity and amazement. It energizes us and inspires us actively explore, ask questions, and learn/understand more.

Confusion occurs when we face something we can't understand or information that conflicts with what we know.

- It's an uncomfortable feeling that makes us question what we know, and it's essential for learning and growth. "*Optimal confusion*" helps us to seek out answers, solve problems, and learn more deeply.

Curiosity is the desire to learn, explore, or close a knowledge gap.

- It can be both a trait (e.g. being naturally curious) and a state (e.g. being curious about something specific). It drives us to *actively question, investigate, and discover*, unlike interest which is more passive.

Interest is more of a cognitive state, when you're focused and open to something that's appealing, relevant, or engaging. You can be interested but not curious; but you can't be curious without being first interested.

Surprise occurs when something unexpected interrupts our mental flow and makes us reevaluate the situation.

- Surprise serves as a *bridge* between our thought and feelings. It's a fleeting emotion that fades within seconds, once the rational brain processes the situation.

- It also *amplifies emotion*: the more unexpected the event, the stronger the emotional response afterward. That's why surprising news is more likely to be shared and surprising messages more likely to get noticed.

5. Places We Go When Things Aren't What They Seem

Amusement is a light, playful emotion typically triggered by humor or unexpected situations.

- It's usually brief, providing a *momentary relief from stress*, and creating social bonds through a sense of humor, playfulness, and camaraderie.

KEY QUOTES

"Confusion, like many uncomfortable things in life, is vital for learning."

"We have to have some level of knowledge or awareness before we can become curious. We aren't curious about something we are unaware of or know nothing about."

"With interest, our mind is open to seeing what's there, but with curiosity, we've acknowledged a gap in what we know or understand, and our heart and head are both invested in closing that gap."

"We can think of surprise as 'a bridge between cognition and emotion.' But it's a short bridge!"

Bittersweetness is the mixed feeling of happiness and sadness at the same time. It involves joy from what is, combined with sadness at the impermanence of that joy, e.g. watching your children grow up.

- Bittersweetness is *different from ambivalence* which involves uncertainty or indecision about feelings.

Nostalgia is a bittersweet feeling of remembering the past, with both happiness for those memories and sadness for the loss of those times.

- It involves yearning for the way things used to be, and seeing the past in a way that feels better than they really were. It's a *double-edged sword*, since it can offer a sense of continuity and social connection, but can also be a way to escape current realities by dwelling on the past.

Cognitive dissonance occurs when we hold two conflicting beliefs or ideas simultaneously.

- This is uncomfortable, so we try to *resolve the contradiction* in some way—often by rejecting conflicting information, downplaying their importance, justifying our actions, or changing our beliefs/actions. For example, smokers who know smoking is harmful but continue to smoke might convince themselves that smoking relaxes them, or the risks are exaggerated.

- Don't rush to resolve the discomfort from dissonance. *Remain curious* to uncover deeper insights and growth.

Paradox refers to the coexistence of two seemingly contradictory truths. For example, leaders must be both assertive and empathetic to succeed. Or, we admire vulnerability in others yet we resist showing it ourselves.

- Cognitive dissonance demands resolution, whereas paradox asks that we *accept and live with the tension* between opposites. In the process, we uncover deeper truths about ourselves and the world.

Irony and sarcasm are both ways of saying one thing and meaning something else.

- *Irony* occurs when the surface/literal meaning of our words and actions contradicts the intended meaning, e.g. saying

KEY QUOTES

"Multiple emotions, such as happiness and sadness, may be rapidly vacillating below our consciousness, but our interpretation may be a more integrated emotional experience."

"Nostalgia can be a part of both healthy and unhealthy coping strategies, depending on an individual's personality and coping style."

"It's brave to invite new information to the table, to sit with it and hear it out. It's also rare these days."

"If we're willing to stay with it and stay curious, complexity is one of our greatest teachers."

"Embracing the paradox teaches us how to think deeper and with more complexity...It moves us away from oversimplifying how systems, organizations, and humans work."

"The same way you feel a muscle 'burn' when it's being strengthened, the brain needs to feel some discomfort when it's learning."

"What a beautiful day!" during a rainstorm. It tends to be more subtle, relying on the audience to grasp the contradiction.

- *Sarcasm* is a type of irony where the words are intended to mock, ridicule, or criticize someone. It tends to have a sharp or biting tone to express frustration or disapproval.

- Both irony and sarcasm should be used with care, as they're *often misunderstood*, especially when communicating with someone unfamiliar, during emotionally-charged situations, or in text-based communication. Be mindful of using sarcasm around children, as they usually can't grasp the intended meaning until they're 9-10 years old.

6. Places We Go When We're Hurting

Anguish is an overwhelming mix of shock, grief, incredulity, and powerlessness. These feelings jointly cause so much physical and emotional pain that they can literally bring us to our knees, causing us to collapse in on ourselves.

- Anguish is often experienced in moments of deep trauma or unbearable loss. The sense of powerlessness makes it especially traumatic, since we cannot reverse or change what has happened. It takes *time and support* to gradually recover the pieces of ourselves and re-engage with life again.

Hopelessness is the feeling that things won't improve no matter what you do. You're unable to set realistic goals or find a way to improve the situation.

- It usually arises from *negative life events and thought patterns*, e.g. self-blame or feeling powerless to influence certain outcomes in a job or relationship.

- Prolonged hopelessness often leads to depression and suicidal thoughts. To *cultivate hope*: set realistic goals, find flexible options to achieve those goals, build belief in ourselves, and seek help and support.

Despair is a deeper and wider sense of hopelessness that affects one's entire outlook on life. It leads to the sense that you're trapped in the current suffering with no way out.

KEY QUOTES

"Are you dressing something up in humor that actually requires clarity and honesty?"

"Anguish often causes us to physically crumple in on ourselves, literally bringing us to our knees or forcing us all the way to the ground."

"The human spirit is resilient, and just as we can reclaim our ability to breathe and feel and think, we can rebuild the bones that anguish rips away. But it takes help and time."

"We need hope like we need air. To live without hope is to risk suffocating on hopelessness and despair, risk being crushed by the belief that there is no way out of what is holding us back, no way to get to what we desperately need."

- Use Martin Seligman's 3Ps to *build resilience and manage despair*:

  (i) *Personalization*: Don't blame yourself when things go wrong; recognize that external factors also play a big role.

  (ii) *Permanence*: Remind yourself that setbacks and challenges are temporary.

  (iii) *Pervasiveness*: When something seems to be ruining your whole life, remember that other good things still exist.

Sadness is a natural emotional response to loss, defeat, or disappointment.

- It's unpleasant, but allows us to process difficult experiences. Studies show that sadness can improve focus, make us more resistant to judgment errors, increase generosity or acts of kindness, and improve human connection.

- Unlike clinical depression, sadness is typically *short-term and situational*. Acknowledging sadness is an important step in cultivating self-compassion and empathy for others.

Grief is a complex process that involves many emotions, such as sadness, anger, longing, and guilt.

- Brown's research uncovered *3 core aspects of grief*:

  (i) *Loss*: It includes tangible losses (e.g. death or separation) and intangible losses (e.g. loss of normalcy or security).

  (ii) *Longing*: It involves a deep yearning for what was lost, whether it's a person, a way of life, or a significant event.

  (iii) *Feeling lost*: It requires us to adapt emotionally, physically, and socially, which can be disorienting.

- Recent research found that *people experience grief differently*—in different stages with no fixed progression or timeline.

  (i) People who're grieving don't necessarily need solutions. They need others to be present, to acknowledge their loss, and to have time/space to process things at their own pace.

  (ii) Storytelling and connection aid healing, as they allow grief to be shared and validated as we process our loss.

KEY QUOTES

"When extreme hopelessness seeps into all the corners of our lives and combines with extreme sadness, we feel despair."

"Hope is a function of struggle—we develop hope not during the easy or comfortable times, but through adversity and discomfort."

"To be human is to know sadness. Owning our sadness is courageous and a necessary step in finding our way back to ourselves and each other."

"The more difficult it is for us to articulate our experiences of loss, longing, and feeling lost to the people around us, the more disconnected and alone we feel."

"Grief does not obey your plans, or your wishes. Grief will do whatever it wants to you, whenever it wants to. In that regard, Grief has a lot in common with Love."
— Elizabeth Gilbert

(iii) Grief may never fully go away, but we can still move forward while honoring what has been lost.

7. Places We Go with Others

Compassion is about consistently treating ourselves and others with kindness, recognizing suffering in others and taking action to support those in pain.

- True compassion is grounded in equality. It's not about "fixing" others, but *being present with them*, facing the discomfort together, and offering companionship and support.

- *Compassion vs empathy*. Empathy is a key skill/tool of compassion. It focuses on understanding and sharing in another's emotions, while compassion goes further to care for others with a healthy boundary.

Empathy is the ability to understand and share in others' feelings. I helps people to feel heard, understood, and less alone in their experiences.

- Empathy allows us to *understand and validate others' emotions*, without necessarily taking them on ourselves.

- There are *2 types of empathy*. Brown emphasizes the importance of cognitive empathy for true connection and compassion.

  (i) *Cognitive empathy*: Understanding others' thoughts and feelings without necessarily sharing in their emotional state.

  (ii) *Affective empathy*: Feeling what the other person is feeling. This can be emotionally taxing and may lead to overwhelm.

Sympathy involves feeling sorry for someone, but from a distance. It often reinforces a sense of separation rather than connection, and can trigger feelings of shame and isolation in the other person.

Pity involves feeling sorry for someone else's misfortune.

- It *creates distance* and makes the person being pitied feel alienated or diminished, because it's about:

KEY QUOTES

"Compassion is the daily practice of recognizing and accepting our shared humanity so that we treat ourselves and others with loving-kindness, and we take action in the face of suffering."

"Only when we know our own darkness well can we be present with the darkness of others."
—Pema Chödrön

"I believe meaningful connection requires a combination of compassion and cognitive empathy or perspective taking."

"We can respond empathically only if we are willing to be present to someone's pain. If we're not willing to do that, it's not real empathy."

"There's nothing worse than feeling pitied."

(i) Seeing others as inferior because of their suffering;

(ii) Feeling sorry for them without actively helping;

(iii) Keeping your emotional distance; and

(iv) Avoiding sharing their pain ("I'm glad I'm not in your shoes").

Boundaries define acceptable behavior and emotional limits. They are essential for healthy relationships because they establish where one person ends and another begins.

- Clear boundaries allow for autonomy, respect, and compassion while protecting your emotional health. Without boundaries, relationships can become *enmeshed*, with one person losing their sense of self or taking on too much responsibility for the other's emotions.

Comparative suffering occurs when we compare our pain to others', on the belief that if someone else suffers more, then our own suffering is less valid.

- This falsely assumes that love, care and concern are *limited resources*. In reality, the more you practice empathy or compassion, the more it expands.

8. Places We Go When We Fall Short

Shame is the "intensely painful feeling or experience of believing that we are flawed and therefore unworthy of love, belonging, and connection."

- To counter shame, we need *self-compassion and empathy*:

  (i) Self-compassion (which includes self-kindness, common humanity, and mindfulness) helps us to acknowledge our humanity and to be gentle with ourselves and our missteps.

  (ii) Empathy reminds us that we're not alone, reduces the power of shame, and opens the door to healing.

- Everyone experiences shame. We're afraid to talk about it, yet the less we talk about it the more control it has over us. To *build shame resilience*:

KEY QUOTES

"If there's no autonomy between people, then there's no compassion or empathy, just enmeshment."

"Empathy is not finite, and compassion is not a pizza with eight slices. When you practice empathy and compassion with someone, there is not less of these qualities to go around. There's more."

"Where shame exists, empathy is almost always absent. That's what makes shame dangerous. The opposite of experiencing shame is experiencing empathy."

(i) Recognize shame and its triggers;

(ii) Question if the shame triggers are realistic or fair;

(iii) Share your experiences with those you trust for support; and

(iv) Speak shame openly and ask for what you need.

Shame is different from guilt or humiliation.

- *Shame* is targeted at the self—the feeling that "I am bad" or "I am unworthy."

- *Guilt* arises when we recognize that our behavior or actions have gone against our values or caused harm to others. It's targeted at actions—the feeling that "I did something bad." If handled constructively, it can motivate positive change.

- *Humiliation* occurs when we feel we've been unfairly devalued by others. Unlike shame, we don't internalize it as a reflection of our self-worth. But when people are humiliated—especially in ways that target their identity—they might feel intense anger/rejection, leading to aggression or violence.

Embarrassment is a mild, often fleeting emotional response to feeling self-conscious, exposed, or awkward in front of others, e.g. doing something clumsy or making a mistake in public. Unlike shame or humiliation, embarrassment is usually temporary and harmless.

Perfectionism is the belief that we can shield ourselves from feelings of shame, judgment, or blame, by doing things perfectly (or presenting ourselves as flawless).

- It's driven by the fear of failure and rejection, rather than a genuine desire for excellence. It *blocks personal growth and success* by focusing on earning approval and avoiding criticism. In trying to meet impossible standards and gain external validation, we feel inadequate, burned out, or stuck in a cycle of inaction.

- By contrast, *healthy striving* focuses on growth and progress. It embraces mistakes and failures as part of the learning process.

KEY QUOTES

"The antidote to shame is empathy. If we reach out and share our shame experience with someone who responds with empathy, shame dissipates."

"Where perfectionism exists, shame is always lurking."

"Perfectionism is externally driven by a simple but potentially all-consuming question: What will people think?"

9. Places We Go When We Search for Connection

Belonging is the deep, visceral feeling that you are accepted and valued for who you truly are. It is a core human need, essential for emotional and psychological well-being.

- Unlike *fitting in*, which requires you to hide or change parts of yourself to conform with external expectations, true belonging means you're accepted as you are.
- To achieve this, you must first *embrace your authentic self* and be willing to share it with others. Belonging is also reciprocal: it's not just about being accepted by others, but also about accepting those around you.

Connection is the energy we feel when we are seen, heard, and valued. It happens when we can be our true selves with others and receive care without judgment. This creates a sense of belonging, purpose, and support, helping us to cope with life's stresses.

- *True connection* is built on emotional availability, mutual trust and respect, allowing people to interact at a deeper level to feel understood and valued.

Disconnection occurs when we feel misunderstood, invalidated, or excluded. This causes both emotional pain and physical distress.

- It can occur when we're afraid to be vulnerable, leading to *shallow or surface-level interactions*. Digital interactions may also create distractions and hinder deep, in-person connections.
- When left unresolved, disconnection can create a *sense of disempowerment*, making us feel like we don't matter.

Insecurity arises from uncertainty about our self-worth, abilities, or relationships, making us feel vulnerable and anxious.

- There are *3 key types of insecurity*:

  (i) *Domain-specific* insecurity e.g. financial insecurity, food insecurity, or a lack of physical safety.

KEY QUOTES

"In the absence of love and belonging, there is always suffering."

"We have to belong to ourselves as much as we need to belong to others. Any belonging that asks us to betray ourselves is not true belonging."

"True belonging doesn't require us to change who we are; it requires us to be who we are."

"We become terrified of feeling pain, so we engage in behaviors that become a magnet for more pain."

(ii) *Relationship or interpersonal insecurity*: when we're unsure about being loved, valued, or protected in our relationships.

(iii) *General or personal insecurity*: being overly self-critical about our personal qualities or performance.

- The opposite of insecurity is *self-security*, which involves accepting your weaknesses without judgment.

Invisibility is the painful experience of being ignored, overlooked, or devalued in a relationship or social setting.

- There are different *types of invisibility* including: interpersonal invisibility (in relationships), group invisibility (affecting entire social groups), and representational invisibility (underrepresentation or negative portrayals in media and culture).
- Invisibility is a form of disconnection linked tied to *stigma and stereotypes*. It can leave people feeling stigmatized and unseen.

Loneliness is the feeling of isolation from others, often accompanied by a deep sadness or a longing for connection.

- Loneliness is *not the same as being alone*. The latter can be healing and restorative, while loneliness is painful due to the absence of meaningful social interaction. It can affect physical health, and is linked to higher risks of cardiovascular disease, dementia, and depression.
- To *combat loneliness*, we must recognize it and seek meaningful connections. To feel less isolated, reach out to a few people you trust and focus on quality over quantity in relationships.

10. Places We Go When the Heart Is Open

Love is a multifaceted emotion characterized by deep affection, attachment, and connection to others. It is central to human connection and emotional well-being.

- It is *both an emotion and a set of actions* that foster connection and trust. It can span from romantic love to familial love, platonic love, and self-love.

KEY QUOTES

"Self-security is the open and nonjudgmental acceptance of one's own weaknesses."
—Alice Huang and Howard Berenbaum

"Given that we are all here to be seen, known, and loved, invisibility is one of the most painful human experiences."

"Invisibility is its own form of stigmatization."

"We feel shame around being lonely—as if feeling lonely means there's something wrong with us. We feel shame even when our loneliness is caused by grief, loss, or heartbreak."

"Love is not something we give or get; it is something that we nurture and grow, a connection that can be cultivated between two people only when it exists within each one of them—we can love others only as much as we love ourselves."

- True love is rooted in *mutual respect, trust, and compassion*, not romantic or idealized notions. To build and maintain love, you need daily commitment, mutual respect, and care. Love also requires vulnerability and a willingness to embrace uncertainty.

Lovelessness is the emotional void left by the absence of love, trust, or connection in one's life. It can be caused by a lack of self-compassion or external experiences where trust has been broken.

- To *recover from lovelessness*, we must rebuild trust and develop the courage to be vulnerable again.

Heartbreak is the intense emotional pain that comes from losing someone or something we deeply care about.

- Heartbreak can come from the loss of love (through a breakup, death, or betrayal), the end of important relationships, unrequited love, or the failure of significant dreams and aspirations. It affects us physically and emotionally, often leading to *feelings of grief, longing, and despair*.
- It takes courage to love, since loving means the risk of heartbreak. To *recover from heartbreak*, you must allow yourself to grieve, seek support from others, and gradually open up to new connections or possibilities.

Trust is the belief that someone is reliable, honest, and has your best interests at heart. It's built gradually over time, through consistent actions that demonstrate integrity and care.

- Trust is the *foundation of meaningful relationships*. It involves the willingness to be vulnerable and the belief that others will act in our best interests and respect our boundaries.
- Here are the *elements of trust* using Brown's BRAVING acronym:

  (i) Boundaries: Setting and respecting boundaries.

  (ii) Reliability: Consistently doing what you say you will do.

  (iii) Accountability: Owning your mistakes and making amends.

  (iv) Vault: Holding what others share with you in confidence.

  (v) Integrity: Practicing your values (not just professing them).

KEY QUOTES

"We need more real love. Gritty, dangerous, wild-eyed, justice-seeking love."

"Heartbreak is what happens when love is lost."
—Joe Reynolds

"The brokenhearted are the bravest among us—they dared to love."

"Heartbreak is unavoidable unless we choose not to love at all. A lot of people do just that."

"If someone says 'I don't trust you,' it feels like a general assault on our character."

(vi) Non-judgment: Asking for what you need without fear of judgment, and offering the same in return.

(vii) Generosity: Interpreting others' words/actions generously.

- Before cultivating trust with others, you must develop *self-trust*—confidence in your own abilities, judgments, and instincts, and knowing you'll act in alignment with your values.

Betrayal occurs when someone violates your trust by acting in a way that is disloyal, dishonest, or harmful. It shatters the trust and connection in a relationship, leading to feelings of hurt, anger, and disbelief. The deeper the trust, the more devastating the betrayal.

- Betrayal can take *many forms*, from infidelity in romantic relationships, to broken promises in friendships or professional settings, to institutional betrayal and self-betrayal.

- Betrayal can create *deep and long-lasting emotional scars*. It often leads to the loss of trust not only in the person who betrayed you, but in relationships in general. It can also impact self-esteem and mental health.

- To *heal from betrayal*, you need time to acknowledge the hurt, process your emotions, set boundaries and rebuild trust from the ground up.

Defensiveness is the instinctive reaction to protect ourselves from perceived threats or attacks to our self-esteem or self-worth.

- We often respond by *denying responsibility, deflecting blame, or justifying behavior*. It can block constructive conversations and feedback, strain relationships, and hinder learning and growth.

- To *overcome defensiveness*, learn to recognize the signs of defensiveness (e.g. tensed body language or tunnel vision) and intentionally shift your stance. For example, relax clenched fists and uncross your arms, or say something like, "I'm feeling overwhelmed. Can we take a 10-minute break and start over?"

Flooding is the sensation of overwhelm that occurs during high-conflict or emotionally-intense situations. We feel overloaded

KEY QUOTES

"Self-trust is normally the first casualty of failure or mistakes. We stop trusting ourselves when we hurt others, get hurt, feel shame, or question our worth."

"Betrayal is so painful because, at its core, it is a violation of trust."

"[Betrayal] happens in relationships in which trust is expected and assumed, so when it's violated, we're often shocked, and we can struggle to believe what's happening. It can feel as if the ground beneath us has given way."

"At its core, defensiveness is a way to protect our ego and a fragile self-esteem."

"Defensiveness blocks us from hearing feedback and evaluating if we want to make meaningful changes in our thinking or behavior based on input from others."

psychologically and physically, making it hard to focus, think logically, or communicate effectively.

- When we're emotionally flooded, we might *shut down or lash out*, worsening the conflict and emotional upheaval.
- The best way to manage flooding is to *take a break*—step away from the situation to regain control over your emotions, then re-engage in a calmer state.

Hurt is a blend of sadness and feelings of being emotionally wounded. It often occurs when someone's actions or words cause us to feel devalued or rejected, and may coexist with other emotions like anger, anxiety, jealousy, or loneliness.

- Hurt can range *from mild disappointment to deep emotional pain*. It's especially painful when the hurt is perceived as intentional. We might respond by blaming ourselves, retaliating, or seeking support/comfort.
- Hurt feelings shouldn't be confused with other emotional pain like grief or "feeling wounded." Brown recommends using the words "*my feelings are hurt*" to express yourself more clearly.

11. Places We Go When Life Is Good

Joy is an intense, momentary feeling of connection, pleasure, and appreciation. It's often linked with other people, nature, or a higher power. It expands our perspective, bringing a sense of freedom and presence that makes everything seem more vibrant.

- Research shows that *joy and gratitude* reinforce each other in an upward spiral. Experiencing joy increases future feelings of gratitude, which further enhances future moments of joy.

Happiness is a state of pleasure or contentment, often tied to external circumstances and experiences. It is more stable, less intense, and longer-lasting than joy.

- Happiness is associated with emotional well-being, but Brown cautions against an *incessant pursuit of happiness* as it can block deeper experiences of joy and gratitude.

KEY QUOTES

"There's only so much our bodies and nervous systems can stand before they flip the survival switch and stop communicating and start protecting or attacking."

"I'm not sure there's a braver sentence in the human catalog of brave sentences than 'My feelings are hurt.'"

"When we respond to hurt feelings with anger, the other person tends to match our anger with more anger."

"I love thinking of joy as 'the good mood of the soul.' There is definitely something soulful about joy."

"While experiencing joy, we don't lose ourselves, we become more truly ourselves."

Calm is a state of peace and mindfulness. It helps us to maintain perspective and manage emotional reactivity in stressful or chaotic situations. It involves (i) slowing down mentally and physically to focus mindfully on the present, and (ii) regulating our emotional reaction to respond thoughtfully (not impulsively).

- We can *cultivate calm* through practices like deep breathing and mindfulness. Whenever Brown feels herself getting anxious, she asks 2 quick questions to gain perspective and calm herself: "Do I have enough information to freak out?" and "Will freaking out help?" The answer is almost always "no" to both questions.

Contentment is the feeling of satisfaction, completeness, and "enoughness." It comes from accepting and appreciating what you have, so you don't feel the urge to keep seeking more, nor long for things to be different.

- Compared to joy and happiness, contentment is more *subdued, steady, and internal*. It is strongly correlated with better life satisfaction and well-being.

- You can *cultivate contentment* through gratitude practices, mindfulness, and focusing on what's within your control (e.g. joy in simplicity and personal growth).

Gratitude is a deep appreciation for the things, people, or experiences that bring meaning and connection to our lives. It involves (i) appreciating the value of what we have (e.g. material possessions, relationships, experiences) and (ii) actively celebrating those positive aspects of life instead of taking them for granted.

- Gratitude is linked to better *well-being and emotional resilience*, including improved sleep, creativity, decision-making skills, and lower blood pressure and aggression.

- It is *both an emotion and a practice* (or something we cultivate intentionally). Common gratitude practices include: journaling, meditations, and expressing what you're thankful for daily.

Foreboding Joy is the paradoxical experience of feeling joy while simultaneously fearing that it will be taken away.

- To protect ourselves from potential loss and pain, we mentally prepare for worst-case scenarios, marring the joyful moments in life. Learn to *fully embrace the positive moments* by leaning into joy and practicing gratitude.

KEY QUOTES

"Calm is an intention. Do we want to infect people with more anxiety, or heal ourselves and the people around us with calm?"

"Calm people...can bring perspective to complicated situations and experience their feelings without reacting to heightened emotions."

"Contentment is about satisfaction, and that, ironically, is an unsatisfying idea for a lot of people."

"Gratitude is a practice that can enrich our lives in meaningful ways."

"While gratitude is an emotion, if we want to experience its full power, we must also make it a practice."

"When we push away joy, we squander the goodness that we need to build resilience, strength, and courage."

Relief is the release of physical and emotional tension after a period of worry or fear.

- Relief brings a sense of *safety and calm*, allowing us to return to a more balanced emotional state. It's often accompanied by a deep sigh or exhale, which reduces muscle tension and signals the end of the stressful period, further enhancing the feeling of relief.

Tranquility is a state of calm, peace and relaxation associated with the absence of demand/pressure. It offers respite from daily pressures, allowing us to reconnect with ourselves and find inner peace/balance.

- Unlike contentment, which involves a sense of satisfaction, tranquility is characterized by the *enjoyment of doing nothing*. It usually involves:

  (i) Being free from the pressures and demands of life; and

  (ii) Being in a natural, restorative environment like forests, fields, or large bodies of water.

KEY QUOTES

"Sighing serves as a type of reset button for our body. It not only signals relief to our body, but it enhances relief, and it reduces muscle tension."

"With contentment, we often have the sense of having completed something; with tranquility, we relish the feeling of doing nothing."

12. Places We Go When We Feel Wronged

Anger is an intense emotion when we feel wronged, disrespected, or treated unfairly. We believe someone else is responsible for an injustice, and that something can be done to right the wrong. Anger can range from mild irritation to full-blown rage.

- It compels us to act, making it a *powerful catalyst* for action and change. However, prolonged or unchecked anger can hurt relationships and lead to exhaustion.

- Often, anger masks deeper, more vulnerable emotions like hurt, fear, or grief. To *manage anger*, identify the root cause, then express it in a healthy, non-destructive way.

Contempt is a mix of anger and disgust, characterized by the feeling of moral superiority over another person or group. It involves a sense of disrespect or disdain, which can be dismissive or belittling.

"Anger is...an emotion that we need to transform into something life-giving: courage, love, change, compassion, justice."

"Anger is a powerful catalyst but a life-sucking companion."

"When someone is angry at you, you've still got traction with them, but when they display contempt, you've been dismissed."
— Pamela Meyer

- To *manage contempt*, start by recognizing it and figuring out why it exists. It often stems from unresolved issues like emotional pain or a desire to feel superior. Recognize the humanity in others to rebuild mutual respect, and reframe conflict as an opportunity for mutual understanding.

Disgust is a strong urge to distance ourselves from something we perceive as offensive, revolting, toxic, or harmful.

- It originally evolved to protect us from *physical contamination* like vomit or rotten food. However, it can also be directed towards *behaviors, individuals, or ideas*. The reaction is visceral and immediate, and can be dehumanizing.

- To *manage disgust*, learn to recognize when it's truly useful for safety, or merely judgmental or exclusionary.

Dehumanization is about seeing others as less than human.

- It often spreads through the use of *degrading language and imagery*, such as portraying certain groups/people as "rats," "cockroaches," or "savages." This creates an us-vs-them division, presenting the other party as our enemy, or something inhuman, immoral or dangerous. This makes it easier to justify acts of hatred, cruelty, and violence.

- To *combat dehumanization*, we must recognize the shared humanity of all people, even those we're in conflict with. Take personal accountability to stop the use of language and imagery that dehumanize others.

Hate is a powerful, destructive emotion, driven by a mix of feelings like repulsion, disgust, anger, fear, and contempt.

- It occurs when we believe a person or group is intentionally malicious or immoral, and that they're unlikely to change. This creates a strong desire to eliminate them mentally, socially, or physically, and leads to *harmful actions* like violence or emotional abuse. Hate crimes target victims for who they are, not what they have done.

- Hate is often spread by leaders who use stories/rhetoric to present the opposing party as a *common enemy*. Distance and a lack of direct contact can intensify hatred, making it easier for us to dehumanize and vilify others.

KEY QUOTES

"[It] is not that we need to disagree less, but we need to learn how to disagree better—without contempt or cruelty."

"With contempt, we look down on the other person and we want to exclude or ignore them. With disgust... we want to avoid being 'poisoned' (either literally or figuratively)."

"The language we use to dehumanize is effective because it actually taps into 'core disgust'...We reduce people into the things that make us grossed out."

"Language matters. It's the raw material of story, it changes how we feel about ourselves and others, and it's a portal to connection."

"Hate crime victims...have been targeted, beaten, and killed, not because of anything they've done, but because of who they are."

"[I believe] that people are harder to hate close up, and easier to hate when we're behind our ideological bunker and they're behind theirs."

- It is much harder to hate someone when you see their humanity and understand their experiences. So, we can *mitigate hate* through critical thinking and empathy for others' points of view.

Self-Righteousness is the conviction that we are morally superior to others. People who exhibit self-righteousness tend to be judgmental and close-minded. They adopt a black-and-white view of morality and dismiss differing opinions as morally or intellectually inferior.

- Self-righteousness is about using moral outrage as a way to elevate oneself. It often masks personal insecurities or flaws, trapping people in a cycle of judgment and defensiveness. This is *different from righteousness*, where someone reacts appropriately to real injustice and seeks to do the right thing.

- To *overcome self-righteousness*, acknowledge that there are multiple perspectives, and others' views may be valid even when they differ from yours.

KEY QUOTES

"The self-righteous scream judgments against others to hide the noise of skeletons dancing in their own closets."
— John Mark Green

"Moral outrage is selfenhancing and related to selfrighteous anger."

13. Places We Go to Self-Assess

Pride is a feeling of satisfaction and pleasure derived from our achievements or efforts. We can feel proud for ourselves and for others, e.g. pride in a loved one's accomplishments or a collective effort.

- Pride *can be good or bad* depending on the context:

  (i) Healthy pride reflects true accomplishments based on real effort and mastery, and this can be a source of motivation and self-esteem.

  (ii) However, pride can lead to arrogance or a sense of superiority if it becomes excessive or inflated. This form of pride alienates people and block growth or connection.

Hubris is an exaggerated sense of pride or self-confidence that is not rooted in genuine achievements or competence.

- It's associated with an inflated view of one's abilities, driven by *narcissism, insecurity and the need for dominance*. The outward show of confidence is often used to hide feelings of shame

"Context and story are necessary to figure out what's driving...behaviors."

"Pride can be good for us, hubris is dangerous, and humility is key to grounded confidence and healthy relationships."

and insecurity, and dominance is used to make the person feel good.

- Hubris blinds us to our flaws/limitations, making it hard to learn from mistakes or feedback. It's dangerous as it can lead to conflict and *poor decisions*.
- To *manage hubris*, counterbalance it with humility: recognize our limitations, be open to feedback, and value others' contributions.

Humility is an openness to new learning, grounded in an honest understanding of your strengths and weaknesses.

- It is not about meekness, self-doubt, or downplaying our achievements. It's a *balanced and powerful trait* that allows for growth and connect without arrogance. People who practice humility are more willing to admit mistakes, respect others' perspectives and experiences, and adjust their beliefs/ behaviors in face of new information.

KEY QUOTES

"To those of us observing hubris, it looks and feels terrible. However, to the person experiencing hubris, it feels good."

"I define narcissism as the shame-based fear of being ordinary."

"Humility is quieter but more genuine and ultimately more powerful than hubris."

Putting It Together: Cultivating Meaningful Connections

The 87 emotions and experiences above help us define what it means to be human. However, to build meaningful connections, we must **apply this knowledge** in our daily interactions.

Brown's research showed that emotional barriers to connection are not always obvious. She calls these "**near vs far enemies**."

- "*Near enemies*" are emotional responses that seem constructive, but actually block connection. For example, pity might seem like empathy, but it lacks the emotional closeness and shared perspective required for true understanding.
- "*Far enemies*" are easier to identify since they are the direct opposites of positive traits (e.g. hatred is a far enemy of love). However, they can still pose challenges in real life.

We can use our emotional vocabulary both as a tool to understand ourselves, and as a guide to deepen our relationships. To cultivate meaningful relationships, we must **practice 3 sets of essential skills** to transform emotional awareness into authentic connections.

"We become what we do—even when those things are outside of who we want to be."

"On the surface, the near enemies of emotions or experiences might look and even feel like connection, but ultimately they drive us to be disconnected from ourselves and from each other."

"Knowing and applying the language of human experience and emotion is a key property of all of the major categories that support meaningful connection."

- *Grounded confidence*: Knowing and embracing our true selves;
- *Courage to walk alongside others*: Being present to their joy and pain without judgment; and
- *Story stewardship*: Listen deeply and honoring others' stories and experiences with trust and care.

Other Details in the Book to Look out For

Understanding, labeling, and expressing our emotions effectively are key to improving clarity, deepening connections, and fostering personal growth. This book offers a detailed breakdown of the 87 emotions and experiences summarized above, along with personal anecdotes, research-backed insights, illustrations, examples and practical tips for navigating emotions in everyday life. For more details, please visit https://brenebrown.com/.

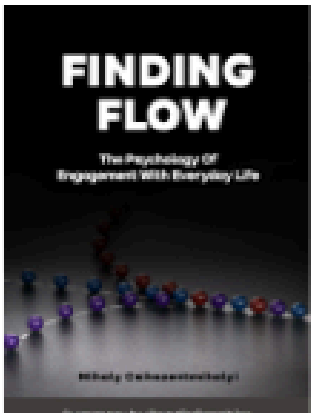
About the Author

Dr. Brené Brown, Ph.D., (born 1965) is an American research professor, author, and podcast host. She is a research professor at the University of Houston Graduate College of Social Work and previously served as a visiting professor at McCombs School of Business, University of Texas at Austin.

Renowned for her groundbreaking research on courage, vulnerability, shame, and empathy, Dr. Brown has delivered multiple TED Talks and lectures, and won numerous teaching awards. She also hosts two popular podcasts "Unlocking Us" and "Dare to Lead" where she explores these topics.

KEY QUOTES

"If we want to find the way back to ourselves and one another, we need language and the grounded confidence to both tell our stories and to be stewards of the stories that we hear. This is the framework for meaningful connection."



FINDING FLOW

The Psychology of Engagement with Everyday Life

Mihaly Csikszentmihalyi

The Big "So What"

The book answers the questions: "what is a good life?", "How anyone can create an excellent life?" and "How to transform every day activities into opportunities for engagement, enjoyment and growth?" It explains why happiness alone isn't enough, and how "flow" can create true excellence and quality of life.

Introduction

The insights from the book are built on 3 key assumptions or foundations:

- Important truths about life have already been captured over the years by philosophers, prophets and sacred books. This book seeks to express and re-interpret them in the modern context.
- Current science provides useful information about mankind. However, our knowledge is still far from complete, and many of the "scientific truths" are by no means proven fact.
- To understand life in the present, we must integrate the realities of the past with the possibilities of the future.

The Content of Experience: What Affects Quality of Life?

To improve our quality of life, we need to first understand how we experience life.

Time is the essence

Our quality of life is essentially the accumulation of

KEY QUOTES

"Societies also have operating systems... And much of our societal operating system consists of a set of assumptions about human behaviour."

Carrot-and-stick approach

"For as long as any of us can remember, we've configured our organizations and constructed our lives around its bedrock assumption: The way to improve performance, increase productivity , and encourage excellence is to reward the good and punish the bad".

experiences (what we do, feel, think) over time. Since experiences take place at a point in time, time is the scarcest resource that we have. How we choose to allocate or invest time will determine what we experience, which add up to determine our quality of life.

What we do

Whenever we think about or do something, it consumes psychic energy. Most of us spend our time and psychic energy in these proportions:

- 24-60% on **productive activities** to generate energy for survival (e.g. working, studying, eating)
- 20-42% on **maintenance activities** (e.g. commuting, grooming, housework)
- 20-43% on **leisure activities**

Thought leaders and philosophers have long suggested that people start to develop their true potential during their "leisure time", when they can devote their time and energy to self-development.

Who we are with

Our experiences (and hence quality of life) are largely affected by the people we are with. Most people spend their time evenly in 3 social contexts:

- **"Public" space,** where we are evaluated by others, compete for resources & may establish collaborative relationships. This is the domain that presents the highest risks and also the highest rewards.
- **Family**, including time with parents, siblings, children and close relatives .
- **Solitude**, i.e. time on our own, which may be enjoyable to some but not to others.

Our intentions and goals

Our intentions focus our psychic energy in the short run, while our goals focus our energy in the long run, and this in turn shapes who we become.

KEY QUOTES

"Motivation 2.0...doesn't mesh with the way many new business models are organizing what we do – because we're intrinsically motivated purpose maximizers, not only extrinsically motivated profit maximizers."

"Economists are finally realizing that we're fullfledged human beings, not single-minded economic robots."

"For growing numbers of people, work is often creative, interesting, and self-directed rather than unrelentingly routine, boring, and other-directed."

Motivation 3.0

"The science shows that the secret to high performance...(is) our deep-seated desire to direct our own lives, to extend and expand our abilities, and to make a contribution."

Immersing/focusing on our goals typically takes a lot of psychic energy:

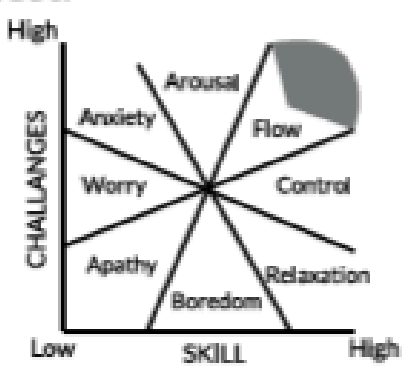
- **Managing our goals** can take up a lot of energy, especially those that go against our pre-programmed beliefs and behaviours.
- **Concentration** takes energy and effort, especially when it goes against our inner feelings and motivations.
- We also **struggle with conflicting desires and thoughts** in a typical day. For example, we may enjoy an expensive dinner and drinks with friends after work, but feel guilty about spending money and not being at home with the kids.

However, "flow experiences" occur when the act of focusing and immersing in our experiences seem effortless. In short:

> *"A person in flow is completed focused. There is no space in consciousness for distracting thoughts, irrelevant feelings. Self-consciousness disappears, yet one feels stronger than usual. The sense of time is distorted: hours seem to pass by in minutes. When a person's entire being is stretched in the full functioning of body and mind, whatever one does becomes worth doing for its own sake...In the harmonious focusing of physical and psychic energy, life finally comes into its own."*

Being in flow typically comes with :

- **Clarity** of goals and required activities, i.e. knowing what to do
- **Immediate feedback,** i.e. knowing how well you are doing
- **High level of skills and challenges,** i.e. the challenges are big enough to be motivating but not insurmountable to cause anxiety, and you can use your skills to the fullest.



KEY QUOTES

"Baseline rewards"
The best use of money as a motivator is to pay people enough to take the issue of money off the table."

Extrinsic Motivation
"Sometimes these motivators work. Often they don't. And many times, they inflict collateral damage".

"Over and over again, (researchers) discovered that extrinsic rewards – in particular, contingent, expected, "if-then" rewards – snuffed out the third drive."

Excellence in life comes from being engaged in flow, not from pursuing happiness. When we are in flow, we direct our energy fully towards complex tasks, learning, and growing our consciousness. Flow is in fact a source of psychic energy, because it helps to focus our attention and motivates us to take action.

≋ Finding Flow in Work & Leisure ≋

Work is often seen as a necessary evil, while having free time to relax and do nothing seems desirable. However, evidence suggests the opposite – work isn't necessarily bad, and leisure time doesn't necessarily improve quality of life.

The Paradox of Work

Work is a central part of most of our lives, and typically takes up a third of our available time. Work can provide meaning, focus, and challenge to our lives, yet most of us are glad to avoid work if possible.

Many people resent their jobs for 3 key reasons:

- The jobs are meaningless or even cause harm
- The jobs are boring and routine (with no variety or challenge)
- The jobs are too stressful (due to relationships with colleagues or superiors, lack of recognition etc.)

On the other hand, work can be a positive experience when it is perceived to be voluntary and we are satisfied with our results. This is especially so given how the concept of "work" has evolved over the centuries - from hunting for food, to manual labor, to an expression of skills and creativity today. Many modern professionals (e.g. artists, entrepreneurs) are enjoying much more intrinsic rewards from work that were not readily available in the past.

In short, we cannot blame our jobs for the lack of inspiration in our lives. Rather, when we find flow at work, it helps us to develop new skills and opportunities for growth and fulfillment.

KEY QUOTES

"Mixing rewards with inherently interesting, creative or noble tasks deploying them without understanding the peculiar science of motivation, is a very dangerous game."

"Greatness and nearsightedness are incompatible. Meaningful achievement depends on lifting one's sights and pushing toward the horizon."

Csikszentmihalyi gave several examples of how people in seemingly poor or unenviable conditions found inspiration and fulfillment in life by focusing their energy on creating value for others, e.g. a lady who dedicated her life to helping homeless urchins who were in even more desperate conditions than her.

The risks and opportunities of leisure

Contrary to common perception, free time doesn't improve the quality of life, unless it is used effectively. In fact, people without goals and meaningful interactions tend to lose motivation, focus, and experience greater anxiety as their minds wander to unresolvable problems.

There's a distinct difference between active and passive leisure. Sports and active games are 3 times more likely to generate a state of heightened enjoyment than watching TV (while hobbies are 2.5 times more likely to do so).

To improve the quality of life, it is important to give our free time the same focus and attention as our work. Ensure that your free time is used to explore the potential of the self and the environment, hence creating opportunity for flow, which brings growth, fulfillment and better quality of life.

Finding Flow in Work & Leisure

To create flow and inspiration in what we do (be it work or leisure):

- Pay attention, so you understand thoroughly what is happening and why. This helps us to understand the full impact of our actions (however trivial) on the whole, to give meaning, clarity and awareness over time.
- Don't accept that the current way of doing the job is the only way – explore and experiment with new and better ways of doing things. No matter now routine a job or task, there are always small adjustments and improvements that you can focus on (and enjoy fulfilment from) if you treat it as a professional challenge.
- Exercise personal control to prevent stress (which hinders

KEY QUOTES

"We're designed to be Type I... If we update the environments we're in... we can return ourselves and our colleagues to our natural state."

"This era doesn't call for better management. It calls for a renaissance of selfdirection."

"Autonomy... is different from independence. It means acting with choice – which means we can be both autonomous and happily interdependent with others."

flow):
o Develop a personal strategy that provides order and priority
o Match your skill with the identified challenges. For example, learn a new skill, delegate a task, break up the task or transform it such that you can manage it.

≋ Finding Flow in Relationships ≋

Relationship with Others

Our relationships have a significant impact on how we feel and on our quality of life. To develop relationships, we need to invest energy in them. A relationship that brings consciousness meets 2 conditions:

- Compatibility between goals, i.e. **shared goals**
- A willingness to **invest attention** in the other person's goals.

How rewarding our relationships are depend on a several factors, including:

- **Socialization.** Socialization shapes our behavious, cultural expectations and aspirations, and hence affects how we experience life. We feel shame and guilt (as opposed to pride and accomplishments) when we feel we have let others down (based on social norms and standards).
- **Our friendships.** The lack of friendship is a common personal complaint. In an ideal world, friends provide mutual benefits and stimulation to hone our skills and support our growth. However, in reality, it is common for friendships to provide a safe haven for us to preserve our self-image, without contributing to our growth.
- **Our sexual relationships.** Fulfilling sexual relationships are another important aspect of a quality life. This come from neither celibacy nor promiscuity, but being conscious of the role of sexuality in our lives.

Relationship with Self

- **Being alone.** Most people experience lower moods when they are alone than when they are with others. The only time

KEY QUOTES

"Control leads to compliance; autonomy leads to engagement."

"In flow, people lived so deeply in the moment, and felt so utterly in control, that their sense of time and even self melted away."

"Flow is essential to mastery. But flow doesn't guarantee mastery – because the two concepts operate on different horizons of time. One happens in a moment; the other unfolds over months, years and sometimes decades."

people feel better when they are alone is when they are in full concentration on a goal/ hobby or have a rich inner life.

- **Attitude towards "others".** People generally assume that people who are different from us – be it in race, language, religion, social class etc. – have different goals and cannot be trusted. Yet, we are fascinated by their differences. Being around strangers and different cultures bring excitement and creativity that improve the quality of life, so long as we believe that the "others" will share our basic goals and behave predictably within certain parameters.
- **Extroversion (expression through "public" action) versus introversion (ascension by looking inward).** Extroversion and introversion need not be mutually exclusive. In fact, the most creative and successful individuals tend to embrace both ends of the spectrum – they set aside time for themselves (e.g. working alone from home, meditating) and create opportunities to meet others (to expose themselves to new possibilities, ideas etc.). By doing so, they have access to the full range of human experiences rather than box themselves into a corner and limit the possibilities of enjoyment.

Balancing Work and Relationships

The "balance" between work and relationships (family and friends) has been an ongoing challenge. People who love their work tend to direct so much psychic energy into work that their relationships suffer.

The solution to balancing work and relationships is to balance the meaningfulness of the rewards we get from work and from relationships. People are held together by 2 types of energy:

- **Material energy** (from food, warmth, physical care, money)
- **Psychic energy** (from investing attention in each other's goals)

Successful relationships are like successful careers – they require an ongoing investment of thought and energy. In modern society, contracts and social control can no longer hold marriages together – only intrinsic rewards (i.e. mutual enjoyment) will motivate people to continue the relationships.

KEY QUOTES

"What people believe shapes what people achieve."

"Mastery hurts. Sometimes – many times – it's not much fun... It's grueling, to be sure. But that's not the problem; that's the solution."

"The joy is in the pursuit more than the realization. In the end, mastery attracts precisely because mastery eludes."

"Autonomous people working toward mastery perform at very high levels. But those who do so in the service of some greater objective can achieve even more."

"Humanize what people say and you may well humanize what they do."

Finding Flow in relationships

Creating flow in relationships involve joint activities that help people to pay attention to each other. For example, to make parenting a more rewarding experience, parents can:

- Pay attention to learn what the child is "into" or is "proud of"
- Devote more attention to share such activities with the child, hence creating joint goals that everyone is investing psychic energy into.

Likewise, when we are appreciated at work, we feel more satisfied, because we feel that our goals are being supported.

≋ Finding Flow through Awareness & Self-Development ≋

To achieve excellence in life, we need to commit ourselves fully to experience all aspects of life & develop all of our potentials.

Awareness and Quality of Life

To improve the quality of life, the first step is to start engineering our daily activities to get the most rewarding experiences. There's no fixed formula, so it's important for you to find what works best for you. Start by keeping a diary or reflecting on your day, so you can become conscious of how you spend your time. Take stock of the activities and people that generate positive versus negative moods:

- What you do: With awareness, you can increase the frequency of positive activities and decrease the negative ones. People in flow also tend to be so focused on the task at hand that they "forget" about their physical pains, fatigue and ailments. Csikszentmihalyi gave an example of how a mental health patient was able to rejoin the community and become financially self-sufficient simply by paring nails for others (an activity that brings her flow).
- Who you spend time with. While companionship can improve the quality of experience, real growth comes when we are with people who stimulate our learning. Invest psychic energy in the right relationships.

KEY QUOTES

"People at work are thirsting for context... a powerful way to provide that context is to spend a little less time telling how and a little more time showing why."

The Autotelic Personality

An autotelic activity is one that we do for its own sake, because experiencing the activity itself *is* the goal. For example, if you are playing a game because you enjoy it, that's an autotelic activity; if you are playing it to win a prize, that's an exotelic activity. To have ownership of our lives, it is important is enjoy an activity for its own sake and in the process, learn to control our attention and direct our psychic energy in line with our intentions.

People fall into a spectrum - some almost never feel that what they do is worth doing, while others (autotelic people) feel that almost everything they do is important and valuable in its own right. Those who are autotelic tend to:

- Already feel so rewarded that they need very little material possessions or titles/ power.
- Be typically more autonomous and independent, yet are more involved or immersed in what's happening around them.
- Have a seemingly inexhaustible supply of psychic energy: they pay attention more, notice more, and are willing to invest more attention in things for their own sake (rather than external rewards).
- Be able to direct their psychic energy to experience life, because they are less concerned with themselves.

The Love of Fate

Leading a truly excellent life requires us to feel that we are part of something greater and more permanent than ourselves. The challenge is to be engaged and carefree at the same time – to be serious in our concern for the world at large, yet humble about the impact that we can make individually.

The starting point is to get a clearer understanding of our self-image – this imaginary entity tends to shape how we direct our psychic energy:

- Without a sense of self, humans will be like animals, exerting ourselves only to fulfill our biological needs.
- On the other hand, a sense of self based on wealth and

KEY QUOTES

"People at work are thirsting for context... a powerful way to provide that context is to spend a little less time telling how and a little more time showing why."

power can lead someone to exert himself relentlessly at the expense of health and relationships.

• We cannot totally remove our ego. However, by developing a deeper understanding of ourselves, we can learn to separate the needs that support us in life from those that make our lives miserable.

It takes skill to reflect. When we have not mastered the skills of reflection, thinking about our problems tend to aggravate them instead of alleviating them.

• Hence, it is better to reflect on our life when we have reason to feel good about it – experiencing flow automatically helps us to feel better without even trying.

• To experience flow, it helps if we have clear goals to focus our attention on. Even if we are faced with a task that we hate or dread, setting a goal (e.g. to finish the task as quickly as possible) can transform how we experience it.

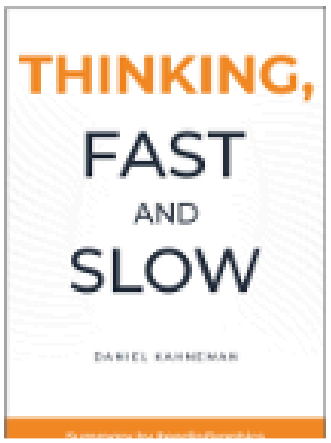
The love of fate, or amor fati, refers to our attitude towards our choices. If we learn to take ownership of our actions and love what we have to do, our quality of life will be improved.

Other Useful Details in the Book to Look Out For

Csikszentmihalyi develops the core ideas in his book by explaining different variables and their inter-relationships, findings from past studies, and how he arrives at his observations and conclusions. The book is rich in references and ideas to understand the concepts of quality of life, excellence, flow and how these it apply in our day to day lives.

KEY QUOTES

"People at work are thirsting for context... a powerful way to provide that context is to spend a little less time telling how and a little more time showing why."



Thinking, Fast and Slow

DANIEL KAHNEMAN

The Big "So What"

In this book, winner of the Nobel Memorial Prize in Economics, Daniel Kahneman, summarizes decades of research to help us understand what really goes on inside our heads - the psychological basis for our reactions, judgments, perceptions and choices. By learning how our mind works, being aware of our intuitive biases and errors of judgement, we can improve our decision-making skills, shape how we think and how we live our lives.

The Two Systems

Physicians have a large set of labels to diagnose and treat diseases (e.g. identify symptoms, possible causes, interventions and cures). Likewise, to understand how we make judgements and choices, we need a richer vocabulary to describe how our mind works.

Kahneman does that by simplifying complex economic and psychological concepts in this book. He describes how our brains work, using 2 systems:

System 1 *is fast.* It operates automatically and involuntarily; it is unconscious, can't be stopped, and runs continuously. We apply it effortlessly and intuitively to everyday decisions, e.g. when we drive, recall our age, or interpret someone's facial expression.

System 2 *is slow.* It's only called upon when necessary to reason, compute, analyze and solve problems. It confirms or correct System 1 judgements, is more reliable, but takes time, effort

KEY QUOTES

"My main aim here is to present a view of how the mind works that draws on recent developments in cognitive and social psychology."

"We can be blind to the obvious, and we are also blind to our blindness."

"One of the tasks of System 2 is to overcome the impulses of System 1. In other words, System 2 is in charge of self-control."

"The best we can do is a compromise: learn to recognize situations in which mistakes are likely and try harder to avoid significant mistakes when stakes are high."

and concentration.

We think of ourselves with System 2 (our beliefs, choices etc.), but System 1 is usually the one in charge. System 1 operates on heuristics that are fast but often inaccurate. System 2 evaluates those heuristics and provides vigilance, but is too slow and inefficient for our routine decisions. We need both systems, and the key is to become aware when we're prone to mistakes, so we can avoid them when the stakes are high.

The Law of Least Effort

It takes energy to think and exercise self-control. Our mental capacity gets depleted with use, and we're programmed to take the path of least resistance. Since System 2 uses more effort and energy, our thoughts and actions are run automatically by System 1. System 2 only kicks in for vital tasks that need special effort or self-control. Specifically:

- System 2 handles *tasks that are new or unnatural* to us. System 1 takes over once something's habitual, or during times of emergency.

- System 2 focuses mental resources on the *most important activity first*. That's why we tend to "zone out" when we're immersed in a challenging task or are mentally overloaded, or stop in the middle of a leisurely stroll if we're asked to complete a difficult mental task.

- We *consume less energy* when we're more skilled or talented at a task, can simplify the tasks into smaller steps, or write them down (to lessen our mental load).

One of the main roles of System 2 is to monitor and control the impulses and suggestions by System 1. But, System 2 fails to perform its role when it's lazy or overloaded. That's why most people don't think through problems carefully, and why we find it harder to resist temptation when we are stressed. In short, self-control decreases when we're tired, hungry, or mentally exhausted.

KEY QUOTES

"In the economy of action, effort is a cost, and the acquisition of skill is driven by the balance of benefits and costs. Laziness is built deep into our nature."

"We cover long distances by taking our time and conduct our mental lives by the law of least effort"

"For most of us, most of the time, the maintenance of a coherent train of thought and the occasional engagement in effortful thinking also require self-control."

"Intense focus on a task can make people effectively blind, even to stimuli that normally attract attention."

Heuristics and How System 1 Works

In order to quickly process the tons of stimuli that we take in daily, System 1 uses "heuristics" or mental shortcuts. These are fast, but often unreliable, and makes us susceptible to others' suggestions or influence.

Associations and Priming. When consciously or subconsciously exposed to an idea, we're "primed" to think about associated idea(s), memories & feelings. If we've been talking about food, we'll fill in the blank SO_P with a "U", but if we've been talking about cleanliness, we'll fill in the same blank with an "A". People reading about the elderly unconsciously walk slower, and people who are asked to smile find jokes funnier. Each associated idea evokes even more ideas, memories, and feelings. This is called the associative mechanism.

Cognitive Ease. System 1 is constantly assessing stimuli and impressions, to determine if System 2 needs to be mobilized:

- When we experience *"cognitive ease"*, we're in a casual, intuitive mode. System 1 is at work and we don't think deeply. Generally, we feel at ease when something seems familiar, is clear and effortless. That's why politicians and marketers use repetition, bright colours, legible words, simple language and rhyming verses. We'll even believe a lie if we hear it often enough.

- When we experience *"cognitive strain"*, System 2 kicks in and we switch to an analytical, problem solving mode. We become more vigilant and are less susceptible to lies and suggestions.

Stories and Causes. To make sense of the world, we connect scraps of information and tell ourselves stories about what's going on.

- *Associative Coherence.* We make associations between events and circumstances. Events that fit

KEY QUOTES

"System 1 is gullible and biased to believe, System 2 is in charge of doubting and unbelieving, but System 2 is sometimes busy, and often lazy."

"You know far less about yourself than you feel you do."

"Like ripples on a pond, activation spreads through a small part of the vast network of associated ideas."

"Anything that makes it easier for the associative machine to run smoothly will also bias beliefs."

"Cognitive strain, whatever its source, mobilizes System 2 which is more likely to reject the intuitive answer suggested by System 1."

"People are prone to apply causal thinking inappropriately, to situations that require statistical reasoning."

into our stories seem "normal". When something unexpected happens, we tell ourselves new stories to make them fit e.g. "It's God's will," or "He acted out of character."

- *Jumping To Conclusions.* We often have to deal with incomplete information. System 1 fills the gaps with interpretations and guesses that fit our stories, jumping to conclusion on causes.

  i. Confirmation Bias is our tendency to search for and find confirming evidence for a belief (while dismissing counter evidence). During an election season, we're likely to seek positive information about our favored candidates, and find negative information about the opposing candidate(s). System 1 also usually flags out only one conclusion and omits alternatives.

  ii. The Halo Effect occurs when we like or dislike everything about a person, place, or thing, based on our first impressions. The first person to share an opinion at a meeting can "prime" others' opinions. Positive adjectives describing a person (e.g. strong, intelligent) influence how we interpret negative adjectives (e.g. stubborn, impulsive) that appear later.

  iii. What You See is All There Is (WYSIATI). System 1 ignores whether the information used is complete or accurate. It only cares how coherent the story is, based on available information.

Judgement Heuristic. Unlike System 2, which zooms in to find specific answers, System 1 adopts a "Mental Shotgun" approach, continuously scanning our environment and making "fight or flight" judgements.

When making such split-second decisions, we're better at broad averages and categorical comparisons, than sum-like variables. For instance, we can intuitively describe crime in terms of colours ("murder" would be a deeper shade of red than "theft"). We are also better at *intuitive averages* than sum-like variables (we can understand "about twice the current size" more easily

KEY QUOTES

"We have limited information about what happened on a day, and System 1 is adept at finding a coherent causal story that links the fragments of knowledge at its disposal."

"When information is scarce, which is a common occurrence, System 1 operates as a machine for jumping to conclusions"

"System 1 does not keep track of alternatives that it rejects, or even of the fact that there were alternatives."

"Sequence matters... because the halo effect increases the weight of first impressions, sometimes to the point that subsequent information is mostly wasted."

"It is the consistency of the information that matters for a good story, not its completeness."

than "an increase from 20,000 to 40,000").

Substitution. When faced with a vexing problem or question, we make our lives easier by answering a simpler, *substitute question*. For example, "What's my mood right now?" is easier to answer than "How happy am I with life?". This sometimes means that we avoid answering the harder (but more important) questions.

Affect or Emotions. When we have a strong *emotional preference* for an outcome, we will play up the benefits and play down its costs. In addition, a simpler question that evokes an emotional response will influence our response to a bigger question. If we are asked "how many dates did you have last month?" just before we're asked "how happy are you with your life?", we'll link our happiness to the number of dates, even if dates weren't important to us.

In short, System 1 works using shortcuts like associations, stories and approximates, tends to confuse causality with correlation, and jumps to inaccurate conclusions. System 2 is supposed to be our inner sceptic, to evaluate and validate System 1's impulses and suggestions. But, it's often too overloaded or lazy to do so. This results in intuitive biases and errors in our judgement.

X Heuristics Cause Biases & Errors

The Law Of Small Numbers

Most of us know that small sample sizes are not as representative as large samples. Yet, System 1 intuitively believes small sample outcomes without validation. We make decisions based on insufficient or unrepresentative data. Moreover, System 1 suppresses doubt by constructing coherent stories and attributing causality. Once a wrong conclusion is accepted as "true", it triggers our associative mechanism, spreading related ideas through our belief systems.

KEY QUOTES

"You often have answers to questions that you do not completely understand, relying on evidence that you can neither explain nor defend... you may not even notice that you did not answer the question you were asked."

"People let their likes and dislikes determine their beliefs about the world."

"A lazy System 2 often follows the path of least effort and endorses a heuristic answer without much scrutiny of whether it is truly appropriate."

"System 1 is designed to jump to conclusions from little evidence – and it is not designed to know the size of its jumps."

"The law of small numbers is a manifestation of a general bias that favors certainty over doubt."

The Anchoring Effect

Our estimates or choices are influenced (subconsciously) by number(s) that we heard previously. For instance, your answer to "Was Gandhi more than 116 years old when he died?" is likely to be closer to 116 than 50. Shoppers are likely to buy more of a promotional item if there was a "limit of 12 per person", than if there was no limit.

The Availability Heuristic

We tend to judge the importance of an idea by the familiarity and feelings that we associate with it, rather than statistical calculation. We are prone to overestimate the frequency of an event if we are fluent with the idea, e.g. we may over-estimate the frequency of divorces if we have undergone divorce, or know people who're divorced.

This heuristic is multiplied via media coverage to create "Availability Cascades", and have implications on public policy.

- *Media coverage* warps our estimates of events. A recent plane crash makes us think air travel is dangerous. The more we fear air travel, the more the media report plane crashes. This creates a negative feedback loop or a cascade of fear, and may trigger a surge in insurance purchases or protective action after a disaster.

- Likewise, *public policy* can be influenced by such irrational concerns - lawmakers may be prone to the same cognitive biases as citizens, or respond due to political sensitivity.

Representativeness

We tend to make judgments about a person, place, or thing based on how much it resembles something else. We may stereotype that someone who's "nerdy" is probably a computer scientist, or assume that a restaurant is doing well because we like their food. A more accurate approach would be to look at probability, base rates, and examine the evidence that was used to develop our assumptions.

KEY QUOTES

"The psychological mechanisms that produce anchoring make us far more suggestible than most of us would want to be."

"The main moral of priming research is that our thoughts and our behaviour are influenced, much more than we know or want, by the environment of the moment."

"The dynamics of memory help explain the recurrent cycles of disaster, concern, and growing complacency that are familiar to students of large-scale emergencies."

"The emotional tail wags the rational dog."
- Jonathan Haidt

"Stereotypes, both correct and false, are how we think of categories."

The Conjunction Fallacy (Less is More)

This occurs when we assume that A+B is more probable than A, e.g. assuming that this statement: "He has lived here his whole life and knows the culture well" to more probable than "He has lived here his whole life." This is flawed because A+B is a subset of A, and can only be less probable.

Likewise, we are likely to perceive an expensive item to be more valuable on its own than when it's bundled with additional cheap items. System 1 intuitively processes averages better than sums.

Causes Trump Statistics

Statistical data are facts about a case, e.g. "50% of cabs are blue". Causal data are facts that change our view of a case, e.g. "blue cabs are involved in 80% of road accidents" - we may infer from the latter that blue cab drivers are more reckless.

We've learnt that System 1 thinks fast using categories and stereotypes, and likes causal explanations. When we're given statistical data and causal data, we tend to focus on the causal data and neglect or even ignore the statistical data. In short, we favor stories with explanatory power, over mere data.

Regression To The Mean (Overlooking luck)

Random fluctuations (e.g. an unusually good or bad sports performance) will typically regress to the mean (i.e. they'll naturally approach the average over time). We tend to assign causal explanations to this phenomenon when they don't exist. We may punish someone for unusually bad behaviour, then convince ourselves that the punishment was effective when the person merely regressed naturally to his normal behaviour. The proper way to establish causal relationships is through control-group experiments.

KEY QUOTES

"Sometimes intuition beats logic even when the correct answer stares you in the face."

"The notions of coherence, plausibility, and probability are easily confused by the unwary."

"Our mind is strongly biased toward causal explanations and does not deal well with 'mere statistics'."

"You are more likely to learn something by finding surprises in your own behaviour than by hearing surprising facts about people in general."

"The truth is regression to the mean has an explanation but does not have a cause."

Heuristics Cause Overconfidence

We feel confident when our stories seem coherent and we are at cognitive ease. Unfortunately, confidence does not mean accuracy.

The Illusion Of Understanding

- **The Narrative Fallacy.** We often create flawed stories to explain the past, which in turn shape our views of the world and our expectations of the future. For example, we may develop detailed models and formulas to explain what caused the global financial crises or Google's rise to success. But it's impossible to identify all the variables and events that happened (and those that didn't happen) to cause these outcomes. No one could have predicted the birth of Adolf Hitler and how it catalyzed World War II. So, we understand the past less than we think we do; Believing we know the past and can predict the future gives us a false sense of security.

- **The Hindsight Illusion.** Once we change our view of the world, we immediately lose much of our ability to recall what we used to believe. We feel as though our current belief has been our belief all along. This leads to hindsight bias (the "I-knew-it-all-along" effect). That's why it's easy to blame others for "bad" decisions on hindsight and give too little credit for good decisions.

The Illusion Of Validity

- **Skills Illusion.** We are prone to think that skills produce predictable results, e.g. experienced traders are believed to be better at evaluating and picking stocks. However, a truly efficient market cannot be predicted nor outsmarted, and studies have shown that traders' "educated guesses" are no better than blind guesses.

- **Formulas vs Intuitions.** Generally, statistical algorithms are better predictors than experts, because experts often try to "think out the box" and consider complex combinations. Their creative solutions sometimes work,

KEY QUOTES

"Confidence is a feeling, which reflects the coherence of the information and the cognitive ease of processing it."

"We humans constantly fool ourselves by constructing flimsy accounts of the past and believing they are true."

"The ultimate test of an explanation is whether it would have made the event predictable in advance."

"You cannot help dealing with the limited information you have as if it were all there is to know. You build the best possible story from the information available to you, and if it is a good story, you believe it."

"Actions that seemed prudent in foresight can look irresponsibly negligent in hindsight."

but reduce their overall reliability. Humans are also inconsistent - the same person can give different answers when asked to judge the same complex situation twice.

- **Trusting Expert Intuition.** Expert intuition can still be trustworthy and valuable under these conditions:
  - If the *environment is regular enough* to be predictable; and
  - The expert has had a chance to learn these regularities via *prolonged practice* (with timely, quality feedback)

  Some examples include chess-games, fire-fighting, and nursing.

The Optimistic Bias

Optimism is a positive trait. However, overconfidence and the **optimistic bias** can also lead people to take excessive risks.

- **Planning fallacy** is one outcome of this bias - people take on risky projects (e.g. litigation or starting a business) based on best case scenarios, without deliberating worst case scenarios or unknowns.
- **Outside View.** To address this fallacy, planners could adopt a more objective "outside view". Identify others who've engaged in similar projects, use their statistics as a baseline, then adjust the baseline using information specific to your case.

Heuristics affect Choices

Prospect Theory

This theory won Kahneman the Nobel Prize in Economics. It's built on 3 key ideas:

KEY QUOTES

"Valid intuitions develop when experts have learned to recognize familiar elements in a new situation and to act in a manner that is appropriate to it... Unfortunately, professionals' intuitions do not all arise from true expertise."

"Expertise...is a collection of skills, and the same professional may be highly expert in some of the tasks in her domain while remaining a novice in others."

"Intuition cannot be trusted in the absence of stable regularities in the environment."

"In terms of its consequences for decisions, the optimistic bias may well be the most significant of the cognitive biases."

"Most of us view the world as more benign than it really is, our own attributes as more favorable than they truly are, and the goals we adopt as more achievable than they are likely to be."

- The absolute value of money is less vital than the **subjective experience** that comes with changes to your level of wealth. For example, having $5,000 today is "bad" for Person A if he owned $10,000 yesterday, but it's "good" for Person B if he only owned $1,000. The same $5,000 is valued differently because people don't just attach value to wealth – they attach values to gains and losses.

- We experience **reduced sensitivity to changes in wealth**, e.g. losing $100 hurts more if you start with $200 than if you start with $1000.

- **Loss aversion.** We basically hate to lose money, and we weigh losses more than gains. To illustrate, look at these 2 options:

  - 50% chance to win $1,000 OR get $500 for sure
    Most people will choose the latter

  - 50% chance to lose $1,000 OR lose $500 for sure
    Most people will choose the former

  Generally, our brain processes threats and bad news faster, people work harder to avoid losses than to attain gains, and they work harder to avoid pain than to achieve pleasure.

KEY QUOTES

"You just like winning and dislike losing—and you almost certainly dislike losing more than you like winning."

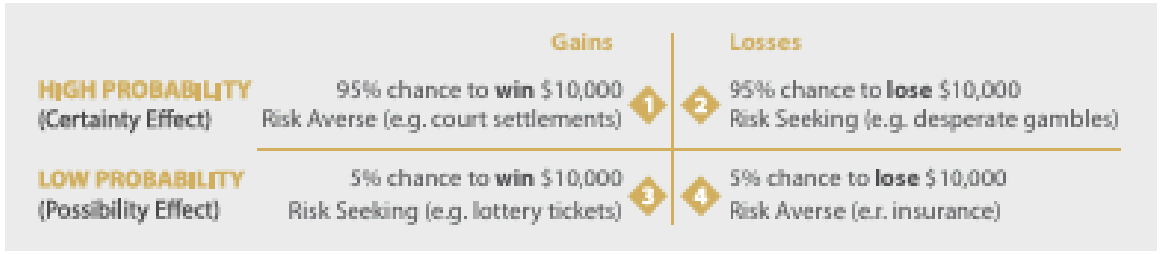
"We are driven more strongly to avoid losses than to achieve gains."

The Endowment Effect

An object that we own and use (or intend to use) is more valuable to us. We endow such objects with additional value, and we're unwilling to part with them. For example, you may buy a ticket for your favourite concert for $500, and refuse to sell it even for $5,000.

The Fourfold Pattern of Preferences

The table on the next page summarizes how we evaluate gains and losses.



- Certainty Effect: People are generally risk-averse when they have a high chance of getting a desired outcome.

  - In *Quadrant 1* (high probability, big gains), people will accept a less-than-expected value of the gamble to lock in a big gain. For example, someone may accept a $910,000 settlement rather than go for a lawsuit with a 95% chance of winning $1 million (i.e. they accept $40,000 less than the expected gamble value).

  - In *Quadrant 4* (low probability, big loss), people are willing to pay a premium for the certainty of not losing. They pay more to buy a peace of mind (e.g. insurance).

- Possibility Effect: We tend to give an irrationally high weightage to a desired but improbable outcome:

  - In *Quadrant 3* (low probability, big gains), people over-invest in a miniscule chance to win (e.g. lottery tickets)

  - In *Quadrant 2* (high probability, big losses), people take desperate gambles, often making things worse in exchange for a small hope of avoiding a large loss. This is why people throw in everything they have to treat a terminal illness, or sink in all their business assets in a futile attempt to catch up with competition.

When we combine the Possibility Effect, Availability Cascade and Cognitive Ease heuristics, we start to understand why people pay an undue amount of attention to rare events (e.g. terrorist attacks, asteroids), compared to likely events (e.g. rain tomorrow). This is especially so when the rare events are described vividly, frequently and repetitively.

Earlier, we shared how to adopt an "outside view" to address planning fallacies from excessive optimism. To counter the excessive caution from loss aversion, we can develop "risk policies" (e.g. never buy extended warranties), which act as broad frames to guide our routine decisions.

KEY QUOTES

"When you pay attention to a threat, you worry – and the decision weights reflect how much you worry. Because of the possibility effect, the worry is not proportional to the probability of the threat."

"When you take a long term view... you can see that paying a premium to avoid a small risk of a large loss is costly... Consistent overweighting of improbable outcomes – a feature of intuitive decision making – eventually leads to inferior outcomes."

"The outside view and the risk policy are remedies against two distinct biases that affect many decisions: the exaggerated optimism of the planning fallacy and the exaggerated caution induced by loss aversion."

Keeping Score

Except for the very poor, most money-seekers aren't just after economic gains - money also symbolizes success and achievement. Hence, people keep score of both (a) the potential financial gains and losses of a transaction, and (b) the emotional risks, rewards, and possible regrets of these decisions:

- The **Disposition Effect** refers to our tendency to sell "winners" (stocks that currently have a higher price than when purchased) rather than "losers" (stocks that're still at a loss). This is an example of "narrow thinking."

- The **Sunk-cost Fallacy** is the tendency to invest additional resources in a losing account, instead of other better investments. Cutting loss is emotionally difficult as it signifies failure. By gambling further, the decision-maker hopes to recoup the original investment or at least postpone the day of reckoning. This fallacy keeps people in poor jobs, unhappy marriages, and unpromising projects.

- **Fear of regret** influences many of our decisions. Consumers who are reminded of potential regret tend to choose safer, conventional options. Don't put too much focus on regret; it usually hurts less than you expect.

Joint Evaluations

We make decisions differently when they're done in isolation than when they are made in comparison with other scenarios. For example, we pay more for a "better-quality" TV that's displayed next to an "inferior" TV in the store, even when the difference in quality is imperceivable when the TVs are viewed in isolation.

Frames

How a problem is framed evokes emotional responses, which affect our choices. Because we hate to lose, we'll intuitively choose a "10% chance to Win" over a "90%

KEY QUOTES

"The emotions that people attach to the state of their mental accounts are not acknowledged in standard economic theory."

"A rational decision maker is interested only in the future consequences of current investments."

"Regret is an emotion, and it is also a punishment that we administer to ourselves."

"Joint evaluations highlights a feature that was not noticeable in single evaluations but is recognized as a decisive when detected."

"The meaning of a sentence is what happens in your associative machinery while you understand it."

chance to Lose". Doctors prefer interventions if there's a "survival rate of 90%" vs a "10% mortality rate." A closer look in these cases will reveal that the options are actually the same; only the frames are different.

Two Selves

We each have an "experiencing self" and a "remembering self". In his research on happiness, Kahneman found that our memories override our actual experiences, and we make decisions with the aim of creating better memories (not better experiences).

The Peak-End Rule. We evaluate our life like a story, focusing on significant events, memorable moments, and how it ends. The actual experience is not as important as the memory of how painful or pleasurable the experience was; our remembering self makes decisions based on the memories we expect to create. In fact, during an experiment, people chose to repeat a painful experience that lasted longer but ended pleasantly, over a shorter painful experience without a pleasant ending.

Experienced Well Being. When we resist ending an experience, it means we're having a good time. To improve our well-being, we should spend time on things that we enjoy and pay attention to what we are doing, so we get more pleasure from our current activities and create positive memories of these experiences.

Thinking About Life

- Generally, we're terrible at "**affective forecasting**", or predicting what will make us happy. People make decisions based on what they think will make them happy in the future, but find out when they "get there" that the happiness doesn't last, e.g. the satisfaction of marriage drops dramatically after the initial years.

KEY QUOTES

"Reframing is effortful and System 2 is lazy."

"Confusing experience with the memory of it is a compelling cognitive illusion."

"A story is about significant events and memorable moments, not about time passing... the ending often defines its character."

"The remembering self... composes stories and keeps them for future references."

"We all care intensely for the narrative of our own life and very much want it to be a good story, with a decent hero."

"Nothing in life is as important as it is when you are thinking about it."

- Our levels of happiness and life satisfaction depend on many factors. When we focus on only one area (e.g. income, health, relationships), we suffer from the **Focusing Illusion** and cannot assess our happiness accurately. We are also prone to acclimatization – what's initially exciting (e.g. a new car) loses appeal over time.

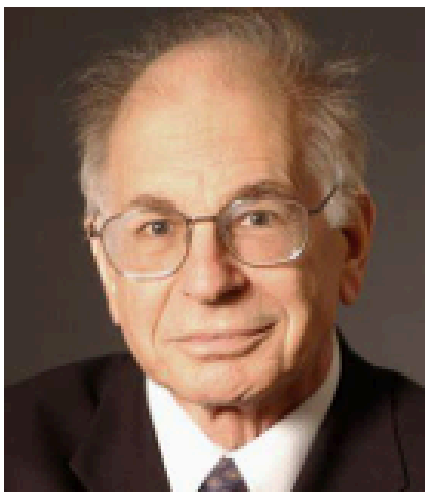
Conclusion

Our heuristics influence our choices, which can be irrational, counter-intuitive and sub-optimal. It's impossible to totally avoid biases and errors from System 1, but we can make a deliberate effort to slow down and utilize System 2 more effectively, especially when stakes are high.

Other Useful Details in the Book to Look Out For

This summary outlines the key heuristics and how they affect our thinking. The book is filled with pages of research, examples and exercises to help us experience our System 1 biases and errors at work. At the end of each chapter, Kahneman also shares examples of how you can use the new vocab in your daily conversations to identify and describe the workings of your mind and the fallacies around you. The book also includes 2 detailed Appendixes on (a) Heuristics and Biases, and Choices, Values and Frames.

About the Author



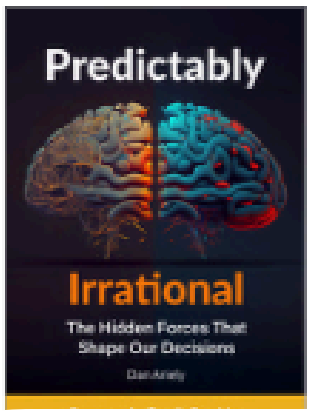
(Professor **Daniel Kahneman** (born 1934) is an Israeli-American psychologist. He was awarded the Nobel Prize in Economic Sciences in 2002 for his pioneering work that integrated psychological research and economic science. Much of this work was carried out collaboratively with Amos Tversky.

KEY QUOTES

"This book has described the workings of the mind as an uneasy interaction between two fictitious characters: the automatic System 1 and the effortful System 2."

"As we have seen again and again, an important choice is controlled by an utterly inconsequential feature of the situation This is embarrassing – it is not how we would wish to make important decisions."

"The way to block errors that originate in System 1 is simple in principle: recognize the signs that you are in a cognitive minefield, slow down, and ask for reinforcement from System 2."



PREDICTABLY IRRATIONAL

The Hidden Forces That Shape Our Decisions

Dan Ariely

The Big "So What"

Why do smart people make bad decisions—again and again? In *Predictably Irrational*, Dan Ariely shows how our choices are shaped by hidden forces we barely notice, from price anchors and social norms to expectations and emotions. Such patterns are systematic and predictable. Once we understand them, we can make smarter decisions in life, business, and policy.

Introduction: Why We Are So Predictably Irrational

We like to think of ourselves as rational beings, especially when the stakes are high. Yet, we make poor decisions all the time.

- Ariely discovered this firsthand as a burn victim, when he saw experienced nurses making systematic errors in pain treatment. This sparked his journey into *behavioral economics*—a field that blends psychology and economics to study how people *actually* behave, not how they are *supposed* to behave.

- Through more than *20 years of scientific experiments*, Ariely studied many factors that influence human behavior. This book reveals why we keep repeating the same mistakes, how to spot those patterns, and design better systems to work around them.

- In this summary, we'll explore Ariely's key insights in *3 parts*.

KEY QUOTES

"This book is about human irrationality—about our distance from perfection... recognizing where we depart from the ideal is an important part of the quest to truly understand ourselves."

"Our irrational behaviors are neither random nor senseless—they are systematic and predictable."

"Wouldn't economics make a lot more sense if it were based on how people actually behave, instead of how they should behave?"

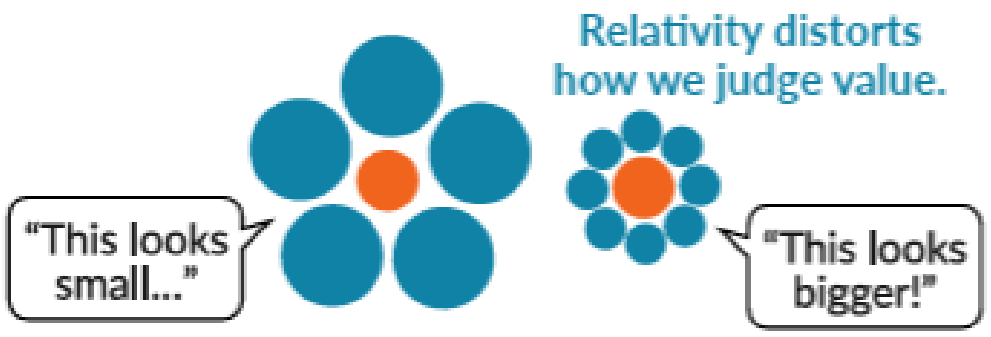
"Once you see how systematic certain mistakes are—how we repeat them again and again—I think you will begin to learn how to avoid some of them."

Part 1: How We Misjudge Value

We assume people know what they want and make rational choices. But in reality, our sense of value is easily distorted—by context, comparisons, and expectations.

Relativity: We Judge Value in Relative Terms, not Absolutes

We don't judge things in isolation. We rely on comparisons to decide what's "better" or "worth it"—even if those comparisons are arbitrary or misleading. This tendency, called relativity, shapes our decisions and even affect how happy we feel.



- Marketers exploit this with tricks like the "*decoy effect*", by introducing an inferior option (or a more expensive one) to nudge us toward a specific choice. In a study, participants were given 3 subscription options:

KEY QUOTES

"Humans rarely choose things in absolute terms. We don't have an internal value meter that tells us how much things are worth."

(i) Online-only ($59)

(ii) Print-only ($125)

(iii) Print + Online ($125)

Almost no one picked option (ii), but its presence made the last option (the combo) look like a great deal. When option (ii) was removed, far fewer people chose the combo deal.

- Adding an overpriced item on a *restaurant* menu makes other expensive dishes seem more reasonable. In *travel*, people are more likely to choose "Rome with coffee" over "Rome without coffee"—even if they don't care about the coffee.

Instead of evaluating real trade-offs, we often compare with **options that are nearby or easy to compare**, even if they're irrelevant.

- People will *choose an inferior option* over a superior one just because it looks better than something else. For example:
  - They might choose a job with a higher salary in a worse city because salary is easier to compare than quality of life.
  - A $10 saving feels more exciting on a $25 pen than a $500 suit—even though the value of $10 is identical.
  - We may pay $3,000 for a car seat upgrade but balk at $1,000 for a home sofa that we use more often.

To make better decisions:

- Avoid environments that trigger *irrelevant comparisons*, like touring homes you can't afford or comparing yourself to others.
- *Think beyond* what's in front of you: focus on what's truly relevant and important to you.

Anchoring Bias: First Impressions Stick

Our decisions are often shaped by **arbitrary anchors**. The first price we encounter often leaves an imprint that influences future decisions—even if the anchor is irrelevant.

KEY QUOTES

"Most people don't know what they want unless they see it in context."

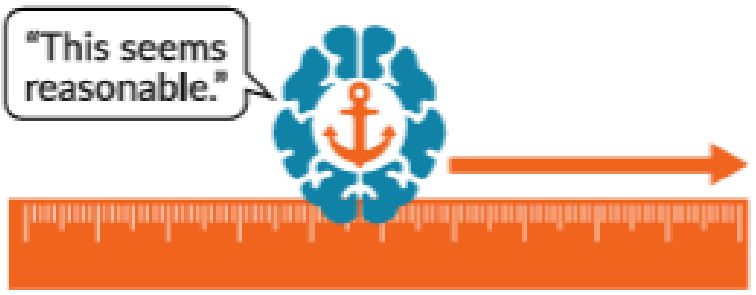
"We are always looking at the things around us in relation to others. We can't help it."

"We not only tend to compare things with one another but also tend to focus on comparing things that are easily comparable—and avoid comparing things that cannot be compared easily."

"Relativity helps us make decisions in life. But it can also make us downright miserable."

"The more we have, the more we want. And the only cure is to break the cycle of relativity."

"Our first decisions resonate over a long sequence of decisions."



- In an experiment, people wrote down the last 2 digits of their Social Security number (SSN), then bid on items like wine or books. Those with higher SSNs consistently bid more—even though these were *random digits* unrelated to the item.

- *Tahitian black pearls* had no demand initially. But, after marketers displayed them in high-end jewelry stores among other precious jewels, they became anchored in people's minds as rare and valuable. Demand skyrocketed after that.

- *Coffee* used to be 50¢. Then, Starbucks came along with Italian names, a cozy setting, and new rituals around coffee. Now, paying $5 for a coffee seems perfectly normal.

- Anchoring also affects how we value *time, pain, or effort*. In an experiment, participants were exposed to an irritating noise for 30 seconds, then asked how much they must be paid to hear it again. Those who were first asked "Would you listen to this again for 90¢?" demanded higher compensation than those who were initially asked "Would you listen to this again for 10¢?"

The perceptions from irrational anchors persist over time, reinforced by imitation and repetition (herding and self-herding).

- When we see a line outside a new café, we assume it must be good so we join in. We *follow the herd* assuming they know better, and our behavior further reinforces others' behaviors.

- Over time, we also *herd ourselves*. Once we've paid $5 for a coffee several times, we keep doing it without evaluating our choice each time.

What can we do about our anchoring bias?

- *Be alert* to the first price, experience, or label you encounter, as it can shape your future decisions. Ask: Would I make the same choice if I started fresh today?

KEY QUOTES

"The random, and not so random, anchors that we encountered along the way and were swayed by remain with us long after the initial decision itself."

"The choices and trades we make are not necessarily going to be an accurate reflection of the real pleasure or utility we derive from those products."

"Socrates said that the unexamined life is not worth living. Perhaps it's time to inventory the imprints and anchors in our own life."

- In *marketing and policies*, explore how anchors can be used to (i) promote savings and healthy choices, or to (ii) protect people from manipulative price cues.

Zero Price Effect: Free Things Come at a Cost

We overvalue free things, even though they often cost us more in time, effort, or missed opportunity.

- The word "FREE!" triggers a strong emotional response. We grab free items we don't need, because they appear to be risk-free. The "*zero price effect*" refers to how we irrationally choose inferior products or waste time/effort just because something is free.

- In a study, when participants were presented with a *high-quality* Lindt truffle over a standard Hershey's Kiss (Scenario A), most chose the Lindt. Yet, when the Kiss was offered for free (Scenario B), most chose the Kiss—despite an identical price difference:

Scenario A	Scenario B
Lindt Truffle: 15¢ Hershey's Kiss: 1¢	Lindt Truffle: 14¢ Hershey's Kiss: FREE
73% chose the Truffle	69% chose the Kiss

- In another study: kids could choose between (i) a large Snickers bar in exchange for 1 Kiss, or (ii) a smaller bar for free. Most chose the free version even though it was the worse option. Adults also prefer *offers that include free items*, even if they're worse deals overall.

- Amazon saw a huge boost in sales when they offered *free shipping*—except in France, where the fee was a negligible 1 franc (about 20¢). When France switched to free shipping, their sales jumped too.

- A *zero-calorie drink* sells much better than a 1-calorie one—even though the difference is insignificant.

KEY QUOTES

"Zero is not just another price, it turns out. Zero is an emotional hot button—a source of irrational excitement."

"When choosing between two products, we often overreact to the free one."

"We just can't resist the gravitational pull of FREE!"

"The difference between two cents and one cent is small. But the difference between one cent and zero is huge!"

- In reality, zero-price items *can cost you more* time, effort, and money in the long-term..
  - Ariely bought a costly Audi (instead of an economical, practical minivan) partly because it came with 3 years of free oil changes—worth only about $150.
  - People queue for hours for free cones or giveaways—paying much more in time/effort than what they save in money.

Beware of hidden costs behind "free" deals.

- As *individuals*: Ask "Would I still want this if it weren't free?" Pause before accepting freebies that clutter your space, waste your time, or sway your decisions.
- As *businesses/policymakers*: Use "Free!" to nudge people toward better choices, e.g. free health screenings, public transport, or eco-options.

Expectations: How Beliefs Can Alter Reality

Our beliefs and expectations shape our reality. Once we form a belief about a product, person, or experience, our mind filters information to match that belief—even if it contradicts the actual facts.

- In an experiment, participants tasted two beers: a regular beer, and another with balsamic vinegar added. Those who weren't told about the vinegar preferred it over the regular beer. But when they knew beforehand, they rated the vinegar beer much lower. The pre-knowledge had distorted their *taste experience*.
- *Branding and presentation* also affect our perceived experiences.
  - In a taste test for Coke vs Pepsi, participants favored Pepsi during the blind test. But when the brands were revealed, people prefer Coke—because the brand triggered stronger emotional and memory-related brain activity.
  - In a study, people were offered condiments (e.g. nutmeg, cloves) with their coffee. When the condiments were presented in upscale containers, people were willing to pay

KEY QUOTES

"When we believe beforehand that something will be good, therefore, it generally will be good—and when we think it will be bad, it will bad."

"When the coffee ambience looked upscale…the coffee tasted upscale as well."

much more than when they came in Styrofoam cups—even though the coffee and condiments were identical.

- *Stereotypes* affect expectations and behaviors too. Before a math test, participants were subtly reminded of either their Asian identity (positive math stereotype) or female identity (negative math stereotype). When primed with their Asian identity, scores went up. When primed with their female identity, scores dropped.

Be aware of how expectations shape your experience, especially when evaluating products, services, or people. You can also use rituals, symbols, or subtle cues to elevate experiences for yourself and others, e.g. using fancy menus, proper plating, and ambience to increase a meal's enjoyment.

Price: Why Expensive Feels More Effective

Placebos have been repeatedly found to alleviate pain, improve performance, and alter physical states. For example, medical placebos (like sugar pills) have been found to reduce pain or symptoms just because patients believe in their effectiveness.

- This response is *triggered by a wide range of cues*, such as:
  - How a treatment is described (e.g. "fast-acting");
  - What it costs (e.g. full price vs. discount); and
  - How it's presented (e.g. fancy packaging or brand label).
- *Price acts as a powerful trigger* for placebo effects. Higher prices lead us to expect higher value and better outcomes, creating real improvements in pain relief, performance, and perception—even when the product itself is exactly the same.

KEY QUOTES

"Expectations can influence nearly every aspect of our life."

"The truth is that placebos run on the power of suggestion. They are effective because people believe in them."

"We filter information through our eyes and brains in accordance with our expectations and patterns—and we are very good at convincing ourselves that what we wanted to see is indeed what we saw."

- In a study, all participants were given a fake painkiller (vitamin C) and exposed to mild electric shocks. Group A was told it costs $2.50 while Group B was told it costs $0.10. The expensive version reduced pain more—even though both were fake.

- In another study, participants received an energy drink before attempting to solve puzzles. Those who paid the full price solved more puzzles compared to the discounted group. In a follow-up study, participants were also told that the drink improved mental functioning—the full-price group showed much better performance, while the discounted group didn't.

Placebo effects are real and powerful. The same item can have drastically different effects based on expectations shaped by price, branding, and presentation.

- But when people *stop to think more carefully* about what's happening, the placebo effect often disappears.

- Ariely reflects on whether placebo effects should be encouraged—especially since higher-priced placebos tend to be more effective. He highlights the ethical dilemma and calls for *more research* to better understand placebo potential and limits.

Ownership Bias: We Overvalue What We Own

We tend to overvalue what we own, simply because it's ours. This endowment effect leads us to inflate prices, overbid in auctions, and resist letting go of objects, services, or even beliefs that we've grown attached to.

- *Ownership distorts how we see value*. In a study at Duke University, students entered a lottery for basketball tickets.

  - Those who won tickets were only willing to sell them for an average of $2,400, focusing on the experiences and memories they'd lose.

  - Those who didn't win were only willing to pay $170, focusing on the alternative ways they could use the money.

KEY QUOTES

"Our expectations can affect us by altering our subjective and even objective experiences—sometimes profoundly so."

"Consumers who stop to reflect about the relationship between price and quality are far less likely to assume that a discounted drink is less effective...the effect of discounts is largely an unconscious reaction to lower prices."

"We fall in love with what we already have."

"Ownership pervades our lives and, in a strange way, shapes many of the things we do."

- Both groups had equal desire before the draw. The only difference was ownership—which made winners value their tickets far more. *Ariely points out 3 quirks*:

  (i) Once something is ours—whether a house, a mug, or a sofa—we fall in love with it.

  (ii) We wrongly assume others see the same value in our possessions—but they don't.

  (iii) We fear losing more than we value gaining. So, we demand more to give something up than we'd pay to acquire it.

Ownership can be physical or virtual.

- The more *effort* we invest in something, the more we value it. The "IKEA effect" is how we feel more attached to things we help to build, even if the outcome isn't better.

- We may feel *virtual ownership* without even touching the item. In online auctions, people bid more aggressively the longer they're the top bidder, because they feel the item is already theirs. Free trials and 30-day return policies work the same way—once people try a product, they're reluctant to down-grade or return it.

- We also get attached to our *ideas and decisions*, making it harder to let go or change course.

There's no direct way to counter ownership bias. Ariely recommends pausing before buying to ask: Would I value the item the same way if it weren't already mine?

Part 2: Why We Lack Self-Control

We often intend to act in our long-term interests, but give in to temptation. We overvalue short-term rewards, struggle with self-control and change our preferences in the heat of the moment.

KEY QUOTES

"It is just difficult for us to imagine that the person on the other side of the transaction...is not seeing the world as we see it."

"The more work you put into something, the more ownership you begin to feel for it."

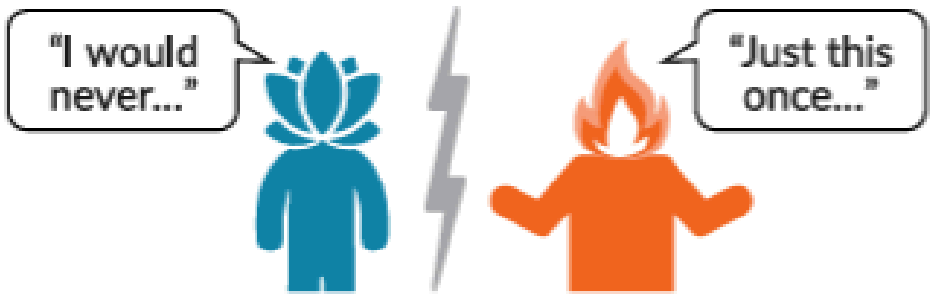
"Virtual ownership... is one mainspring of the advertising industry."

"There is no known cure for the ills of ownership...But being aware of it might help."

"Even the most brilliant and rational person, in the heat of passion, seems to be absolutely and completely divorced from the person he thought he was."

Hot-State Thinking: We Act Differently When Aroused

We like to think we can manage our behaviors at all times, but we're surprisingly bad at anticipating how we'll act when emotionally charged. In moments of intense arousal—whether it's lust, anger, or excitement—we make choices we won't endorse in a rational state.



- In an experiment, male college students were asked to answer a set of questions related to *sexual behavior*: once in a normal, rational state and again while sexually-aroused. In the aroused state, the same individuals were (i) more willing to engage in morally questionable behaviors (e.g. lying, drugging a partner) and (ii) more likely to take sexual risks (e.g. foregoing condoms, engaging in taboo acts).

- Similar patterns emerge with *anger, fear, hunger, or even competitiveness*. When emotions take over, we become impulsive, take greater risks, rationalize unethical behavior, and become less empathetic.

By understanding the gap between our "cool state" and "hot state" we can design smarter policies and make better choices. Plan ahead for your hot state while you're in cool state.

- *Don't rely on willpower*. Avoid situations where you'll face temptation, arousal or emotional overload that impair judgment.

- Create *structural boundaries or safeguards* while you're still rational. For example, keep condoms on hand, use cooling-off periods for purchases, or write scripts for what to do when angry or triggered.

KEY QUOTES

"Looking from one emotional state to another is difficult. It's not always possible; and... it can be painful."

"[The participants] were simply unable to predict the degree to which passion would change them."

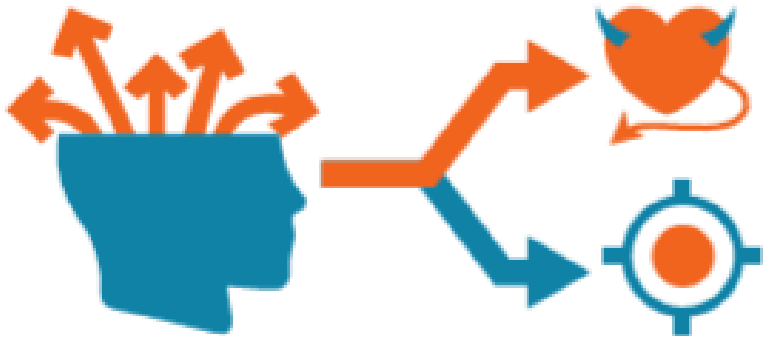
"We need to explore the two sides of ourselves...we need to see how the gap between the hot and cold states benefits our lives, and where it leads us astray."

"Avoiding temptation altogether is easier than overcoming it."

"Perhaps just being aware that we are prone to making the wrong decisions when gripped by intense emotion may help us."

Self-Control Failure: Why We Delay What Matters

Even when we know what's good for us—like saving money, exercising, eating healthy—we often don't do it because we give in to instant gratification.



- Left to own devices, *we procrastinate*. For instance, in a classroom experiment, students had to submit 3 papers in 12 weeks:

  (i) Group 1 had fixed deadlines at weeks 4, 8, and 12.

  (ii) Group 2 chose their own deadlines, with penalties if late.

  (iii) Group 2 had no deadlines, only a final submission date.

  Group 1 performed best, followed by Group 2 (though those who spaced out their deadlines did better than those who bunched them up at the end). Group 3 (with most freedom) did the worst.

We're more likely to succeed when we put up guardrails in advance.

- Design systems that bridge the gap between what we want to do and what we actually do. Use *precommitments*, e.g. pay a refundable deposit for a medical test so you're less likely to skip your health check, use automatic payroll deductions for savings, or exercise with a buddy to stay accountable.

Too Many Options: Why We Struggle to Let Go

We like to keep all our doors open, even when it makes us worse off. This fear of missing out leads us to juggle too many paths at once, stretch ourselves thin, and delay important decisions.

KEY QUOTES

"Giving up on our long-term goals for immediate gratification, my friends, is procrastination."

"Without precommitments, we keep on falling for temptation."

"People may set deadlines for themselves, but not necessarily the deadlines that are best for getting the best performance."

"We have problems with self-control...But each of the problems we face has potential self-control mechanisms, as well."

- When we try to keep all our options open, we *lose focus/ energy and hurt results*.

  - In an experiment, participants played a game where they earned money by clicking on doors in a virtual room. Each click earned cash, but the doors would disappear if ignored for too long. Since players had limited clicks, the best strategy was to focus on the most rewarding door. Yet, many kept clicking on low-paying doors just to stop them from disappearing.

  - We make the same mistake in real life. People stay in bad jobs, relationships, or commitments because they don't want to "burn bridges." Or, we overcommit to too many things because we can't bear to let go.

  - Given the choice, people will keep too many possibilities alive, *fearing they'll miss* out or make the wrong decision. This only reduces our ability to pursue the options that truly matter, leading to stress, distraction, decision paralysis, lost opportunities, and diminished results.

To focus, we must be willing to close doors—like how Chinese general Xiang Yu burned his army's ships after crossing a river, successfully forcing his troops to fight their way out with full commitment. Accept that you can't pursue everything. Let go of less promising paths to focus on what matters.

Part 3: When Social Factors Override Rationality

We like to think of ourselves as independent thinkers. In reality, our behavior is heavily shaped by social forces—like norms, expectations, and the people around us.

KEY QUOTES

"We work feverishly to keep all of our options open."

"How can we unshackle ourselves from this irrational impulse to chase worthless options?"

"What we need is to consciously start closing some of our doors...We have an irrational compulsion to keep doors open."

"Given a simple setup and a clear goal...all of us are quite adept at pursuing the source of our satisfaction."

Social vs Market Norms: Why Money Changes Relationships

We operate in 2 distinct worlds: one governed by *social norms* like trust, reciprocity, and community, and another governed by *market norms* like pricing, contracts, and transactions. Each works well on its own. But once you mix them, motivation collapses and it's hard to restore the social relationship afterward.

Social rewards can drive higher effort than money.

- People are often *more motivated by goodwill* than by small payments. In an experiment, participants were asked to drag circles into a square for 5 minutes.
  - (i) Those who did it as a favor (no pay) finished 168 circles.
  - (ii) Those paid $5 finished 159 circles.
  - (iii) Those paid 50¢ finished 101 circles.

  The unpaid group worked hardest, while a small payment undermined effort—as it shifted the mindset from doing a favor to calculating whether the effort was "worth it."

- *The same effect was seen with gifts/rewards*. When participants received chocolates as gifts, they worked harder regardless of the value of the chocolate. Once a value was attached to the gift (e.g. "50¢ Snickers"), effort dropped as the relationship became transactional.

- In a study, people who were exposed to words or screensavers about money became more self-reliant, less helpful, and more socially distant. *Just thinking about money shifted their behavior* toward market norms, even without monetary transactions.

- *Once market norms enter, social norms disappear*—and they seldom return. For example, a daycare center introduced a fine for parents who picked up their kids late. This actually *increased* the lateness, as parents now saw it as a fee-for-service, not a moral obligation to be on time. When the fine was removed later, lateness remained high as the relationship had changed.

KEY QUOTES

"When we keep social norms and market norms on their separate paths, life hums along pretty well...When social and market norms collide, trouble sets in."

"People are willing to work free, and they are willing to work for a reasonable wage; but offer them just a small payment and they will walk away."

"Money, as it turns out, is very often the most expensive way to motivate people. Social norms are not only cheaper, but often more effective as well."

"Introducing market norms into social exchanges... violates the social norms and hurts the relationships."

"Life with fewer market norms and more social norms would be more satisfying, creative, fulfilling, and fun."

Don't mix money with relationships.

- In *personal relationships*, don't offer money for personal favors or mention prices when it comes to gifts.
- In *business*, choose a frame and stick to it. If you want employees to focus on purpose and contribution, don't over-rely on cash rewards or penalties. If you're building a social relationship with customers, stick to social norms—even 1 wrong signal can change the relationship.
- *Policy-makers* should beware of using fines or payments to replace social obligations (e.g. parenting, civic duty) as it can erode intrinsic motivation in the long run.

The Honest Cheat: Why Good People Break Rules

We tend to view dishonesty as a deliberate crime—like a robber weighing the risk of getting caught before stealing. In reality, most cheating comes from **well-meaning people who bend the rules slightly**—just enough to benefit without feeling like "bad people."

- *We justify "small" infractions* like fudging expenses, copying homework, or wearing clothes with tags before returning them. Yet, such minor acts can accumulate into major systemic damage, e.g. employee fraud costs $600 billion annually—more than all robberies, burglaries, and thefts combined.
- *We cheat just enough to benefit*, but not enough to feel immoral. In a test, participants were paid for every correct answer. Those who self-reported their scores overstated them slightly. When the answer sheets were shredded (so there seemed to be no accountability), cheating increased but not outrageously.

KEY QUOTES

"If you want a social relationship, go for it, but remember that you have to maintain it under all circumstances."

"Cheating arises from our attempts to balance two incompatible goals. On one hand, we want to look in the mirror and feel good about ourselves...On the other hand, we're selfish, and we want to benefit from cheating."

"People cheat when they have a chance to do so, but they don't cheat as much as they could. Moreover, once they begin thinking about honesty...they stop cheating completely."

"When we are removed from any benchmarks of ethical thought, we tend to stray into dishonesty. But if we are reminded of morality at the moment we are tempted, then we are much more likely to be honest."

Moral reminders are a powerful deterrent for dishonesty. Just by asking people to recall the Ten Commandments or sign an honor code, you can activate their moral self-concept to dramatically reduce or even eliminate cheating.

Context & Abstraction: Environment Shapes Our Integrity

Context matters. People are more likely to cheat when their actions feel abstract or disconnected from real consequences.

- We're more likely to cheat *when money isn't directly involved*.
  - In a dorm, six-packs of Coke disappeared quickly from the fridge, while plates with $1 bills were left untouched.
  - We're more likely to take home a pen from the office than to take $1 from the petty cash to buy one.
  - When participants were paid in tokens (exchangeable for money) instead of cash, cheating more than doubled.

- This effect extends to *real-world corruption*, e.g. doctors may accept gifts from pharmaceutical companies (but not bribes), and employees may misreport numbers (instead of stealing cash).

As society moves toward cashless digital systems, it increases our psychological distance from money, making dishonesty more tempting and easier to rationalize. making it easier to rationalize dishonest behavior. To counter this, we need to deliberately connect actions to consequences, e.g. pricing office supplies or requiring pre-signature pledges.

Social Influence: How Others Shape Our Choices

Our personal preferences are often distorted in a group setting.

KEY QUOTES

"Cheating is a lot easier when it's a step removed from money."

"We can be dishonest without thinking of ourselves as dishonest. We can steal while our conscience is apparently fast asleep."

"When we deal with money, we are primed to think about our actions as if we had just signed an honor code."

- In social contexts, we often *sacrifice our real preferences* and true satisfaction to fit in or to protect our self-image.

- In an experiment, patrons who ordered beer aloud at a pub were *less happy with their selections*, as they chose options that seemed unique. Those who ordered privately were more satisfied with their choices (as they picked what they really wanted). The person who ordered first was usually the most content, as their choice was undistorted by social influence.

Watch for the impact of social influence and be more intentional with your choices.

Conclusion and Other Details in the Book

Standard economics assumes we make rational trade-offs. But behavioral economics reveals how our decisions are shaped by hidden forces—like emotion, framing, and social pressure. By understanding these patterns, we can design smarter choices, avoid repeated mistakes, and create subtle nudges that benefit individuals, businesses, and society.

This book includes many other real-world experiments and examples to explain the factors that shape our decisions and behaviors. For more information, visit predictablyirrational.com.

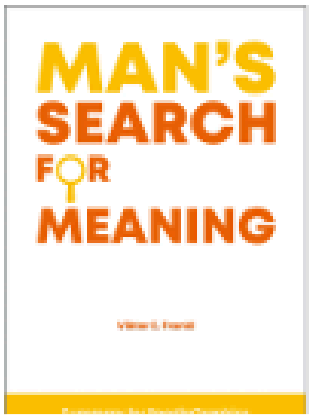
About the Author

Dan Ariely is a leading behavioral economist and professor at Duke University. Known for his engaging research on human irrationality, he explores how emotions, social norms, and cognitive biases influence our decisions. Ariely is also the founder of several behavioral science centers and a bestselling author of books. His work bridges academic insight with practical tools to improve choices in business, health, and everyday life.

KEY QUOTES

"People are sometimes willing to sacrifice the pleasure they get from a particular consumption experience in order to project a certain image to others."

"If we all make systematic mistakes...why not develop new strategies...to improve our overall well-being?"



MAN'S SEARCH FOR MEANING

VIKTOR E. FRANKL

The Big "So What"

Renowned psychiatrist Viktor Frankl survived the Nazi death camps as a prisoner. His years of suffering, experiences and insights led him to develop logotherapy, a branch of psychology built on the belief that humans are primarily driven by meaning. In this book, he chronicled his camp experiences and how logotherapy can be used to help people overcome anxiety and find happiness and fulfilment in life.

Introduction

In a concentration camp, all meaning and life goals are stripped away. When left with nothing but the skin on their backs, how do some prisoners persevere and survive while others collapse or give up? Frankl believed that meaning and purpose are powerful driving forces that allow mankind to overcome extreme odds and achieve extraordinary feats. His experience in the concentration camps reinforced his beliefs and inspired him to develop logotherapy.

In this summary, we've organized the key ideas into 2 parts:

- The physiological journey of a concentration camp prisoner; and
- Logotherapy: how to address anxiety and find meaning in life.

Part 1: A Concentration Camp Prisoner's Psychological Journey

During WWII, Frankl spent 3 years (1942-1945) in Auschwitz and other concentration camps as a prisoner. During this period, he observed that the prisoners went through 3 psychological phases with corresponding symptoms: shock, apathy and depersonalization.

KEY QUOTES

"Man's search for meaning is the primary motivation in his life and not a 'secondary rationalization' of instinctual drives."

"An abnormal reaction to an abnormal situation is normal behavior."

Phase 1: Admission to Camp → Shock

When the prisoners entered the camps, most of them went into shock. They couldn't handle the stress nor process the implications of their new situation, and reacted in ways that would've seemed abnormal under normal circumstances. Yet, abnormal reactions to abnormal circumstances are actually normal and expected. Such "abnormal" reactions included (i) delusions of reprieve, (ii) humor, (iii) curiosity, and (iv) a lack of fear.

Delusions of reprieve. When faced with dire circumstances, we *want* to believe that things will miraculously work out, even when evidence suggests the contrary.

- Frankl arrived at Auschwitz with 1,500 people. The prisoners originally thought they were being sold to a factory as forced labor and were shocked to realize the train had arrived at a concentration camp. But when they saw a small group of well-fed, healthy-looking camp prisoners boarding the train, they told themselves that things may not be that bad. Then, they were split into 2 groups, and the larger group (with 90% of the newcomers) was sent to death within a few hours.

- Frankl was part of the minority that survived. When the remaining prisoners were told to surrender all their possessions and valuables, some still naively requested to keep certain items. They simply couldn't process that they could lose everything overnight, including their identity and past lives.

- However, bit by bit, their hopes and illusions were stripped away. Their clothes were removed, their heads and bodies were shorn, and they were whipped/beaten at the slightest provocation. Frankl finally realized that he was literally left with nothing but his naked existence.

No fear of death. Everyone knew of the high death rates in concentration camps. Yet, the very knowledge of their impending death made death less fearful.

KEY QUOTES

"We, too, clung to shreds of hope and believed to the last moment that it would not be so bad."

"No one could yet grasp the fact that everything would be taken away."

Humor. Instead, the prisoners tried their best to crack jokes, e.g. making jibes about how there was actually water in the showers.

Curiosity. Next, a strange, detached sense of curiosity set in, e.g. if someone got seriously injured, he may wonder if/how he'd survive the injury, rather than fear the outcome per se. This was the mind's way of protecting itself from the horrors all around. In fact, the prisoners were often surprised at how much they could endure, e.g. they could stand wet and naked in the autumn chill without catching a cold, or survive with very little sleep.

Phase 2: Routine → Apathy

New prisoners missed their loved ones and felt disgust, horror, and pity at the level of death and suffering. One of the worst pains was the mental-emotional trauma of being treated like animals. Yet, the initial shock of Phase 1 wore off as the prisoners settled into a routine and transited to their grim new reality. In Phase 2, apathy set in, i.e. they became numb to the physical and psychological pain of the daily beatings and abuse.

Apathy served as a protective shell or a defense mechanism. It allowed the prisoners to conserve their strength to focus on the overriding goal of survival.

- The prisoners were severely underfed and undernourished. They spent long hours doing manual labor, but were given only ≤10.5 ounces of bread a day, with 1.75 pints of thin soup, and small daily "allowances" in the form of bits of margarine, honey, jam, cheese or sausage. Over time, they lost their fats/muscles and became skin and bones. Once their immunity system collapsed, the death toll rose even further. They needed every ounce of energy to stay alive.

- Things that used to bring feelings like horror or disgust no longer affected them. When a prisoner died, others would apathetically salvage the dead man's food, clothes, and possessions.

KEY QUOTES

"The most painful part of beatings is the insult which they imply."

Phase 3: Liberation → Depersonalization

After the prisoners were liberated, they entered a 3rd Phase: depersonalization, where they felt disconnected from their own bodies, thoughts and feelings, as if they were observing their life from the outside in a dreamlike state.

- When the prisoners were finally freed, they didn't feel the joy or excitement they'd expected. They'd become so emotionally numb and detached that they had *forgotten how to feel*.

- Moreover, the survivors would've at some point dreamt of being free before waking up to the terrible reality that they were still imprisoned. Thus, their minds *didn't dare to believe that the freedom was real*. Their starved body, however, showed no such reservations and they ate with an endless appetite.

After prolonged mental pressures and physical captivity, sudden liberty can be dangerous. It's similar to how a diver can die from the sudden change in pressure if he rises to the surface too quickly from the ocean depths. Many liberated prisoners suffered from 3 key negative responses:

- In some cases, the oppressed became the oppressor. They *felt justified to harm/hurt others* like how they'd been hurt.

- They also *felt bitter* when other people didn't seem to acknowledge or care about what they'd been through. They questioned what all their suffering was for.

- They *felt disillusioned* when the world they returned to wasn't what they'd imagined it would be. Often, the liberated prisoners returned to their hometown only to find their loved ones gone, and things were no longer as they remembered.

Despite the adjustment difficulties, at some point all the liberated prisoners were able to look back with wonder at how they survived the camps, and feel as if there was nothing else to fear (except perhaps God).

KEY QUOTES

"We had literally lost the ability to feel pleased and had to relearn it slowly."

"'Freedom'—we repeated to ourselves, and yet...we could not grasp the fact that freedom was ours."

"We were not hoping for happiness...And yet we were not prepared for unhappiness."

Coping Mechanisms

Despite the horrifying camp life, many prisoners managed to retain their sense of self, find psychological relief and even inner peace. Frankl observed that survival and self-preservation depended much more on mental-emotional strength than physical strength, and the survivors often demonstrated several coping mechanisms.

Rich inner lives. No matter how unbearable our external circumstances, humans have the ability to retreat into an inner psychological space of peace and safety. Prisoners who had rich inner lives coped much better than those who didn't.

- It's possible to find *humor*, joy and laughter in anything. Frankl challenged his friend to come up with at least 1 amusing story each day, focusing an amusing scenario after their liberation (e.g. something silly at a family dinner or at work).

- *Art and beauty* can enrich your inner life and trigger wonderful memories. Where possible, the prisoners improvised with music and poetry, or paused to admire a beautiful sunset. Even when they were being transported from one concentration camp to the next, they could admire the Salzburg mountains from the train.

- Many prisoners deepened their *religious and spiritual beliefs* in camp, finding pockets of time and hidden corners to run makeshift religious services.

- During his imprisonment, Frankl came to realize the power of *love* as a life-force. Even if a man has nothing, he can still feel joy and bliss by thinking of something/someone he loves. Frankl often conversed with his wife in his head, and focused on his loving memories of her to distract himself from his pain. He didn't know if she was still alive, but he decided he would act in a way that'd honor her.

- The prisoners also used their *imagination* to escape temporarily from their camp life, e.g. talking about the favorite dishes they'd have when they went home. Many dreamt regularly of a life of freedom.

KEY QUOTES

"(The) intensification of inner life helped the prisoner find a refuge from the emptiness, desolation and spiritual poverty of his existence."

"Humor was another of the soul's weapons in the fight for self-preservation."

"As the inner life of the prisoner tended to become more intense, he also experienced the beauty of art and nature as never before."

"Love is the ultimate and the highest goal to which man can aspire."

"The salvation of man is through love and in love...a man who has nothing left in this world still may know bliss, be it only for a brief moment, in the contemplation of his beloved."

Goals for the future. A concentration camp prisoner was reduced to a number. He had no name, no possessions, and no idea if/when he'd ever be free. Frankl was simply #119104 and spent the bulk of his time digging and laying tracks for railway lines. It was like being stuck in a "provisional existence" without an end-date.

- Many prisoners committed suicide since they felt they had nothing to live for. Yet, those with life goals somehow found a way to persist. Once you know your "why", you'll find the "how".

- Frankl helped many of the prisoners to set future goals, e.g. to return to a son/wife, finish writing a book series etc. Even small goals (e.g. planning a favorite dinner menu or family event) gave people something to look forward to.

Perception of Choice. Despite the suffering in a concentration camp, prisoners still had choices.

- Prisoners constantly decided if they'd push to survive another day or simply give up. They chose whether to let the camp degrade them to an animal, or stay true to their human values and sense of self. Some prisoners chose to abuse others while others offered comfort and shared what little food they had. Some guards were sadistic while others chose to be kind. *You can choose to retain your human dignity* even in a death camp.

- In 1945, there was an outbreak of typhus. After surviving typhus in his own camp, Frankl volunteered for medical duties at another typhus-wrecked camp. This would increase his risks of dying from the disease, but he decided he'd rather die with purpose. Later, Frankl almost escaped with other prisoners when an opportunity arose. Yet in the end, he chose to stay with his patients, and this decision brought him a profound *sense of inner peace*. On hindsight, Frankl realized that things seldom turned out as expected; his life was saved on many occasions when he chose what felt right rather than what he thought would've served his self-interests.

- No matter what your external circumstance are, you *can* choose how to interpret the situation and *find meaning in suffering*, e.g. see it as an opportunity to test your inner

KEY QUOTES

"He who has a why to live can bear with almost any how."
— Nietzsche

"Every day, every hour, offered the opportunity to make a decision, a decision which determined whether you would or would not submit to those powers which threatened to rob you of your very self, your inner freedom."

"Man can preserve a vestige of spiritual freedom, of independence of mind, even in such terrible conditions of psychic and physical stress."

strength and grow yourself. Even if you're terminally-ill, you *can* choose what to do with your remaining time on earth. In fact, such choices often define who you truly are as a person.

Part 2: Logotherapy and the Power of Meaning

What is Logotherapy?

Frankl's experience in the concentration camps inspired him to develop logotherapy. "Logos" stands for "meaning" in Greek, and Logotherapy is a psychological approach that focuses on the meaning of human existence.

- It's built on the principle that humans are motivated by meaning. We want to know why we exist, what we're supposed to do, and that there's value in our existence.
- In a survey of college students, only 15% indicated the most important thing to them was "making a lot of money", compared with 78% who chose "finding a purpose and meaning to my life". In a public-opinion in France, 89% said that humans needed something to live for, and 51% said there was something or someone they'd die for. Similar results were found in Vienna.

Unlike psychoanalysis (which treats neurosis by examining the patient's past), logotherapy focuses on introspection and what the patient wishes to fulfill in the *future*. Frankl asserted that the search for meaning should *not* be treated like a disease or dysfunction.

- Specifically, we suffer from "*existential frustration*" in 3 ways:

(i) Frustration with existence itself (i.e. the things we must be/do to exist as a human);

(ii) Frustration with the meaning of life in general (i.e. why are *we* here?); and

(iii) Frustration with the meaning of our personal existence (i.e. what am *I* here for?)

KEY QUOTES

"Man...is able to live and even to die for the sake of his ideals and values!"

"Existential frustration is in itself neither pathological nor pathogenic."

These may make us feel empty, detached and lost, but they don't mean we need psychiatric help.

- Instead of trying to "fix" the patients with drugs and analysis, logotherapy is simply about *guiding patients* through their growth or developmental crisis. For example, a high-ranking American diplomat was dissatisfied with his career and struggled to adhere to America's foreign policy. For 5 years, he underwent psychoanalytic treatment, and his analyst insisted that his job dissatisfaction was rooted in his problematic relationship with his father. Finally, the diplomat approached Frankl. After a few sessions, they established that there was a conflict between his vocation and desire for meaning. He found contentment once he switched to another profession.

- It's also a flawed assumption that a healthy mental state means being in perfect balance/equilibrium. Often, inner conflict and tension helps us to grow, improve and deepen our self-awareness. *Constructive tension*—the tension between where you are and where you can/want to be—drives you to take action and push beyond your current boundaries. Good mental health isn't about being conflict free; it's about how you address conflicts in your life.

KEY QUOTES

"Mental health is based on a certain degree of tension, the tension between what one has already achieved and what one still ought to accomplish, or the gap between what one is and what one should become."

What's The Meaning of Life?

There's no universal definition for the meaning of life, since such meaning varies from person to person and from moment to moment. It's just like how there's no such thing as *the* best chess move in the world—the "best" move will depend on the specific game, players and their respective strategies and counter-strategies. What truly matters is the meaning of your life *right now*.

"What matters...is not the meaning of life in general but rather the specific meaning of a person's life at a given moment."

- No two people are the same, and every life situation is unique. This means that *you're fundamentally responsible* for each and every choice that you make. Instead of asking for the meaning of life, look to your daily choices as they'd show what *you* are making of your life right now.

"Logotherapy sees in responsibleness the very essence of human existence."

- To assess if you're *making a right decision*, fast-forward to the moment when you're on your deathbed, and ask

"Live as if you were living already for the second time and as if you had acted the first time as wrongly as you are about to act now!"

yourself if you'd be happy with the choice you're about to make. Then make your decision as if you've been given a second chance to do it right.

- Instead of telling the patient why, what or how to behave, the logotherapist's role is to help him to see himself, the world and his range of options clearly, so he can *make enlightened choices*.

Frankl disagreed with a key assumption in psychoanalysis—that humans' behaviors are pre-determined by biology and external conditioning. He believed that mankind is self-determining: no matter what happened in the past, what we decide *now* will shape what happens next, and thus redefine our existence, who we are and who we're becoming. Your past does not pre-determine your future.

3 Paths for Finding Your Meaning in Life

There's no easy or straightforward way to discover your meaning in life, though logotherapy offers 3 broad approaches do to so:

Through action, i.e. the deeds you perform or the things you create. This could include the things you do/create in your work, family, social, personal or religious life.

Through your positive inner experiences with something (e.g. goodness, truth, beauty, nature) or someone. Love, in the context of logotherapy, goes beyond romance and sex; it's a deeper experience of togetherness. You can only see someone's innermost qualities—including their potential—if you love them. Your love in turn empowers them to actualize their potential, and creates the feeling that they're seen, accepted, challenged yet supported. Love is a powerful force—that's why people are willing to make sacrifices to give their children a better life, to make their partners happy, or to contribute to a bigger cause.

Through suffering. Suffering is unavoidable (e.g. losing someone we love), but we *can* seek to find meaning in it. In fact, if you're "stuck" in a situation you can't change (e.g. if you're diagnosed with a terminal illness), then the only thing you can do is to change your own attitudes and perspectives.

KEY QUOTES

"Man is capable of changing the world for the better if possible, and of changing himself for the better if necessary."

"By making him aware of what he can be and of what he should become, he makes these potentialities come true."

"When we are no longer able to change a situation...we are challenged to change ourselves."

However, while you can find meaning in suffering, you don't *need* to suffer to find meaning—suffering unnecessarily is basically being masochistic.

- There are *3 key types of suffering*—pain, guilt and death—and you can find meaning in all of them:

  (i) See *pain* as sacrifice. A man had been depressed since his wife's death 2 years ago. After speaking with Frankl, he realized that his wife would've been the one in pain if he had passed away before her. He now saw his suffering as a form of sacrifice to spare his wife the pain, and his depression disappeared.

  (ii) Use *guilt* to improve future actions. Logotherapy can help reduce recidivism by redirecting guilt about the past into constructive actions. If criminals can choose to commit a crime, they can also choose to learn from and rise above their mistakes.

  (iii) Use *mortality* to inspire responsible action. Human life may be fleeting, but once you make a decision and take action, you create real outcomes that leave a permanent footprint. If you live to your fullest and make the most of *every* moment, you'll have no reason to look back with regret when you're old.

  - What if your suffering is so great that you simply can't find any meaning in it? Well, animals are used in medical tests to study diseases/cures. They undoubtedly experience pain and suffering, much of which they can't comprehend. Likewise, there could be a *wider purpose to our suffering* that we simply can't grasp.

For all 3 paths above, true meaning and actualization will always come from focusing on something beyond yourself, e.g. giving yourself fully to a cause or to loving someone.

Addressing "Collective Neurosis"

Just like how each individual has his/her unique purpose, each generation has its unique psychological challenges. The present generation is grappling with nihilism—the belief that life is empty and meaningless.

KEY QUOTES

"In some way, suffering ceases to be suffering at the moment it finds a meaning, such as the meaning of a sacrifice."

"Suffering is an ineradicable part of life...Without suffering and death human life cannot be complete."

"Self-actualization is possible only as a side-effect of self-transcendence."

How did an entire generation end up in an existential vacuum? Ironically, it's partly a result of our freedom and better living conditions.

- Our human ancestors had to rely on primal animal instincts to survive and procreate; they simply had no need/ability to ponder about the meaning of life. With cultural progress, our roles and behaviors were dictated by tradition, religion and social norms, so there was still minimal need/opportunity to define our own roles or purpose in life.

- In modern societies, we've lost touch with many traditions and are free to make our personal choices. Without others telling us what to do and believe, we feel lost. When we're bored, we feel discontented and seek to fill our inner void. With automation and longer lives, we may also find ourselves losing the jobs that used to give us our sense of purpose and identity.

Frankl believed that logotherapy is a much better approach for dealing with nihilism than traditional psychotherapy.

- *Logotherapy* assumes that life has meaning, asserts that you're free to and responsible for defining what to do with your life, and focuses on helping people to identify their options for the future. It directly addresses the void that people are grappling with.

- On the other hand, the most popular *psychoanalytical approach* (by Sigmund Freud) asserts that humans are driven by pleasure, and our behaviors are determined by our past experiences. This only reinforces the view that we're pawns to our biology and social conditioning. Focusing on your past may also lead to a downward spiral if those were the same experiences that taught you life was meaningless.

Using Logotherapy to Counter Anxiety

When we're anxious, we tend to get fixated on the causes of our anxiety, creating a loop called "anticipatory anxiety". Frankl explained 2 conditions associated with anticipatory anxiety:

KEY QUOTES

"The logotherapist's role consists of widening and broadening the visual field of the patient so that the whole spectrum of potential meaning becomes conscious and visible to him."

- *Hyper-intention* is when you focus so much on something you *want* that you end up sabotaging it. For example, the more you try to achieve a sexual orgasm, the harder it is. Or, the more you try not to sweat, the more likely you will.

- *Hyper-reflection* is about paying too much attention to something you *don't want*, only to worsen it, e.g. a woman became frigid not because of the childhood sexual abuse she suffered, but because of the amount of psychoanalytical research she did thereafter which amplified her trauma.

These conditions can be countered using logotherapy:

- Counter hyper-intention with *paradoxical intention*, i.e. consciously plan to do the *opposite* of what you're afraid of. If you're anxious about sweating during a speech, flip it around by challenging yourself to show the audience how much you can sweat. If you're trying to fall asleep, challenge yourself to stay awake as long as possible.

- Counter hyper-reflection with *dereflection*, i.e. redirect the focus *away* from yourself to something external or wider. By alleviating the anxiety, it inadvertently helps to achieve your goals. Continuing from the example above, the frigid woman found it easier to achieve orgasm when she shifted the focus away from herself to her partner instead.

Fundamentally, you can't force happiness. Pushing too hard will only cause hyper-intention. When we over-emphasize the need to be constantly happy and in-balance, we end up feeling bad/guilty for being unhappy, thus making things worse. Instead of directly searching for happiness, it's much more effective to search for a *reason* to be happy. It's like how you tell a joke to make someone laugh, rather than force him to laugh. When you find meaning in your life, you automatically find hope, motivation and happiness, actualize your potential and create an upward spiral.

Other Details in the Book to Look out For

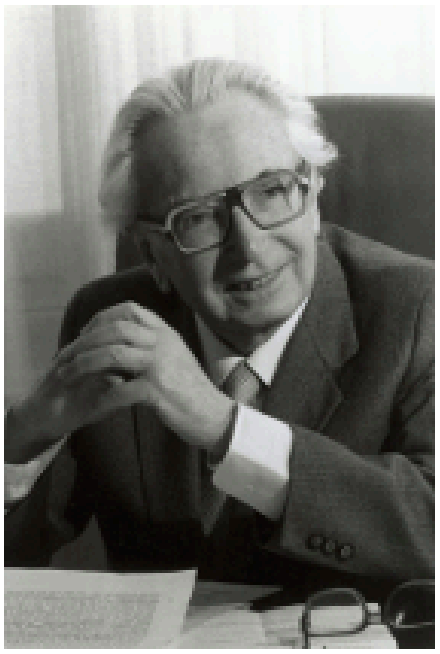
This book is actually a combination of several of Frankl's works, including a narrative of his concentration camp experiences, an overview of logotherapy and an elaboration of its philosophy and

KEY QUOTES

"Happiness cannot be pursued; it must ensue. One must have a reason to 'be happy.' Once the reason is found, however, one becomes happy automatically."

practices. It includes many detailed narratives, examples and discussions about life, meaning, logotherapy and its applications. For more details, please visit www.viktorfrankl.org.

About the Author



Dr. Viktor Emil Frankl (1905-1997) was an Austrian neurologist and psychiatrist. He founded logotherapy, a school of psychology, after he survived the Holocaust during WWII. Dr. Frankl received the degrees of Doctor of Medicine and Doctor of Philosophy from the University of Vienna. Dr. Frankl was a Professor of Neurology and Psychiatry at the University of Vienna Medical School and Distinguished Professor of Logotherapy at the U.S. International University.

He was also a visiting professor and guest lecturer at several universities around the world, the President of the Austrian Medical Society of Psychotherapy and Honorary Member of the Austrian Academy of Sciences.

KEY QUOTES

"Every negotiation reaches a point where you need to communicate to the other side that they've pushed you as far as they can."

The New Science of Adult Attachment And How It Can Help You Find and Keep Love

Amir Levine, M.D. and Rachel Heller, M.A.

The Big "So What"

Why do some romantic relationships thrive while others fail? This book explains the science behind adult attachment, the reasons for common relationship challenges, with practical strategies for building stronger, healthier, and more fulfilling relationships. Whether you're single, dating, or in a long-term relationship, *Attached* provides actionable tips to help you find and sustain the love life you desire.

The Science of Adult Attachment

The attachment theory explains why people behave the way they do in relationships.

- There are *3 main attachment styles*—secure, anxious, and avoidant—that shape how we connect, communicate, and seek intimacy. It applies to all types of relationships, including romance, friendships, family, and colleagues.
- In this book, psychologists Amir Levine and Rachel Heller focus on *romantic relationships in adults*, using their experience in psychiatry, neuroscience, and social-organizational psychology to translate scientific research into practical insights and strategies for romantic relationships.

This summary presents the insights in 3 parts:

- The origins and foundations of adult attachment theory;
- The behaviors, traits, and challenges of each attachment style; and

KEY QUOTES

"By understanding that people vary greatly in their need for intimacy and closeness and that these differences create clashes, attachment findings offered us a new way of looking at romantic relationships."

"Understanding attachment styles is an easy and reliable way to understand and predict people's behavior in any romantic situation."

"Although we all have a basic need to form close bonds, the way we create them varies."

- Practical strategies to find a compatible partner, navigate relationships effectively, and nurture secure, fulfilling relationships.

Part 1: Understanding the Adult Attachment Theory

Origins of Attachment Styles

John Bowlby and Mary Ainsworth developed the original attachment theory, focusing on the bond between infants and their primary caregivers. This bond is crucial for a child's safety and survival, and it shapes how they handle relationships as adults.

- Ainsworth's experiments, including the "Strange Situation" test, identified *3 main attachment styles in children*:

  (i) *Anxious*: The baby is distressed when the mother leaves, and is both happy and angry when she returns.

  (ii) *Avoidant*: The baby seems indifferent when the mother departs or returns, but is actually stressed inwardly.

  (iii) *Secure*: The baby is upset when the mother leaves but quickly calms down upon her return.

- Such attachment styles were initially thought to come solely from childhood interactions. However, research has since shown that *genes and life experiences* also play a part.

Adults have been found to exhibit similar attachment styles. These affect how we manage intimacy, conflict, dependence, and autonomy in adult romantic relationships.

- *Anxious*: People with this style crave intimacy, often worrying about their relationships, and fearing their partners may not reciprocate their feelings.

- *Avoidant*: People with this style see intimacy as a threat to their independence and prefer to keep a distance in relationships.

KEY QUOTES

"The attachment theory.... allowed us to learn not only what goes 'wrong' in relationships but also what goes 'right'."

"An entire mosaic of factors comes together to create this attachment pattern: our early connection with our parents, our genes, and also something else—our romantic experiences as adults."

- *Secure*: People with this style are comfortable with intimacy, and are typically warm and loving.

Every person has an attachment style.

- Such styles tend to remain stable, though they *can change over time* for about 1 in 4 people.

- People with secure attachments generally report higher relationship satisfaction compared to others. The *keys to a thriving relationship* include: developing a secure attachment style, finding a secure partner, or helping your current partner adopt a secure style.

Dependency in Relationships

Challenging the self-sufficiency myth: There's a long-standing misconception that people should be emotionally self-sufficient. In the 1940s, experts advised against "coddling" children, saying it would lead to emotional instability.

- Early attachment research challenged this view. For example, infants that lacked attachment figures showed abnormal development even though they were well-nourished, proving that healthy development requires both *emotional bonds and physical care*.

- Some modern self-help advice also promotes *strict independence* and avoiding emotional entanglements.

Yet, human beings are biologically wired for connection.

- Our emotional bonds affect our *physiological responses*. Studies show that, once attached, partners regulate each other's blood pressure, heart rate, breathing, and hormone levels.

- *Healthy dependence* on a partner offers comfort and reduces stress, making you more autonomous and resilient.

  (i) Dr. James Coan found that women felt less stressed when holding their husband's hands while awaiting a mild electric shock.

KEY QUOTES

"Time and again, research shows that the best predictor of happiness in a relationship is a secure attachment style."

"We live in a culture that seems to scorn basic needs for intimacy, closeness, and especially dependency while exalting independence. We tend to accept this attitude as truth— to our detriment."

"Dependency is a fact; it is not a choice or a preference."

(ii) Dr. Brooke Feeney found that couples who feel supported by their partners reported higher self-esteem, better mood, and greater confidence in achieving their goals.

Our need for closeness creates a "dependency paradox." The more fully we can depend on our partner and trust them as our secure base, the more independent we can be.

- When we're attached to someone, we view them as our "*secure base*" and seek their support, both mentally and physically.
- If we feel *safe and secure*, we feel empowered to explore, take risks, and achieve our goals.
- If we feel *insecure or threatened*, we instinctively seek to restore a sense of safety.

(i) Both children and adults show "*protest behaviors*" or "*activating strategies*" when separated from their attachment figures. Children might cry for an absent mother, while adults might seek reassurances or repeatedly call their partner on the phone. We find it hard to focus on other activities until our secure base is restored.

(ii) When partners fail to meet each other's attachment needs, it can create *chronic tension and stress*, hurting their emotional and physical health.

Part 2: Understanding the 3 Attachment Styles

By understanding your attachment style and your partner's, you can gain insight into your respective needs and behaviors.

Secure Attachment Style

Overview: Individuals with a secure attachment style ("secure individuals") are comfortable with intimacy and are generally warm and loving. They find it easy to depend on others, and to have others depend on them. They do not worry constantly about being abandoned, nor about their partner getting too close. As a result, they generally report higher satisfaction, commitment, and trust in relationships.

KEY QUOTES

"Once we choose a partner, there is no question about whether dependency exists or not. It always does."

"Attachment principles teach us that most people are only as needy as their unmet needs."

"The need to be near someone special is so important that the brain has a biological mechanism specifically responsible for creating and regulating our connection with our attachment figures."

"In a true partnership, both partners view it as their responsibility to ensure the other's emotional well-being."

People with a secure attachment style tend to demonstrate these traits and behaviors:

- They engage in *open and direct communication*. They express their needs, problems, and successes openly because they expect their partner to be loving and responsive.

- They are *comfortable with both closeness and independence*. They can read others' emotions, express themselves, and effectively provide and receive support. This tends to create a "buffering effect" to help an insecure partner feel more secure and satisfied with the relationship.

- They demonstrate high levels of *trust and commitment* in close relationships. They believe in their ability to strengthen a relationship and are committed to its growth. They don't see the need to "play games" or engage in a "relationship dance" of push-and-pull.

- They can *resolve conflicts calmly and effectively*, showing flexibility and openness to feedback. If they're treated disrespectfully, they tend to see it as a reflection of the other person's shortcomings, not their own self-worth. This allows them to move on without dwelling on the issue.

KEY QUOTES

"What may come as hard work for some— to keep an even emotional keel in the face of threat—comes effortlessly for someone secure."

"Secure adults naturally know how to soothe their partners and take care of them—it's innate talent."

Anxious Attachment Style

Overview: Individuals with an anxious attachment style ("anxious individuals") crave intimacy but worry constantly about their relationship stability. They need constant reassurance, potentially leading to clingy or dependent behavior.

- Anxious individuals feel insecure in relationships. They are sensitive to shifts in their partner's moods or behaviors, tend to overthink them and misinterpret them as relationship threats. This triggers their attachment system, and they use *activating strategies* to reconnect, e.g. calling or texting their partner repeatedly.

  (i) If the partner responds positively and quickly (e.g. texting to explain they can't take a call because they're in a meeting), they feel secure and return to their "*safe zone*".

"Notice that if you feel unsettled in a relationship situation, all that is required is a minimal reassurance from your partner to get back on track."

(ii) But if the issue drags on, their anxiety escalates and they enter the "*danger zone*". They worry obsessively (e.g. thinking their partner is upset or even involved with someone else) and may take extreme measures to regain attention.

In short, anxious people tend to demonstrate these traits and behaviors:

- They need *frequent reassurance and validation*. They become anxious when they're not in contact with their partner, and can become clingy, jealous, or possessive.
- They tend to be *overly-sensitive*, overanalyzing interactions and reading too much into their partner's actions/moods.
- Once their attachment system is triggered, they find it hard to "turn it off" without proper reassurances. They tend to engage in *protest behaviors* like excessive calling, keeping score, hostility, threatening to leave, or manipulation (e.g. acting busy/distant or trying to make their partner jealous). Such bids to regain attention can damage the relationship.

KEY QUOTES

"Having a perpetually activated attachment system is the opposite of what nature had in mind for us in terms of gratifying love."

"Protest behavior and activating strategies can cause you to act in ways that are harmful to the relationship. It is very important to learn to recognize them when they happen."

Avoidant Attachment Style

Overview: Individuals with an avoidant attachment style ("avoidant individuals") value independence and often see intimacy as a threat to their freedom. They may be uncomfortable with closeness and tend to keep their partners at arm's length. Avoidants usually find it hard to express their emotions and may come off as distant or emotionally unavailable.

- When a partner seems too close, avoidants use *deactivating strategies* to create distance. They might:

  (i) Focus on their partners' flaws and overlook their positive qualities;

  (ii) Avoid discussing the relationship or committing to it;

  (iii) Suppress emotions and pull away when things get too intimate; and/or

  (iv) Flirt with others or pine for an ex.

"As an avoidant, you have a skewed perspective of the things that your partner says and does. The unnerving part is that you're almost entirely unconscious of these unconstructive thought patterns."

- To *justify their emotional distance*, avoidants tend to idealize a past partner, or believe there's a perfect partner out there who could meet their needs effortlessly.

  (i) This gives them an excuse not to invest fully in the present relationship.

  (ii) However, once they separate from a partner and distance themselves, they start to realize the positive qualities they had overlooked.

- Excessive self-reliance hampers their ability to connect or share intimacy, leading to *less connectedness, warmth, and satisfaction* in their relationships. They also tend to misinterpret their partner's attempts at closeness as clinginess, or perceive their partner's upsets as indifference.

People with an avoidant attachment style tend to demonstrate these traits and behaviors:

- *Prefer autonomy* and maintain emotional distance;
- *Avoid vulnerability*, emotional dependence, or deep conversations about their feelings or the future; and
- *Prioritize work, hobbies, or personal space* over relationships or closeness.

Part 3: Nurturing Secure, Fulfilling Relationships

To nurture happy, fulfilling relationships, it's crucial to understand both you and your partner's attachment styles, adapt your responses effectively, and move toward a more secure relationship.

Identifying Your Respective Attachment Styles

Identify the attachment styles for you and your partner, to better understand yourselves and manage your needs/responses, leading to happier and more fulfilling relationships.

Refer to the list of traits/behaviors in the previous section, focusing on 2 attachment dimensions:

KEY QUOTES

"As an avoidant, your mind is governed by overarching perceptions and beliefs about relationships that ensure a disconnect with your partner and get in the way of your happiness."

"One of the consequences of devaluing your romantic relationship is that you often wake up long after the relationship has gone stale, having forgotten all those negative things that annoyed you about your partner, wondering what went wrong and reminiscing longingly about your long-lost love."

- Consider these 2 key dimensions: *intimacy and anxiety*.

  (i) *Intimacy*: The extent to which you avoid intimacy and closeness; and

  (ii) *Anxiety*: The extent to which you're preoccupied with your relationship and your partner's love or attention.

*Adapted from Brennan, Clark, and Shaver's scale

- *Secure* (low avoidance, low anxiety): You are comfortable with expressing your needs and affection, trust others, and are not easily bothered by minor issues.

- *Anxious* (low avoidance, high anxiety): You become quickly attached to romantic partners, are sensitive to your partner's moods, often worry that your partner will lose interest, and fear that people won't like you once they know the real you.

- *Avoidant* (high avoidance, low anxiety): You prioritize independence, avoid sharing feelings, struggle to support your partner emotionally, prefer casual relationships, and often feel annoyed at your partner for no clear reason.

- *Anxious-Avoidant* (high avoidance, high anxiety): You are anxious about your partner's availability, yet uncomfortable with intimacy.

Approximately 50% of people are secure, 20% are anxious, 25% are avoidant, and 3-5% are anxious-avoidant.

Use these 5 Golden Rules to assess your partners' behaviors:

- Do they *seek intimacy or closeness?* If yes, they're likely to be anxious or secure. If no, they are likely to be avoidant.

- Are they sensitive to and *preoccupied with the relationship?* If yes, they are likely to be anxious.

- How do they respond *when you express your needs effectively?* Secures accommodate your needs, anxious partners become more intimate, while avoidants react negatively.

- Look at *multiple signs* to assess the overall pattern. Don't just rely on 1 behavior.

KEY QUOTES

"Understanding attachment will change the way you perceive new people you meet, but it will also give you surprising insight into your partner if you are already in a relationship."

"What goes unsaid or undone by your partner can be just as informative as what he or she is doing and saying. Trust your gut feeling."

"There is no one characteristic that can establish someone's style but rather a combination of behaviors and attitudes that together create a coherent pattern. It is the whole picture that tells the true story."

- Don't just pay attention to what they say/do. *Silence and inaction* also reveal a lot about their true feelings and attachment style.

Adopt Effective Strategies Based On Your Attachment Style

Remember: there's no such thing as a "good" or "bad" style. Your needs are valid, and they can be fulfilled with the right partner.

If you have an anxious attachment style, recognize that your needs for intimacy, availability, and security are valid. Learn to express those needs effectively, and find a partner who can meet them.

- *Don't follow popular dating advice* like playing hard to get or appearing distant. These don't reflect your true need for intimacy, and will only attract the wrong type of partner.

- Adopt the "*abundance philosophy*." Realize that there are many potential partners who can meet your needs. Take your time to date different people and find someone truly compatible.

  (i) Ideally, pick a secure partner who's more likely to prioritize your well-being and provide the secure base you need. They might seem boring initially, but they also offer the stability and consistency you crave in a relationship.

  (ii) Learn to spot avoidant partners who send mixed signals, constantly find faults with you, and disregard your feelings. Don't confuse drama with romance.

- Learn to *express your needs clearly*, rather than expect your partner to guess what you need/want. Don't overwhelm them with protest behaviors.

  (i) You're sensitive to your partner's emotional changes, but may misinterpret those emotions if you react too quickly.

  (ii) So, take a moment to reflect on your partner's perspective instead of making assumptions. Give your partner some space to respond in their own time.

If you have an avoidant attachment style, learn to balance your need for independence with connectedness.

KEY QUOTES

"By being someone you're not, you're allowing another to be with you on his or her own terms and come and go as s/he pleases."

"The more you meet, the greater the chances you'll find the one who is a good match for you."

"Many people who live with insecure partners cannot even begin to imagine how fundamentally different life with a secure person can be."

"The beauty of effective communication is that it allows you to turn a supposed weakness into an asset."

- *Express your needs* for personal space and autonomy, but remember that extreme self-reliance can lead to loneliness and less satisfying relationships.

- *Mutual support* leads to more fulfilling connections. When both partners feel secure, there's also less need for distance or clinginess.

- Ideally, choose a *secure partner* who can respect your need for personal space while gently encouraging emotional closeness.

- *Recognize your deactivating strategies*. For example, if you find yourself idealizing an ex, remind yourself why that relationship wasn't right. Stop searching for the "perfect partner" who will meet all your ideals.

- Instead of fixating on your partner's flaws or imperfections, *focus on positive aspects* of your partner and relationship.

  (i) Make a daily list of things you appreciate about your partner.

  (ii) Trust that your partner has your best interests at heart.

- Use *shared activities* to connect without feeling overwhelmed. Activities like hiking, cooking, or watching movies together some distractions to help you feel closer without the pressure of direct emotional intimacy.

If you have a **secure attachment style**, you can probably sustain satisfying relationships with people of any attachment style. You can even help anxious or avoidant partners to become more secure over time by providing consistent support and comfort.

- Seek to *create a "secure base"* for your partner. This helps anxious partners to feel reassured and encourages avoidant partners to open up gradually.

- However, beware of *staying too long in an unhealthy relationship* due to your forgiving nature and sense of duty.

  (i) Feelings of anxiety, jealousy, or avoidance are all signs that your secure foundation has been shaken.

  (ii) If unhappiness persists despite your best efforts to address the issues, it's often better to end the relationship.

KEY QUOTES

"If we overrate self-reliance, we diminish the importance of getting support from other people, thus cutting ourselves off from an important lifeline."

"The more attuned you are to your partner's needs at the early stages—and he or she to yours—the less energy you will need to expend attending to him or her later."

"If you want to take the road to independence and happiness, first find the right person to depend on and travel down it with them."

"If you're with someone secure, they nurture you into a more secure stance."

"Just because you can get along with anyone doesn't mean you have to."

Adapting To Your Partner's Attachment Style

If you're still unattached, choose a partner with a secure style. If you're already in a relationship with an anxious or avoidant partner, then adapt to your partner's style to improve the relationship dynamics.

If your partner has an anxious style:

- *Check-in regularly* and consistently to give them the assurance and attention they crave. This could be as simple as verbal affirmations or simple text messages to let them know you're thinking of them.
- Be more *open and honest* in your communications, expressing your feelings and intentions clearly to avoid misunderstandings.

If your partner has an avoidant style:

- Respect their need for *space and time alone*; don't take it personally, and don't rush intimacy or emotional closeness.
- Use *straightforward language* to help them understand your needs and feelings without feeling pressured.
- Regularly *highlight positive aspects* of your relationship and shared experiences.

Navigating the Anxious-Avoidant Trap

The worst conflicts often occur when one partner is anxious and the other is avoidant. The anxious partner needs closeness and reassurance, which conflicts with the avoidant partner's need for distance and autonomy. This creates an anxious-avoidant trap.

- Such *conflicting intimacy needs* lead to misunderstandings, frustrations and dissatisfaction on both sides.

  (i) The closer the anxious partner gets and the needier they seem, the more the avoidant partner withdraws or responds with hostility, making the anxious partner feel rejected and undervalued.

KEY QUOTES

"The trick is not to get hooked on the highs and lows and mistake an activated attachment system for passion or love. Don't let emotional unavailability turn you on."

"True love, in the evolutionary sense, means peace of mind. "Still waters run deep" is a good way of characterizing it."

"All happiness or unhappiness solely depends upon the quality of the object to which we are attached by love."
—Baruch Spinoza

"When the two people in a couple have colliding intimacy needs, their relationship is likely to become more of a storm-tossed voyage than a safe haven."

(ii) The tension builds up, leading to frequent fights over seemingly-trivial issues. Both sides experience an emotional roller-coaster of intense highs and lows.

- There's also *emotional counterbalancing* at play, as avoidants inflate their self-esteem and independence by comparing themselves to their dependent, anxious partners.

Strategies to improve the relationship.

- Create a relationship inventory to understand how your attachment style affects your relationships, so you can *work towards a more secure style*.

(i) List down the names of your past and present romantic partners to identify wider patterns.

(ii) What are the key memories and characteristics that stand out for each relationship?

(iii) What were the specific situations that triggered your need for closeness (if you're anxious) or your need for distance (if you're avoidant)?

(iv) What were your specific thoughts, actions, and feelings in response to these situations?

(v) What underlying patterns, insecurities, or attachment issues can you identify?

(vi) How did these attachment-driven reactions impact your happiness and relationship satisfaction?

(vii) Who are the secure role models you can learn from (e.g. a family member who can express their feelings calmly and constructively)? Focus on specific beliefs, attitudes, behaviors or traits you can emulate.

- Review your relationship inventory with a *primary attachment figure* or someone you trust for emotional support (e.g. a family member or therapist).

- With clarity and awareness, you can *communicate your needs more clearly*, without attacking or blaming your partner.

- *Establish clear boundaries* (e.g. acceptable levels of closeness and independence) to manage expectations and reduce overwhelm. For example:

KEY QUOTES

"Attachment styles are stable but plastic. This means that they tend to stay consistent over time, but they can also change."

"As a person's attachment style gradually changes toward greater security, he or she behaves more constructively in relationships and even enjoys better mental and physical health. And if both partners are able to do so—the results can be remarkable."

(i) Instead of bombarding your partner with texts, you might agree on 2 simple check-ins daily so you can feel reassured without overwhelming your partner.

(ii) If you feel suffocated with too much 1-1 time, try agreeing on specific times in the week when you can engage in shared activities, e.g. taking walks or watching a movie.

Intimacy clashes are rarely resolved. Even if the relationship lasts a long time, it remains unstable. Couples stuck in the anxious-avoidant trap may experience **chronic dissatisfaction** that damages their mental-emotional health and spills over to other aspects of life e.g. sleeping habits or parenting.

- If necessary, *seek professional help*.
- You can choose to *compromise* by adjusting your expectations, but this often leads to lower relationship satisfaction.
- If things don't improve despite your best efforts, it might be better to *end the relationship*, especially if you're in a new or uncommitted relationship.

Even if you know you should **end the relationship**, you might find it hard to do so.

- A breakup is painful, and it's common to experience a "*rebound*" as you crave comfort from your ex to soothe the emotional pain. Positive memories may also overshadow the negatives, strengthening the emotional pull toward your ex.
- Here are some *strategies to survive a breakup*:

(i) Build a support network of family and friends who can offer emotional support and soothe your attachment needs straight after a breakup. Try staying temporarily with someone you trust, to reduce feelings of loneliness.

(ii) Write down all the reasons why you left the relationship. When you feel the urge to revive the relationship, ask your friends/family to remind you of those reasons.

(iii) Be kind to yourself if you slip and rebound. Acknowledge your pain, and trust that it will eventually pass, and you can move on to a healthier relationship.

KEY QUOTES

"Our memories are not like old books in the library, lying there dusty and unchanged; they are rather like a living, breathing entity. What we remember today of our past is in fact a product of editing and reshaping that occurs over the years whenever we recall that particular memory."

"You may understand rationally that you should leave, but your emotional brain may not yet be ready to make that move."

"The fact that one person can take away all our discomfort in a split second makes it very hard to resist the temptation to see him or her again."

"The worse you feel about yourself, the more you'll want to go back to the false safety of the bad relationship you were in."

Improving Communications for Relationship Success

Effective communication helps you to (i) choose the right partner who can meet your needs and (ii) ensure those needs are met.

Here are several important communication principles:

- Be *honest, authentic, and unapologetic* about your needs and feelings, recognizing that your attachment needs are key to your happiness.

- Use phrases like "need," "feel," and "want" to *express your needs clearly without blaming* your partner. For example: "I love you very much. I need to know that you're there for me all the time. And I need to be able to talk to you daily, not just when it's convenient for you. I don't want to hide my desire to be close to you, for fear of driving you away."

- *Be specific* about what's bothering you, e.g. "I feel disconnected and anxious when I don't hear from you daily."

If necessary, draft a script in advance. This helps you to reflect on what specifically what makes you uneasy, and what you need to feel more secure. Seek help from someone with a secure attachment style, and rehearse your message until you're confident.

- *Example*: Let's imagine your partner frequently cancels plans last minute, making you feel like an afterthought.

  (i) It's *ineffective* to give them the silent treatment to show your displeasure, hoping they'll figure out why you're upset.

  (ii) It's more *effective* to address it directly, e.g. "It's disappointing when our plans are canceled last minute. I look forward to our time together, and I need to know that you prioritize spending time with me. Can we find a way to make our plans more consistent?"

KEY QUOTES

"Your date's response to effective communication can reveal more in five minutes than you could learn in months of dating without this kind of discourse."

"Ineffective communication can be interpreted in different ways while effective communication has only one specific meaning."

"Worries and fears surface more when you are not communicating your concerns and are letting things build up."

"When it comes to attachment style, we're malleable. And it's never too late to learn new relationship skills."

Resolving Everyday Conflicts in a Secure Way

All couples, even secure ones, experience conflicts. However, their impact depends on the type of issues involved, and how the conflict is handled.

- Unlike intimacy conflicts (which are more challenging), *bread-and-butter conflicts* involve everyday issues like choosing what to do or eat. Handled properly, they can help couples to consider each other's perspectives and bring them closer together.

Use these learnable principles for conflict resolution:

- To resolve conflicts constructively, always assume the best in your partner and *show concern* for their well-being. Recognize that their happiness and well-being are interconnected with yours.
- *Focus on the problem at hand*. Do not (i) launch into personal attacks, or (ii) generalize and let the issue spill over into other areas of the relationship.
- *Stay present*—both physically and emotionally—to show that you're willing to resolve the issue together.
- *Clearly articulate your needs and feelings*. Don't expect your partner to guess them.

Our brain releases oxytocin—a hormone that strengthens bonds—during orgasm or when we cuddle. Prioritize quality time for healthy boosts of oxytocin to minimize the occurrence of conflicts.

Conclusion and Other Details in the Book

Regardless of your current attachment style, you can learn to adopt a secure communication style for healthier, more fulfilling connections.

Beyond the concepts in this summary, the book offers many other tools to help you apply the insights in your life, such as: real-life examples of couples who have overcome relationship

KEY QUOTES

"What does differentiate between couples and affect their satisfaction levels in their relationships is not how much they disagree, but how they disagree and what they disagree about."

"We often view conflict as a zero-sum game...attachment theory shows us that our happiness is actually dependent on our mate's and vice versa."

"When there's a willingness to resolve a specific problem, people feel that they're being heard and it brings both parties closer together."

"The first step toward applying attachment theory to your life is to get to know yourself and those around you from an attachment perspective."

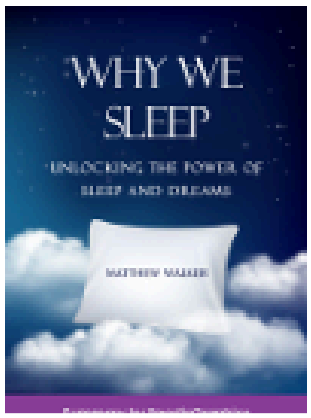
challenges, interactive exercises to explore your own attachment style, and a detailed questionnaire to identify your attachment type. For more information, visit www.attachedthebook.com.

About the Author

Amir Levine, M.D. is a psychiatrist, neuroscientist, and associate professor of psychiatry and director of the SecureLab at Columbia University. He specializes in attachment-based treatments and supervises therapists globally. He also has a private practice where he consults with individuals, couples, and families. His research and clinical work have significantly contributed to the development of adult attachment theory, especially how different attachment styles affect romantic relationships.

Rachel S. F. Heller, M.A. is a supervising psychologist with a master's degree from Columbia University. She integrates attachment-based principles with cognitive behavioral therapy and other approaches in both her public sector work and private practice to help individuals improve interpersonal relationships.

KEY QUOTES



WHY WE SLEEP

Unlocking the Power of Sleep and Dreams

MATTHEW WALKER, PHD

The Big "So What"

All living creatures need sleep. The question is: *why*? In this book, neuroscientist and sleep expert Prof Matthew Walker presents groundbreaking discoveries about sleep and how it affects all aspects of our physical, mental and emotional health, including our longevity.

In this summary, we'll present the key findings in 3 parts: (i) What is sleep, (ii) Why you should sleep, and (iii) Improving your sleep.

What is Sleep?

Sleep Architecture

Every night, your brain switches between 2 types of sleep:

Non-rapid eye movement (NREM) sleep is characterized by deep, slow brainwaves that're 10x slower than when you're awake.

- The thalamus is the sensory gatekeeper that decides if sensory signals are allowed to your brain's cortex to become a conscious perception. During deep NREM sleep, this gate is closed, resulting in a *sensory blackout*. This allows your cortex to relax.

- Your entire brain is now fully aligned to distill and transfer selected memories from your short-term memory (in your frontal lobes) to your long-term memory (at the back of your brain). The *slow, deep-sleep brainwaves* are like couriers sending info packets within your brain.

KEY QUOTES

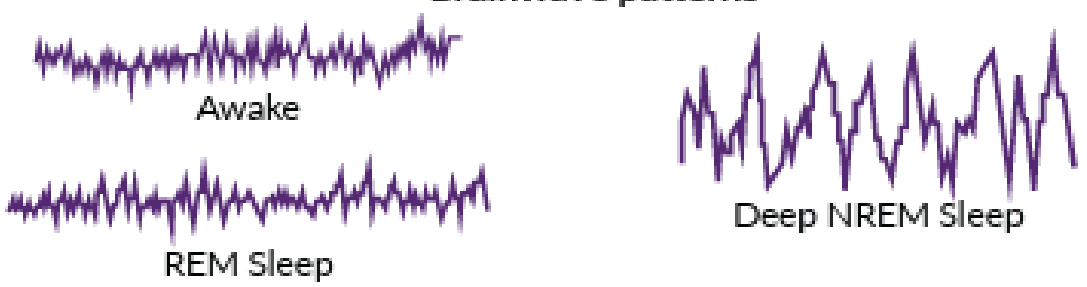
"Sleep is the single most effective thing we can do to reset our brain and body health each day—Mother Nature's best effort yet at contra-death."

"What you are actually experiencing during deep NREM sleep is one of the most epic displays of neural collaboration that we know of. Through an astonishing act of self-organization, many thousands of brain cells have all decided to unite and 'sing' or fire, in time."

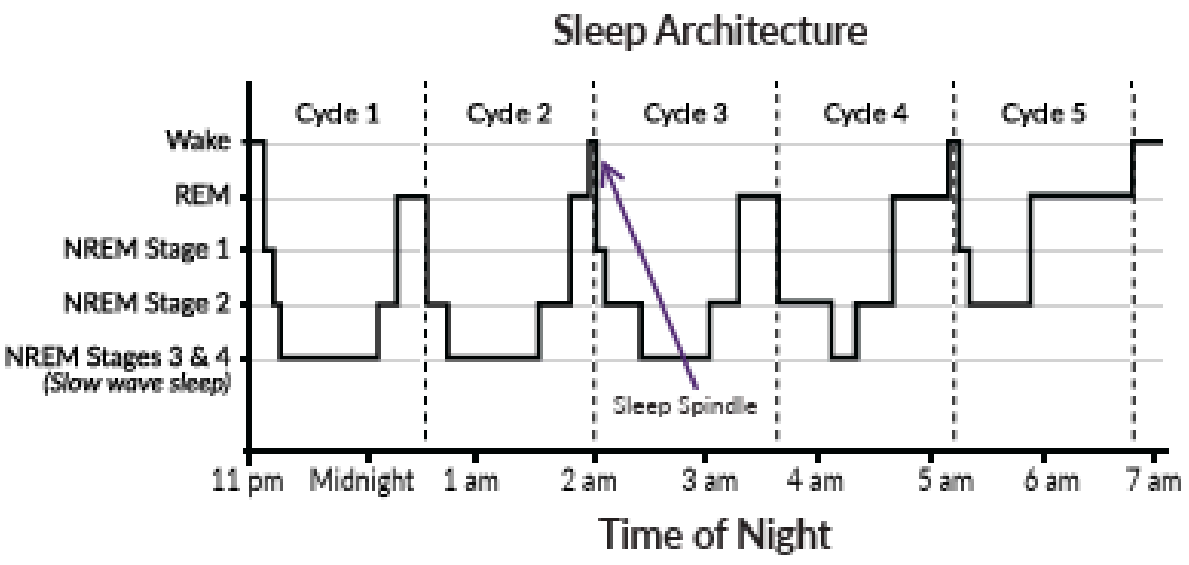
Rapid eye movement (REM) sleep is characterized by faster brainwave activity that's similar to when you're awake. Your body is still resting, but your thalamus is now open to *internal* sensory inputs (rather than external ones). When you dream, your brain basically combines pockets of feelings, info, memories, motivations etc. into a giant movie screen, and your eyes may move rapidly as you dream. However, your voluntary muscles are deactivated (muscle atonia) to protect you from acting out your dreams unconsciously. Your sense of time seems dilated, i.e. you may feel like an hour has passed when it's only been 10 mins.

When we're awake, we constantly receive new sensory inputs from the external environment. NREM sleep reinforces and stores those raw data and skills. REM sleep integrates these ingredients by connecting them with one another *and* with our past experiences and knowledge, to improve our mental model of how the world works, develop new insights and solve problems innovatively.

Brainwave patterns



A typical night's sleep happens in recurring 90-minute NREM and REM cycles. When you fall asleep, you'll first enter light NREM sleep (stages 1-2), then deeper NREM sleep (stages 3-4). As the night progresses, a greater fraction of each cycle is spent in REM sleep, with the last part being richest in REM sleep.



KEY QUOTES

- Occasionally, you'll have a *sleep spindle*—a burst of brain-wave activity—which usually comes at the end of a slow wave before you enter REM sleep. The spindles block off external noises, so people with more/stronger spindles sleep more soundly.

- NREM and REM serve *different but equally-vital functions*. When you don't get full 8 hours of sleep, you lose out on chunks of NREM or REM sleep with serious repercussions (which we'll explain later).

Understanding Your Sleep Rhythm

Your wakefulness and need for sleep are regulated by 2 key factors.

The Circadian Rhythm is your internal body clock that runs in an approximate 24-hour cycle.

- It's regulated by melatonin, which is produced by the *suprachiasmatic nucleus* in the brain, which calibrates your body clock using the amount of light.

- *Melatonin* is typically released into your bloodstream from dusk to tell your body to prepare to sleep. The amount is slowly reduced through the night, until sunlight at dawn tells your brain to stop melatonin release. Besides daylight, other reliably recurring signals (e.g. temperature change, social interactions) can also be used to reset our biological clock.

- Every human has a *different internal rhythm*, i.e. we feel most awake at different times of the day due to our genes. Some feel energized in the mornings (the morning larks) while others are most functional at night (the night owls). Unfortunately, our society favors daytime work—night owls may be misunderstood as lazy and end up burning the midnight oil to catch up on their unproductive workday.

Adenosine is a chemical that makes you sleepy.

- It builds up progressively when you're awake; most people will feel "*sleep pressure*" after being awake for 12-18 hours. It decreases as you sleep and is usually purged fully after 8 hours of sleep.

KEY QUOTES

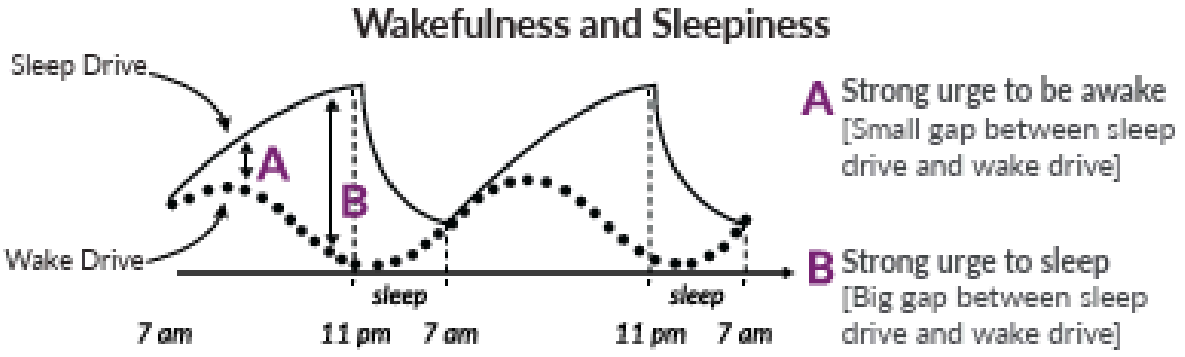
"When it comes to sleep, there is no such thing as burning the candle at both ends—or even at one end—and getting away with it."

"Wakefulness and sleep are...under the control of the circadian rhythm, and not the other way around."

"We require more supple work schedules that better adapt to all chronotypes, and not just one in its extreme."

- *Caffeine* can dull the effects of Adenosine, but doesn't stop the chemical from building up in your body. So, you may feel worse once the effect of caffeine wears off. If you then consume more caffeine to counter the fatigue, a dependency cycle is created. Caffeine taken in the evening can disrupt sleep since 50% of caffeine will still be in your system 5-7 hours later. Caffeine is found in coffee, teas, energy drinks, dark chocolate and certain drugs. Even decaffeinated coffee usually contains 15-30% of caffeine in regular coffee.

The 2 mechanisms above operate independently, with the circadian cycle powering your "wake drive" and adenosine powering your "sleep drive". The combined effects mean that after a proper night's rest, you'll feel wide awake at noon since there's only a small gap between the 2 drives. At 11pm, you'll feel an urge to sleep since there's now a huge gap between the 2 drives.



You're probably not getting enough quality sleep if: (i) you can fall asleep a few hours after waking up (e.g. at 10-11am), (ii) you can't function optimally without caffeine before noon, (iii) you can't wake up naturally at the time you set your alarm, and/or (iv) you keep rereading something because you can't focus.

Who Sleeps and How?

Every animal species sleeps, including worms, insects, fish, reptiles, amphibians, mammals and humans.

- All species have NREM sleep, but many don't seem to have REM sleep (e.g. insects, fish, amphibians and most reptiles). Only birds and mammals—which are newer on the evolutionary timeline—have full-blown REM sleep. Compared to other animals, humans need much less sleep, and we have a disproportionately high amount of REM sleep. Walker theorizes that humans have evolved with *fewer hours of more efficient/intensive sleep*.

KEY QUOTES

"Without exception, every animal species studied to date sleeps, or engages in something remarkably like it...Sleep is universal."

"Regardless of the amount of recovery opportunity, the brain never comes close to getting back all the sleep it has lost."

- There's no way to fully recover from lost-sleep. When you're *recovering from sleep-deprivation*, your body tends to prioritize NREM over REM recovery. However, once you've recovered on your NREM, the proportion of REM sleep will increase.

Today, most humans are not sleeping adequately nor optimally. In most modern societies, people usually sleep in a monophasic pattern, with 1 stretch of only <7hrs a night. Generally, an adult human needs *8 hours of sleep*. In societies without electricity (e.g. hunter-gatherer tribes), people sleep in a *biphasic pattern*, with a stretch of 7-8 hrs at night (2-3 hrs after sunset till dawn) *plus* a 30-60 minute mid-afternoon nap (to address the natural dip in alertness). Some modern cultures still observe siestas, and people who kept Greek siestas were found to have a 37% lower risk of death from heart disease compared to those who didn't.

Our sleep hours and patterns change across our lifespan:

- *Babies*. Mammals' brain construction is done most heavily during REM sleep, which is why infants sleep so much. Newborn rats that were denied REM sleep suffered retarded gestational progress. Since alcohol is a strong suppressor of REM sleep, infants whose mothers drink heavily have much lower levels of vibrant brain activity compared to those whose mothers don't drink.

- Infants and young *children* have polyphasic sleep, i.e. they sleep for many short periods throughout the day. As their suprachiasmatic nuclei develop and gain a rhythm, they shift to a daily rhythm, then a biphasic pattern and a finally a monophasic sleep pattern by late childhood. As a child grows up, total sleep time drops and the proportion of REM-to-NREM sleep decreases.

- During late childhood and *adolescence*, cognitive and critical thinking skills are honed during deep NREM sleep to affect maturity and rationality. Teens have a later circadian cycle, preferring to stay up later and wake later. Asking them to sleep at 10pm is like asking adults to sleep at 7-8pm. Unfortunately, sleeping late and waking early for school mean that our teens are sleeping much less than they would naturally.

KEY QUOTES

"Humans are not sleeping the way nature intended. The number of sleep bouts, the duration of sleep, and when sleep occurs have all been comprehensively distorted by modernity."

"REM sleep is not optional during early human life, but obligatory."

"An infant brain without sleep will be a brain ever underconstructed."

"Deep sleep may be a driving force of brain maturation, not the other way around."

- *Mid-life and old-age*. It's not true that the elderly need less sleep. Most seniors are actually sleep-deprived due to 3 factors:

  (i) They have less *quantity/quality* of deep NREM sleep. NREM brainwaves start to become smaller and fewer from our late 20s. By 70 years old, we'd have lost 80-90% of the deep REM sleep we enjoyed as a teen.

  (ii) They *sleep less efficiently* since they wake up more frequently at night (due to illnesses, a weaker bladder etc.).

  (iii) They develop an *earlier circadian rhythm*. Instead of sleeping early, they may take an evening nap which disrupts their night sleep, then wake up pre-dawn due to their cycle. Seniors can try using Melatonin to sleep better, and push their circadian rhythm back by getting bright-light exposure in the late afternoon instead of mornings.

KEY QUOTES

"That older adults simply need less sleep is a myth."

Why You Should Sleep

Sleep is the ultimate therapy and enhancer to provide a range of benefits that medicine and other interventions cannot.

"There is much that sleep can do that we in medicine currently cannot."

Sleep Benefits the Brain

Sleep is essential to our brain and delivers 3 main cognitive benefits.

Sleep improves memory. The hippocampus in our brain stores short-term memory and has a limited capacity, while the cortex stores long-term memory with a larger capacity. In NREM sleep:

"Sleep has proven itself time and again as a memory aid: both before learning, to prepare your brain for initially making new memories, and after learning, to cement those memories and prevent forgetting."

- *Short-term memory is transferred to the cortex*, helping to (i) free up space so we can absorb new info and (ii) save useful info for the long term. In fact, after sleeping, you may recall something you previously forgot.

- You *discard useless memories* to make space for those worth remembering. You can use *targeted memory reactivation* to lock in vital info: before going to bed, review what you've

learned and mentally "tag" those you'd like to remember or improve, then leave the rest to your brain.

Sleep improves motor task proficiency. Once you learn to ride a bike, you won't forget it—that's "muscle memory" at work, though the memory resides in your brain (not your muscles). You may struggle with a motor task (e.g. playing a difficult piano sequence), but can suddenly do it flawlessly after sleeping. That's because during sleep, your brain continues to practice the motor skills and work out the kinks. Sleep spindles are associated with better memory effects (including motor memories) and are most concentrated in the last cycle of deep NREM sleep. This means that when you wake up early, you're actually losing valuable sleep hours.

Sleep improves creativity. REM sleep connects your different memories, experiences and skills to create new ideas and insights.

Sleep-deprivation Harms the Brain

A lack of sleep causes brain impairment, with repercussions for all aspects of your mental and physical health.

Sleep-deprivation worsens focus/concentration.

- After being awake for 19hrs, you're as *cognitively impaired* as someone who's legally drunk. After 10 days with 7hrs of sleep, your brain is as dysfunctional as someone who's been awake for 24hrs. Only a rare 1% of the population is genetically-enabled to survive on 6hrs of sleep with minimal impairment. Power naps can help defer fatigue if sleep-deprivation hasn't sunk in, but they can't replace regular sleep.

- When you're tired, you may also fall into *microsleep*, i.e. the brain shuts down momentarily and you lose all awareness for 1-2 sec. This can be fatal if you're engaged in risky activities like driving. In the US, the number of traffic accidents from fatigue-related errors are higher than those from alcohol and drugs combined.

- Even if you sleep for 3 full nights, you can't recover from a week of sleep-deprivation. Yet, we're *unaware of the effects*

KEY QUOTES

"Your brain will continue to improve skill memories in the absence of any further practice".

"Sleep provides a nighttime theater in which your brain tests out and builds connections between vast stores of information."

"No facet of the human body is spared the crippling, noxious harm of sleep loss."

"The human mind cannot accurately sense how sleep-deprived it is when sleep-deprived."

of sleep-debt since we get used our worsening performance levels.

Sleep-deprivation worsens emotional control. When we lack sleep, the amygdala (our brain's emotional center) becomes more active and overpowers the prefrontal cortex (the brain's logical center). We swing between extreme negative moods (linked to aggression and bullying) and extreme positive moods (linked to risk-taking and addiction).

Sleep-deprivation impairs memory since (i) the hippocampus seems to shut down without enough sleep, and (ii) it can cause lasting damage to our DNA and learning-related genes.

Sleep-deprivation plays a role in mental illnesses. By worsening mood swings, it can reinforce *psychiatric conditions* (and vice versa) in a vicious cycle. Sleep-loss is also correlated with *Alzheimer's Disease*. During NREM sleep, the glymphatic system flushes out toxins from the brain (including those responsible for Alzheimer's). A lack of sleep could create a buildup of toxins, which in turn disrupts NREM sleep in a vicious cycle.

Sleep-deprivation Harms the Body

Sleep-deprivation damages every aspect of our physiology and is linked to a host of diseases (e.g. cancer, heart diseases) and a shorter lifespan.

Cardiovascular System. Insufficient sleep is widely linked to an *overactive sympathetic nervous system*, i.e. the body is in a stressful fight-or-flight state. This leads to (i) increased heart rates, blood pressure, levels of cortisol (a stress hormone) and atherosclerosis, and (ii) decreased HDL (good cholesterol) and growth hormone (to repair blood vessels). The opposite happens during deep NREM sleep—the body relaxes while heart rate and blood pressure falls. A lack of sleep is associated with a 45% increase in the risk of developing and/or dying from coronary heart disease in the next 25 years. Just sleeping 1-2 hours less for 1 night can increase heart rate and systolic blood pressure.

Insufficient sleep leads to weight gain, since (i) you're likely to eat more and (ii) your body can't handle the calories as

KEY QUOTES

"The under-slept brain swings excessively to both extremes of emotional valence, positive and negative."

"Sleep is not like the bank. You cannot accumulate a debt and hope to pay it off at a later point in time."

"Sleep is...the foundation on which the other two health bastions [diet and exercise] sit. Take away the bedrock of sleep, or weaken it just a little, and careful eating or physical exercise become less than effective."

"Unhealthy sleep, unhealthy heart. Simple and true."

effectively. Chronic sleep deprivation is a key contributor to type 2 diabetes.

- When you lack sleep, you *eat excessively* due to an increase in chemicals that signal hunger and carbohydrates-craving, and a decrease in chemicals that signal that you're full.

- You also *feel lethargic* and are less likely to exercise. Even if you lose weight, sleep-deprived people tend to *lose lean body mass* (vs those with enough sleep tend to lose more fat).

Reproductive System. Sleep-deprived males have 29% lower sperm count, smaller testicles, and decreased testosterone (which in turn affect libido, bone density and muscle mass). Sleep-deprived females have 20% lower follicular-releasing hormone (required for conception), more infertility issues, and higher risks of miscarriages. After just 1 night of sleep shortage, participants' face in a study were rated less attractive.

There's a clear correlation between sleep and immunity.

- Sleep is vital in the *prevention and fight against cancer*. When we sleep, our immunity system releases "killer cells" to remove bad foreign elements in our bodies. After just 1 night of sleep loss, you can lose 70% of your killer cells. Regularly sleeping ≤6 hours a night increases your risk of developing cancer by 40% compared to those who sleep ≥7 hours.

- Sleep-deprivation also increases the risks of *cancer inflammation*. Lab rats were injected with malignant cells and split into 2 groups (with normal vs insufficient sleep). The sleep-deprived rats had (i) faster and bigger cancer growth, and (ii) more aggressive cancer cells that metastasized or spread to other organs.

Genes and DNA. Every cell in our body contains DNA that defines who we are and tells our body what to do. Reducing sleep for just 1 night can reduce the *genetic activity* for healthy men and women. Chronic sleep-loss can even *change our genetic structure*. Telomeres are found at the end of your DNA chromosomes (like the tip of your shoelaces). The more sleep-deprived you are, the more damaged your telomeres become to increase the risks of changing your genetic makeup.

KEY QUOTES

"Inadequate sleep is the perfect recipe for obesity: greater calorie intake, lower calorie expenditure."

"Chronic sleep loss will erode the very essence of biological life itself: your genetic code and the structures that encapsulate it."

Benefits of Dreaming

Neuroscience has shed light on how, what and why we dream. Using MRI scans, scientists can now predict what you're dreaming. Dreams offer real benefits for our survival and well-being.

Dreams reduce the pain from traumatic events. Dreams capture 35-55% of the emotional concerns and themes from our waking lives. Deep REM sleep is the *only* time when the stress-related chemical noradrenaline is totally absent from your brain. This allows you to process painful memories without being crippled by the visceral feelings. However, this *only* works if you dream about the emotional themes associated with the trauma; REM sleep or dreams about unrelated themes won't help you to move past your trauma.

Dreams help us to decode facial expressions, which are one of the most important external cues to help us discern friend from foe, and help us to interact effectively with others. People with a full night's sleep were able to accurately decipher others' emotions based on their facial expressions. The same people, when deprived of sleep, were less able to do so and tended to see others as hostile or aggressive.

Dreams improve problem-solving and creativity. During deep NREM sleep, brain activity drops. But once we enter REM sleep and start dreaming, the visual, motor, memory and emotional centers of our brain are activated while the prefrontal cortex and logical centers are switched off.

- This means that in your dreams, your brain fuses past and present knowledge and experiences in creative/abstract ways, *without the limits of logical filters*. Your dreaming brain can apply an idea to your entire storage bank and make novel connections that your waking brain can't conceive.

- For example, after years of seeking a way to organize the world's elements, Dmitri Mendeleev literally dreamt up the solution in 1869. In his dream, he saw how all the elements fell neatly into a table. His dreaming mind could integrate his years of research into the *period table of elements* which we now use—something his waking mind couldn't.

KEY QUOTES

"It was not...time...that healed all wounds, but instead it was time spent in dream sleep that was providing emotional convalescence."

"REM-sleep dreaming is informational alchemy."

"Our human memories are...richly interconnected in webs of associations that lead to flexible, predictive powers."

Sleep Disorders and Death

Sleep disorders can disrupt our lifestyle and well-being.

Somnambulism refers to sleep disorders that involve movement, including sleepwalking, sleep talking etc. This happens during NREM sleep (*not* REM sleep), when spikes in electric pulses in the nervous system cause the person to be stuck between sleep and wakefulness. Sleepwalkers often perform familiar routines unconsciously (e.g. brushing their teeth, drinking water).

Insomnia. Unlike sleep deprivation (where the person is capable of sleep but doesn't get enough opportunity to sleep), insomniacs set aside enough time (7-9 hours) for sleep, but have difficulty falling asleep and/or staying asleep for more than 3 months. The most common causes of insomnia are emotional concerns or distress, which are linked to an overactive sympathetic nervous system that keeps the brain overly-active. Even when asleep, insomniacs have shallower deep NREM brainwaves and more fragmented REM sleep.

Narcolepsy comes with 3 key symptoms: (i) extreme sleepiness in the day (e.g. irresistible urges to sleep), (ii) sleep paralysis (i.e. loss of the ability to move/talk when you wake up), and (iii) cataplexy (sudden loss of muscle control e.g. face sagging or limb muscles going limp). Narcoleptic patients are stuck between sleep and wakefulness because they lose the bulk of the brain cells that produce orexin, the chemical that signals wakefulness.

At the extreme, sleep deprivation can cause death. In experiments, sleep-deprived rats died after 15 days without any sleep/REM sleep, or after 45 days without NREM sleep. Notably, the sleep-deprived rats (i) lost body mass, (ii) couldn't regulate their body temperature, and (iii) had damaged immune systems resulting in skin infections and internal damage (e.g. hemorrhaging, stomach ulcers). Death from sleep deprivation is uncommon in humans, though patients with fatal familial insomnia (a rare inherited condition) degenerate and die within 10 months after they lose all ability to sleep.

KEY QUOTES

"Simply put, the insomnia patients could not disengage from a pattern of altering, worrisome, ruminative brain activity."

"The shorter your sleep, the shorter your life span…The elastic band of sleep deprivation can stretch only so far before it snaps."

Improving Sleep Quality & Quantity

On average, half of all adults in developed countries aren't getting the recommended hours of sleep. We can systematically improve our sleep quality and quantity at individual, educational, organizational, public and societal levels.

Individual Lifestyle and Sleep Habits

We can address key barriers to sleep and improve our sleep hygiene.

Light. Modern electric light disrupts our circadian rhythm by delaying the release of melatonin by an average of 2-3 hours in the evenings. Any light can disrupt your circadian rhythm, but blue LED lights—including those from computer and smartphone screens—have the worst impact. To improve sleep quantity/quality:

- Dim the lights in the rooms where you spend your evenings
- Use blackout curtains to keep your bedroom completely dark
- Use software to decrease blue LED lights from electronic devices

Besides natural light, the body uses the dip in nighttime temperature as a signal to prepare for bed. However, air-con, heaters and blankets mask such natural temperature fluctuations. Generally, it's easier to fall sleep in a cold room than a warm one—the ideal temperature for sleep is around 65°F or 18.3°C. You can reduce your core body temperature by ejecting heat via your hands, feet and head, thus facilitate sleep:

- Take a hot bath or warm your hands/feet, to draw heat to the skin surface and reduce core body temperature;
- Splash water on your face using your hands; and/or
- Stick your hands/feet outside the blankets or wear a cooling body suit.

KEY QUOTES

"What, precisely, about modernity has so perverted our otherwise instinctual sleep patterns, eroded our freedom to sleep, and thwarted our ability to do so soundly across the night?"

Caffeine. Earlier, we've explained the effects of caffeine. Avoid consuming caffeine from late afternoon.

Alcohol does *not* help you to sleep better. It's a sedative that blocks the brain's neurons from firing properly, thus suppressing REM sleep and causing us to wake up throughout the night. Alcohol disrupts sleep and harms our memory and learning abilities. The body takes several hours to breakdown and discharge alcohol, so it's best to abstain from alcohol.

In modern societies, most people force themselves to wake up using alarms. This actually creates stressful spikes in heart rates, cortisol and blood pressure levels. Ideally, you should wake up naturally at the same time daily, without alarms. If you must use an alarm, then wake up once it goes off; don't put yourself through a series of stresses by using the snooze function.

Regular exercise helps to improve the quality/quantity of sleep, which in turn improves your fitness and energy levels. However, avoid exercising 2-3 hours before bed as it increases core body temperature to make it harder to fall asleep.

Eat a normal diet and don't go to bed feeling too full/hungry. Sleep is generally disrupted if you consume too few calories (<800) or too much carbohydrates (>70% of all energy intake).

Avoid sleeping pills since they're sedatives that affect your brain in the same way as alcohol. Such drug-induced sleep lacks the deep brainwaves found in healthy sleep, resulting in next-day grogginess.

- In fact, people who use prescription sleep medications are much more likely to die and to develop cancer than those who don't. They're also linked with higher rates of stroke/heart *disease, infections and accidents*.

- Until scientists discover a drug that can induce natural sleep without harmful side effects, Walker recommends *sleep therapy* such as the Cognitive Behavioral Therapy. These involve good lifestyle habits and sleep hygiene, such as (i) adopting a consistent daily sleep cycle, (ii) reducing bedroom temperature, noise/light levels, (iii) avoiding alcohol, caffeine, naps and exercise just before sleep, and (iv) avoiding heavy mental activities or anxiety-provoking thoughts before bed.

KEY QUOTES

"Alcohol sedates you out of wakefulness, but it does not induce natural sleep."

"Sleep and physical exertion have a bidirectional relationship."

"No past or current sleeping medications on the legal (or illegal) market induce natural sleep."

Ideas for the future. We can use technology to detect/prevent sleep-deprived driving, design intelligent household lights that match our circadian rhythms, or use body trackers to identify how sleep correlates with our activity, heart rate, mood, etc.

Addressing Sleep at Systemic Levels

The Workplace. Longer work hours don't mean productivity. Sleep-deprived employees show lower levels of creativity, motivation, efficiency and effectiveness. They're also less sociable, emotionally stable and ethical/honest. Sleep-deprived leaders are less engaging and inspiring, and create a negative rippling effect on their staff.

- Inadequate sleep can cost *companies* $2,000-$3,500 per employee or tens of millions in annual losses. By allowing flexible work hours to fit employees' natural body clocks, encouraging naps and proper rest, companies can deliver better results.
- Many *medical institutions* still require doctors and nurses to work long hours at a stretch, especially during their years in resident training. Fatigue has contributed to an alarming number of serious/fatal medical errors and accidents. These can be reduced simply by limiting each shift to 16 hours, with at least 8-hour rest opportunities in between. There's simply no reason to continue with the existing practices of sleep-deprivation which hurt both patients and medical staff. Sleep hygiene can also be used to help patients, e.g. change harsh white lights to warm yellow lights, provide earplugs/eye-masks etc.

School Schedules. To match parents' schedules, schools often start at 8am or earlier. Kids may have to wake up at 5:30am to catch the school bus which, given their circadian rhythms, is akin to an adult waking up at 3:30am. We're robbing our kids of the vital hours of REM-rich late-morning sleep that's critical for their learning, development and well-being. Chronic sleep deprivation is also harmful to adolescents who're the most susceptible to mental illnesses. Schools that start later have seen improvements in attendance, students' grades, IQ, emotional stability and even life expectancy (due to fewer accidents). It's time to review our existing school schedules.

KEY QUOTES

"Under-slept employees are not only less productive, less motivated, less creative, less happy, and lazier, but they are also more unethical."

"Ounces of sleep offer pounds of business in return."

"There's simply no evidence-based argument for persisting with the current sleep-anemic model of medical training, one that cripples the learning, health, and safety of young doctors and patients alike."

"It is clear that a tired, underslept brain is little more than a leaky memory sieve, in no state to receive, absorb, or efficiently retain an education."

"We as a society must work toward dismantling our negative and counterproductive attitude toward sleep."

Education and public/societal interventions. Sleep is no less critical than diet and exercise, and should be made a mandatory topic in education, to build awareness and encourage better sleep practices. At a public/societal level, we should also consider public campaigns to improve sleep awareness, enact laws against drowsy driving, introduce health insurance credits for people who with consistent/quality sleep hours, etc.

Other Details in the Book to Look out For

This book is packed with useful background, theories, examples and discussions on sleep and its implications, including:

- Evolutionary and scientific information about sleep;
- How NREM/REM sleep relate to various biological functions and lifestyle factors; and
- Detailed insights, tips and ideas on how we can improve our quality and quantity of sleep.

For more details, please visit www.sleepdiplomat.com.

About the Author

Dr. Matthew Walker is an English scientist and professor of neuroscience and psychology at the University of California. His research focuses on the impact of sleep on human health and disease. Previously, he was a professor of psychiatry at Harvard Medical School. He is also the founder and director of the Center for Human Sleep Science.

He has received numerous funding awards from the National Science Foundation and the National Institutes of Health, and is a Kavli Fellow of the National Academy of Sciences. He has published more than 100 scientific research studies and has been featured on numerous television and radio programs.
